—Experience working with and providing a full range of support services for international students;
—Ability to arrange professional affiliations and internships;
—Capacity to assign a faculty advisor and a Muskie Program coordinator to provide academic support and enrichment;
—Commitment to contribute substantial cost-sharing, such as tuition scholarships, fellowships, or reduced room and board expenses.
—Evaluation plan for monitoring the academic progress and integration of Fellows into the campus and community; and
—Adherence of proposed activities to the criteria outlined above and the goals of the Edmund S. Muskie Fellowship Program.

USIA retains the right to determine final selection decisions with regard to the competition for institutions to host Muskie Fellows.

Some Fellows will be placed at universities or colleges in clusters of 5–10, and institutions are encouraged to receive and provide commensurate cost-sharing for such groups. The academic interests and needs of candidates selected as Fellows will also be considered in the selection of U.S. receiving institutions. Institutions currently hosting Fellows under the 1992 Program are eligible to apply to receive students in 1993 but should submit a proposal under these guidelines. The Agency reserves the right to determine final placement decisions.

Proposals must be submitted to ACTR/ACCELS, IIE, IREX, or the Soros Foundation, according to discipline and type of program (degree or professional development), as indicated above. All programs in law must lead to the Master of Laws (LLM) degree.

Notice

The terms and conditions published in this RFP are binding and may not be modified by any USIA, ACTR/ACCELS, IIE, IREX, or Soros Foundation representative. Explanatory information provided by USIA, ACTR/ACCELS, IIE, IREX, or the Soros Foundation that contradicts published language will not be binding. Issuance of the RFP does not constitute an award commitment on the part of the Government. Final awards cannot be made until funds have been fully appropriated by Congress, allocated and committed through internal USIA procedures.

Notification

Applicants will be notified in writing of the results of the review process on or about April 15, 1993. Final placement of students at institutions is subject to the specific academic interests and needs of individuals selected as Muskie Fellows.

Options for Renewal

Subject to the availability of funding and the satisfactory performance of grant programs, USIA may invite grantee organizations to submit proposals for renewals of awards.

Dated: December 18, 1992.

Barry Fulton,

Acting Associate Director, Bureau of Educational and Cultural Affairs.

[FR Doc. 92–31228 Filed 12–23–92; 8:45 am]
BILLING CODE 8230–01–M

Public and Private Non-Profit Organizations in Support of International Educational and Cultural Activities

AGENCY: United States Information Agency.

ACTION: Notice; request for proposals.

TITLE: Central and Eastern European Training Program *(CEETP–3).*

SUMMARY: The Office of Citizen Exchanges (E/P) announces a competitive grants program for non-profit organizations to develop training programs in the areas of (1) independent media development, (2) local government/public administration and (3) business administration for countries of Central and Eastern Europe as specified below. These projects should link the U.S. organization's international exchange interests with counterpart institutions and groups in the partner countries.

Interested applicants are urged to read the complete **Federal Register** announcement before addressing inquiries to the Office or submitting their proposals. After the deadline for submitting proposals, USIA officers may not discuss this competition in any way with applicants until final decisions are made.

ANNOUNCEMENT NAME AND NUMBER: All communications concerning this announcement should refer to Central and Eastern European Training Program *(CEETP–3).* This announcement number is *E/P–93–8.* Please refer to this title and number in all correspondence or telephone calls to USIA.

Dates: *Deadline for Proposals:* All copies must be received at the U.S. Information Agency by 5 p.m., Washington DC time on February 26, 1993. Faxed documents will not be accepted, nor will documents postmarked February 26, 1993, but received at a later date.

It is the responsibility of each grant applicant to ensure that proposals are received by the above deadline. CEETP–3 grant project activity should begin after June 15, 1993.

Addresses: The original and 14 copies of the completed application and required forms should be submitted by the deadline to: U.S. Information Agency, Ref: CEETP–3 E/P–93–8, Office of Grants Management (E/XE), 301 Fourth Street SW., room # 336, Washington, DC 20547.

For information contact; Interested organizations/institutions should contact: European Division, Office of Citizen Exchanges (E/P), room 216, United States Information Agency, 301 Fourth Street, SW., Washington, DC 20547, telephone 202/619–5348, fax 202/619–4350, to request detailed application packets, which include award criteria, all necessary forms, and guidelines for preparing proposals, including specific budget preparation.

Objectives of Central & East European Training Program (CEETP–3)

Overview: Proposals must be for projects which encourage the growth of democratic institutions and political and economic pluralism, and must show tolerance and sensitivity toward cultural and ethnic differences. They should lay the groundwork for new and continuing links between American and Central/East European professional organizations. Grant proposals which are overly ambitious or general will not be competitive. Doing a few tasks well is preferred. Other objectives which apply to all three theme areas:

—The advancement of mutual understanding through targeted professional development programs for Central/Eastern European leaders;
—The development of culturally sensitive and relevant study tours in

the United States for small groups of key senior leaders to observe theories and concepts at work in the United States;

—The transfer at minimal cost of relevant knowledge through short courses and intensive workshops (preferably of at least two weeks duration) conducted in Central/Eastern Europe;

—Well-planned internships in the U.S. and extended learning programs overseas (from four to ten weeks, with considerable in-country cost-sharing);

—The transfer of American academic and professional expertise through consultations in Central/Eastern Europe for periods of not less than one month;

—The development of specialized materials for secondary and post-secondary teachers, plus special training workshops for such teachers;

Programmatic Considerations

Pursuant to the Bureau's authorizing legislation, grant programs must maintain a non-political character and should be balanced and representative of the diversity of American political, social and cultural life.

The Office of Citizen Exchanges strongly encourages the coordination of these activities between respected universities, professional associations, and significant cultural, educational and political institutions in the U.S. and abroad. In addition, coordination in the design of program with U.S. Information Agency officers overseas and with foreign government officials will likely make the proposal more competitive. The themes addressed in these exchange programs must be of long-term importance rather than focussed on current events or short-term issues.

In every case, a compelling rationale for the development and execution of an exchange program must be presented as part of the proposal, one that clearly indicates the distinctive and important contribution of the overall project and its enduring impact.

USIA will give priority to proposals from U.S. organizations which have partner organizations in Central/Eastern Europe, which will assist logistically and will contribute to the realization of program goals and objectives and will themselves be enhanced by the program. Applicants are encouraged to demonstrate partner relationships by providing copies of correspondence or other materials as appendices to proposals.

The CEE partner institutions are encouraged to provide cost-sharing or significant in-kind contributions such as local housing, transportation, interpreting, translating and other local currency costs and to assist with the organization of projects. USIA is interested in multi-phase programs. A model program could include a planning visit by the American organizer; an in-country workshop or seminar led by American experts; a travel/study program in the United States for selected foreign participants; U.S.-based internships where appropriate; and, finally, follow-up consultations overseas by American organizers. Internships usually work best when arranged for the most promising participants in earlier, in-country workshops.

The development of new curricula and instructional materials in Central/Eastern European languages is encouraged; however, USIA does not pay for publication of materials for distribution in the United States.

Planning Trips

USIA grants will pay for planning trips to partner CEE countries by staff or consultants for consultations and planning meetings with partner institutions, but these should be trips which build on previous communications and agreements for cooperation.

Seminars and In-Country Workshops

Seminars and workshops should be at least two weeks in duration. CEE language skills on the part of American experts are desirable but not essential. American presenters should be experienced trainers and professionals in the relevant field (local government administration, business, or media) and be sufficiently knowledgeable of local conditions and needs to tailor presentations.

Orientation Activities

All CEETP–3 grant projects should include a pre-departure orientation to introduce travelers, in both directions, to administrative and substantive details of the grant program. On arrival in the USA, all projects should begin with two to three days of local orientation to such matters as geographic and historical setting, medical insurance, health, cultural values and practices, the roles of police and mass media and other sectors of society which visitors may encounter, and the like. In addition, there should be an orientation for hosts, whether families or individuals or institutions; if overseas visitors will stay longer than a couple of weeks, it is advisable to established some sort of support network to monitor the project and resolve problems which develop.

The purpose in all these orientations is not only to inform participants about agenda and logistics but also to raise issues of economic, social, political, and cultural sensitivities, knowledge, and practice.

Finally, there should be a re-entry orientation and project evaluation just before visitors return home to ease their re-entry, to promote understanding, to identify strengths and weaknesses in the program, and to make adjustments in the remainder of the program where possible.

Study Tours in the United States

Study tours are generally three-four weeks in length and can be a mix of site visits, mini-workshops, and consultations. The purpose of these visits is to provide the participants a first-hand look at local government administration, business, and the media as organized in the United States, as well as an introduction to the cultural and geographic richness of the United States.

U.S.-Based Internships

For the purposes of this competition, internships are practical work experiences in state or local government, businesses, or media organizations. Active, productive internships are preferred over passive job shadowing. They are not university-based residency programs or research opportunities. Participants must be fluent in English. The length of stay for an internship should be at least one month, including orientation activities, but probably not longer than ten weeks. USIA gives priority to proposals which demonstrate private sector cost-sharing, either in the form of in-kind contributions or through corporate or foundation support. Funding from private sources is encouraged to cover food, lodging, and pocket money for the participant. In no case could the intern receive a wage or be "hired" by the sponsoring institution.

Well-designed internships require considerable planning and monitoring. Critical to the success of internship programs is the matching of expectations of host institution and participant. USIA will give priority to proposals that include a detailed plan for how internships will be developed and organized, including the recruitment of institutions for placements and their preparation, the detailed course of work for participants, extra curricular activities, on-going monitoring, contingency planning for any required changes, and final evaluation.

Internships should begin with a basic orientation program as described above but also with due emphasis on American work habits and detailed information on the particular area of interest (public administration, business, or media). For internships of an extended duration, organizations may wish to design a mid-point workshop which brings participants together for a few days to evaluate the experience and make mid-course corrections if necessary.

Materials Development

USIA encourages the development, where needed, of written, audio and video materials in CEE languages to enhance the training programs. For example, if not already available, glossaries of specialized terms in the three fields (public administration, business, and media) might be developed.

In developing materials, consideration should be given to their wider use, beyond the immediate training program. USIA is interested in organizations' ideas on how to "reuse" specialized materials by providing them to universities, libraries, or other institutions for use by a larger audience.

Local Government

Preference will be given to projects in Albania, Bulgaria, Romania, The Czech and Slovak Federal Republic, Hungary and Poland. USIA is interested in proposals for training programs which will foster effective administration of local and regional governments. Programs might examine and seek to improve relationships among local executive, legislative, and judicial elements, or they might address the knowledge and skills necessary to administer one or more of these branches of local government.

Program topics might include one or more of the following: judicial administration, budget development, financial management, tax policies and mechanisms, election practices, management of municipal services, privatization of government property, consumer protection, business regulation (as opposed to control), licensing, environmental protection. Programs might further the development of information and library systems relevant to local government improve committee and staff structures, research capability, legislation drafting capability, structural and procedural needs of local governments. Training should be conducted mostly in local centers, preferably situated outside the capital cities.

Business Administration

Preference will be given to projects with Albania, Bulgaria, Romania, Estonia, Latvia, Lithuania, the Czech and Slovak Federal Republic, Hungary, and Poland. In Poland, Hungary, and the Czech and Slovak Federal Republic, projects which take place outside Warsaw, Budapest, and Prague will be given priority.

While this topic is broad, proposals should focus primarily on management training, small business development (including incubators and Small Business Centers), agri-business, banking, credit practices, financial management, marketing management, industrial relations, and/or privatization.

Program design should clearly differentiate CEE target audiences, such as professors and instructors of economics, senior business leaders, government officials, or promising practitioners, and demonstrate how the proposed agenda addresses the selected audience(s).

USIA has a strong interest in programs on the development of business structures and the creation of jobs in non-urban areas.

Mass Media Development

Preference will be given to projects with Albania, Bulgaria, Croatia, Romania, Estonia, Latvia, Lithuania, the Czech and Slovak Federal Republic, Hungary, Poland, Macedonia, and Slovenia. The focus of the proposals should be directed toward the development of a free and independent media, since this is a sector of the society which has benefitted least from the new wave of democratization.

Programs in this general topic fall under two training sub-categories: working reporters and media business management. Preference will be given to mass media training programs which contain a U.S. internship component. For training programs in CEE, preference will be given to those of at least two weeks duration; they could focus on either basic journalism or business management techniques. Mass media proposals may also focus on curriculum reform and development of schools of journalism.

Training, especially for journalists outside of the CEE capital cities, should emphasize skills such as effective writing, investigative reporting, objectivity, evaluation of sources, clear labelling of editorials and opinion pieces, conformance to copyright laws, and ethics.

Media management training (both print and broadcast) should focus on management of media as a profitable business. Topics to be addressed might include management techniques, desk top publishing, advertising, marketing, distribution, public relations, staff development, accountability, and the pitfalls of journalistic advocacy, among others.

Scope

USIA is interested in proposals for programs with one or more of the CEE countries, but they should focus on one of the three major topics: independent media development, local governance, or business administration. A program that is broader in scope is less likely to receive USIA support. Grantee organizations are not limited to one-country projects. However, if developing a multi-country or regional project, serious thought should be given to political, organizational, and budgetary implications.

USIA will consider geographic distribution in selecting grantee institutions to ensure a wide distribution of this program.

USIA encourages proposals which feature "train the trainers" models; the creation of indigenous training centers; enhancement for university departments; schemes to create professional networks or professional associations to disseminate information, and other enduring aspects.

Guidelines and Restrictions

In the selection of all foreign participants, USIA and USIS posts retain the right to nominate participants and to accept or deny participants recommended by the program institution.

Selection of Participants

All grant proposals must clearly describe the type of persons who will participate in the program as well as the process by which participants will be selected. It is recommended that programs in support of internships in USA should include letters tentatively committing host institutions to support the internships.

USIA does not support proposals limited to conferences or seminars of only a few days length which are organized as plenary sessions, major speakers, and panels with a passive audience. It will support conferences only insofar as they are a minor part of a larger project in duration and scope which is receiving USIA funding from this competition. Furthermore, grants are not given to support projects whose focus is limited to technical issues, or for research projects, for publications intended for dissemination in the

United States, for individual student exchanges, for film festivals or exhibits. Nor does this Office provide scholarships or other support for long-term (i.e., a semester or more) academic studies.

Competitions sponsored by other offices of USIA's Educational and Cultural Bureau are also announced in the **Federal Register**, and may have different guidelines or restrictions.

Funding

The amount requested from USIA should not exceed $200,000. However, exchange organizations with less than four years of successful experience in managing international exchange programs are limited to $60,000.

Applicants are invited to provide both an all-inclusive budget as well as separate sub-budgets for each program component, phase, location or activity in order to facilitate USIA decisions on funding.

While an all-inclusive budget must be provided with each proposal, separate component budgets are optional. Competition for USIA funding support is keen.

The following project costs are eligible for consideration for funding: 1. International and domestic air fares; visas; transit costs; ground transportation costs.

2. Per Diem. For the U.S. program, organizations have the option of using a flat $140/day for program participants or the published U.S. Federal per diem rates for individual American cities.

Note: U.S. escorting staff must use the published federal per diem rates, not the flat rate. For activities in Central/Eastern Europe, the Federal per diem rates must be used.

3. Interpreters. Interpreters for the U.S. program are provided by the U.S. State Department Language Services Division. Typically, a pair of simultaneous interpreters is provided for every four visitors who need interpretation. USIA grants do not pay for foreign interpreters to accompany delegations from their home country. Grant proposal budgets should contain a flat $140/day per diem for each DOS interpreter, as well as home-program-home air transportation of $400 per interpreter plus any U.S. travel expenses during the program. Salary expenses are covered centrally and should not be part of an applicant's proposed budget.

4. Book and cultural allowance. Participants and escorts are entitled to a one-time cultural allowance of $150 per person, plus a book allowance of $50. U.S. staff do not get these benefits.

5. Consultants. May be used to provide specialized expertise or to make presentations. Daily honoraria generally do not exceed $250 per day. Subcontracting organizations may also be used, in which case the written agreement between the prospective grantee and subcontractor should be included in the proposal.

6. Room rental, which generally should not exceed $250 per day.

7. Materials development. Proposals may contain costs to purchase, develop and translate materials for participants.

8. One working meal per project. Per capita costs may not exceed $15–20 for a lunch and $20–30 for a dinner; this includes room rental if applicable. The number of invited guests may not exceed participants by more than a factor of two to one.

9. Administrative Costs. USIA-funded administrative costs are limited to 22% of total funds requested. Administrative costs are defined as salaries for grantee organization employees, benefits, other direct and indirect costs incurred in the United States. Overseas administrative costs, such as employee compensation in an office abroad, are not counted in this 22% limit. Important note for universities: The U.S. Information Agency's Bureau of Educational and Cultural Affairs defines U.S. faculty salaries as an administrative expense, regardless of how the faculty time is to be used.

10. A return travel allowance of $70 for each participant which is to be used for incidental expenditures incurred during international travel. Please Note: All delegates will be covered under the terms of a USIA-sponsored health insurance policy. The premium is paid by USIA directly to the insurance company.

Application Requirements

Proposals must be structured in accordance with the instructions contained in the application package.

Review Process

USIA will acknowledge receipt of all proposals and will review them for technical eligibility. Proposals will be deemed ineligible if they do not fully adhere to the guidelines established herein and in the application packet.

Eligible proposals will be forwarded to panels of USIA officers for advisory review. Proposals are reviewed by USIS posts and by USIA's Office of European Affairs. Proposals may also be reviewed by the Office of General Counsel or other Agency offices. Funding decisions are at the discretion of the Associate Director for Educational and Cultural Affairs. Final technical authority for grant awards resides with USIA's contracting officer. The award of any grant is subject to availability of funds.

The U.S. Government reserves the right to reject any or all applications received. USIA will not pay for design and development costs associated with submitting a proposal. Applications are submitted at the risk of the applicant; should circumstances prevent award of a grant all preparation and submission costs are at the applicants expense.

USIA will not award funds for activities conducted prior to the actual grant award.

Review Criteria

USIA will consider proposals based on their conformance with the objectives and considerations already stated in this RFP, as well as the following criteria:

1. *Quality of Program Idea:* Proposals should exhibit relevance, originality, rigor and substance to the USIA mission. They should demonstrate the match of U.S. resources to a clearly defined need.

2. *Institutional Ability/Capacity/Record:* Applicant institutions should demonstrate their potential for program excellence and/or provide documentation of successful programs. If an organization is a previous USIA grant recipient, responsible fiscal management and full compliance with all reporting requirements for past USIA grants as determined by the Office of Contracts (M/KG) will be considered. Relevant program evaluation of previous projects may also be considered in this assessment.

3. *Project Personnel:* Personnel's thematic and logistical expertise should be relevant to the proposed program.

4. *Program Planning:* A detailed agenda and relevant work plan should demonstrate substantive rigor and logistical capacity.

5. *Thematic Expertise:* Proposal should demonstrate the organization's expertise in the subject area.

6. *Cross-Cultural Expertise and Area Expertise:* Evidence of sensitivity to historical, linguistic, and other cross-cultural factors, as well as relevant knowledge of target area/country.

7. *Ability to Achieve Program Objectives:* Objectives should be realistic and attainable. Proposal should clearly demonstrate how the grantee institution will meet program objectives.

8. *Multiplier Effect:* Proposed programs should strengthen long-term mutual understanding, to include maximum sharing of information and establishment of long-term institutional and individual ties.

9. *Cost-Effectiveness:* Overhead and administrative costs should be kept as

low as possible. All other items proposed for USIA funding should be necessary and appropriate to achieve the program's objectives.

10. *Cost-Sharing:* Proposals should maximize cost-sharing through other private sector support as well as direct funding contributions and/or in-kind support from the prospective grantee institution.

11. *Follow-on Activities:* Proposals should provide a plan for continued exchange activity (without USIA support) which ensures that USIA-supported programs are not one-time events.

12. *Project Evaluation:* Proposals should include a plan to evaluate the activity success. In this respect the applicant should include a draft survey questionnaire or other technique and a methodology to use to link outcomes to original project objectives. Applicants will be expected to submit intermediate reports after each project component is concluded or quarterly, whichever is less frequent.

Notice

The terms and conditions published in this RFP are binding and may not be modified by any USIA representative.

Explanatory information provided by USIA that contradicts published language will not be binding. Issuance of the RFP does not constitute an award commitment on the part of the U.S. Government. Awards cannot be made until funds have been fully appropriated by the U.S. Congress and allocated and committed through internal USIA procedures.

Notification

All applicants will be notified of the results of the review process on or about June 1, 1993.

Awarded grants will be subject to periodic reporting and evaluation requirements.

Dated: December 18, 1992.

Barry Fulton,

Acting Associate Director, Bureau of Educational and Cultural Affairs.

[FR Doc. 92–31185 Filed 12–23–92; 8:45 am]

BILLING CODE 8230–01–M

Public and Private Non-Profit Organizations in Support of International Educational and Cultural Activities

AGENCY: United States Information Agency.

ACTION: Notice; request for proposals.

SUMMARY: The Office of Citizen Exchanges (E/P) of the Bureau of Educational and Cultural Affairs of the United States Information Agency (USIA) announces a request for proposals from not-for-profit organizations to conduct an initiative grant exchange program designed to encourage increased private sector commitment to and involvement in international exchanges between U.S. and African journalists. All international participants will be nominated by USIA personnel overseas. Interested applicants are urged to read the complete **Federal Register** announcement before addressing inquiries to the Office or submitting their proposals.

ANNOUNCEMENT NUMBER: The announcement number is E/P–93–7. Please refer to this number in all correspondence and telephone calls to the Agency.

DATES: Deadline for Proposals: All copies must be received at the U.S. Information Agency by 5 p.m. Washington, DC time on Friday, February 26, 1993. Faxed documents will not be accepted, nor will documents postmarked February 26, 1993, but received at a later date. It is the responsibility of each grant applicant to ensure that proposals are received by the above deadline. Grants should begin after June 26, 1993.

ADDRESSES: The original and 14 copies of the completed application, including required forms, should be submitted by the deadline to: U.S. Information Agency, REF: Citizen Exchange: Initiative Grant Competition FY–93–7, Office of Grants Management (E/XE), room 336, 301 4th Street, SW., Washington, DC 20547.

FOR FURTHER INFORMATION CONTACT: Interested organizations/institutions should contact the Office of Citizen Exchanges (E/P), room 224, USIA, Washington, DC 20547, telephone: (202) 619–5326, to request detailed application packets which include award criteria additional to this announcement, all necessary forms, and guidelines for preparing proposals, including specific budget preparation guidance. Please specify the name of USIA Program Officer Stephen Taylor on all inquiries and correspondence.

SUPPLEMENTARY INFORMATION: Pursuant to the Bureau's authorizing legislation, "programs must maintain a non-political character and should be balanced and representative of the diversity of American political, social and cultural life."

Professional Development of African Print and Broadcast Media Journalists and Managers

The Office of Citizen Exchanges (E/P) of the United States Information Agency (USIA) proposes the development of a two-way exchange program for print and broadcast journalists and media managers in anglophone, francophone and lusophone Africa. The first phase of the program would provide a series of at least 20 intensive workshops in Africa aimed at strengthening skills in the areas of political affairs reporting, economic affairs reporting and management of media organizations. During the second phase, the grantee institution would organize internships of 4–6 weeks at appropriate U.S. publications and broadcast services for 25 African participants. The project would be designed to prepare African trainers to replicate the training activities for other audiences in Africa.

A U.S. not-for-profit institution or institutions will design and execute the program and select the American presenters. The institution should demonstrate extensive experience and success in coordinating international exchange programs for senior-level foreign participants. The potential grantee institution should have substantive working relationships with U.S. public and private sector organizations responsible for promoting journalistic professionalism and successful business management. The African participants will be nominated by overseas personnel of the United States Information Service (USIS) and selected by the United States Information Agency (USIA). The program will begin in the summer of 1993.

It is desirable that the first phase of the program be completed, and the second phase be underway, within twelve months after the initial grant award from USIA. While coordination of all activities by a single grantee organization would be attractive, the number and variety of workshops and follow-on internships may require subcontracting or the award of two smaller grants in order to achieve successful completion of program activities in a timely manner. Thus, USIA will consider proposals to conduct all elements of the program, as well as proposals to develop either the anglophone or francophone portions of the program, in combination with activities for lusophone participants.

Funding

Competition for USIA funding is keen. The selection of a grantee

institution will depend on program substance, cross-cultural sensitivity, the applicant's familiarity with professional journalistic standards and the U.S. and foreign media, and ability to successfully carry out the program. Since USIA grant assistance constitutes only a portion of total project funding, proposals should list and provide evidence of other anticipated sources of financial and in-kind support.

A proposal's cost-effectiveness—including in-kind contributions and ability to keep administrative costs low—is a major consideration in the review process.

Funds requested from USIA cannot exceed $550,000 for support of this program. However, organizations with less than four years of successful experience in managing international exchange programs are limited to grants of $60,000.

Administrative costs. USIA-funded administrative costs are limited to twenty-two (22%) per cent of the total funds requested from USIA. Administrative costs are defined as salaries, benefits, other direct and indirect costs. Important note for universities: The U.S. Information Agency's Bureau of Educational, and Cultural Affairs defines American faculty salaries as an administrative expense, regardless of how the faculty time is to be used.

Application Requirements

Proposals must be structured in accordance with the instructions contained in the application package.

Review Process

USIA will acknowledge receipt of all proposals and will review them for technical eligibility. Proposals will be deemed ineligible if they do not fully adhere to the guidelines established herein and in the application packet. Eligible proposals will be forwarded to panels of USIA officers for advisory review. Proposals are reviewed by USIS posts and by USIA's Office of African Affairs and the Office of Contracts. Proposals may also be reviewed by the Agency's Office of the General Counsel.

Funding decisions are at the discretion of the Associate Director for Educational and Cultural Affairs. Final technical authority for grant awards resides with USIA's contracting officer.

The award of any grant is subject to the availability of funds.

The Government reserves the right to reject any or all applications received. USIA will not pay for design and development costs associated with submitting a proposal. Applications are submitted at the risk of the applicant; should circumstances prevent award of a grant, all preparation and submission costs are at the applicant's expense.

USIA will not award funds for activities conducted prior to the actual grant award.

Review Criteria

USIA will consider proposals based on the following criteria:

1. *Quality of Program Idea:* Proposals should exhibit originality, substance, rigor, and relevance to Agency mission. They should demonstrate the matching of U.S. resources to a clearly defined need.

2. *Institution Reputation/Ability Evaluations:* Institutional grant recipients should demonstrate potential for program excellence and/or track record of successful programs, including responsible fiscal management and full compliance with all reporting requirements for past Agency grants as determined by USIA's Office of Contracts (M/KG). Relevant evaluation results of previous projects are part of this assessment.

3. *Project Personnel:* Personnel's thematic and logistical expertise should be relevant to the proposed program. Resumes should be relevant to the specific proposal and no longer than two pages each.

4. *Program Planning:* Detailed agenda and relevant work plan should demonstrate substance and logistical capacity.

5. *Thematic Expertise:* Proposal should demonstrate expertise in the subject area.

6. *Cross-Cultural Sensitivity/Area Expertise:* Evidence of sensitivity to historical, linguistic, and other cross-cultural factors; relevant knowledge of geographic area.

7. *Ability to Achieve Program Objectives:* Objectives should be reasonable, feasible, and flexible. Proposal should clearly demonstrate how the grantee institution will meet the program's objectives.

8. *Multiplier Effect:* Proposed programs should strengthen long-term mutual understanding, to include maximum sharing of information and establishment of long-term institutional and individual ties.

9. *Cost-Effectiveness:* The overhead and administrative components should be kept as low as possible. All other items should be necessary and appropriate to achieve the program's objectives.

10. *Cost Sharing:* Proposals should maximize cost-sharing through other private sector support as well as institution direct funding contributions.

11. *Follow-on Activities:* Proposals should provide a plan for continued exchange activity (without USIA support) which ensures that USIA supported programs are not isolated events.

12. *Project Evaluation:* Proposals should include a plan to evaluate the activity's success.

Notice

The terms and conditions published in this RFP are binding and may not be modified by any USIA representative. Explanatory information provided by the Agency that contradicts published language will not be binding. Issuance of the RFP does not constitute an award commitment on the part of the Government. Final award cannot be made until funds have been fully appropriated by Congress, allocated and committed through internal USIA procedures.

Notification

All applicants will be notified of the results of the review process on or about May 20, 1993. Awarded grants will be subject to periodic reporting and evaluation requirements.

Dated: December 18, 1992.

Barry Fulton,

Acting Associate Director, Bureau of Educational and Cultural Affairs.

BILLING CODE 8230-01-M

DEPARTMENT OF VETERANS AFFAIRS

Geriatrics and Gerontology Advisory Committee; Meeting

The Department of Veterans Affairs gives notice under Public Law 92-463 that a meeting of the Geriatrics and Gerontology Advisory Committee (GGAC) will be held January 26 and 27, 1992, by the Department of Veterans Affairs, in the Conference Room 7 of the Ramada Renaissance Hotel—TechWorld, 999 Ninth Street, NW., Washington, DC. The purpose of the Geriatrics and Gerontology Advisory Committee is to advise the Acting Secretary of Veterans Affairs and the Chief Medical Director relative to the care and treatment of the aging veterans, and to evaluate the Geriatric Research, Education and Clinical Centers. The committee will meet on January 26 from 8:30 a.m. until 4:30 p.m. and will reconvene on January 27 at 8:30 a.m. and adjourn at 12 noon. The meeting is open to the public up to the seating capacity of the room. For those wishing to attend contact Jacqueline Holmes,

Program Assistant, Office of Assistant Chief Medical Director for Geriatrics and Extended Care (phone 202–535–7165) prior to January 22, 1992.

Changes in geriatric programs and update on allied health care training will be the primary topics for discussion.

Dated: December 15, 1992.

Diane H. Landis,

Committee Management Officer.

BILLING CODE 8320–01–M

Advisory Committee on Structural Safety of Department of Veterans Affairs Facilities; Meeting

The Department of Veterans Affairs gives notice under Public Law 92–463 that a meeting of the Advisory Committee on Structural Safety of Department of Veterans Affairs Facilities will be held in room 442, of the Lafayette Building, 811 Vermont Avenue, NW., Washington, DC, on January 29, 1993, at 10 a.m. The committee members will review Department of Veterans Affairs construction standards and criteria relating to fire, earthquake and other disaster resistant construction.

The meeting will be open to the public up to the seating capacity of the room. Because of the limited seating capacity, it will be necessary for those wishing to attend to contact Mr. Krishna K. Banga, Acting Director, Structural Engineering Service, Office of Construction Management, Department of Veterans Affairs Central Office (phone 202–233–2864) prior to January 27, 1993.

Dated: December 15, 1992.

Diane H. Landis,

Committee Management Officer.

Sunshine Act Meetings

Federal Register
Vol. 57, No. 248
Thursday, December 24, 1992

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

BLACKSTONE RIVER VALLEY NATIONAL HERITAGE CORRIDOR COMMISSION

Notice of Meeting

Notice is hereby given in accordance with Section 552b of Title 5, United States Code, that a meeting of the Blackstone River Valley National Heritage Corridor Commission will be held on Thursday, January 14, 1993.

The Commission was established pursuant to Public Law 99–647. The purpose of the Commission is to assist federal, state and local authorities in the development and implementation of an integrated resource management plan for those lands and waters within the Corridor.

The meeting will convene at 7:00 p.m. at the Slatersville Congregational Church, On the Common, Slatersville, RI, for the following reasons:

1. Presentation of North Smithfield significance and projects.
2. Corridor video.
3. Report of Executive Committee on budget and administration.
4. Report of Boundary Committee.
5. Status of demonstration projects.

It is anticipated that about twenty people will be able to attend the session in addition to the Commission members.

Interested persons may make oral or written presentations to the Commission or file written statements. Such requests should be made prior to the meeting to: James Pepper, Executive Director, Blackstone River Valley National Heritage Corridor Commission, P.O. Box 730, Uxbridge, MA 01569. Telephone: (508) 278–9400.

Further information concerning this meeting may be obtained from James Pepper, Executive Director of the Commission at the address noted on this letterhead.

James R. Pepper,

Executive Director, Blackstone River Valley National Heritage Corridor Commission.

Environmental Protection Agency

40 CFR Parts 261, et al.
Wood Preserving; Identification and Listing of Hazardous Waste; et al., Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 261, 264, 265, and 302

[FRL–4155–5]

RIN 2050–AD35

Wood Preserving; Identification and Listing of Hazardous Waste; Standards and Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is amending the regulations for hazardous waste management under the Resource Conservation and Recovery Act (RCRA) by modifying the technical standards for drip pads used to collect preservative drippage from treated wood and modifying the listings of three categories of hazardous waste from the wood preserving industry. These listings include wastewaters, process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use or have used pentachlorophenol (F032), that currently use creosote (F034), or that currently use inorganic preservatives containing arsenic or chromium (F035). This action modifies portions of the regulations that were previously finalized by EPA on December 6, 1990 (50 FR 50450). Portions of that final rule were administratively stayed on June 13, 1991 (56 FR 27332), and again on February 6, 1992 (published in the **Federal Register** on February 18, 1992 [57 FR 5859]). Today's amendments constitute final action on the June 1991 Administrative Stay and result in termination of that stay. The February 6, 1992 stay is also terminated as a result of today's action. This notice also modifies the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) list of hazardous substances to reflect the modifications to the F032, F034, and F035 hazardous waste listings.

DATES: This final rule will become effective on December 24, 1992 except for the amendments to the following provisions which are effective on June 24, 1993: §§ 264.570(c)(1), 264.573(a)(4)(i), and (b)(3), 265.440(c)(1), 265.443(a)(4)(i) and (b)(3) and the revision of hazardous waste number F032 in § 261.31. See section VII of Supplementary Information for further details.

ADDRESSES: The official record of this rule-making is identified by Docket Number F92–WP2F–FFFFF and is located at the following address: EPA RCRA Docket Clerk, Room 2427 (OS–332), U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460.

The docket is open from 9 a.m. to 4 p.m., Monday through Friday, excluding Federal holidays. The public must make an appointment to review docket materials by calling (202) 260–9327. The public may copy 100 pages from the docket at no charge; additional copies are $0.15 per page. Copies of materials relevant to the CERCLA portions of this rulemaking also are located in room 2427 at the above address.

FOR FURTHER INFORMATION CONTACT: The RCRA/Superfund Hotline, at (800) 424–9346 (toll-free) or (703) 920–9810, in the Washington, DC metropolitan area. The TDD Hotline number is (800) 553–7672 (toll-free) or (703) 486–3323, locally. For technical information on the modifications to the hazardous waste listings and drip pad standards, contact Mr. David J. Carver at (202) 260–6775, Office of Solid Waste (OS–333), U.S. Environmental Protection Agency, 401 M Street, SW, Washington, DC, 20460.

For technical information on the CERCLA aspects of this rule, contact: Ms. Gerain H. Perry, Response Standards and Criteria Branch, Emergency Response Division (OS–210), U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460, (202) 260–5650.

SUPPLEMENTARY INFORMATION: The contents of the preamble are listed in the following outline:

VIII. Regulatory Requirements
  A. Executive Order 12291
  B. Regulatory Flexibility Act
IX. Paperwork Reduction Act

I. Legal Authority

These regulations are being promulgated under the authority of sections 2002(a), 3001(b) and (e)(1), and 3004 of the Solid Waste Disposal Act, as amended, 42 U.S.C. 6912(a) and 6921(b) and (e)(1) (commonly referred to as RCRA), and section 102(a) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), 42 U.S.C. 9602(a).

II. Background

A. General

Section 3001(e)(1) of RCRA requires EPA to determine whether to list as hazardous wastes containing chlorinated dioxins and chlorinated dibenzofurans. As part of this mandate, the Agency initiated a listing investigation of dioxin-containing wastes from pentachlorophenol wood preserving processes and pentachlorophenate surface protection processes. Two other similar wood preserving processes that use creosote and aqueous inorganic formulations containing chromium or arsenic were also included in this investigation.

On December 30, 1988, EPA proposed four listings pertaining to wastes from wood preserving and surface protection processes, as well as a set of standards for the management of these wastes (53 FR 53282). The Agency finalized three generic hazardous waste listings for wastes from wood preserving processes and promulgated standards for the management of these wastes on drip pads (40 CFR parts 264 and 265, subpart W) on December 6, 1990 (55 FR 50450).

The purpose of this final rule is to amend the F032, F034, and F035 listings and portions of the subpart W requirements for drip pads. As explained briefly above, the EPA proposed these amendments in a notice published in the **Federal Register** on December 5, 1991 (56 FR 163848). As with the original final rule, the scope of today's amendments does not include wastes that are included in the K001 listing (bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and/or pentachlorophenol).

B. Administrative Stays

1. June 6, 1992 Administrative Stay

On December 31, 1990, the American Wood Preservers Institute (AWPI) formally requested a stay of the effective date for compliance with the final rule, and also filed a petition for judicial review of the rule. EPA issued an Administrative Stay on June 13, 1991 (see 56 FR 27332). Elements of the December 6, 1990 final rule subject to that stay are the following:

- The F032, F034, and F035 listings in the process area only (until February 6, 1992 for existing drip pads and until May 6, 1992 for new drip pads);
- The requirement for impermeably sealed or coated surfaces for new drip pads, until further administrative action is taken;
- The applicability of the F032 waste code to wastes generated by previous users of pentachlorophenol, provided that they are regulated as F034 or F035, until further administrative action is taken; and
- The applicability of the F032, F034, and F035 listings to wastewaters that do not contact listed process wastes, until further administrative action is taken.

This stay further required that a facility adhere to several conditions in order to be eligible for the stay. The Agency did this in an effort to limit the extension provided by the stay to those facilities making bona fide efforts to comply with the original final rule. The conditions of the stay are as follows.

(1) By August 6, 1991, a facility must have notified the proper authorities of its intent to either install or upgrade a drip pad, or cease operations by August 7, 1991;

(2) By November 6, 1991, a facility must have provided evidence of *bona fide* efforts to comply with its earlier stated intent;

(3) By February 6, 1992, a facility must have completed any upgrades to existing pads, including installation of an impermeable coating, sealer, or cover; and

(4) By May 6, 1992, a facility must have completed installation of new pads.

The staying of the F032, F034, and F035 listings in the process area does not require further administrative action to effect termination of the stay. The remaining elements of the June 1991 stay require specific administrative action to effect their termination. These elements of the December 1990 final rule were proposed for modification in the December 5, 1991 NPRM and are being finalized today. Accordingly, today's final rule constitutes the final administrative action that terminates the stay of these provisions.

2. February 6, 1992 Administrative Stay

Because the Agency had not promulgated today's final rule prior to the February 6, 1992 deadline set forth in the June 13, 1991 Administrative Stay, the Agency issued a subsequent Administrative Stay on February 6, 1992 (57 FR 5859). This action stayed the impermeability requirements for existing drip pad coatings, sealers, and covers until October 30, 1992. Because today's final rule amends the impermeability requirement, replacing it with a specific hydraulic conductivity standard, the February 6, 1992 stay is no longer applicable. The Agency is establishing today a new compliance date for the hydraulic conductivity standard (see section VII). Facilities with existing drip pads must meet the new hydraulic conductivity standard before the compliance date established in today's rule, and not the October 30, 1992 deadline set in the administrative stay.

III. Summary of the Regulation

A. Overview of the Proposed Rule

In the December 5, 1992 **Federal Register**, EPA proposed to revise several elements of the wood preserving hazardous waste regulations and requested comment on those issues. The Agency proposed the following actions: (1) Eliminate the F032 classification for certain wastes generated by past users of chlorophenolic formulations that any wastewaters, drippage, process residuals, or spent preservatives are regulated as F034 wastes, F035 wastes, or wastes exhibiting the Toxicity Characteristic (TC); (2) narrow the scope of the wastewater listings contained in the F032, F034, and F035 listings to include only those wastewaters that come in contact with process contaminants; (3) require contingency plans and cleanup of storage yard drippage in response to incidental drippage in storage yards; (4) remove the requirement that new drip pad coatings, sealers or covers be impermeable; (5) add a requirement that new drip pads have leak collection devices; (6) revise the requirement that all existing drip pad coatings, sealers, or covers be impermeable to reflect data on the permeabilities of available coatings, sealers, or covers; (7) require that drip pad surface materials be chemically resistant to the preservation being used and that these surface materials be maintained free of cracks, gaps, corrosion, or other deterioration that would increase their hydraulic conductivity above the 1×10^{-7}cms level and lead to a potential for releases to the environment; (8) revise the requirement that drip pads be cleaned weekly to a requirement that drip pads be cleaned in a manner and frequency such that the entire surface of drip pads can be inspected weekly; (9) revise the schedule for upgrading existing drip pads to allow 15 years for the incorporation of liners and leak detection systems; and (10) revise the CERCLA designation of hazardous substances to reflect the modifications in the listings.

The Agency also requested comment as to whether the standards for new drip pads should allow the choice of either a highly impermeable surface (e.g., sealers, coatings, or covers for concrete drip pads) or a liner with a leak detection and collection system.

B. Overview of the Final Rule

Today's rule finalizes modifications proposed on December 5, 1991 (56 FR 63848) to the wood preserving waste listings and drip pad regulations originally promulgated on December 6, 1990 (55 FR 50450). The modifications being finalized today are summarized below.

1. Provisional Elimination of the F032 Waste Code

The listing description for F032 promulgated in the December 6, 1990 final rule includes wastes generated at wood preserving plants that currently use or previously used chlorophenolic formulations. That final rule also contained a provision whereby a facility owner/operator could "delete" the F032 waste code from the wastes if the facility's process no longer uses chlorophenolic formulations and the facility meets other criteria outlined in § 261.35 (see 55 FR 50483). In the December 5, 1991 NPRM, EPA proposed to eliminate the applicability of the F032 listing to wastes generated by past users of chlorophenolic formulations that have ceased using such formulations, provided that any wastes generated exhibit the Toxicity Characteristic or meet the listing description of F034 or F035 (56 FR 63849).

In today's rule, the Agency is finalizing a portion of this provision. Today's action eliminates the applicability of the F032 waste code to wastes generated by wood preserving operations that previously used, but no longer use, chlorophenolic preservatives, provided that any wastewaters, process residuals, drippage, or spent preservatives generated by those operations are

regulated as F034 or F035 wastes. EPA has made this elimination of the F032 waste code conditional in order to ensure continued protection of human health and the environment. Given this approach, the wastes generated by past users of chlorophenolic formulations will continue to be subject to appropriate management standards under Subtitle C. There is no additional environmental benefit to be gained from regulating wastes from past users of chlorophenolic formulations as F032 wastes, provided the wastes are regulated as F034 or F035 wastes. It is important to note, however, that although F034 and F035 do not include dioxin as a basis for listing, wastes generated by past users of chlorophenolic formulations that are reclassified as F034 or F035 may contain dioxin due to cross-contamination with wastes formerly classified as F032. As discussed in the December 1991 NPRM, this will be relevant in establishing treatment standards under the Land Disposal restrictions program of 40 CFR 268.

As discussed above, the December 1991 NPRM proposed to extend eligibility for the provisional elimination of the F032 waste code to wastes that exhibit that TC as well as wastes meeting the F034 or F035 listings. The Agency has decided not to finalize the TC portion of the proposed conditional elimination for wastes from past users of chlorophenolic preservatives. Therefore, TC wastes generated by past users of chlorophenolic formulations which do not meet the F034 or F035 listing descriptions are still considered F032 wastes, unless the generator satisfies the cleaning and replacement requirements of 40 CFR 261.35.

2. Narrowing of the Wastewater Listings

EPA is promulgating amendments to the listings of F032, F034 and F035, as proposed, to exclude wastewaters that have not come into contact with process contaminants. For purposes of today's rule (and as stated in the June 13, 1991 Administrative Stay), EPA intends "process contaminants" to include hazardous constituents from formulations of preservative and any F032, F034 of F035 wastes. Therefore, wastewaters that never conduct these process contaminants do not fall within the scope of the listings, as amended today. Rainwater, however, that is collected on drip pads and conveyed to a collection system would be considered a hazardous waste if it becomes mixed with hazardous wastes from wood preserving operations. This contaminated rainwater would then meet the definition of a wastewater generated from the facility and would have to be treated as a listed hazardous waste.

3. Drippage in Storage Yards and Contingency Plans

On December 5, 1991, the Agency proposed to require owners/operators of wood preserving plants to develop and implement a contingency plan for immediate response to incidental drippage in storage yards. Today, EPA is finalizing this requirement as proposed and is providing guidance through this preamble discussion of what EPA intends by "immediate response." With respect to the word "immediate," the Agency intends, absent extenuating circumstances, that owners/operators respond to storage yard drippage that occurs when a facility is in operation within one consecutive working day. A facility is considered in operation on any day in which it is treating wood. For facilities which are not in operation during a storage yard drippage event, the Agency expects the facility to clean up drippage within 72 hours of occurrence. EPA recognizes that the term "immediate" must take into account the nature of the incident as well as facility-specific factors. The above clarification of "immediate" recognizes that facilities have "down" times, and that a facility may not have adequate staff available during down times, weekends, or holidays.

It is important to note that the timing of response to drippage is based on when the drippage actually occurs, rather than when the drippage is detected in the storage year. The approach promulgated today places the responsibility for checking storage yards for drippage on the facility owner/operator. Regular checks of storage yards, particularly following the initial storage of newly treated wood, allow owners/operators to response to drippage as required by today's rule.

With respect to the word "response," EPA intends to include cleanup and removal of preservative drippage from the storage yard which is consistent with Federal Regulations. Because response must be "immediate," as discussed above, drippage would not remain in the storage yard long enough to cause significant contamination of the soil or other environmental media. Therefore, extensive remediation will not be necessary for periodic cleanup of drippage in accordance with the contingency plan. For purposes of today's rule, removal of visible drippage from storage yards will satisfy the requirements for immediate response. Today's rule does not require sampling and analysis for confirmation of contamination in storage yards. If historical contamination exists at a wood preserving plant, any remediation would proceed under an enforcement order and would be independent of any response to incidental storage yard drippage required by this rule.

Today's rule requires facility owners/operators to maintain a written plan that describes how the facility will respond to incidental drippage in the storage yard. As described in the NPRM, and as finalized in today's rule, this plan, at a minimum, must describe how the owner/operator will do the following:

(i) Clean up of the drippage
(ii) Document the clean-up of the drippage
(iii) Retain the documents regarding the clean up for three years; and
(iv) Manage the contaminated media in a manner which is consistent with Federal regulation.

The NPRM stated that the contingency plan meet the requirements of subpart D of 40 CFR part 264/265. By this, the Agency did not intend, and is not requiring in today's rule, that the contingency plan for responding to incidental storage yard drippage meet the detailed content requirements for subpart D. The Agency believes that those requirements exceed what is necessary for a written plan for responding to incidental storage yard drippage. Today's rule still requires that a written plan be developed and maintained at the facility, and that the plan be available for inspection by the Agency or its representatives.

With respect to the requirement that the cleanup of incidental drippage in the storage yard be documented, the Agency will consider an annual certification, signed and on company letterhead, that the owner/operator has cleaned up in accordance with today's final rule requirements, to be adequate documentation. Individual facilities, however, may elect to keep more detailed records, including records for each cleanup incident, to defend, for example, against potential claims of liability.

4. New Drip Pad Coating, Sealer or Cover Impermeability Requirement

As proposed in the December 5, 1991 NPRM, EPA is revising the 40 CFR subpart W regulations for drip pads by removing the requirement that new drip pads have an impermeable surface coating, sealer or cover. Furthermore, the Agency has decided to remove the requirement for new drip pads to have liners and leak detection with leak collection if coatings and sealers are chosen. As discussed in the proposal, the Agency requested comment on the

relative merits of allowing industry a choice for new drip pads of having a surface protection system on the drip pad surface or a liner and leak detection system below pad with no surface protection. The Agency has decided to allow regulated community to choose between these two options.

In the NPRM, the Agency noted that the design criteria for coatings could be more complex than the design criteria for a liner and leak detection system. Specifically, EPA was concerned that coatings would not be an effective barrier unless operators applied coatings and sealers to the drip pad which are chemically resistant to the preservatives in use and which are maintained against corrosion and wear. Therefore, EPA is today promulgating requirements to ensure that new drip pads with coatings, including extensions to existing drip pads, are designed and maintained to be an effective barrier to migration of contaminates from the drip pad.

Today's requirements for existing drip pad surface protection will be applicable to new drip pads. A new drip pad without a liner and leak detection system will be in compliance with subpart W requirements if the owner/operator applies a surface protection system to the pad which meets the permeability requirements for existing drip pads and is chemically resistant to the preservative being used. Likewise, a new drip pad following these technical requirements must be inspected and certified annually by an independent qualified registered professional engineer.

It is the Agency's belief that a drip pad with a liner and leak detection system may require less maintenance than a drip pad with a surface coating only, potentially saving a facility a substantial amount of money over the lifetime of a new pad. However, commenters to the proposed rule pointed out specific situations where coatings may be more cost effective. New drip pads may be located in specific environmental locations (i.e. with a high seasonal water table) or a facility situation (i.e. an extension to the existing drip pad that does not have a liner) in which it is less expensive to use coatings than a liner and leak detection system. Further, if the cost of highly impermeable coatings declines in the future, allowing the two compliance options in today's rule could reduce overall compliance costs. Since the Agency finds that either requirement for new drip pads promulgated today provides for adequate protection of human health and the environment, the Agency has decided to allow the regulated community the flexibility to choose either compliance option. However, the Agency believes that either requirement for new drip pads promulgated today provide for adequate protection of human health and the environment.

5. Leak Collection Systems for New Drip Pads

The EPA is finalizing the proposal that new drip pads which are equipped with a liner and leak detection system also be equipped with a leak collection system below the pad and above the liner so that any leakage through the pad can be collected and removed. With a leak collection system in place, water and preservative formulations that leak through the pad can be removed before they even reach the liner. This collection system will also aid the facility in determining whether or not (and the extent to which) pad failure has occurred. The leak collection system required by today's rule is to be a collection device separate from than the sump system used to collect drip pad washdown water. The purpose of this separate collection device is to differentiate between washdown water and leachate collection which could occur due to drip pad permeation. Owners and operators must document, in the facility's operating record, the date, time, and quantity of leakage collection when it is removed from the collection device. This information will be useful to the Agency in enforcing the requirement that new drip pads be maintained in a structural sound manner. This leak collection requirement will apply to all new drip pads which are fitted with a liner and leak collection system constructed after the publication date of today's rule, except for those pads constructed after such time, for which the owner/operator has entered into binding financial or other agreements for construction prior to the publication date of today's rule. As stated in the NPRM, the requirement to install a leak collection system on new drip pads does not affect the responsibility of an owner/operator to remove some or all of a drip pad to clean up any release of hazardous waste to the environment in the event such a release occurs. This requirement, however, should minimize the frequency of these potentially costly cleanup activities.

6. Existing and New Drip Pad Coating, Sealer, and Cover Permeability Requirements

EPA is aware that the requirement for an absolutely impermeable surface cannot be practicably met. The Agency's intent in the December 6, 1990 rule was to require a surface coating, sealer, or cover for concrete drip pads (or similar porous or easily-fractured materials of construction) that would provide incremental protection against permeation of preservative through the drip pad and thus serve to ensure less permeability than would be achieved by the drip pad alone. This requirement would be applicable to concrete or other porous or easily fractured materials of construction but may not be applicable to other materials of construction such as steel.

Today's rule finalizes the proposed standard that existing drip pad coatings, sealers, or covers have a hydraulic conductivity of less than or equal to 1×10^{-7} cm/second. This requirement, which was proposed for existing drip pads, also applies to new drip pads for which the owner/operator has chosen surface protection over liners and leak detection, and collection, as described elsewhere in the preamble. The Agency recognizes that the most common material for drip pad construction has been concrete. Thus, the conductivity value of 1×10^{-7} cm/s has been derived from the theoretical conductivity of unfractured, well constructed concrete. Available data reflect that coatings, sealers and covers that meet this standard are currently on the market.

A common unit of measurement within the protective coating and sealer industry to express a coating, sealer, or liner's hydraulic conductivity is a mass flux number given in units of grains per ft^2. The hydraulic conductivity value of 1×10^{-7} cm/s can be expressed as a flux with an equivalent value of 1×10^{-7} grams/cm^2/s or in English units of 5.168 grains/ft^2/hr, assuming that values for water are used in the calculation. Additionally, to convert from grains per hour per ft^2 to units of cm/s, one has to multiply by 1.934964×10^{-8} (ft^2)(hr)(cm)/(s)(grains). This flux number was obtained by assuming that a worst case scenario would exist if pure water was used to permeate through a pad, instead of preservative. The Agency has no data on the infiltration rates of preservatives but it is logical that water would permeate a drip pad somewhat more rapidly than a preservative formulation. The Agency believes that the adoption of a 1×10^{-7} cm/s hydraulic conductivity based on a worst case scenario is reasonable. Indeed, because wastes mixed with rainwater or other water may be present and may permeate the pad, the Agency stands by its calculation. Therefore, the density term in the calculation was chosen for water at room temperature and atmospheric pressure. The details of

this calculation along with any assumptions can be found in the docket for this rule.

In the NPRM, EPA identified ASTM Method E–96 Procedure E as an accepted method for measuring the infiltration rate of water vapor into a drip pad surface. EPA continues to support this method as acceptable, although its use is not required and other appropriate methods may be used.

7. Selection of a Chemically Compatible Surface Material for Existing and New Drip Pads

Today's rule also promulgates a requirement that existing and (if applicable) new drip pads be constructed with coatings, sealers, or covers that are chemically compatible with the preservatives being used. Furthermore, these surface materials must be maintained free of cracks, gaps, corrosion, or other deterioration that would increase the hydraulic conductivity of drip pad coatings, sealers, and covers above the 1×10^{-7} cm/s level and lead to a potential for releases to the environment. There is no testing requirement associated with this provision; an owner/operator is not required to demonstrate through testing that a surface material is compatible with the preservatives being used.

8. Drip Pad Cleaning Requirements

The Agency is revising the drip pad cleaning requirements as proposed. Cleaning of drip pads is required in a manner and frequency to be determined on a facility-specific basis by the owner/operator to allow weekly inspections of the entire surface of the drip pad. The current requirements to document the date and time of each cleaning to which revisions were not proposed remain unchanged.

9. Timeframe for Existing Drip Pads To Comply With New Drip Pad Standards

The Agency is not finalizing the proposal to allow 15 years from the effective date of today's rule for owners/operators of existing drip pads to meet the new drip pad standards. The requirements at 40 CFR part 265, subpart W are amended today to reflect these changes. In addition to removing the 15 year upgrade requirement, the Agency is removing the requirement that owners/operators of existing drip pads document the age of their drip pad. Because this requirement was directly related to the 15 year upgrade requirement, there is no logical reason to maintain it in the absence of that upgrade provision. As discussed elsewhere in this preamble, the Agency has elected to allow facilities to comply with the standards for new drip pads by choosing between liner and leak detection and surface protection. Because the substantive requirements for existing pads (particularly the requirement of an annual, certified written assessment of the drip pads compliance with regulatory standards) are the same as those being promulgated today for new drip pads for which surface protection has been elected over liners, the proposed 15 year upgrade deadline has become unnecessary and irrelevant.

For example, at the end of the proposed 15 year period, an owner/operator could choose to continue meeting the surface protection requirement, or could retrofit an existing pad or build a new pad to include a liner and leak detection system. Since the surface protection option is consistent with the standards that owners/operators are already required to meet for existing drip pads, the owner/operator is able to meet the standards for new drip pads without adapting to different standards. Thus, at the end of the 15 year period, an owner/operator in compliance with the requirements for existing drip pads would be in compliance with the standards for new drip pads as well. As stated elsewhere in this preamble, Agency believes that a well constructed drip pad that complies with the surface protection requirement may provide sufficient protection for a period greater than 15 years. The annual certification requirement for drip pads with surface protection is intended to ensure that drip pads meet these requirements.

Of course, today's rule allows the owner/operator to install a drip pad with a liner or retrofit an existing pad with a liner to meet the standards for new drip pads. Under today's rule, there is no requirement that the owner/operator do so within 15 years. The decision to choose the liner option, as well as the decision of when to install or retrofit a drip pad to meet these requirements are left to the individual facility. It is important to note, however, that the Agency is maintaining the requirement that owners/operators develop a written plan for upgrading, repairing, and modifying the drip pad if the owner/operator chooses to meet the standards for new drip pads by installing a liner and leak detection system. Any such plan must still be submitted to the Regional Administrator no later than 2 years before the date that all repairs, upgrades, and modifications will be complete.

10. CERCLA Hazardous Substance Designation

All hazardous wastes listed pursuant to RCRA 3001 are hazardous substances as defined in section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), as amended. The designations for F032, F034, and F035 in Table 302.4 (40 CFR 302.4) are revised today to reflect the modifications to their listing descriptions under RCRA (40 CFR 261.31). Reportable quantities (RQ's) for these revised CERCLA designations are set at one pound, consistent with the RQ's established in the December 6, 1990 final rule, for the initial CERCLA listings for F032, F034, and F035.

IV. Summary of Public Comments and Responses

The Agency received several comments on the NPRM, covering a range of issues. These major issues presented in these comments and the Agency's responses are addressed separately below for clarity and ease of understanding. A complete summary of comments received and the Agency's responses thereto are contained in the separate document entitled "Response to Public Comment" which is located in the docket associated with today's rulemaking. The major issues from public comments, however, are summarized and responded to in this section.

A. Provisional Elimination of F032 Waste Code

Several comments were received on the conditions for elimination of the F032 waste code from wastes generated at plants that previously used, but no longer use, chlorophenolic formulations. As proposed in December 1991, these conditions required that any wastes generated by past users of chlorophenolic formulations either exhibit the TC or be regulated as F034 or F035 wastes to qualify for elimination of the code. Industry commenters generally supported the provisional elimination of the waste code. Two commenters, however, requested that EPA remove the reference to TC wastes. The commenters stated that listed wastes are subject to a different regulatory regime than are characteristic wastes. Thus, while the Agency could be sure that F034 and F035 wastes generated by past users of chlorophenolic preservatives would be subject to the identical scheme of regulation as F032 wastes, the same cannot be said of TC wastes generated by past users.

The Agency agrees with the commenters' rationale and has decided not to include TC wastes within the conditional elimination for wastes from past users of chlorophenolic formulations. TC wastes were originally added to the conditional elimination proposal to regulate wastes in States that are authorized for the base RCRA program but have not adopted the F034 or F035 listings. The Agency notes that its regulations require all States authorized for the base program to pick up the F034 and F035 listings by the end of December 1992 (See 40 CFR 271.21). As the commenter stated, the regulatory standards that apply to F032, F034 and F035 wastes are identical; therefore, the Agency can be assured that wastes generated by past users of chlorophenolic formulations that are reclassified as F034 or F035 will be managed consistently. In addition, it is programmatically more difficult to establish and implement land ban treatment standards for cross-contaminated wood preserving wastes under the TC than under the F034/F035 listings. The F034/F035 listings involve a clearly defined industry and a significantly smaller universe of wastes than that which is potentially captured by the TC.

One commenter urged the Agency to expand the provision for deletion of the F032 code to include wastes generated by past users of chlorophenolics that are not regulated as hazardous wastes. Such an approach would undermine the central premise of the F032 waste code deletion concept. As discussed above, EPA wants to ensure that wastes from which the F032 code is deleted continue to be managed properly under the Subtitle C regime. In this way, the deletion provision has not established a regulatory loophole of any kind but continues to provide protection of human health and the environment.

Finally, one commenter stated that the F032 waste code appeared to overlap with the existing F027 listing, in that spent formulations would be regulated as F027. The Agency clarifies here that the F027 listing applies only to discarded unused formulations containing tri-, tetra-, or pentachlorophenol. Therefore, spent formulations are not covered by the F027 listing. On the other hand, the listing descriptions for F032, F034 and F035 explicitly include spent formulations from wood preserving processes. The same commenter suggested that EPA clarify that the F032, F034 and F035 listings do not include wastes from the wood surface protection industry. EPA believes that the listing descriptions for F032, F034 and F035 are clear as to which wastes they encompass. On December 30, 1988, the Agency proposed to list wastes from wood surface protection processes as F033 (53 FR 53330). This listing was not finalized along with the rest of the wood preserving rule on December 6, 1990; a possible F033 listing will be pursued in the future as a separate Agency action. Today's rule, as with the December 6, 1990 rule, does not apply to wastes from the wood surface protection industry.

B. February 6, 1992 Deadline

One commenter (a wood preserving industry trade group) requested a six month extension of the February 6, 1992 deadline for existing pads to comply with the numerical standard for coating, sealer and cover permeability. The Agency has already recognized that February 6 presented an impractical deadline for compliance with standards for existing drip pads that the Agency proposed to modify but had yet to amend by that date. In order to remedy this situation, EPA issued an Administrative Stay on February 6, 1992 (57 FR 5859; February 18, 1992), staying the impermeability requirement for drip pad surfaces until October 30, 1992. However, as explained elsewhere in this notice, today's final rule modifies the permeability standard for existing drip pads, and establishes a new compliance date for meeting the new standard (see section VII). The effective date established in the February 1992 stay is no longer applicable; rather, facilities must now meet the later compliance deadline associated with the permeability standard promulgated today.

C. Mixture Rule and Contained-In Policy

Several commenters were concerned with the management of media contaminated with wood preserving wastes, particularly in light of the court remand of the mixture and derived-from rules (*Shell Oil Co.* v. *EPA*, 950 F. 2d 741, D.C. Cir. 1991). At the outset, neither the mixture rule nor the derived-from rule (which the Agency reinstated on March 3, 1992, 57 FR 7628), applies to environmental media. These rules concern the regulatory status of solid wastes. Two commenters urged EPA to develop risk-based *de minimis* levels for listed hazardous wastes that are "contained in" environmental media.

One commenter argued that EPA should not include environmental media within the listings themselves. EPA emphasizes that the listings for F032, F034, and F035 as promulgated on December 6, 1990, and as modified today, do not specifically include environmental media in the listing criteria. Environmental media can be classified as listed hazardous wastes, however, through application of the "contained-in" policy, whereby soils, rainwater, and other media that come into contact with listed hazardous wastes are themselves hazardous wastes (*i.e.*, they "contain" hazardous wastes). For example, soil that comes into contact with spent creosote formulations at a wood preserving plant and is subsequently excavated or otherwise actively managed, will carry the F034 listing.

Another commenter suggested that environmental media should be considered hazardous wastes only if they exhibit a characteristic of hazardous waste. Consideration of such an approach is far broader than the specific issues in this rulemaking and is outside the scope of the December 1991 NPRM.

Several commenters requested that EPA clarify that stormwater run-off is not a hazardous waste under 40 CFR 261.3(c)(2)(i). This regulatory citation refers to the "derived-from" rule, which states generally that any solid waste generated from the treatment, storage, or disposal of a hazardous waste, is itself a hazardous waste. This provision specifically exempts precipitation run-off from the derived-from rule (i.e., precipitation run-off is not considered to be "derived from" the treatment, storage or disposal of a hazardous waste and, therefore, is not itself a hazardous waste).

The nature of the Subpart W standards for drip pads, however, distinguishes them from the regulations governing other more conventional hazardous waste management units. The definition of drip pad in 40 CFR 260.10 states that a drip pad is "designed to convey preservative kick-back or drippage from treated wood, precipitation, and surface water run-on to an associated collection system at wood preserving plants" (55 FR 50482). In the July 1, 1991 technical correction notice, EPA amended the applicability sections of Subpart W in parts 264 and 265 to reflect that drip pads were intended to convey precipitation and surface water run-on as well as treated wood drippage (56 FR 30193). Additional language in the preamble to the December 1991 NPRM indicates the Agency's position on precipitation at wood preserving plants. In the discussion of wastewater listings, EPA states that rainwater (precipitation run-off) collected in a fashion that keeps it segregated from preservative formulations or listed wastes would not be considered a hazardous waste (56 FR 63850). On the other hand (and as

discussed above), rainwater that falls on a drip pad and contacts preservative formulations or listed wastes and is then collected is itself a hazardous waste by virtue of the contained-in policy (*i.e.*, the rainwater, which is an environmental medium, "contains" the hazardous waste). Because drip pads are hazardous waste management units designed and maintained to convey treated wood drippage, precipitation and surface water run-on to an associated collection system, the exemption for precipitation run-off in 40 CFR 261.3(c)(2)(i) does not apply to drip pads.

D. Narrowing of Wastewater Listings

The majority of commenters supported the Agency's proposal to narrow the wastewater listings to exclude wood preserving wastewaters that do not come into contact with process contaminants. One commenter believed that EPA should not regulate wastewaters that simply come into contact with process contaminants. The Agency disagrees and is not expanding this revision beyond what was proposed. Wastewaters that come into contact with process contaminants at wood preserving plants have the potential to solubilize and mobilize hazardous constituents and, therefore, warrant regulation as a hazardous waste under RCRA.

E. Storage Yard Drippage

The majority of commenters on the issue of incidental drippage in storage yards requested that EPA clarify what is meant by "immediate response" to such drippage. EPA appreciates the commenters' concerns and is providing guidance on the Agency's use of the term "immediate response" in today's rule. This guidance can be found in section III.B.3. of this preamble.

One commenter objected to the Agency requiring response to drippage in storage yards on the grounds that EPA has not shown any environmental benefit to be gained from such a requirement. The commenter went on to say that contamination in storage yards is limited to the first few feet of soil. EPA believes that this last statement about storage yard contamination justifies the requirement for responding to drippage in treated wood storage yards. There are several cases of historical contamination resulting from incidental drippage from treated wood stored outside on the ground. Since facility owners/operators are required to implement a contingency plan for responding to visible drippage from treated wood, the likelihood of incidental drippage causing long term contamination is greatly minimized, if not eliminated. As a result, EPA believes that the requirement to respond to preservative drippage in storage yards is consistent with the RCRA mandate to protect human health and the environment.

F. Revisions to Drip Pad Cleaning Requirements

All commenters supported the proposed changes to the drip pad cleaning requirements. One commenter stated that the recordkeeping requirement associated with the pad cleaning provisions is unnecessary and should be dropped. The Agency disagrees; the records maintained by facilities showing how often drip pads are cleaned and what cleaning procedure is used can provide valuable information for Agency and State officials conducting inspections of the site. For example, these records could show inspectors that aqueous preservatives do not obscure the drip pad and that weekly inspections can be conducted without frequent water washings of the pad. EPA notes that the recordkeeping requirement was promulgated as part of the original final rule on December 6, 1990. The December 1991 NPRM dealt only with the frequency of pad cleaning.

G. Policy to Allow Installation of Either a Surface Coating, Sealer, or Cover or a Liner and Leak Detection System

Two commenters favored the concept of allowing facility owners/operators the choice of installing either a surface coating, sealer, or cover or a liner and leak detection system on a new drip pad. One State agency commented that surface coatings alone do not provide adequate protection in cases of pad failure. The Agency disagrees. As discussed in the NPRM, the Agency believes that surface coatings, sealers, and covers provide a primary barrier against continuous chemical attack and limit permeation of preservatives through the pad. Liners, on the other hand, provide backup protection against unpredictable chemical exposure that could occur due to concrete micro-cracking without the use of coatings or sealers. EPA believes both options adequately protect human health and the environment. As discussed earlier, EPA is providing a choice to facilities to use either surface protection which meets the permeability and chemical resistance requirements of this rule or a liner and leak detection system to protect against releases into subsurface soils, ground water, and surface waters.

However, as discussed in the NPRM, the EPA believes that additional benefits could accrue with both the use of a liner and leak detection, and leak collection system and the use of sealers and coatings. Section VIII of this rule provides additional discussion of the costs of each option. Although not required, the EPA recommends the use of coatings and sealers and a liner and leak detection and leak collection system. EPA notes that the use of a surface coating, sealer, or cover can eliminate or minimize the amount of leakage to the liner and leak collection system.

One commenter suggested a change in the regulatory language to clarify which drip pads are required to meet the hydraulic conductivity standard of today's rule. EPA notes that the regulatory language promulgated today clearly specifies which drip pads are required to be equipped with a sealer, coating, or cover that meets the hydraulic conductivity standard. The Agency has not made the change suggested by the commenter. In addition to requiring a coating/sealer system on existing drip pads, today's rule allows an owner/operator to satisfy the standards for new drip pads by choosing to use either a coating/sealer system *or* a liner and leak detection and leak collection system.

One manufacturer of protective coatings commented that owners/operators should not be given the option of using either a sealer or a coating since most would not choose coatings due to cost. The Agency appreciates the commenter's interest in this matter but believes that sealers are also acceptable as a primary barrier against chemical attack of drip pads. In particular, the commenter objected to the use of penetrating sealers, stating that the breakdown of the sealer will allow absorption of CCA into the pad. The Agency disagrees with the commenter. Performance data provided by manufacturers indicate that penetrating sealers are capable of providing adequate protection from permeation of preservatives through drip pads, particularly given the pad cleaning requirements included in today's rule. In order for a facility owner/operator to inspect drip pads in accordance with Subpart W standards, water washings of the pad must occur at a frequency sufficient to allow visual inspection of the entire pad surface on a weekly basis.

H. Drip Pad Coating, Sealer, and Cover Permeability

The comments received on the numerical standard for drip pad coating, sealer, and cover permeability were generally favorable. One commenter, however, strongly disagreed with the

Agency's reliance on the calculation indicating 4 gallons per day of leakage from 2000 square feet of wetted concrete, indicating that very few wood preserving plants have four gallons per day of drippage in any event. The commenter went on to say that if concrete leaked that badly, most of the regulated community would believe that the primary liner had failed. As discussed in section III.B.6 of this preamble, the Agency stands by this calculation and its assumptions, which represent a worst case scenario. In addition to the discussion of the permeability standard in the NPRM (56 FR 63851), supporting documentation for the numerical standard can be found in the docket for this rulemaking. The reader is referred to these sources for background information. Today, the Agency is finalizing the performance standard as proposed, requiring that drip pad coatings, sealers or covers have a hydraulic conductivity of less than or equal to 1×10^{-7} cm/s.

One commenter suggested that EPA adopt ASTM Method E–96 Procedure BW for determining hydraulic conductivity. As discussed above, EPA has recommended ASTM Method E–96 Procedure E as an accepted method for measuring the rate of infiltration of water vapor into a drip pad surface. The Agency continues to recommend this method but does not preclude the use of other acceptable methods, such as the one referred to by the commenter. More information concerning water vapor transmission testing can be found in the docket of the December 5, 1991 NPRM (56 FR 63848).

I. Other Issues

EPA requested comment on several other issues that are not specifically addressed above. These are: (1) The addition of a requirement that new drip pads have leak collection systems, (2) a requirement that drip pad surface protection materials be chemically compatible with the preservatives being used, and (3) the revision of the schedule for upgrading existing drip pads to allow 15 years from publication of today's rule for owners/operators to meet the standard for new drip pads. EPA is finalizing the first two issues, but EPA is not finalizing the proposal to allow 15 years for owners/operators of existing drip pads to meet the new drip pad standards. As discussed elsewhere in this preamble, the Agency has elected to allow facilities to comply with the standards for new drip pads by choosing between liner and leak detection and surface protection.

With respect to the issue of the 15 year upgrade period, one commenter interpreted the NPRM to require owners/operators to demonstrate that no releases have occurred before the Regional Administrator will grant an extension of the 15 year deadline. EPA clarifies here that the regulations in subpart W do not require an owner/operator to make such a showing. Paragraph (b)(2) of §§ 264.571 and 265.441 states that the RA will grant a petition for extension of the 15 year period based on a finding that the drip pad meets all the requirements of §§ 264.573 and 265.443, other than those for liners and leak detection and collection systems, and that the pad will continue to be protective of human health and the environment.

One commenter asserted that plants using more than one type of preservative should be able to label their wastes with one waste code most appropriate for the nature of the waste, rather than ascribing two or three waste codes to the same waste. The Agency disagrees. It is not uncommon for wastes generated at one facility to carry multiple RCRA waste codes. Some overlap does occur among different hazardous waste listing descriptions. However, it is important to note that the listing of each hazardous waste under RCRA is based on a unique set of hazardous constituents contained in the waste (see part 261, appendix VII). For example, F032 is listed, in part, due to the presence of dioxins in the waste, whereas F034 is listed because it contains naphthalene and other hydrocarbons, but no dioxin. It is important that hazardous waste generators classify their wastes correctly when shipping them for subsequent management so that the owner/operator of the treatment, storage, and disposal facility (TSDF) has full knowledge of the composition of the waste. In this way, the TSDF can make an informed decision concerning proper treatment or disposal of the waste and ensure that protection of human health and the environment is not compromised.

V. State Authority

A. Applicability of Final Rule in Authorized States

Under section 3006 of RCRA, EPA may authorize qualified States to administer and enforce the RCRA program within the State. (See 40 CFR part 271 for the standards and requirements for authorization.) Following authorization, EPA retains enforcement authority under sections 3007, 3008, 3013, and 7003 of RCRA, although authorized States have primary enforcement responsibility.

Before the Hazardous and Solid Waste Amendments of 1984 (HSWA) amended RCRA, a State with final authorization administered its hazardous waste program entirely in lieu of the Federal program in that State. The Federal requirements no longer applied in the authorized State, and EPA could not issue permits for any facilities located in the State with permitting authorization. When new, more stringent Federal requirements were promulgated or enacted, the State was obligated to enact equivalent authority within specified time frames. New Federal requirements did not take effect in an authorized State until the State adopted the requirements as State law.

By contrast, under section 3006(g) of RCRA, 42 U.S.C. 6926(g), new requirements and prohibitions imposed by the HSWA take effect in authorized States at the same time that they take effect in nonauthorized States. EPA is directed to implement those requirements and prohibitions in authorized States, including the issuance of permits, until the State is granted authorization to do so. While States must still adopt HSWA-related provisions as State law to retain final authorization, the Federal HSWA requirements apply in authorized States in the interim.

Pursuant to section 3001(e) of RCRA, a provision added by HSWA, EPA added F032 to the list of hazardous wastes from nonspecific sources (40 CFR 261.31) in the December 6, 1990 rule. Thus, the changes finalized in today's rule in connection with F032, including modifications to the drip pad standards, will take effect in all States (authorized and unauthorized) on the effective date.

The elements of today's final rule as they apply to F034 and F035 wastes are not immediately effective in authorized States since the requirements are not imposed pursuant to HSWA. These regulations will apply in authorized States when F034 and F035 become hazardous wastes in that State, and when the State is authorized for the drip pad standards. However, should F034 or F035 wastes exhibit the Toxicity Characteristic, which was promulgated under HSWA authority and is effective in authorized States, such wastes managed on drip pads must meet the modified Subpart W standards. Today's amendments include a technical correction to footnote 2 of Table 1 in 40 CFR 271.1(j). To clarify this point, Table 1 identifies the Federal program requirements that are promulgated pursuant to HSWA, and that take effect in all States, regardless of their authorization status.

B. Effect on State Authorizations

1. HSWA Provisions

Because portions of the final rule are promulgated pursuant to HSWA, a State submitting a program modification is able to apply to receive either interim or final authorization under section 3006(g)(2) or 3006(b), respectively, on the basis of requirements that are substantially equivalent or equivalent to EPA's requirements. The procedures and schedule for State program modifications under section 3006(b) are described in 40 CFR 271.21. It should be noted that all HSWA interim authorizations are currently scheduled to expire on January 1, 1993 (see 40 CFR 271.24(c)).

2. Non-HSWA Provisions

As described above, other portions of today's notice will not be effective in authorized States since the requirements are not being imposed pursuant to HSWA. In authorized States, these requirements will not be applicable until the States revise their programs to adopt equivalent requirements under State law.

3. Modification Deadlines

Section 271.21(e)(2) of EPA's state authorization regulations (40 CFR part 271) requires that States with final authorization must modify their programs to reflect Federal program changes and submit the modifications to EPA for approval. The deadline by which the States must modify their programs to adopt this regulation will be determined by the date of promulgation of the final rule in accordance with section 271.21(e)(2). Once EPA approves the modification, the State requirements become Subtitle C RCRA requirements.

States with authorized RCRA programs already may have regulations similar to those in today's final rule. These State regulations have not been assessed against the Federal regulations being promulgated today to determine whether they meet the tests for authorization. Thus, a State would not be authorized to implement these regulations as RCRA requirements until State program modifications are submitted to EPA and approved. Of course, States with existing regulations may continue to administer and enforce their regulations as a matter of State law.

States that submit their official application for final authorization less than 12 months after the effective date of these standards are not required to include standards equivalent to these standards in their application. However, States must modify their programs by the deadlines set forth in 40 CFR 271.21(e). States that submit official applications for final authorization 12 months or more after the effective date of these standards must include standards equivalent to these standards in their applications. 40 CFR 271.3 sets forth the requirements that States must meet when submitting final authorization applications.

It should be noted that authorized States are required to modify their programs only when EPA promulgates Federal standards that are more stringent or broader in scope than existing Federal standards. Section 3009 of RCRA allows States to impose standards more stringent than those in the Federal program. For those Federal program changes that are less stringent or reduce the scope of the Federal program, States are not required to modify their programs. (See 40 CFR 271.1(i).) For example, the modification to the F032 listing is less stringent than the Federal program because it exempts wastes generated by past users of chlorophenolic formulations from the F032 listing under certain conditions. As a result, authorized States are not required to modify their programs to pick up this provision. On the other hand, the requirement that owners/operators develop and implement a contingency plan for response to incidental drippage in storage yards increases the stringency of the Federal program. Consequently, this provision must be adopted by authorized States.

VI. CERCLA Designation and Reportable Quantities

All hazardous wastes listed pursuant to 40 CFR 261.31 through 261.33, as well as any solid waste that exhibits one or more of the characteristics of a RCRA hazardous waste (as defined at 40 CFR 261.21 through 261.24), are hazardous substances as defined at section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), as amended. The CERCLA hazardous substances are listed in Table 302.4 at 40 CFR 302.4 along with their reportable quantities (RQs). CERCLA Section 103(a) requires that persons in charge of vessels or facilities from which a hazardous substance has been released in a quantity that is equal to or greater than its RQ shall immediately notify the National Response Center of the releases at 1-800-424-8802 or (202) 426-2675. In addition, Section 304 of the Superfund Amendments and Reauthorization Act of 1986 (SARA) requires the owner or operator of a facility to report the release of a CERCLA hazardous substance or an extremely hazardous substance of the appropriate State Emergency Response Commission (SERC) and to the Local Emergency Planning Committee (LEPC) when the amount released equals or exceeds the RQ for the substance or one pound where no RQ has been set. It is important to note that the RQ is measured by the volume of the hazardous substance released into the environment, not the volume of any resulting contaminated media.

The release of a hazardous waste to the environment must be reported when the amount released equals or exceeds the RQ for the waste, unless the concentrations of the constituents of the waste are known (48 FR 23566, May 25, 1983). If the concentrations of the constituents of the waste are known, then the Clean Water Act mixture rule may be applied. According to this rule, developed in connection with the Clean Water Act section 311 regulations and also used in notification under CERCLA and SARA (50 FR 13463; April 4, 1985), the release of mixtures and solutions containing hazardous wastes would need to be reported to the NRC, and to the appropriate LEPC and SERC, when the RQ of any of its component hazardous substances is equalled or exceeded. This mixture rule provides that "[d]ischarges of mixtures and solutions are subject to these regulations only where a component hazardous substance of the mixture or solution is discharged in a quantity equal to or greater than its RQ (44 FR 50767; August 29, 1979). RQs of different hazardous substances are not additive under the Clean Water Act mixture rule, such that spilling a mixture containing half an RQ of one hazardous substance and half an RQ of another hazardous substance does not require a report.

Under section 102(b) of CERCLA, all hazardous waste streams newly designated under RCRA will have a statutorily imposed RQ of one pound unless and until adjusted by regulation under CERCLA. In order to coordinate the RCRA and CERCLA rulemakings with respect to the amended waste stream listings, the Agency today is amending the descriptions of waste streams F032, F034, and F035 at 40 CFR 302.4, the codified list of CERCLA hazardous substances. In the December 1991 NPRM, EPA proposed an RQ of one pound for F032, F034 and F035. Because the basis for listing these three wastes has not changed from the original final rule in December 1990, the final RQs remain at one pound, as originally promulgated.

VII. Compliance Deadlines

Section 3010(b) of RCRA (42 U.S.C. 6930(b)) specifies that a regulation within subtitle C will take effect on the date six months after the date of promulgation. At the time a regulation is promulgated, the Administrator may provide for a shorter period prior to an effective date, or an immediate effective date for "a regulation with which the Administrator finds the regulated community does not need six months to come into compliance."

All elements of this final rule, with the exception of the four listed below, become effective on December 24, 1992, since each of these modifications has the effect of minimizing or relieving existing regulatory requirements. (See also section 553(d)(1) of the Administrative Procedures Act, 5 U.S.C. 553.)

Other Effective Dates

(1). With respect to meeting the drip pad permeability requirements of this final rule (264.573(a)(4)(i), 265.443(a)(4)(i)), the Agency is establishing a new effective date of June 24, 1993, by which time owners and operators of drip pads must comply with the standard. The Agency is establishing this new date to provide facilities adequate time to comply with this new permeability requirement. The Agency recognizes that the upcoming cold weather and rainy seasons in parts of the country may hinder the proper curing of coatings or sealers and that this compliance period should address any such concerns.

(2). With respect to the requirement that new drip pads for which owners/operators have chosen liners and leak detection also have a leak collection system (264.573(b)(3), 265.443(b)(3)), the Agency is establishing an effective date of June 24, 1993.

(3). With respect to the provisional elimination of the F032 waste code (Today's revision to the listing of hazardous waste No. F032 in § 261.31 with respect to the potentially cross-contaminated wastes that are otherwise currently regulated as hazardous wastes), the Agency is establishing an effective date of June 24, 1993.

(4). With respect to the requirements for contingency plans for incidental drippage in storage yards (264.570(c)(1), 265.440(c)(1)), the Agency is establishing an effective date of June 24, 1993.

VIII. Regulatory Requirements

A. Executive Order 12291

Under Executive Order 12291, a Federal agency must determine whether a regulation is "major" and thus subject to the requirement to prepare a Regulatory Impact Analysis. Today's final rule is not major because it will not result in an effect on the economy of $100 million or more, will not result in significantly increased costs or prices (indeed, it will likely result in decreased costs), will not have a significant adverse effects on competition, employment, investment, productivity, and innovation, and will not significantly disrupt domestic or export markets. Therefore, the Agency has not prepared a Regulatory Impact Analysis under the Executive Order for these modifications. This regulation was submitted to the Office of Management and Budget (OMB) for review as required by Executive Order 12291.

Although the Agency is not required to prepare a Regulatory Impact Analysis for this rule, for the benefit of the regulated community, the economic impacts of modifications presented in this rule are discussed below. Where the Agency has insufficient data to quantify the impact, economic effects are qualitatively discussed.

The exclusion from the listing descriptions for wastewaters that have not come into contact with process contaminants will result in a decrease in costs to the extent that segregation of wastewater results in a decreased hazardous waste generation rate. For example, collection of rainwater in a vessel rather than on a drip pad could result in decreased hazardous waste generation. Because generated hazardous waste is taxed in some locations, there may be additional cost savings in the form of a decrease in tax liability. Increases in cost may be incurred in the form of expenditures for collection equipment that may be required to segregate such wastewaters. The Agency has insufficient information to quantify such cost savings or additional costs attributable to the wastewater exclusion.

The removal of the applicability of the F032 listing to past users of chlorophenolic formulations who currently generate F034 or F035 wastes will have a negligible impact on costs. The regulatory requirements associated with a waste that is listed as F032 are not substantially different from those associated with wastes listed as F034 or F035 wastes.

The requirement to clean up incidental and infrequent drippage in storage yards will have cost effects that are highly site, weather, and situation dependent. There will also be costs associated with documenting the cleanup of storage yard drippage and the collection of leachate from new drip pads with liners. Costs associated with this requirement are also dependent on the efforts undertaken by individual plants to eliminate or minimize such drippage to incidental amounts. These efforts would include the use of vacuum cycles and holding treated wood on drip pads for an appropriate amount of time.

The removal of the requirement that new drip pads have an impermeable coating, sealer, or cover will decrease costs by the amount attributable to the application of coatings, sealers or covers. The installation cost of low cost sealers and coatings ranges between $2 to $5 per square foot of drip pad, the savings to a plant with a 10,000 square foot drip pad would range from $20,000 to $50,000.

The change in the drip pad cleaning requirements from a weekly basis to as needed to conduct weekly drip pad inspections will also reduce costs. Cost reductions will mostly benefit users of inorganic preservatives that are dissolved in water. Such aqueous solutions will tend not to obscure drip pad surfaces and will result in a greatly decreased frequency of cleaning. Facilities using oil-based preservatives, particularly creosote, will not benefit to the same degree because such formulations tend to obscure the drip pad surface. The cost savings may result primarily from reduced taxes on hazardous waste generation. The Agency has insufficient data to quantify these cost effects.

The change in drip pad coating, sealer, and cover permeability requirements (from "impermeable" to $\leq 1\times10^{-7}$ centimeters per second) should have no cost effects. The regulations promulgated today give an actual value for hydraulic conductivity and, therefore, provide the owner/operator with useful information in making purchasing decisions regarding drip pad coatings, sealers, or covers.

B. Regulatory Flexibility Analysis

Pursuant to the Regulatory Flexibility Act, 5 U.S.C. 601–612, whenever an agency is required to publish a general notice of rulemaking for any proposed or final rule, it must prepare and make available for public comment a Regulatory Flexibility Analysis (RFA) that describes the impact of the rule on small entities (i.e., small businesses, small organizations, and small governmental jurisdictions). However, if the head of the agency certifies that the rule will not have a significant impact on a substantial number of small entities, no RFA is required.

The Agency examined the potential effects on small entities for the December 6, 1990 final rule. In that rule,

EPA concluded that the rule did not have a significant effect on a substantial number of small entities. Therefore, EPA did not prepare a formal Regulatory Flexibility Analysis (RFA) in support of the rule. Details on small business impacts are available in the Regulatory Impact Analysis for the rule. Today's final rule reduces the potential effects identified for the December 6, 1990 rule, particularly by removing the applicability of the F032 listing to past users of chlorophenolic formulations who generate F034 or F035 wastes. As a result, a formal RFA was not prepared in support of today's rule.

IX. Paperwork Reduction Act

The information collection requirements in this rule have been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* and have been assigned control number 2050–0115.

Public reporting burden for this collection of information is estimated to average about 338 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the required data, and completing and reviewing the collection of information.

Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Chief, Information Policy Branch, PM–223Y, U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503, marked "Attention: Jonathan Gledhill."

List of Subjects

40 CFR Part 261

Hazardous materials, Waste treatment and disposal, Recycling.

40 CFR Part 264

Hazardous materials, Packaging and containers, Reporting requirements, Security measures, Surety bonds, Waste treatment and disposal.

40 CFR Part 265

Air pollution control, Hazardous materials, Packaging and containers, Reporting requirements, Security measures, Surety bonds, Waste treatment and disposal, Water supply.

40 CFR Part 271

Administrative practice and procedures, Air pollution control, Hazardous materials transportation, Hazardous waste, Indian lands, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Water pollution control, Water supply.

40 CFR Part 302

Air pollution control, Chemicals, Hazardous materials transportation, Hazardous substances, Intergovernmental relations, Natural resources, Nuclear materials, Pesticides and pests, Radioactive materials, Reporting and recordkeeping requirements, Superfund, Waste treatment and disposal, Water pollution control.

Dated: October 30, 1992.

William K. Reilly,

Administrator.

For the reasons set out in the preamble, title 40 of the Code of Federal Regulations is amended as follows:

PART 261—IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

1. The authority citation for part 261 continues to read as follows:

Authority: 42 U.S.C. 6905, 6912(a), 6921, 6922, 6934, and 6938.

2. In § 261.31 the table is amended by revising the F032, F034, and F035 listings.

§ 261.31 Hazardous wastes from non-specific sources.

* * * * *

Industry and EPA hazardous waste No.	Hazardous waste	Hazard code
	• • • • • • •	
F032	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use or have previously used chlorophenolic formulations (except potentially cross-contaminated wastes that have had the F032 waste code deleted in accordance with § 261.35 of this chapter or potentially cross-contaminated wastes that are otherwise currently regulated as hazardous wastes (i.e., F034 or F035), and where the generator does not resume or initiate use of chlorophenolic formulations). This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(T)
F034	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use creosote formulations. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(T)
F035	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chromium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(T)
	• • • • • • •	

PART 264—STANDARDS FOR OWNERS AND OPERATORS OF HAZARDOUS WASTE TREATMENT, STORAGE, AND DISPOSAL FACILITIES

3. The authority citation for part 264 continues to read as follows:

Authority: 42 U.S.C. 6905, 6912(a), 6924, and 6925.

4. Section 264.570 is amended by revising paragraph (a) and adding paragraph (c) to read as follows:

§ 264.570 Applicability.

(a) The requirements of this subpart apply to owners and operators of facilities that use new or existing drip pads to convey treated wood drippage, precipitation, and/or surface water run-off to an associated collection system.

Existing drip pads are those constructed before December 6, 1990 and those for which the owner or operator has a design and has entered into binding financial or other agreements for construction prior to December 6, 1990. All other drip pads are new drip pads. The requirement at § 264.573(b)(3) to install a leak collection system applies only to those drip pads that are constructed after December 24, 1992

except for those constructed after December 24, 1992 for which the owner or operator has a design and has entered into binding financial or other agreements for construction prior to December 24, 1992.

* * * * *

(c) The requirements of this subpart are not applicable to the management of infrequent and incidental drippage in storage yards provided that:

(1) The owner or operator maintains and complies with a written contingency plan that describes how the owner or operator will respond immediately to the discharge of such infrequent and incidental drippage. At a minimum, the contingency plan must describe how the owner or operator will do the following:

(i) Clean up the drippage;

(ii) Document the cleanup of the drippage;

(iii) Retain documents regarding cleanup for three years; and

(iv) Manage the contaminated media in a manner consistent with Federal regulations.

5. Section 264.571 is amended by revising the last sentence of paragraph (a), and revising paragraph (b) to read as follows:

§ 264.571 Assessment of existing drip pad integrity.

(a) * * * The evaluation must document the extent to which the drip pad meets each of the design and operating standards of § 264.573 of this subpart, except the standards for liners and leak detection systems, specified in § 264.573(b) of this subpart.

(b) The owner or operator must develop a written plan for upgrading, repairing, and modifying the drip pad to meet the requirements of § 264.573(b) of this subpart, and submit the plan to the Regional Administrator no later than 2 years before the date that all repairs, upgrades, and modifications are complete. This written plan must describe all changes to be made to the drip pad in sufficient detail to document compliance with all the requirements of § 264.573 of this subpart. The plan must be reviewed and certified by an independent qualified registered professional engineer.

* * * * *

6. Section 264.572 is revised to read as follows:

§ 264.572 Design and installation of new drip pads.

Owners and operators of new drip pads must ensure that the pads are designed, installed, and operated in accordance with one of the following:

(a) all of the requirements of §§ 264.573 (except 264.573(a)(4)), 264.574 and 264.575 of this subpart, or

(b) all of the requirements of §§ 264.573 (except § 264.573(b)), 264.574 and 264.575 of this subpart.

7. Section 264.573 is amended by revising paragraphs (a)(4) and (b) introductory text and paragraph (i) and adding paragraph (b)(3) to read as follows:

§ 264.573 Design and operating requirements.

(a) * * *

(4)(i) Have a hydraulic conductivity of less than or equal to 1×10^{-7} centimeters per second, e.g., existing concrete drip pads must be sealed, coated, or covered with a surface material with a hydraulic conductivity of less than or equal to 1×10^{-7} centimeters per second such that the entire surface where drippage occurs or may run across is capable of containing such drippage and mixtures of drippage and precipitation, materials, or other wastes while being routed to an associated collection system. This surface material must be maintained free of cracks and gaps that could adversely affect its hydraulic conductivity, and the material must be chemically compatible with the preservatives that contact the drip pad. The requirements of this provision apply only to existing drip pads and those drip pads for which the owner or operator elects to comply with § 264.572(a) instead of § 264.572(b).

(ii) The owner or operator must obtain and keep on file at the facility a written assessment of the drip pad, reviewed and certified by an independent, qualified registered professional engineer that attests to the results of the evaluation. The assessment must be reviewed, updated and recertified annually. The evaluation must document the extent to which the drip pad meets the design and operating standards of this section, except for paragraph (b) of this Section.

* * * * *

(b) If an owner/operator elects to comply with § 264.572(b) instead of § 264.572(a), the drip pad must have:

* * * * *

(3) A leakage collection system immediately above the liner that is designed, constructed, maintained and operated to collect leakage from the drip pad such that it can be removed from below the drip pad. The date, time, and quantity of any leakage collected in this system and removed must be documented in the operating log.

* * * * *

(i) The drip pad surface must be cleaned thoroughly in a manner and frequency such that accumulated residues of hazardous waste or other materials are removed, with residues being properly managed as hazardous waste, so as to allow weekly inspections of the entire drip pad surface without interference or hindrance from accumulated residues of hazardous waste or other materials on the drip pad. The owner or operator must document the date and time of each cleaning and the cleaning procedure used in the facility's operating log. The owner/operator must determine if the residues are hazardous as per 40 CFR 262.11 and, if so, must manage them under parts 261–268, 270, and section 3010 of RCRA.

* * * * *

PART 265—INTERIM STATUS STANDARDS FOR OWNERS AND OPERATORS OF HAZARDOUS WASTE TREATMENT, STORAGE, AND DISPOSAL FACILITIES

8. The authority citation for part 265 continues to read as follows:

Authority: 42 U.S.C. 6905, 6912(a) 6924, 6925, and 6935.

9. Section 265.440 is amended by revising paragraph (a) and adding paragraph (c) to read as follows:

§ 265.440 Applicability.

(a) The requirements of this subpart apply to owners and operators of facilities that use new or existing drip pads to convey treated wood drippage, precipitation, and/or surface water run-off to an associated collection system. Existing drip pads are those constructed before December 6, 1990 and those for which the owner or operator has a design and has entered into binding financial or other agreements for construction prior to December 6, 1990. All other drip pads are new drip pads. The requirement at § 265.443(b)(3) to install a leak collection system applies only to those drip pads that are constructed after December 24, 1992 except for those constructed after December 24, 1992 for which the owner or operator has a design and has entered into binding financial or other agreements for construction prior to December 24, 1992.

* * * * *

(c) The requirements of this subpart are not applicable to the management of infrequent and incidental drippage in storage yards provided that:

(1) The owner or operator maintains and complies with a written contingency plan that describes how the owner or operator will respond immediately to the discharge of such

infrequent and incidental drippage. At a minimum, the contingency plan must describe how the facility will do the following:

(i) Clean up the drippage;

(ii) Document the cleanup of the drippage;

(iii) Retain documents regarding cleanup for three years; and

(iv) Manage the contaminated media in a manner consistent with Federal regulations.

10. Section 265.441 is amended by revising the last sentence of paragraph (a), and revising paragraph (b) to read as follows:

§ 265.441 Assessment of existing drip pad integrity.

(a) * * * The evaluation must document the extent to which the drip pad meets each of the design and operating standards of § 265.443 of this subpart, except the standards for liners and leak detection systems, specified in § 265.443(b) of this subpart.

(b) The owner or operator must develop a written plan for upgrading, repairing, and modifying the drip pad to meet the requirements of § 265.443(b) of this subpart, and submit the plan to the Regional Administrator no later than 2 years before the date that all repairs, upgrades, and modifications are complete. This written plan must describe all changes to be made to the drip pad in sufficient detail to document compliance with all the requirements of § 265.443 of this subpart. The plan must be reviewed and certified by an independent qualified registered professional engineer.

* * * * *

11. Section 265.442 is revised to read as follows:

§ 265.442 Design and installation of new drip pads.

Owners and operators of new drip pads must ensure that the pads are designed, installed, and operated in accordance with one of the following:

(a) All of the applicable requirements of §§ 265.443 (except § 265.443(a)(4)), 265.444 and 265.445 of this subpart, or

(b) All of the applicable requirements of §§ 265.443 (except § 265.443(b)), 265.444 and 265.445 of this subpart.

12. Section 265.443 is amended by revising paragraphs (a)(4) and (b) introductory text, and paragraph (i) and adding paragraph (b)(3) to read as follows:

§ 265.443 Design and operating requirements.

(a) * * *

(4)(i) Have a hydraulic conductivity of less than or equal to 1×10^{-7} centimeters per second, e.g., existing concrete drip pads must be sealed, coated, or covered with a surface material with a hydraulic conductivity of less than or equal to 1×10^{-7} centimeters per second such that the entire surface where drippage occurs or may run across is capable of containing such drippage and mixtures of drippage and precipitation, materials, or other wastes while being routed to an associated collection system. This surface material must be maintained free of cracks and gaps that could adversely affect its hydraulic conductivity, and the material must be chemically compatible with the preservatives that contact the drip pad. The requirements of this provision apply only to existing drip pads and those drip pads for which the owner or operator elects to comply with § 265.442(a) instead of § 265.442(b).

(ii) The owner or operator must obtain and keep on file at the facility a written assessment of the drip pad, reviewed and certified by an independent, qualified registered professional engineer that attests to the results of the evaluation. The assessment must be reviewed, updated and recertified annually. The evaluation must document the extent to which the drip pad meets the design and operating standards of this section, except for subsection (b).

* * * * *

(b) If an owner/operator elects to comply with § 265.442(b) instead of § 265.442(a), the drip pad must have:

* * * * *

(3) A leakage collection system immediately above the liner that is designed, constructed, maintained and operated to collect leakage from the drip pad such that it can be removed from below the drip pad. The date, time, and quantity of any leakage collected in this system and removed must be documented in the operating log.

* * * * *

(i) The drip pad surface must be cleaned thoroughly in a manner and frequency such that accumulated residues of hazardous waste or other materials are removed, with residues being properly managed as hazardous waste, so as to allow weekly inspections of the entire drip pad surface without interference or hindrance from accumulated residues of hazardous waste or other materials on the drip pad. The owner or operator must document the date and time of each cleaning and the cleaning procedure used in the facility's operating log.

* * * * *

PART 271—REQUIREMENTS FOR AUTHORIZATION OF STATE HAZARDOUS WASTE PROGRAMS

13. The authority citation for part 271 is revised to read as follows:

Authority: 42 U.S.C. 9602; 33 U.S.C. 1321 and 1361.

14. In Table 1 of 271.1(j), footnote 2 is revised to read as follows:

§ 271.1 Purpose and scope.

* * * * *

(j) * * *

* * * * *

[2] These regulations, including test methods for benzo(k)fluoranthene and technical standards for drip pads, implement HSWA only to the extent that they apply to the listing of Hazardous Waste No. F032, and wastes that are hazardous because they exhibit the Toxicity Characteristic. These regulations, including test methods for benzo(k)fluoranthene and technical standards for drip pads, do not implement HSWA to the extent that they apply to the listings of Hazardous Waste Nos. F034 and F035.

* * * * *

PART 302—DESIGNATION, REPORTABLE QUANTITIES, AND NOTIFICATION

15. The authority citation for part 302 continues to read as follows:

Authority: 42 U.S.C. 9602, 9603, and 9604; 33 U.S.C. 1321 and 1361.

16. In 302.4 the table is amended by revising the listings for waste streams F032, F034, and F035. The appropriate footnotes to Table 302.4 are republished without change.

§ 302.4 Designation of hazardous substances.

* * * * *

TABLE 302.4—LIST OF HAZARDOUS SUBSTANCES AND REPORTABLE QUANTITIES

[Note: All Comments/Notes Are Located at the End of This Table]

Hazardous substance	CASRN	Regulatory synonyms	Statutory			Final RQ	
			RQ	Code †	RCRA waste No.	Category	Pounds (Kg)
• • •	•	•		•		•	
F032 ..... Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use or have previously used chlorophenolic formulations (except potentially cross-contaminated wastes that have had the F032 waste code deleted in accordance with §261.35 of this chapter or potentially cross-contaminated wastes that are otherwise currently regulated as hazardous wastes (i.e., F034 or F035), and where the generator does not resume or initiate use of chlorophenolic formulations). Part III

Department of Education

34 CFR Part 280

Magnet Schools Assistance Program; Final Rule and Notice

DEPARTMENT OF EDUCATION

34 CFR Part 280

RIN: 1810–AA63

Magnet Schools Assistance Program

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary amends the regulations governing the Magnet Schools Assistance Program (MSAP). These amendments are needed to improve administration of the program and to enable the Secretary to select applications for funding that best demonstrate promise of achieving the purposes of the program.

EFFECTIVE DATE: These regulations take effect either 45 days after publication in the **Federal Register** or later if the Congress takes certain adjournments. If you want to know the effective date of these regulations, call or write the Department of Education contact person. A document announcing the effective date will be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Sylvia Wright, Chief, Magnet Schools and Desegregation Branch, U.S. Department of Education, 400 Maryland Avenue, SW., room 2059, Washington, DC 20202–6246. Deaf and hearing impaired individuals may call the Federal Dual Party Relay Service at 1–800–877–8339 (in the Washington, DC 202 area code, telephone 708–9300) between 8 a.m. and 7 p.m., Eastern time.

SUPPLEMENTARY INFORMATION: These amendments are based on the Department's experience in implementing the program over several years. These final regulations also complement the President's AMERICA 2000 strategy by requiring that, in order to receive MSAP assistance, local educational agencies (LEAs) demonstrate how well their proposed magnet schools will provide high-quality educational programs in desegregated learning environments that are designed to improve significantly the academic and vocational skills of America's students.

On August 12, 1992, the Secretary published a notice of proposed rulemaking (NPRM) for this program in the **Federal Register** (57 FR 36324).

As a result of public comments since publication of the NPRM, the Secretary has made the following revisions:

- Section 280.20 has been revised to clarify that, in determining the eligibility of an applicant's voluntary desegregation plan, an LEA will be asked to submit additional information only after the Secretary has reviewed the enrollment data and other materials the LEA has submitted with its application and determined that additional information is necessary to assist the Secretary in determining the eligibility of the LEA's plan.
- Section 280.32(d) has been revised to explain further the factors used to evaluate an applicant's need for assistance.

Note: These final regulations do not solicit applications. A notice inviting applications under this competition is published in a separate notice in this issue of the **Federal Register**.

Analysis of Comments and Changes

In response to the Secretary's invitation in the NPRM, six parties submitted comments on the proposed regulations. An analysis of the comments and of the changes in the regulations since publication of the NPRM is published as an appendix to these final regulations.

Substantive issues are discussed under the section of the regulations to which they pertain. Technical and other minor changes—and suggested changes to sections of the regulations that were not discussed in the NPRM—are not addressed.

Executive Order 12291

These regulations have been reviewed in accordance with Executive Order 12291. They are not classified as major because they do not meet the criteria for major regulations established in the order.

Intergovernmental Review

This program is subject to the requirements of Executive Order 12372 and the regulations in 34 CFR part 79. The objective of the Executive Order is to foster an intergovernmental partnership and a strengthened federalism by relying on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

In accordance with the order, this document is intended to provide early notification of the Department's specific plans and actions for this program.

Assessment of Educational Impact

In the NPRM the Secretary requested comments on whether the proposed regulations would require transmission of information that is being gathered by or is available from any other agency or authority of the United States.

Based on the response to the proposed rules and on its own review, the Department has determined that the regulations in this document do not require transmission of information that is being gathered by or is available from any other agency or authority of the United States.

List of Subjects in 34 CFR Part 280

Civil rights, Desegregation, Education, Elementary and secondary education, Grant programs—education, Magnet schools, Reporting and recordkeeping requirements.

(Catalog of Federal Domestic Assistance Number 84.165A Magnet Schools Assistance Program)

Dated: December 18, 1992.

Lamar Alexander,

Secretary of Education.

The Secretary amends part 280 of title 34 of the Code of Federal Regulations as follows:

PART 280—MAGNET SCHOOLS ASSISTANCE PROGRAM

1. The authority citation for Part 280 continues to read as follows:

Authority: 20 U.S.C. 3021–3032, unless otherwise noted.

2. Section 280.2 is amended by redesignating the undesignated introductory text as paragraph (a), redesignating paragraphs (a) and (b) as paragraphs (1) and (2), respectively, and adding a new paragraph (b) to read as follows:

§ 280.2 Who is eligible to apply for a grant?

* * * * *

(b) The Secretary approves a voluntary plan under paragraph (a)(2) of this section only if he determines that for each magnet school for which funding is sought—

(1) The magnet school will reduce, eliminate, or prevent minority group isolation within the period of the grant award, either in the magnet school or in a feeder school, as appropriate; and

(2) The establishment of the magnet school will not result in an increase of minority enrollment, at the magnet school or at any feeder school, above the districtwide percentage of minority group students in the LEA's schools at the grade levels served by that magnet school.

(Authority: 20 U.S.C. 3022)

3. Section 280.4 is amended by designating "Minority group isolation" in paragraph (b) as a separate definition by italicizing the words "Minority group isolation" and adding a definition for "Feeder school" in alphabetical order to read as follows:

§ 280.4 What definitions apply to this program?

* * * * *

Feeder school means a school from which students are drawn to attend a magnet school.

* * * * *

4. Section 280.20 is amended by adding new paragraphs (f) (4) and (5), redesignating the current paragraph (g) as paragraph (i), and adding new paragraphs (g) and (h) to read as follows:

§ 280.20 How does one apply for a grant?

* * * * *

(f) * * *

(4) For an LEA that seeks assistance for existing magnet schools—

(i) Enrollment numbers and percentages, for minority and non-minority group students, for each magnet school for which funding is sought and each feeder school—

(A) For the school year prior to the creation of each magnet school;

(B) For the school year in which the application is submitted; and

(C) For each of the two school years of the proposed grant cycle (i.e., projected enrollment figures); and

(ii) Districtwide enrollment numbers and percentages for minority group students in the LEA's schools, for grade levels involved in the applicant's magnet schools (e.g., K–6, 7–9, 10–12)—

(A) For the school year prior to the creation of each magnet school;

(B) For the school year in which the application is submitted; and

(C) For each of the two school years of the proposed grant cycle (i.e., projected enrollment figures).

(5) For an LEA that seeks assistance for new magnet schools—

(i) Enrollment numbers and percentages, for minority and non-minority group students, for each magnet school for which funding is sought and for each feeder school—

(A) For the school year in which the application is submitted; and

(B) For each of the two school years of the proposed grant cycle (i.e., projected enrollment figures); and

(ii) Districtwide numbers and percentages of minority group students in the LEA's schools, for the grade levels involved in the applicant's magnet schools (e.g., K–6, 7–9, 10–12)—

(A) For the school year in which the application is submitted; and

(B) For each of the two school years of the proposed grant cycle (i.e., projected enrollment figures).

(g) An applicant that does not have an approved desegregation plan, and demonstrates that it cannot provide some portion of the information requested under paragraphs (f)(4) and (5) of this section, may provide other information (in lieu of that portion of the information not provided in response to paragraphs (f)(4) and (5) of this section) to demonstrate that the creation or operation of its proposed magnet school would reduce, eliminate, or prevent minority group isolation in the applicant's schools and would not result in an increase of minority student isolation at one of the applicant's schools above the districtwide percentage for minority students at the same grade levels as those served in the magnet school.

(h) After reviewing the information provided in response to paragraph (f)(4) or (5) of this section, or as provided under paragraph (g) of this section, the Secretary may request other information, if necessary (e.g., demographic data concerning the attendance areas in which the magnet schools are or will be located), to determine whether to approve an LEA's plan.

* * * * *

(Approved by the Office of Management and Budget under control number 1810–0516)

(Authority: 20 U.S.C. 3027)

5. Section 280.31 is revised to read as follows:

§ 280.31 What selection criteria does the Secretary use?

The Secretary uses the following selection criteria in evaluating each application:

(a) *Plan of operation.* (25 points) (1) The Secretary reviews each application to determine the quality of the plan of operation for the project.

(2) The Secretary determines the extent to which the applicant demonstrates—

(i) The effectiveness of its management plan to ensure proper and efficient administration of the project;

(ii) The effectiveness of its plan to attain specific outcomes that—

(A) Will accomplish the purposes of the program;

(B) Are attainable within the project period;

(C) Are measurable and quantifiable; and

(D) For multi-year projects, can be used to determine the project's progress in meeting its intended outcomes;

(iii) The effectiveness of its plan for utilizing its resources and personnel to achieve the objectives of the project, including how well it utilizes key personnel to complete tasks and achieve the objectives of the project;

(iv) How it will ensure equal access and treatment for eligible project participants who have been traditionally underrepresented in courses or activities offered as part of the magnet school, e.g., women and girls in mathematics, science or technology courses, and disabled students; and

(v) The effectiveness of its plan to recruit students from different social, economic, ethnic, and racial backgrounds into the magnet schools.

(b) *Quality of personnel.* (10 points) (1) The Secretary reviews each application to determine the qualifications of the personnel the applicant plans to use on the project.

(2) The Secretary determines the extent to which—

(i) The project director (if one is used) is qualified to manage the project;

(ii) Other key personnel are qualified to manage the project;

(iii) Teachers who will provide instruction in participating magnet schools are qualified to implement the special curriculum of the magnet schools; and

(iv) The applicant, as part of its nondiscriminatory employment practices will ensure that its personnel are selected for employment without regard to race, religion, color, national origin, sex, age, or disability.

(3) To determine personnel qualifications the Secretary considers experience and training in fields related to the objectives of the project, including the key personnel's knowledge of and experience in curriculum development and desegregation strategies.

(c) *Quality of project design.* (35 points) (1) The Secretary reviews each application to determine the quality of the project design.

(2) The Secretary determines the extent to which each magnet school for which funding is sought will—

(i) Foster interaction among students of different social, economic, ethnic, and racial backgrounds in classroom activities, extracurricular activities, or other activities in the magnet schools (or, if appropriate, in the schools in which the magnet school programs operate);

(ii) Address the educational needs of the students who will be enrolled in the magnet schools;

(iii) Carry out a high quality educational program that will substantially strengthen students' knowledge of mathematics, science, history, English, foreign languages, art, music, or vocational skills;

(iv) Encourage greater parental decisionmaking and involvement; and

(v) Improve the racial balance of students in the applicant's schools by reducing, eliminating, or preventing minority group isolation in its schools.

(d) *Budget and resources.* (5 points) The Secretary reviews each application to determine the adequacy of the resources and the cost-effectiveness of the budget for the project, including—

(1) The adequacy of the facilities that the applicant plans to use;

(2) The adequacy of the equipment and supplies that the applicant plans to use; and

(3) The adequacy and reasonableness of the budget for the project in relation to the objectives of the project.

(e) *Evaluation plan.* (15 points) The Secretary determines the extent to which the evaluation plan for the project—

(1) Includes methods that are appropriate for the project;

(2) Will determine how successful the project is in meeting its intended outcomes, including its goals for desegregating its students and increasing student achievement; and

(3) Includes methods that are objective and that will produce data that are quantifiable.

(f) *Commitment and capacity.* (10 points) (1) The Secretary reviews each application to determine whether the applicant is likely to continue the magnet school activities after assistance under this part is no longer available.

(2) The Secretary determines the extent to which the applicant—

(i) Is committed to the magnet schools project; and

(ii) Has identified other resources to continue support for the magnet school activities when assistance under this program is no longer available.

(Approved by the Office of Management and Budget under control number 1810–0516)

(Authority: 20 U.S.C. 3021–3032)

6. Section 280.32 is revised to read as follows:

§ 280.32 How is special consideration given to applicants?

(a) *How special consideration is given.* In addition to the points awarded under § 280.31, the Secretary gives special consideration to the factors listed in paragraphs (b) through (f) of this section. The maximum number of points awarded for each factor is stated in parentheses.

(b) *Recentness of the implementation of the approved desegregation plan.* (5 points)

(1) The Secretary reviews each application to determine the recentness of the implementation date of the approved desegregation plan or modification of the plan.

(2) The Secretary determines the recentness of the plan by assigning each application to one of the following categories:

(i) Applications based on plans or modifications of plans with implementation dates not more than five years before the July 1 that follows the deadline date for applications. (5 points)

(ii) Applications based on plans or modifications of plans with implementation dates more than 5 years but not more than 10 years before the July 1 that follows the deadline date for applications. (3 points)

(iii) Applications based on plans or modifications of plans with implementation dates more than 10 years but not more than 15 years before the July 1 that follows the deadline date for applications. (1 point)

(iv) Applications based on plans or modifications of plans with implementation dates more than 15 years before the July 1 that follows the deadline date for applications. (0 points)

(c) *Involvement of minority group children.* (5 points)

(1) The Secretary gives special consideration to the proportion of minority group children involved in the approved desegregation plan.

(2) The Secretary determines the percentage that represents a comparison of the number of minority group children involved in the applicant's approved desegregation plan to the number of minority group children enrolled in the applicant's schools.

(3) The Secretary awards one point for each 20 percentage points the applicant receives under paragraph (c)(2) of this section.

(d) *Need for assistance.* (15 points) (1) The Secretary evaluates the applicant's need for assistance under this part, by considering—

(i) The costs of fully implementing the magnet schools project as proposed;

(ii) The resources available to the applicant to carry out the project if funds under the program were not provided;

(iii) The extent to which the costs of the project exceed the applicant's resources; and

(iv) The difficulty of effectively carrying out the approved plan and the project for which assistance is sought, including consideration of how the design of the magnet school project—e.g., the type of program proposed, the location of the magnet school within the LEA—impacts on the applicant's ability to successfully carry out the approved plan.

(2) The applicant receives up to 15 points, depending on the extent of its need for assistance.

(e) *Degree of achievement.* (15 points) (1) The Secretary determines the extent to which the project for which assistance is sought affords promise of achieving the purposes of this program as listed in § 280.1.

(2) In determining the degree to which the magnet school affords promise of achieving the purposes stated in § 280.1, the Secretary will evaluate the likelihood that the applicant's plan to achieve desegregation through the use of a magnet school program will be successful in reducing, eliminating, or preventing minority group isolation in light of its overall strategy. Factors the Secretary will consider include, but are not limited to—

(i) The needs assessment conducted by the applicant;

(ii) The site selection for each magnet school;

(iii) The special curriculum selected for each magnet school; and

(iv) If appropriate, the applicant's past performance in achieving desegregation through use of a magnet school.

(f) *Collaborative efforts.* (5 points) The Secretary determines the extent to which the project for which assistance is sought involves the collaborative efforts of institutions of higher education, community-based organizations, the appropriate State educational agency, or any other organization.

(Approved by the Office of Management and Budget under control number 1810–0516)

(Authority: 20 U.S.C. 3028)

Appendix—Analysis of Comments and Changes

(Note: This appendix will not be codified in the Code of Federal Regulations.)

§ 280.2 Who is eligible to apply for a grant?

Comment: One commenter suggested that urban districts be granted more than two years to show that a newly created magnet program has reduced, eliminated, or prevented minority group isolation. The commenter indicated that the two-year time frame is unrealistic in light of the barriers these districts must overcome to reduce racial isolation and suggested that a three- or four-year time frame for reporting progress or a longer grant period would be more realistic.

Discussion: The Secretary has interpreted the Magnet Schools Assistance Act (MSAA) to require a two-year limit on grant awards under this program. See 20 U.S.C. 3031. In addition, the Secretary believes it is reasonable to expect that within the two-year grant period an LEA can demonstrate a positive change in minority group isolation in its schools, as a result of the implementation of a magnet school. The Secretary appreciates the difficulty that all school

districts face in implementing voluntary desegregation plans and, accordingly, has not established numerical benchmarks to measure how well an LEA has performed under a MSAP grant. However, the Secretary seeks to award MSAP grants to those LEAs that best demonstrate promise of achieving the purposes of this program.

Changes: None.

Comment: One commenter suggested that the Secretary introduce some flexibility into the requirement that magnet schools not result in increases in minority enrollments in the magnet or feeder schools above the relevant districtwide average. The commenter suggested that a margin of five percent be permitted, because in many urban school districts the non-minority enrollment is very small and therefore districts struggle to enroll and maintain a critical mass of non-minority students in their schools. Thus, the movement of a single non-minority student may have a significant impact on the percentage of minority group students in a particular school.

Discussion: Use of an LEA's districtwide average as the standard for evaluating the effect of a magnet school on other schools in an LEA provides a school district with sufficient flexibility to tailor a desegregation plan to its needs so that the district can maximize its opportunities to promote desegregation. It also provides the Secretary with a standard that can be applied uniformly to all school districts when determining the eligibility of their voluntary desegregation plans, and that can be used as a reasonable gauge to measure if an applicant is attempting to reduce, eliminate, or prevent minority group isolation.

Changes: None.

§ 280.20 How does one apply for a grant?

Comment: One commenter explained that neither the old regulations nor these revised regulations address the difficulty that districts with open enrollment plans have, when seeking approval of a voluntary desegregation plan, in demonstrating the effect of the magnet school on surrounding schools, because the traditional concept of a "magnet feeder school" does not apply to these districts. The commenter suggested that districts with open enrollment plans be permitted to demonstrate the effectiveness of a magnet school by providing data on student assignment patterns for neighboring schools, that would have been applicable had the districts not had open enrollment.

Discussion: The Secretary believes that the regulations address this concern. Under § 280.20(g) of the regulations, an LEA that demonstrates that it cannot provide reliable data on magnet feeder schools may provide other information to the Secretary in support of its desegregation plan. This section provides an applicant flexibility in demonstrating the potential effectiveness of its magnet school if, because of the design of its desegregation plan, an applicant does not have data on feeder schools as required under § 280.20(f). Therefore, districts with open enrollment plans may provide other information to demonstrate that creation or operation of their magnet schools complies with the eligibility requirements of this program.

Changes: None.

Comment: One commenter suggested that § 280.20(f)(4)(iii) be clarified to indicate—(1) when the applicant would be required to submit "other information that the Secretary determines is necessary;" (2) whether the information would be required of all or only some applicants; and (3) whether the example provided is used for illustrative purposes only. If additional information will be required of all applicants, the commenter suggested that the regulations indicate how applicants will be notified of the additional requirements.

Discussion: The Secretary recognizes that there may be limited circumstances when an LEA may not be able to provide the information requested under § 280.20(f)(4) or (5) in the manner required by the regulations, or may not provide enough information with its application to allow the Secretary to fairly evaluate its desegregation plan. The Secretary does not expect that every applicant will be asked to provide additional information in support of its desegregation plan. However, the Secretary wants to ensure that each applicant is given a full and fair opportunity to demonstrate its eligibility for this program. Therefore, if, after review of enrollment data provided with an application, or other information provided by an LEA to demonstrate its eligibility, the Secretary does not have sufficient information to approve a desegregation plan, the Secretary will request that an LEA provide additional information. Reference to providing the Secretary with demographic data to support a desegregation plan is included in this discussion for illustrative purposes only.

Changes: The Secretary has deleted §§ 280.20(f)(4)(iii) and (5)(iii) and added a new section (h) to explain that, after reviewing the enrollment information provided with an LEA's application, or other information provided by the LEA under paragraph (g), the Secretary may request additional information necessary to evaluate the LEA's desegregation plan.

Comment: One commenter suggested that the regulations indicate where in the application the applicant should provide desegregation plan data (e.g., enrollment numbers and percentages).

Discussion: Instructions for submitting enrollment numbers and percentages, and any other information to support an application, will be provided in the application package.

Changes: None.

Comment: One commenter recommended that the regulations require applicants to submit in their application the data needed to ascertain their compliance with civil rights laws. The commenter expressed concern that some districts seeking MSAP funds maintain racially identifiable classes as a result of ability grouping and assign faculty and staff in a manner to identify its schools for a particular race of students.

Discussion: Under § 280.20, an LEA must provide assurances of its compliance with civil rights laws in its application and upon request, must provide the Assistant Secretary for Civil Rights with any information the Assistant Secretary finds is necessary to determine whether the assurances will be met. This provision of the regulations was not changed by the NPRM.

Changes: None.

§ 280.31 What selection criteria does the Secretary use?

Comment: One commenter objected to the proposed reduction of points for the quality of project personnel under § 280.31(b), because it believes the success of each project depends on experienced key personnel who are knowledgeable about desegregation and magnet schools.

Discussion: The Secretary agrees that a project must have qualified staff if it is to be successful and therefore has assigned significant points for this criterion. However, the Secretary has found that almost all applicants propose to use personnel who are qualified to conduct the project activities. In assigning the relative weights for the selection criteria, the Secretary determined that the criteria for project design and implementation, i.e., "quality of project design" and "plan of operation," provide a more meaningful indication of the likelihood of an applicant's success in meeting the purposes of the MSAP.

Changes: None.

Comment: One commenter felt that the regulations should address perceived deficiencies in the program. Specifically, the commenter recommended that the regulations be amended to limit funding to only magnet schools that serve the school's entire student population and that operate throughout the regular school day, to allow expenditures only for the operation of the magnet school, and to disallow expenditures for a year of planning.

Discussion: The MSAA defines a magnet school as "a school or educational center that offers a special curriculum capable of attracting students of different racial backgrounds." The MSAA does not limit eligibility for MSAP funding to a magnet school that only involves an entire student population and that only operates throughout the regular school day. However, under § 280.31(c), the Secretary evaluates how well an LEA's magnet school will assist an LEA to desegregate its schools. In this way, the Secretary selects for awards those applicants that best demonstrate promise of achieving the purpose of the program. In addition, although the MSAA permits funds to be used for planning and promotional activities, planning activities are limited to no more than 10 percent of a grant award in any given year.

Changes: None.

Comment: One commenter felt that assigning points under § 280.31(c)(2)(iii) for a project's conformance with the President's AMERICA 2000 strategy goes beyond the purpose of the law and therefore the existing regulations should not be changed.

Discussion: Points are not assigned for a project's conformance with the President's AMERICA 2000 strategy. The selection factor evaluating the type of educational program that an LEA will provide is based on the requirement in the MSAA that the magnet school provide courses of instruction to substantially strengthen a student's knowledge of academic subjects and marketable vocational skills. The subjects that are identified under this factor are specifically included in the MSAA in describing the "Uses of funds."

Changes: None.

Comment: One commenter felt that the points assigned to "commitment and capacity" under § 280.31(f) should be increased, to make continuation of projects after Federal funding ends a stronger requirement. The commenter indicated that if the magnet programs are reducing minority group isolation and are improving academic achievement they should be continued. The commenter noted that under the current point assignment, programs are sometimes decreased or eliminated after the Federal funding ends.

Discussion: The Secretary believes that the criterion "Commitment and capacity" has been assigned significant points relative to the other selection factors, to ensure that applicants for MSAP funds will continue magnet schools programs. Data from previously funded magnet schools grants confirms that most MSAP-funded programs are continued after Federal funding ends. In addition, an applicant must demonstrate under other selection factors, e.g., "Collaborative efforts," that it has sought other resources through which funds needed to continue a project could be acquired.

Changes: None.

§ 280.32 How is special consideration given to applicants?

Comment: Two commenters felt the 10 points awarded for "recentness of implementation of the approved desegregation plan" should be retained. One commenter explained that reducing the points for this factor reduces the advantage for newly desegregating districts that attempt to win public acceptance of plans through the use of new magnet schools. Another commenter felt that districts that continually revise desegregation plans to adapt to changing circumstances and student needs should be rewarded.

Discussion: The regulations continue to provide an advantage to school districts that are implementing new or recently revised plans, but reduce the relative weight of this special consideration factor. The Secretary has found that this criterion has not resulted in a meaningful distinction among applicants since most applicants have received maximum points for it. For example, in the fiscal year 1991 grant competition, 85 percent of the applicants received the maximum score. The district's desire to meet the educational needs of its students and its desire to retain the support of the community should be sufficient incentive for implementing new plans or for modifying existing plans.

Changes: None.

Comment: One commenter said that reducing the points awarded for "involvement of minority group students" from 10 to 5 reduces the competitive advantage for districts that are truly striving to meet the purposes of the MSAP by undertaking massive, districtwide desegregation.

Discussion: The points for the proportion of minority group children involved in the applicant's desegregation plan was reduced because most applicants have received the maximum points for this criterion and therefore it has not helped to determine the relative merit of applications. Also, the Secretary found that applicants who had made progress in desegregating some schools in their districts were being penalized for their success. The reduction in points for this criterion is intended to ensure that the weight given is reasonably consistent with its value in determining the likely success of the applicant's plan to achieve the purpose of the MSAP.

Changes: None.

Comment: One commenter stated that the language of the regulations under "need for assistance" is inadequate to prevent wealthy districts from receiving funds while poor districts are left unfunded. Another commenter suggested that the factors used to evaluate an applicant's need for assistance be expanded to give applicants further guidance on what information should be provided to address this criterion (e.g., how will the Secretary assess an applicant's ability to finance the project). The commenter also noted that this criterion now refers only to the difficulty of carrying out the project for which assistance is sought and not the difficulty of carrying out the applicant's desegregation plan and the project for which assistance is sought.

Discussion: "Need for assistance" is an important criterion for funding under the MSAP and, accordingly, is a relatively heavily weighted factor. The Secretary agrees that additional guidance on the factors that the Secretary will consider in evaluating this criterion will assist an applicant in demonstrating its need for assistance and will provide the Secretary with information to better distinguish among applicants seeking funding. Information provided in an application in response to this criterion may include (1) a budget for fully implementing the magnet schools project or a narrative discussion of costs for fully implementing the project that includes a breakdown of all of the resources that will be needed to fund the project; (2) a description of any special costs that, because of the design of the project, would be incurred in order to implement the project fully; and (3) a description of why the applicant does not have sufficient funds without assistance under this program to fully implement the project.

Changes: The Secretary has revised this section to explain further the factors used to evaluate an applicant's need for assistance. The Secretary will evaluate

an applicant's need for assistance based on how much it will cost the applicant to fully implement the magnet schools project proposed in the application and the resources available to the applicant to implement the project if funds under the MSAP were not provided. The Secretary will also consider how the design of the project impacts on the applicant's ability to successfully implement the desegregation plan as proposed.

Comment: One commenter suggested that if the Secretary wants to reduce the collective weight of the special consideration factors, the points assigned to "collaborative efforts" could be reduced because the commenter felt that this factor does not deserve equal weight with "quality of personnel" and "commitment and capacity," and does not merit more weight than "budget and resources."

Discussion: The NPRM did not propose a change in the points assigned for this criterion. Currently, five points are awarded under § 280.32(f) for this criterion.

Changes: None.

[FR Doc. 92-31222 Filed 12-23-92; 8:45 am]
BILLING CODE 4000-01-M

DEPARTMENT OF EDUCATION

[CFDA No.: 84.165A]

Magnet Schools Assistance Program; Notice Inviting Applications for New Awards for Fiscal Year (FY) 1993

Purpose of Program: Provides grants to eligible local educational agencies to support magnet schools that are part of approved desegregation plans.

Eligible Applicants: Local educational agencies.

Deadline for Transmittal of Applications: February 19, 1993.

Deadline for Intergovernmental Review: April 20, 1993.

Applications Available: January 4, 1993.

Available Funds: $107,532,800.

Estimated Range of Awards: $200,000–$4,000,000.

Estimated Average Size of Awards: $1,792,000.

Estimated Number of Awards: 60.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 24 months.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 75, 77, 79, 80, 81, 82, 85 and 86; and (b) the regulations in 34 CFR part 280 as amended. (Please note that amendments to 34 CFR parts 75 and 77 of EDGAR were published in the **Federal Register** on Wednesday, July 8, 1992, (57 FR 30328). Final regulations amending 34 CFR part 280 are published in this issue of the **Federal Register**.

SUPPLEMENTARY INFORMATION: Applicants must submit with their applications one of the following types of desegregation plans (1) a plan required by a court order; (2) a plan required by a State agency or official of competent jurisdiction; (3) a plan required by the Office for Civil Rights (OCR), United States Department of Education (ED), under Title VI of the Civil Rights Act of 1964 (Title VI plan); or (4) a voluntary plan adopted by the applicant.

An applicant that submits a plan required by a court, State agency or official of competent jurisdiction, must obtain approval for any modification to the plan from the court, agency, or official that originally approved the plan. A previously approved desegregation plan that does not include the magnet school or program for which an applicant is now seeking assistance under this program must be modified to include the magnet school component, and the modification to the plan must be approved by a court, agency or official, as appropriate. An applicant should indicate in its application if it is seeking to modify its previously approved plan. However, all applicants must submit proof to ED to approval of all modifications to their plans by March 26, 1993. If an applicant submits a modification to a previously approved Title VI plan, the proposed modification will be reviewed by OCR for approval as part of this magnet schools application process.

An applicant submitting a desegregation plan as described in 1, 2, or 3 above, must provide an assurance that the plan is being implemented as approved. An applicant submitting a voluntary plan or a modification to a Title VI plan for approval by the Secretary must provide a copy of a school board resolution or other evidence of final official action adopting and implementing the plan, or agreeing to adopt and implement it if Magnet Schools Assistance Program funds are made available.

FOR APPLICATIONS OR INFORMATION CONTACT: Steven L. Brockhouse, U.S. Department of Education, 400 Maryland Avenue, SW., room 2059, Washington, DC 20202–6246. Telephone (202) 401–0358. Deaf and hearing impaired individuals may call the Federal Dual Party Relay Service at 1–800–877–8339 (in the Washington, DC 202 area code, telephone 708–9300) between 8 a.m. and 7 p.m., Eastern time.

Program Authority: 20 U.S.C. 3021–3032.

Dated: December 18, 1992.

John T. MacDonald,

Assistant Secretary,

Elementary and Secondary Education.

Department of Health and Human Services

Administration for Children and Families

Administration for Native Services; Availability of Financial Assistance; Notice

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

[Program Announcement No. 93612–932]

Administration for Native Americans: Availability of Financial Assistance

AGENCY: Administration for Native Americans (ANA), Administration for Children and Families, (ACF), Department of Health and Human Services, (DHHS).

ACTION: Announcement of availability of competitive financial assistance for Alaskan Native social and economic development projects.

SUMMARY: The Administration for Native Americans (ANA) announces the anticipated availability of fiscal year 1993 funds for social and economic development projects. Financial assistance provided by ANA is designed to promote the goal of self-sufficiency for Alaskan Natives through support of locally determined social and economic development strategies (SEDS) and the strengthening of local governance capabilities.

DATES: The closing dates for submission of applications are February 5, 1993 and May 14, 1993.

FOR FURTHER INFORMATION CONTACT: Lucille Dawson (202) 690–7727 or Hank Aguirre, (202) 690–7714, Department of Health and Human Services, Administration for Children and Families, Administration for Native Americans, 200 Independence Avenue, SW., 344F, Washington, DC 20201–0001.

SUPPLEMENTARY INFORMATION:

A. Introduction and Purpose

The purpose of this program announcement is to announce the anticipated availability of fiscal year 1993 financial assistance to promote the goal of social and economic self-sufficiency for Alaskan Natives through social and economic development (SEDS) strategies. Funds will be awarded under section 803 of the Native American Program Act of 1974, as amended, (42 U.S.C. 2991b) for local governance and social and economic development projects.

Proposed projects will be reviewed on a competitive basis against the evaluation criteria in this announcement. A Native American community is self-sufficient when it can generate and control the resources which are necessary to meet the needs of its members and to meet its own social and economic goals.

The Administration for Native Americans believes that responsibility for achieving self-sufficiency rests with the governing bodies of Indian tribes, Alaskan Native villages, and in the leadership of Native American groups. Progress toward the goal of self-sufficiency requires active development with regard to the strengthening of governmental responsibilities, economic progress, and improvement of social systems which protect and enhance the health and economic well-being of individuals, families and communities. Progress towards self-sufficiency is based on the community's ability to develop a social and economic development strategy and to plan, organize, and direct resources in a comprehensive manner to achieve the community's long-range goals.

The Administration for Native Americans bases its program and policy on three interrelated goals:

(1) *Governance:* To assist tribal and village governments, Native American institutions, and local leadership to exercise local control and decision-making over their resources.

(2) *Economic Development:* To foster the development of stable, diversified local economies and economic activities which will provide jobs, promote economic well-being, and reduce dependency on public funds and social services.

(3) *Social Development:* To support local access to, control of, and coordination of services and programs which safeguard the health and well-being of people, provide support services and training so people can work, and which are essential to a thriving and self-sufficient community.

To achieve these goals, ANA supports tribal and village governments, and other Native American organizations, to develop and implement community-based, long-term governance, social and economic development strategies (SEDS). These strategies must promote the goal of self-sufficiency in local communities. The ANA SEDS approach is based on two fundamental principles:

(1) The local community and its leadership are responsible for determining goals, setting priorities, and planning and implementing programs aimed at achieving those goals. The unique mix of socio-economic, political, and cultural factors in each community makes such self-determination necessary. The local community is in the best position to apply its own cultural, political, and socio-economic values to its long-term strategies and programs.

(2) Economic, governance, and social development are interrelated, and development in one area should be balanced with development in the others in order to move toward self-sufficiency. Consequently, comprehensive development strategies should address all aspects of the governmental, economic, and social infrastructures needed to develop self-sufficient communities.

- "Governmental infrastructure" includes the constitutional, legal, and administrative development requisite for independent governance.
- "Economic infrastructure" includes the physical, commercial, industrial and/or agricultural components necessary for a functioning local economy which supports the life-style embraced by the Native American community.
- "Social infrastructure" includes those components through which health and economic well-being are maintained within the community and that support governance and economic goals.

Without a careful balance between all of these, a community's development efforts could be jeopardized. For example, expansion of social services, without providing opportunities for employment and economic development, could lead to dependency on social services. Conversely, inadequate social support services and training could seriously impede productivity and local economic development. Additionally, the governmental infrastructures must be put in place to support or institute social and economic development and growth.

B. Proposed Projects To Be Funded

The fundamental task which Native American communities face is to develop those social and economic development strategies (SEDS) that support their local goals, resources, and cultural values. The Administration for Native Americans assists local communities to undertake one-to-three year development projects that are a part of long-range comprehensive plans to move toward social and economic self-sufficiency. The Administration for Native Americans expects its applicants to have undertaken a long-range planning process to address the community's development. Such long-range planning must consider the maximum use of all available resources, directing those resources to development opportunities, and addressing how to overcome the local issues that hinder social and economic growth in the community. The Administration for Native Americans encourages applicants to design project

strategies to achieve their specific but interrelated governance, and social and economic objectives and to use available human, natural, financial, and physical resources to which the applicant has access. Non-ANA resources should be leveraged to strengthen and broaden the impact of the proposed project in the community. Project designs should explain how those parts of projects which ANA does not fund, such as construction, will be financed through other sources.

All projects funded by ANA must be completed, or self-sustaining or supported with other than ANA funds at the end of the project period. "Completed" means that the project ANA funded is finished, and the desired result(s) have been attained. "Self-sustaining" means that a project will continue without outside resources. "Supported by other than ANA funds" means that the project will continue beyond the ANA project period, but supported by funds other than ANA's. The Administration for Native Americans does not fund programs which operate indefinitely or would have a need for ANA funding on a recurring basis.

The Administration for Native Americans does not fund objectives or activities for the core administration of an organization. However, ANA will consider funding core administrative capacity building projects at the village government level if the villages do not have governing systems in place. "Core administration" is defined as those functions which provide the ongoing management and administrative support to an organization. The management and administrative functions needed to carry out an ANA approved project are not considered "core administration." However, ANA does fund the salaries of approved staff for the time to implement a funded ANA project. The Administration for Native Americans does not provide funds for staff salaries for those functions which support the organization as a whole, or for purposes unrelated to the actual management or implementation of work conducted under an ANA approved project.

Goal 1: Governance Development. Effective governance is a necessary foundation and condition for the social and economic development of Indian tribes, Alaskan Native villages, and Native American groups. Efforts to achieve effective governance include: (1) Strengthening the governmental, judicial and/or administrative infrastructures of tribal and village governments; (2) increasing the ability of tribes, villages, and Native American groups and organizations to plan, develop, and administer a comprehensive program to support community social and economic self-sufficiency; and (3) increasing awareness of and exercising legal rights and benefits to which Native Americans are entitled, either by virtue of treaties, the Federal trust relationship, legislative authority, or as citizens of a particular state, or of the United States.

Under its governance development goal, ANA strongly encourages tribal and village councils, and other governing bodies, to strengthen and streamline their established administrative and management procedures that influence their institutional management systems. The purpose of this capacity is to develop and implement effective social and economic development strategies and their comprehensive community long term goals and to improve their day-to-day governmental management. By improving governance and management capabilities, Indian Tribes, Alaskan Native villages, and Native American groups can better define and achieve their goals, promote greater efficiency, and the effective use of all available resources.

Applications in this area are generally under the following categories:

- Status clarification
- Tribal recognition
- Amendments to tribal constitutions; court procedures and functions; bylaws or codes; council or executive branch duties and functions;
- Improvements in administration and management of tribes/villages.

Goal 2: Economic Development is the long-term mobilization and management of economic resources to achieve a diversified economy. It is characterized by the effective and planned distribution of economic resources, services, and benefits. It also includes the participation of community members in the productive activities and economic investments of the community, and the pursuit of economic interests through methods that balance economic gain with social development, supported by an adequate governmental infrastructure.

Goal 3: Social Development is the mobilization and management of resources for the social benefit of community members. It involves the establishment of institutions, systems, and practices that contribute to the social environment desired by the community. This includes the development of, access to, and local control over, the projects and institutions that protect the health and economic well-being of individuals and families, and preserve the values, language, and culture of the community.

Social and Economic Development Strategies (SEDS)

Building on developing the foundation for strong local governance, ANA supports tribal and village governments' and other Native American organizations' corollary plans to achieve coordinated and balanced development through the implementation of social and economic development strategies (SEDS). These interrelated strategies and their objectives should describe in detail how the community coordinates and directs all resources (Federal and non-Federal) toward locally determined priorities, and how the community and its members are assisted in ways that promote greater economic and social self-sufficiency. In addition, SEDS strategies that combine balanced social and economic and governance goals should also address how to obtain independent sources of revenue for the community or how the venture supports the long-term goals.

Alaska Initiative

Based on the three ANA goals, in fiscal year 1984, ANA implemented a special Alaska social and economic development initiative. The purpose of this special effort was to provide financial assistance at the village level or for village-specific projects aimed at improving a village's social and economic development. This program announcement continues to implement this initiative. ANA sees both the nonprofit and for-profit corporations in Alaska as being able to play an important supportive role in assisting individual villages to develop and implement their own locally determined strategies which take advantages of the opportunities afforded to Alaskan Natives under the Alaska Native Claims Settlement Act (ANCSA), Public Law 92–202.

Examples of the types of projects that ANA is seeking to fund include, but are not limited to, projects that will:

Governance:

- Initiate a demonstration program at a regional level to allow Native people to become involved in developing strategies to maintain and develop their economic subsistence base.
- Assist villages in developing land use capabilities and skills in the areas of land and natural resource management, resources assessment and development, and studies of the potential impact of land use upon the environment and the subsistence ecology.

- Assist village consortia in the development of tribal constitutions, ordinances, codes and court systems.
- Develop agreements between the State and villages that transfer programs, jurisdictions, and/or control to Native entities.
- Strengthen village government control of land management, including land protection.
- Develop tribal courts, adoption codes, and/or related comprehensive children's codes.
- Assist in status clarification.
- Initiate village level mergers between village councils, village corporations and others to coordinate programs and services which safeguard the health and well being of a community and its people.
- Develop Regional IRAs (Indian Reorganization Act of 1934) and village consortia in order to maximize tribal government resources, i.e., to develop model codes, tribal court systems, governance structures and organic documents.
- Assist villages in developing and coordinating plans for the development of water and sewer systems for use within the village boundaries.
- Assist villages in establishing structures through which youth would participate in the governance of the community and be trained to assume leadership roles in village governments.

Economic Development:

- Assist villages to develop businesses and industries which (1) use local materials, (2) create jobs for Alaskan Natives, (3) are capable of high productivity at a small scale of operation, and (4) complement traditional and necessary seasonal activities.
- Substantially increase and strengthen efforts to establish and improve the village and regional infrastructure and the capabilities to develop and manage resources in a highly competitive cash-economy system.
- Assist villages or consortia of villages in developing subsistence compatible industries that will retain local dollars in villages.
- Assist in new or expanded native-owned businesses.
- Assist villages in labor export, i.e., people leaving the local communities for seasonal work and returning to their communities.
- Consider strategies and plans to protect against, monitor, and assist when catastrophic events occur, such as oil spills, earthquakes, etc.

Social Development:

- Assist villages in developing programs to deliver needed social services.
- Assist in developing training and education programs for those jobs in education, government and health usually found in local communities; and work with the various agencies to encourage job replacement of non-Natives by Natives.
- Coordinate land use planning with village corporations and city government.
- Develop local models related to comprehensive planning and delivery of social services.
- Develop new service programs established with ANA funds and funded for continued operation by local communities or the private sector.
- Develop or coordinate activities with State-funded projects in decreasing the incidence of child abuse and neglect, fetal alcohol syndrome, or Native suicides.
- Assist in obtaining licenses to provide housing or related services from State or local governments.
- Develop businesses to provide relief for caretakers needing respite from demanding care work, child care, chore service, etc.

C. Eligible Applicants

- Current ANA grantees in Alaska funded under Section 803 of the Native American Programs Act whose project period terminates in fiscal year 1993 (October 1, 1992–September 30, 1993) are eligible to apply for a grant award under this program announcement. (The Project Period is noted in Block 9 of the "Financial Assistance Award" document);
- Alaskan Native villages as defined in the Alaska Native Claims Settlement Act (ANCSA) and/or nonprofit village consortia;
- Nonprofit Alaskan Native Regional Associations in Alaska with village specific projects;
- Nonprofit Native organizations in Alaska with village specific projects; and
- Nonprofit Alaskan Native community entities or tribal governing bodies (IRA or traditional councils) as recognized by the Bureau of Indian Affairs.

If the applicant is a nonprofit organization, proof of nonprofit status, such as an IRS determination of nonprofit status under IRS Code 501(c)(3), must be included in its application. Although for-profit regional corporations established under ANCSA are not eligible applicants, individual villages and Indian communities are encouraged to use the for-profit corporations as subcontractors and to collaborate with them in joint-venture projects for promoting social and economic self-sufficiency. ANA encourages the for-profit corporations to assist the villages in developing applications and to participate as subcontractors in a project.

This program announcement does not apply to current grantees with multi-year projects that apply for continuation funding for their second or third year budget periods.

Note: In fiscal year 1993, Alaskan Native entities are eligible to submit an application under either program announcement 93612–931 or 93612–932, but are limited to a single application for each closing date.

An Alaskan Native applicant may apply for the:

(1) February 5, 1993 closing date for Program Announcement 93612–931 OR for Program Announcement 93612–932; and

(2) May 14, 1993 closing date for Program Announcement 93612–931 OR for Program Announcement 93612–932.

D. Available Funds

Approximately $1.5 million of financial assistance is anticipated to be available under this program announcement for Alaskan Native projects. This program announcement is being issued in anticipation of the appropriation of funds for FY 1993, and is contingent upon final appropriations.

ANA plans to award approximately 15–18 grants under this announcement. For individual village projects, the funding level for a budget period of 12 months will be up to $100,000; for regional nonprofit and village consortia, the funding level for a budget period is up to $150,000, commensurate with approved multi-village objectives. Each eligible applicant can receive only one grant award under this announcement.

E. Multi-Year Projects

Applicants may apply for projects of up to 36 months duration. A multi-year project is a project on a single theme that requires more than 12 months to complete and affords the applicant an opportunity to develop and address more complex and in-depth strategies than can be completed in one year. Applicants are encouraged to develop mutli-year projects. However, applicants should understand that a multi-year project is a project on a single theme that requires more than 12 months to complete. The project cannot be a series of unrelated objectives with activities presented in chronological order over a two or three year period. Funding after the first 12 month budget period of an approved multi-year project is non-competitive.

Applications for continuation grants funded under these awards beyond the

one-year budget period, but within the two or three year project period, will be entertained in subsequent years on a non-competitive basis, subject to the availability of funds, satisfactory progress of the grantee and determination that continued funding would be in the best interest of the Government.

F. Grantee Share of Project

Grantees must provide at least 20 percent of the total approved cost of the project. The total approved cost of the project is the sum of the ACF share and the non-Federal share. The non-Federal share may be met by cash or in-kind contributions, although applicants are encouraged to meet their match requirements through cash contributions. Therefore, a project requesting $300,000 in Federal funds (based on an award of $100,000, per budget period for three years), must include a match of at least $25,000 (20% total project cost per budget year). An itemized budget detailing the applicant's non-Federal share, and its source, must be included in an application. A request for a waiver of the non-Federal share requirement may be submitted in accordance with 45 CFR 1336.50(b)(3) of the Native American Program Regulations.

G. Intergovernmental Review of Federal Programs

This program is not covered by Executive Order 12372.

H. The Application Process

Availability of Application Forms

In order to be considered for a grant under this program announcement, an application must be submitted on the forms supplied and in the manner prescribed by ANA. The application kits containing the necessary forms and instructions may be obtained from: Department of Health and Human Services, Administration for Children and Families, Administration for Native Americans, room 344F, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201–0001, Attention: Earldine Glover, Phone: (202) 690–7727.

Application Submission

One signed original, and two copies, of the grant application, including all attachments, must be hand delivered or mailed by the closing date to: Department of Health and Human Services, Administration for Children and Families, Division of Discretionary Grants, room 341F.2, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201–0001, Attention: ANA 93612–032.

The application must be signed by an individual authorized (1) to act for the applicant tribe or organization and (2) to assume the applicant's obligations under the terms and conditions of the grant award, including Native American Program statutory and regulatory requirements.

Application Consideration

The Commissioner of the Administration for Native Americans determines the final action to be taken with respect to each grant application received under this announcement.

The following points should be taken into consideration by all applicants:

- Incomplete applications and applications that do not conform to this announcement will not be accepted for review. Applicants will be notified in writing of any such determination by ANA.
- Complete applications that conform to all the requirements of this program announcement are subjected to a competitive review and evaluation process. An independent review panel consisting of reviewers familiar with Native American Tribes, communities and organizations evaluates each application against the published criteria in this announcement. The review will result in a numerical score attributed to each application. The results of this review assist the Commissioner to make final funding decisions.
- The Commissioner's funding decision also takes into account the analysis of the application, recommendation and comments of ANA staff, State and Federal agencies having contract and grant performance related information, and other interested parties.
- The Commissioner makes grant awards consistent with the purpose of the Act, all relevant statutory and regulatory requirements, this program announcement, and the availability of funds.
- After the Commissioner has made decisions on all applications, unsuccessful applicants are notified in writing within approximately 120 days of the closing date. The notification will be accompanied by a critique including recommendations for improving the application. Successful applicants are notified through an official Financial Assistance Award (FAA) document. The Administration for Native Americans staff cannot respond to requests for information regarding funding decisions prior to the official notification to the applicants. The FAA will state the amount of Federal funds awarded, the purpose of the grant, the terms and conditions of the grant award, the effective date of the award, the project period, the budget period, and the amount of the non-Federal matching share requirement.

I. Review Process and Criteria

Applications submitted by the closing date and verified by the postmark under this program announcement will undergo a pre-review to determine:

- That the applicant is eligible in accordance with the Eligible Applicants Section of this announcement.
- That the application narrative, forms and materials submitted are adequate to allow the review panel to undertake an indepth evaluation. (All required materials and forms are listed in the Grant Application Checklist in the Application Kit).

Applications which pass the pre-review will be evaluated and rated by an independent review panel on the basis of the five evaluation criteria listed below. These criteria are used to evaluate the quality of a proposed project, and to determine the likelihood of its success. A proposed project should reflect the purposes of ANA's SEDS policy and program goals (described in Introduction and Program Purpose of this announcement), include a social and economic development strategy, and address the specific developmental steps toward self-sufficiency that the specific tribe or Native American community is undertaking.

The five programmatic and management criteria are closely related to each other. They are considered as a whole also in judging the overall quality of an application. Points are awarded only to applications which are responsive to this announcement and these criteria. The five evaluation criteria are:

(1) *Long-Range Goals and Available Resources.* (15 points)

(a) The application explains how specific social, governance and economic long-range community goals relate to the proposed project and strategy. It explains how the community intends to achieve these goals. It clearly documents the involvement and support of the community in the planning process and implementation of the proposed project. The goals are described within the context of the applicant's comprehensive community social and economic development plan. (Inclusion of the community's entire development plan is not necessary). The application has a clearly delineated

social and economic development strategy.

(b) Available resources (other than ANA) which will assist, and be coordinated with the project are described. These resources should be documented by letters or documents of commitment of resources, not merely letters of support. These resources may be human, natural or financial, and may include other Federal and non-Federal resources.

(2) *Organizational Capabilities and Qualifications.* (10 points)

(a) The management and administrative structure of the applicant is explained. Evidence of the applicant's ability to manage a project of the proposed scope is well defined. The application clearly shows the successful management of prior or current projects of similar scope by the organization, and/or by the individuals designated to manage the project.

(b) Position descriptions or resumes of key personnel, including those of consultants, are presented. The position descriptions and resumes related specifically to the staff proposed in the Approach Page and in the proposed Budget of the application. Position descriptions very clearly described each position and its duties and clearly relate to the personnel staffing required to achieve the project objectives. Resumes indicate that the proposed staff are qualified to carry out the project activities. Either the position descriptions or the resumes set forth the qualifications that the applicant believes are necessary for overall quality management of the project.

(3) *Project Objectives, Approach and Activities.* (45 points)

The application proposes specific project objective work plans with activities related to the SEDS strategy and the overall long-term goals. The objective work plan(s) in the application include(s) project objectives and activities for each budget period proposed and demonstrates that each of the objectives and its activities:

- are measurable and/or quantifiable in terms of results or outcomes;
- are based on the fully described and locally determined balanced SEDS strategy narrative for governance or social and economic development;
- clearly related to the community's long-range goals which the project addresses;
- can be accomplished with the available or expected resources during the proposed project period;
- indicate when the objective, and major activities under each objective, will be accomplished;
- specify who will conduct the activities under each to achieve the objective; and
- support a project that will be completed, self-sustaining, or financed by other than ANA funds at the end of the project period.

(4) *Results or Benefits Expected.* (20 points)

The proposed objectives will result in specific, measurable outcomes to be achieved that will clearly contribute to the completion of the overall project and will help the community meet its goals. The specific information provided in the narrative and objective work plans on expected results or benefits for each objective is the standard upon which its achievement can be evaluated at the end of each budget year.

(5) *Budget.* (10 points)

There is a detailed budget provided for each budget period requested. The budget is fully explained. It justifies each line item in the budget categories in Section B of the Budget Information of the application, including the applicant's non-Federal share and its source. Sufficient cost and other detail is included and explained to facilitate the determination of cost allowability and the relevance of these costs to the proposed project. The funds requested are appropriate and necessary for the scope of the project. For business development projects, the proposal demonstrates that the expected return on the funds used to develop the project provides a reasonable profit within a future specified time frame.

J. Guidance to Applicants

The following is provided to assist applicants to develop a competitive application.

(1) *Program Guidance*

- The Administration for Native Americans funds projects that present the strongest prospects for fulfilling a community's governance, social or economic development leading to its self-sufficiency. The Administration for Native Americans does not fund on the basis of need alone.
- In discussing the goals, strategy, and problems being addressed in the application, include sufficient background and/or history of the community concerning these and/or progress to date, as well as the size of the population to be served. The appropriateness and potential of the proposed project in strengthening and promoting the goal of the self-sufficiency of a community will be determined by reviewers.
- An application should describe a clear relationship between the proposed project, the SEDS strategy, and the community's long-range goals or plan.
- The project application must clearly identify in measurable terms the expected results, benefits or outcomes of the proposed project, and the positive or continuing impact on the community that the project will have.
- Supporting documentation or other testimonies from concerned interests other than the applicant should be included to provide support for the feasibility and the commitment of other resources to implement or conduct the proposed project.

In the ANA Project Narrative, Section A of the application package, Resources Available to the Proposed Project, the applicant should describe any specific financial circumstances which may impact on the project, such as any monetary or land settlements made to the applicant, and any restrictions on the use of those settlements. When the applicant appears to have other resources to support the proposed project and chooses not to use them, the applicant should explain why it is seeking ANA funds and not utilizing these resources for the project.

- Reviewers of applications for ANA indicate they are better able to evaluate whether the feasibility has been addressed and the practicality of a proposed economic development project, or to start a business if the applicant includes a business plan that clearly describes its feasibility and the plan for the implementation and marketing of the business. (ANA has included sample business plans in the application kit). It is strongly recommended that an applicant use these as a guide to its development of an economic development project or business that is part of the application. The more information provided a review panel, the better able the panel is to evaluate the potential for the success of the proposed project.
- A "multi-purpose community-based Native American organization" is an association and/or corporation whose charter specifies that the community designates the Board of Directors and/or officers of the organization through an elective procedure and that the organization functions in several differing areas of concern to the members of the local Native American community. These areas are specified in the by-laws and/or policies adopted by the organization. They may include, but need not be limited to, economic, artistic, cultural, and recreational activities, the delivery of human services such as health, day care, counseling, education, and training.

(2) *Technical Guidance*

• It is strongly suggested that the applicant follow the Supplemental Guide included in the ANA application kit to develop an application. The Guide provides practical information and helpful suggestions, and is an aid to help applicants prepare ANA applications for social and economic development projects.

• Applicants are encouraged to have someone other than the author apply the evaluation criteria in the program announcement and to score the application prior to its submission, in order to gain a better sense of the application's quality and potential competitiveness in the ANA review process.

• For purposes of developing an application, applicants should plan for a project start date approximately 120 days after the closing date under which the application is submitted.

• The Administration for Native Americans will not fund essentially identical projects serving the same constituency.

• The Administration for Native Americans will accept only one application from any one applicant for each closing date. If an eligible applicant sends in two applications, the one with the earlier postmark will be accepted for review unless the applicant withdraws the earlier application.

• An application from an Indian Tribe, Alaskan Native village or other applicant must be from the governing body of the applicant.

• The application's Form 424 must be signed by the applicant's representative authorized to act with full authority on behalf of the applicant.

• The Administration for Native Americans suggests that the pages of the application be numbered sequentially from the first page, and that a table of contents be provided. This allows for easy reference during the review process. Simple tabbing of the sections of the application is also helpful to the reviewers.

• Two copies of the application plus the original are required.

• The Cover Page (included in the Kit) should be the first page of an application, followed by the one-page abstract.

• The Approach Page (Section B of the ANA Program Narrative) for each Objective Work Plan proposed should be of sufficient detail to become a monthly staff guide for project responsibilities if the applicant is funded.

• The applicant should specify the entire project period length on the first page of the Form 424, Block 13, not the length of the first budget period. Should the application's contents propose one length of project period and the Form 424 specify a conflicting length of project period, ANA will consider the project period specified on the Form 424 as governing.

• Line 15a of the 424 should specify the Federal funds requested for the first Budget Period, not the entire project period.

• If a profit-making venture is being proposed, profits must be reinvested in the business in order to decrease or eliminate ANA's future participation. Such revenue must be reported as general program income. A decision will be made at the time of grant award regarding appropriate use of program income. (See 45 CFR Part 74 and Part 92.)

• Applicants proposing multi-year projects must fully describe each year's project objectives and activities. Separate Objective Work Plans (OWPs) must be presented for each project year and a separate itemized budget of the Federal and non-Federal costs of the project for each budget period must be included.

• Applicants for multi-year projects must justify the entire time-frame of the project (i.e., why the project needs funding for more than one year) and clearly describe the results to be achieved for each objective by the end of each budget period of the total project period.

• Village governments or other applicants without established accounting systems must arrange for qualified, acceptable accounting services prior to release of grant funds.

Note: Subpart H, 45 CFR part 74 and subpart C, 45 CFR part 92, address those elements of a generally acceptable accounting system for Federal grantees. The financial management standards in subparts H and C, for example, include:

(1) Accurate, current and complete disclosure;

(2) Records which show source and application of funds;

(3) Effective control and accountability of funds and property;

(4) Comparison of actual and budgeted amounts;

(5) Procedures to minimize time lapsing between transfer and disbursement of funds;

(6) Procedures to determine allowability and allocation of funds;

(7) Accounting records with source documentation;

(8) Periodic audits; and

(9) A follow-up system.

(3) *Projects or activities that generally will not meet the purposes of this announcement.*

• Projects in which a grantee would provide training and/or technical assistance (T/TA) to other tribes or Native American organizations ("third party T/TA"). However, the purchase of T/TA by a grantee for its own use or for its members' use (as in the case of a consortium), where T/TA is necessary to carry out project objectives, is acceptable.

• Projects that request funds for feasibility studies, business plans, marketing plans or written materials, such as manuals, that are not an essential part of the applicant's SEDS strategy long-range development plan. The Administration for Native Americans is not interested in funding "wish lists" of business possibilities. The administration for Native Americans expects written evidence of the solid investment of time and consideration on the part of the applicant with regard to the development of business plans. Business plans should be developed based on market analysis and feasibility studies on the potential success to the business prior to the submission of the application.

• The support of on-going social service delivery programs or the expansion, or continuation, of existing social service delivery programs.

• Core administration functions, or other activities, that essentially support only the applicant's on-going administrative functions.

• Project goals which are not responsive to one or more of the three interrelated ANA goals (Government Development, Economic Development, Social Development).

• Proposals from consortia of tribes and villages that are not specific with regard to support from, and roles of, member tribes and villages. The Administration for Native Americans expects an application from a consortium to have goals and objectives that will create positive impacts and outcomes in the communities of its members.

• Projects which should be supported by other Federal funding sources that are appropriate, and available, for the proposed activity.

• Projects that will not be completed, self-sustaining, or supported by other than ANA funds, at the end of the project period.

• The purchase of real estate (see 45 CFR 1336.50(e)) or construction (see ACF Grants Administration Manual Ch. 3, § E.)

• Projects originated and designed by consultants who are not members of the applicant organization, tribe or village who prepared the application and provide a major role for themselves in the proposed project.

The Administration for Native Americans will critically evaluate applications in which the acquisition of major capital equipment (i.e., oil rigs, agricultural equipment, etc.) is a major component of the Federal share of the budget. During negotiation, such expenditures may be deleted from the budget of an otherwise approved application, if not fully justified by the applicant and not deemed appropriate to the needs of the project by ANA.

K. Paperwork Reduction Act of 1980

Under the Paperwork Reduction Act of 1980, Public Law 96–511, the Department is required to submit to the Office of Management and Budget (OMB) for review and approval any reporting and record keeping requirements in regulations including program announcements. This program announcement does not contain information collection requirements beyond those approved for ANA grant applications under the Program Narrative Statement by OMB.

L. Due Date for Receipt of Applications

The closing dates for applications submitted in response to this program announcement are February 5, 1993 and May 14, 1993.

M. Receipt of Applications

Applications must either be hand delivered or mailed to the address in Section H, The Application Process: Application Submission.

The Administration for Native Americans will not accept applications submitted via facsimile (FAX) equipment.

Deadlines. Applications mailed through the U.S. Postal Service or a commercial delivery service shall be considered as meeting an announced closing date if they are either:

(1) Received on or before the deadline date at the address specified in Section H, Application Submission, or

(2) Sent on, or before, the deadline date and received in time for the ANA independent review. (Applicants are cautioned to request a legibly dated receipt from a commercial carrier or U.S. Postal Service or a legible postmark date from the U.S. Postal Service. Private metered postmarks shall not be acceptable as proof of timely mailing.)

Late applications. Applications which do not meet the criteria in the above paragraph of this section are considered late applications and will be returned to the applicant. The Administration for Native Americans shall notify each late applicant that its application will not be considered in the current competition.

Extension of deadlines. The Administration for Native Americans may extend the deadline for all applicants because of acts of God such as floods, hurricanes, etc., or when there is a widespread disruption of the mails. However, if ANA does not extend the deadline for all applicants, it may not waive or extend the deadline for any applicant.

Part V

Department of Labor

Mine Safety and Health Administration

30 CFR Part 14, et al.
Requirements for Approval of Flame-Resistant Conveyor Belts; Proposed Rule

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Parts 14, 18 and 75

RIN 1219–AA65

Requirements for Approval of Flame-Resistant Conveyor Belts

AGENCY: Mine Safety and Health Administration (MSHA), Labor.

ACTION: Proposed rule.

SUMMARY: This proposed rule would implement new procedures and requirements for testing and approval of flame-resistant conveyor belts to be used in underground mines. The proposed revisions would replace the existing flame test for acceptance of flame-resistant conveyor belts specified in agency regulations. The proposal would also include current terminology. Currently regulations require that conveyor belts be flame resistant in accordance with specifications of the Secretary. Conforming amendments to safety standards are being proposed as part of this rulemaking.

DATES: Written comments must be submitted on or before February 22, 1993.

ADDRESSES: Send written comments to the Mine Safety and Health Administration, Office of Standards, Regulations and Variances, Room 631, Ballston Tower No. 3, 4015 Wilson Boulevard, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Patricia Silvey, (703) 235–1910.

SUPPLEMENTARY INFORMATION:

I. Paperwork Reduction Act

This proposal contains information collection requirements in §§ 14.4, 14.7 and 14.8. These paperwork requirements have been submitted to the Office of Management and Budget (OMB) for review under section 3504(h) of the Paperwork Reduction Act of 1980. Comments on the proposed paperwork provisions should be sent directly to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for MSHA (see address at the end of this discussion). The respondents would be mine equipment manufacturers. The burden hour estimate includes the time for reviewing instructions, gathering and maintaining the data needed, and completing and reviewing the collected information. In each instance, the resultant information collected would be used by MSHA to assess compliance with the proposed requirements. The information collection requirements contained in the proposal are discussed below.

Proposed § 14.4 would require applicants seeking approval of flame-resistant conveyor belts to submit an application for approval. MSHA estimates there would be 250 applications submitted the first year, 150 applications during the second year, and 60 applications in the third and following years. The time needed to prepare and submit each application is projected to be 5 hours for each approval application for a conveyor belt that is not similar to one previously approved (original application) for the applicant and 2 hours for each extension of approval or approval application of a conveyor belt similar to one that has been previously approved. The proposal would not require submittal of duplicative documentation on extension of approval and approval applications for conveyor belts similar to a previously approved belt. Hence these applications would take less time to prepare than original applications. MSHA estimates that initially the first year, there would be 200 original applications submitted, each requiring 5 hours to prepare, and 50 applications similar to ones previously submitted, each requiring 2 hours to prepare. The estimated burden hours are 1100. During the second year, MSHA estimates there would be 75 original applications submitted, each requiring 5 hours to prepare, and 75 similar applications, each requiring 2 hours to prepare. The estimated burden hours are 525. In the third and following years, MSHA estimates there would be 60 applications, each requiring 2 hours to prepare. The estimated burden hours are 120.

The proposal would require applicants to maintain records on the distribution of all conveyor belt bearing an approval marking as set forth in § 14.7(d). This provision does not specify the type of record, and MSHA believes applicants will use existing sales record systems to comply; therefore, no burden hours are assigned to this requirement.

Proposed § 14.8(d) requires applicants to report to MSHA any knowledge of any conveyor belt distributed with flame resistance characteristics not in accordance with the approval specifications. MSHA estimates that, in a worse case, manufacturers would submit 12 reports per year requiring 15 minutes per report. Estimated burden hours are 3.

Send comments regarding these burden estimates or any other aspects of this collection of information, including suggestions for reducing this burden, to Patricia W. Silvey, Director, Office of Standards, Regulations and Variances, MSHA, room 631, Ballston Tower #3, 4015 Wilson Boulevard, Arlington, Virginia 22203, and to the Office of Information and Regulatory Affairs of OMB, Attention: Steve Semenuk Desk Officer for the Mine Safety and Health Administration, room 3001, New Executive Office Building, Washington, DC 20503.

II. Background

Conveyor belt systems are used extensively in underground mines to transport mined material. MSHA estimates there are about 3,000 feet (900 meters) of conveyor belt in an average small underground coal mine (covering 1,500 feet (450 m) for conveyance and return) and 28,000 feet (8,500 m) of conveyor belt in an average large underground mine. Because of the fire hazards in underground coal mines, existing MSHA safety standards require that conveyor belts be flame resistant in accordance with specifications of the Secretary by passing the flame test for conveyor belt specified in § 18.65. That test is conducted in a 21-inch (53.3 cm) cubical test gallery with belt samples 6-inches (15.2 cm) long by ½-inch (1.27 cm) wide by belt thickness.

MSHA requires mine operators to report any mine fires that either are not extinguished within 30 minutes of discovery or involve a serious injury. MSHA's Belt Entry Ventilation Review: Report of Findings and Recommendations (1989) contains a historical review of reportable underground coal mine fires involving conveyor belts. In addition, two other MSHA reports contain information on underground coal mine fires involving conveyor belts. These reports are Coal Mine Fires Involving Track and Belt Entries, 1970–1988, dated November 19, 1990 and Mine Fire Prevention and Response Strategies, dated October 31, 1991. An analysis of information from these reports follows.

From 1970 through 1990, 307 underground coal mine fires were reported and investigated by MSHA. Conveyor belts were identified to be involved in 42 of these fires. The 42 fires represent 14 percent of the total number of fires over this 21-year period. Moreover, belt fires as a percentage of total fires have shown increases over the last twelve years with half of the belt fires occurring in the last eight years.

From an analysis of the available data, approximately 75 percent of the belt fires occurred in the mainlines, with about 25 percent of the belt fires occurring in the panel or section beltlines. Two of the 42 belt fires, or

about 5 percent resulted in the mine being sealed. These data also indicate that about 30 percent of the belt fires resulted in flame traveling for hundreds of feet. Such fires create a severe hazard to the health and safety of miners.

When belt fires reach the propagation stage, they produce more fire gases and spread faster than the fires of surrounding coal surfaces. The belt fires that have occurred since 1970 have burned as much as 2,000 feet (600 m) of belt before the fire was extinguished.

The 21 underground coal mine fires from 1983 through 1990 that involved conveyor belts and the large-scale flammability studies of conveyor belts conducted by the Bureau of Mines, U.S. Department of the Interior (BOM) in cooperation with MSHA have shown that the flame test specified in § 18.65 is not optimal for evaluating the flammability of conveyor belts. For example, some conveyor belts that passed the current flame test readily propagated flame and were completely consumed by fire in large-scale gallery tests that were more representative of the mine environment. As a result, BOM and MSHA worked together to develop a revised test that would more effectively assess the flame resistance of conveyor belts than the flame test in § 18.65.

The Agency is aware that in recent years the United Kingdom has developed a conveyor belt evaluation program that provides the U.K. with a product having flame resistance superior to that provided by existing part 18 requirements in the United States. Germany and the U.K. are currently involved with the other European nations to negotiate a common standard.

The revised test is intended to address the resistance of conveyor belts to both ignition and flame propagation. It is designed to significantly reduce or eliminate the hazard of flame propagation along the belt.The revised test would identify conveyor belts which are difficult to ignite and are self-extinguishing under the test conditions. Therefore, conveyor belts passing the revised test would not only be resistant to ignition, but also highly resistant to flame propagation.

This proposal would replace the current regulations covering the testing and acceptance for flame resistance of conveyor belts found in 30 CFR part 18 with new regulations incorporating the revised flame test.

III. Discussion and Summary of Proposed Rule

The test procedures and criteria in subpart B are the result of the BOM and MSHA's cooperative efforts to develop a more appropriate laboratory-scale flammability test for conveyor belts. The primary concerns were to develop procedures that are objective, repeatable and which appropriately assess the flammability of conveyor belts in the context of the mining environment in which they are used.

Development of Laboratory—Scale Test and Procedures

A large-scale flammability test for conveyor belt was jointly developed by the BOM and MSHA. Experimental tests were conducted in the BOM surface fire gallery located at the Lake Lynn Laboratory. The fire gallery consisted of a 90-foot (27.4 m) long by 12.5-foot (3.8 m) wide arched tunnel (81 square feet (7.5 m^2) cross-sectional area) coupled, by means of a transition section, to a 6-foot (1.8 m) diameter axivane fan. The gallery contained a typical conveyor belt structure. A 30-foot (9.1 m) length of belt, typically 42-inches (107 cm) wide, was placed on the top rollers of the structure. The ignition source was a 2-gallon (7.6 liter) liquid fuel fire (700 kilowatts (2520 millijoules)) in a 3-foot (0.9 m) by 2-foot (0.6 m) tray located below the upstream end of the belt sample. The gallery airflow was set at 300 feet per minute (ft/min) (91.4 m/min) (24,300 CFM (688 m^3/min)). Previous studies on the effect of ventilation on conveyor belt fires with rubber and polyvinyl chloride (PVC) belts had shown that flame propagation at these test conditions was most likely to occur with this airflow. (see "Effect of Ventilation on Conveyor Belt Fires" by C.P. Lazzara and F.J. Perzak, presented at the Symposium on Safety in Coal Mining, Pretoria, South Africa (October 1987) and "Impact of Entry Air Velocity on the Fire Hazards of Conveyor Belts" by H.C. Verakis and R.W. Dalzell, presented at the 4th International Mine Ventilation Congress, Brisbane, Australia (July, 1988) and "Reducing the Fire Hazard of Mine Conveyor Belts" by H.C. Verakis, presented at the 5th U.S. Mine Ventilation Symposium, West Virginia University in Morgantown, WV (June 4, 1991) which detail these studies.)

A belt passed the large-scale flammability test if a portion of the 30-foot (9.1 m) long sample, across its width, remained undamaged by fire (excluding blistering). Sixteen different formulations of conveyor belts, 8 rubber and 8 PVC, that passed the current MSHA flammability test (30 CFR 18.65) were subjected to the large-scale gallery test. Six of these formulations passed the test and ten failed. For the belts that failed, flame propagation rates varied from about 1 foot (0.3 m) per minute to 30 feet (9.1 m) per minute. Results from the large-scale test were repeatable and the test provided an appropriate method for evaluating the flame resistance of conveyor belts in a manner that was more representative of the mining environment than the current test.

The large-scale test requires an expensive fire gallery facility and large amounts of belt. This makes it expensive to conduct testing. It would not be feasible for belt manufacturers to construct the large-scale fire gallery and perform the test. It would not be feasible for MSHA or the BOM to use the large-scale facility for approval testing. Therefore, the BOM began development of a laboratory-scale flammability test for conveyor belts that provide results comparable with the large-scale test. To develop the laboratory-scale test the ventilated tunnel dimensions were selected on the basis of experience with fire testing and the development of flammability tests. Other values such as sample size, the air velocity and ignition time were varied to obtain comparable results to the large-scale test. The laboratory-scale test developed consists of a horizontal 5.5-foot (1.68 m) long by 1.5-foot (0.46 m) square ventilated tunnel. The size of the belt test sample is 60 inches (152.4 cm) long by 9 inches (22.9 cm) wide. The tunnel airflow is 200 feet per minute (61 m/min) (450 CFM (12.7 m^3/min)) and the ignition source is a gas burner applied to the upstream end of the sample for 5 minutes. A belt formulation passes the test if, in each of three separate trials, there remains a portion of the sample, across its entire width, undamaged by fire.

Samples of the same 16 formulations of belts that were examined in the large-scale gallery test were subjected to the laboratory-scale test and the results compared. Of these, 8 were rubber belt formulations, and 8 were PVC formulations. Of the 16 formulations examined, one formulation passed the laboratory-scale test but failed the large-scale gallery test and one formulation passed the large-scale gallery test and failed the laboratory-scale test.

The development of flammability tests is not an exact science. Because of the difficulty in designing a laboratory-scale test that is in complete agreement with a large-scale test, the comparison of tesf results obtained between these two procedures is considered to be very good. MSHA solicits comments on the appropriateness of the laboratory-scale test.

The laboratory-scale flammability test described above and in subpart B of this proposed rule was found to produce

repeatable, objective test results. MSHA and the BOM believe this test appropriately assesses the flame resistance of conveyor belts in a relatively inexpensive manner that is more representative of the mining environment than the present test. The laboratory-scale test procedure also provides results comparable with the large-scale test with control of certain critical factors. (See "Conveyor Belt Flammability Tests: Comparison of Large-Scale Gallery and Laboratory-Scale Tunnel Results" by C.P. Lazzara and F. J. Perzak, presented at the 23rd International Conference of Safety In Mines Research Institutes, Washington, D.C. (September 11–15, 1989) which details this agreement).

Due to the fire dynamics during testing, certain design characteristics essential in obtaining uniform and consistent test results are specified in subpart B. These include tunnel dimensions, sample size and distance of sample rack to tunnel roof. These factors are critical for obtaining agreement and repeatable test results. For example, the requirements for construction of the laboratory-scale tunnel described in subpart B minimize thermal losses through the walls. The specified burner provides a controlled and consistent flame during the ignition period and was found to be a reliable and uniform ignition source. Variations in the principal parts of the apparatus and procedures will affect the burning process, yielding unreliable results. However, where variations do not affect the reliability of the test results, design characteristics have not been specified.

IV. Section-by-Section Discussion

Subpart A—General Provisions

Section 14.1 Purpose and effective date.

This section is derived from existing § 18.1 and would establish the requirements for conveyor belts to be approved under part 14. Conveyor belts are used for the transportation of coal and other mining products in underground mines. Because of the hazard presented by fires in underground coal mines, existing 30 CFR 75.1108 requires the use of flame-resistant conveyor belts as determined by specifications of the Secretary. Under this proposal, MSHA would modify the existing requirements specified for acceptance of conveyor belts contained in §§ 18.6(c), 18.6(i), and 18.65 after a review of the public record and consideration of all comments.

The proposal would take effect 60 days from the publication of the final rule. At the same time, the applicable portions of part 18 referring to conveyor belts would be modified. After this date, all applications for approval of conveyor belts would be required to meet the requirements of this part, and applications for acceptance of conveyor belts would no longer be processed under part 18.

MSHA is implementing a voluntary acceptance program concurrent with the publication of this proposal. Under this program manufacturers may submit applications to MSHA's Approval Certification Center requesting the testing of their conveyor belts in accordance with the test procedures outlined in proposed § 14.22. Acceptance numbers will be issued to conveyor belts meeting the acceptable performance criteria, identifying those conveyor belts that have demonstrated this improved flame resistance. The inception of this program would not affect the existing acceptance program conducted under part 18. MSHA intends to continue to offer the new voluntary acceptance program for evaluation of belts with improved flame resistance until the effective date of the final rule for this part.

MSHA anticipates that, as a result of manufacturers' participation in the voluntary acceptance program, a substantial number of conveyor belts in compliance with the improved flame-resistance requirements would be commercially available on the effective date of the final rule. Based upon this projection, as well as the performance of belt samples during the development of the proposed test, MSHA believes the manufacturers will be able to submit applications for approval of conveyor belts in accordance with the final rule shortly after its publication. MSHA has, therefore, proposed the effective date of the final rule to be 60 days after its publication.

Section 14.2 Definitions.

The following definitions which apply to the approval of conveyor belts are designed to clarify the requirements of this part. Many are derived from existing § 18.2, although some are new.

Applicant. This term, which is derived from existing § 18.2, would identify an applicant as an individual or organization that manufactures or controls the production of the conveyor belt and that applies to MSHA for approval of that conveyor belt.

Approval. This term would replace the "Acceptance" terminology defined in existing § 18.2. An approval would be defined as a document issued by MSHA which states that a conveyor belt has met the requirements of this part. It also would authorize an approval marking identifying the conveyor belt as approved.

This would be consistent with other recent MSHA approval regulations which define "approved" as the general term which indicates that products have met MSHA's technical requirements and have been designed and manufactured to ensure that the products will not present a fire, explosion, or other specified safety hazard related to use.

Conveyor belt. This term is new. It would define a conveyor belt to be a flexible strip of material that is typically constructed of interwoven fabric or plies and polymeric compounds and used to transport coal or other extracted minerals.

Extension of approval. This term, which is new as applied to conveyor belts, would define an extension of approval as a document issued by MSHA which states that a change to a conveyor belt previously approved by MSHA under this part meets the requirements of this part. It would also authorize the continued use of the approval marking after the appropriate extension number has been added. The definition of this term would, like that of "approval", provide for consistent terminology.

Load bearing cover. This term is new and would describe the top cover of a conveyor belt. The load bearing cover is designed to be the surface upon which the extracted minerals are conveyed

Post-approval product audit. This term is new. It would be defined as MSHA's examination, testing, or both, of an approved conveyor belt selected by MSHA to determine whether it meets the technical requirements and has been manufactured as approved.

Section 14.3 Observers at tests and evaluations.

This section is derived from existing § 18.9(a) and would specify those individuals who could be present during testing and evaluation conducted under this part. These individuals would be limited to personnel of MSHA, BOM, representatives of the applicant and such other persons as agreed upon by MSHA and the applicant. This section is intended to protect proprietary information which could be available to observers at tests and evaluations conducted under this part.

Section 14.4 Application procedures and requirements.

This section, which is derived from existing § 18.6, would set forth the procedures and requirements for requesting approval of a flame-resistant conveyor belt. It does not contain

specific provisions concerning the fees to be charged for approval of a flame-resistant conveyor belt. Instead, § 14.4(b) would require that fees, calculated pursuant to Part 5, Fees for Testing, Evaluation, and Approval of Mining Products, (52 FR 17506) be submitted with each application for approval or extension of approval.

Fees for MSHA processing of an application under part 14 would be subject to an hourly rate charge for evaluation and testing. On hourly rate actions, applicants would be billed for the fee when processing of the action is completed.

MSHA would charge $39 per hour for evaluation and $41 an hour for testing with an application fee of $100 for processing requests for approval or extension of approval of flame-resistant conveyor belt under part 14. These fees are based on the fee adjustments published in the **Federal Register** on December 20, 1991, (56 FR 66299) effective January 1, 1992.

This rule would organize the application procedures into two types of approval actions: Approval and extension of approval. In requesting an approval for a flame-resistant conveyor belt, MSHA would require the submission of all information necessary to properly evaluate a conveyor belt as it relates to the approval requirements. If, after receipt of an approval, the applicant requests approval of a similar conveyor belt or an extension of approval for the original conveyor belt, the applicant would not be required to submit documentation duplicative of previously submitted information. Only information related to changes in the previously approved conveyor belt would be required, avoiding unnecessary paperwork.

This proposal would include a requirement that changes in the specifications of a previously approved flame-resistant conveyor belt must be approved by MSHA. This would avoid unauthorized changes being made that could affect the flame resistance of the conveyor belt.

Section 14.4(c) would require an applicant to submit information to characterize the identification and construction of a conveyor belt. The applicant would have the option to either provide the complete formulation of a conveyor belt or to specify each fire retardant ingredient by percentage along with a listing of each flammable and inert ingredient. While the submission of this information is not specifically addressed, existing § 18.6(c) and current application procedures for acceptance of conveyor belts require formulation information to be provided.

The proposal provides that an application for approval of a conveyor belt that is similar to a previously approved conveyor belt would include an explanation of any changes from the existing approval, along with the approval number of the belt which most closely resembles the new one. Documentation which is listed in the prior approval need not be resubmitted.

Section 14.4(d) would require an application for extension of approval to include a description of the proposed change to an approved belt and the MSHA approval number for the belt for which the extension is requested. The applicant would not be required to submit documentation duplicative of previously submitted information. Only information related to changes in the previously approved product would be required, avoiding unnecessary paperwork. Section 14.4(e) would provide that a determination by MSHA would be made if additional information, samples and testing are needed to evaluate the application. Additional samples may be requested by MSHA as a result of erroneous test results as discussed below in the flame-resistance test procedures. There may be instances where MSHA would not need to conduct testing to determine the flammability of a conveyor belt based on its previous experience in testing and evaluating similar belts. An applicant may also provide a statement of MSHA for consideration which explains the reasons why flame testing of a conveyor belt is not necessary in a given case.

Section 14.5 Test samples.

Section 14.5, derived from § 18.6(g) and (h), would require that three unrolled, flat samples of conveyor belt, 60 inches (152.4 cm) long by 9 inches (22.9 cm) wide, be submitted for flame testing when requested by MSHA. The test for flame resistance would require that three samples be tested to determine acceptable performance. The purpose of providing the samples in an unrolled, flat state is to prevent difficulty in mounting samples for testing. If samples would be received in a rolled (coiled) state, additional time would be needed for MSHA to flatten the samples for subsequent mounting.

Curling of samples can cause erroneous test results and has, at times, presented a problem during testing. MSHA and BOM have determined that most of this curling effect resulted from the conveyor belts having a "pre-set" from being rolled prior to testing. The requirements of § 14.5 along with the preconditioning of samples in § 14.22(a)(1) have been designed to address and minimize this problem.

Section 14.6 Issuance of approval.

This section is derived from existing § 18.10 and would specify the actions to be taken by MSHA upon review of applications for approval of conveyor belts.

Paragraph (a) would require MSHA to issue, following completion of the evaluation and testing of a conveyor belt provided for under this part, a written notice of approval or the reason for denying approval of the product.

Paragraph (b) would retain the provision of existing § 18.10(c) that an applicant is not to advertise or otherwise represent a conveyor belt as approved until MSHA has issued an approval for that product.

Section 14.7 Approval marking and distribution record.

This section is derived from existing § 18.65(f), with modifications, and would provide for the marking of approved conveyor belts and the retention of initial sale records.

Paragraph (a) would clarify the Agency's policy that approved products be marketed only under the name specified in the approval. This provision, common to all products bearing an MSHA approval, would ensure that the product is easily identifiable as one to which the approval applies.

The provisions of paragraph (b) would require a legible and permanent approval marking to be at least ½-inch (1.27 cm) high, at intervals not exceeding 60 feet (18.3 m), and repeated at least once every foot (30.5 cm) across the width of the belt. They are modified in part from the existing § 18.65(f). This modification in marking is being proposed to allow for greater ease of identification of a conveyor belt in use. As the belt passes along the conveyor framework, the edges can wear. The resulting fraying of conveyor belts which occurs during normal use can cause the approval markings on these belts to be illegible. The relocation of the markings from the edge of the belt to across its width would permit identification of the conveyor belt for a longer time period.

The proposal would specify that the approval marking be repeated at least once every foot (30.5 cm) across the width of the belt. This would ensure that a portion of the making would be present should a belt be worn along the edges or cut into narrower widths. The proposed change to a 60-foot (18.3 m) distance between the approval markings would correspond to the present requirement that the approval marking be placed at 30-foot (9.1 m) intervals

alternately along the edges of the belt. For example, when placing markings according to the present requirement at the 30 foot (9.1 m) intervals alternately along the edges of a belt, the distance between the marking along one edge of a belt is 60 feet (18.3 m).

The proposed change from the existing requirement of metal stencils used during the vulcanizing process to produce depressed letters, to the requirement that the approval marking be "legibly and permanently marked" would provide flexibility in marking and allow for technological advances in the manufacturing process for conveyor belts. This proposed modification acknowledges current manufacturing procedures and materials that allow conveyor belts to be manufactured without including the vulcanizing process.

Paragraph (c) would retain the existing provision that allows MSHA to accept permanent marking other than that described in paragraph (b) where the conveyor belt construction does not permit such marking.

Paragraph (d) would require applicants to maintain records of the initial sale of each belt having an approval marking. These sale records would be expected to be maintained for the projected service life of the belts, as determined by the applicant. This approach recognizes that the life of a belt varies depending on factors such as its physical characteristics, use as a main line or section belt, the type of material being transported and belt maintenance. Since belts in service may need to be traced for corrective action, it is necessary to have records of the belts as long as they are in use. Maintaining records on the sale of belts would be necessary so that deficient products which may present a hazard to miners can be traced and withdrawn from use until appropriate corrective action could be taken by the approval-holder. The proposal does not specify the type of record to be maintained. MSHA believes most manufacturers would use existing record systems to fulfill this requirement. The information that would be needed on initial sales would be the customer name and address and belt identification on a batch or lot basis.

Section 14.8 Quality assurance.

The provisions of proposed § 14.8 are new for conveyor belts. However, they are very similar to provisions contained in other recent MSHA regulations concerning approval of products for use in underground mines. The MSHA approval label is relied upon in the mining community as an indication that the product is safe for use in mines. Section 14.8 would set forth the elements of a quality assurance program which MSHA believes are essential to ensure the required level of flame resistance can be expected from any conveyor belts distributed.

Under § 14.8(a) of this proposed rule, the approval-holder would be required to flame test a sample of each batch or lot of conveyor belt or inspect, test, or both, a sample of each batch or lot of the materials that contribute to the flame-resistance characteristic to ensure that the finished product will meet the flame test.

Section 14.8(b) would require that instruments used for the inspection and testing in § 14.8(a) be properly calibrated and sufficiently accurate. The minimum frequency of calibration that would be required is that recommended by the instrument manufacturer and the calibration would need to be traceable to standards set by the National Institute of Standards and Technology (formerly National Bureau of Standards), U.S. Department of Commerce, or other nationally recognized standards. The instruments used would be required to be accurate to at least one significant figure beyond the desired accuracy. The use of instruments to such degree of accuracy would be consistent with testing protocol.

Section 14.8(c) would require that production documentation be controlled so that the conveyor belt is manufactured as approved. While many constructions and formulations would meet the technical requirements of this proposal, the conveyor belt that is manufactured and distributed under an approval must conform to the specifications to which the approval was issued. This aspect of the proposal would require approval-holders to ensure that the conveyor belt produced does not differ from the conveyor belt approved by MSHA. The proposal does not specify which documents must be controlled, but would instead obligate each approval-holder to implement document control procedures to ensure that the product conforms to the approval.

In MSHA's present conveyor belt acceptance program, the manufacturer is obligated to maintain the quality of the accepted conveyor belts. Manufacturers already have quality control programs which monitor the production of accepted conveyor belts and therefore, no additional cost is anticipated from these provisions.

Adherence to the proposed requirements for quality assurance would provide substantial protection against the distribution of defective conveyor belts. However, MSHA recognizes that this could occur. In such an event, § 14.8(d) would require the approval-holder to report immediately to the Agency any knowledge that conveyor belts have been distributed which do not meet the requirements upon which the approval is based. This knowledge could come from the results of audits conducted by the approval-holder, reports from users, or other sources. Upon receiving such a report, MSHA would work with the approval-holder to implement appropriate corrective action.

Since conveyor belts not meeting the technical requirement of this part could create a hazard, immediate notification should be by expeditious means, such as by telephone. The notification should include a description of the nature and extent of the problem, the locations where the conveyor belt has been distributed, and the approval-holder's plans for corrective action. Corrective action may include recalling the conveyor belt or restricting its use pending conformance with the approval specifications. MSHA would review all the information provided, including the approval-holder's program of corrective action. MSHA would work with the approval-holder, if necessary, to develop an appropriate program. If appropriate corrective action cannot be agreed upon by the approval-holder and MSHA, the Agency may seek revocation of the approval, or other action as necessary.

Section 14.9 Disclosure of information.

This section is derived from existing § 18.9 and addresses the disclosure of information on conveyor belts tested and evaluated under part 14. MSHA intends to continue the current practice of treating information on product specifications and performance as proprietary information and will protect its disclosure to the fullest extent consistent with The Freedom of Information Act (FOIA, 5 U.S.C. 522). Under § 14.9(b) of the proposed rule, MSHA would notify the applicant of requests for product information received by the Agency and provide the manufacturer the opportunity to present its position on disclosure. Information identified by the manufacturer as proprietary would not be disclosed, unless, as provided by FOIA, MSHA determines that disclosure would further the public interest and would not impede the discharge of any of the functions of the Agency.

Section 14.10 Post-approval product audit.

This section, also new, would provide for approved conveyor belts to be subject to periodic audit by MSHA for the purpose of determining conformity with the technical requirements upon which the approval was based. A consistent approach on the issue of product audits with that outlined in parts 7 (Product testing by applicant or third party) and 15 (Requirements for approval of explosives and sheathed explosive units) would be maintained by this section. This aspect of the proposed rule, by providing a mechanism for independent evaluation by MSHA of approved products on a random basis, would complement the quality assurance provisions that would require approval-holders to manufacture their conveyor belts as approved. Moreover, it would be consistent with recommendations from interval reviews of MSHA's approval program. Approved conveyor belts audited by MSHA would be selected by the Agency as representative of those distributed for use in mines. Upon request, a final report of such audits would be provided to the approval-holder.

In determining which approved conveyor belts would be subject to audit at any particular time, MSHA would consider a variety of factors such as whether the manufacturer has previously produced the approved product or similar products, whether the approved product is new or part of a new product line, or whether the approved product is intended for a unique application or limited distribution. Other considerations may include product complexity, the manufacturer's previous conveyor belt audit results, product population in the mining community and the time since the last audit or since the conveyor belt was first approved. Use of these factors would be consistent with the approach taken in all of MSHA's other approval programs where approved products are audited.

Under this proposed rule, approved conveyor belts could be obtained for audit from the approval-holder or from sources other than the manufacturer, such as mine suppliers or distributors. The provisions of paragraph (b) would, however, require the approval-holder to provide, at MSHA's request, three samples of an approved conveyor belt of the size needed for flame testing at no cost to MSHA for an audit. Such requests, except for cause, would be made no more than once a year. The Agency would examine, evaluate and conduct any testing necessary when requesting an approved conveyor belt for audit from the approval-holder. Approval-holders would be notified by MSHA of the time for any audit-related testing of approved conveyor belts to allow then an opportunity to witness such tests. MSHA could obtain conveyor belts for audit from the approval-holder or other sources, such as mine suppliers or distributors at any time at MSHA expense.

Based on MSHA's experience, the Agency anticipates few instances in which more than this quantity of approved conveyor belts would be required "for cause" from any one manufacturer in any one year. There are circumstances, however, under which an additional audit would be appropriate to ascertain compliance with the technical requirements upon which an approval was based. Examples of such circumstances include verified complaints about the safety of an approved belt, evidence of unapproved changes to belts, audit test results that warrant further testing to determine compliance, and evaluation of corrective action taken by an approval-holder. Under these circumstances, the approval-holder would be required to provide, at no cost to MSHA, additional approved conveyor belts so the Agency can ensure that the approval-holder is meeting the obligation to manufacture the product as approved.

Should discrepancies be found during MSHA audits of approved conveyor belts, MSHA would require that the manufacturer take all necessary corrective actions. These actions could include, but are not limited to, the approval-holder recalling the lot, batch, or roll of conveyor belt; or issuing user notices. Revocation of the approval by MSHA may result when discrepancies in approved products are not successfully corrected.

Section 14.11 Revocation.

Section 14.11 is derived from existing § 18.16, as well as § 7.9 and § 15.11. It would be identical to the revocation provisions in other recent approval regulations as MSHA believes that all approval-holders must be accorded the same rights and subject to the same process regardless of the approval regulations under which the approval was granted.

The proposed rule would provide that MSHA may revoke an approval granted under part 14 whenever a conveyor belt fails to meet the technical requirements specified in this part or creates a hazard when used in a mine. The Agency recognizes that an MSHA approval is important to the marketability of a product used in the mining industry. For this reason, it has been MSHA's practice to treat approval-holders as "licensees" under the Administrative Procedure Act (APA, 5 U.S.C. 558). Consistent with this practice, the proposed rule would provide that approval-holders be accorded certain protection prior to revocation of an approval. This protection would include being provided with (1) a written notice of the Agency's intent to revoke a product approval, with an explanation of the reasons for the proposed revocation, (2) an opportunity to demonstrate or achieve compliance with the technical requirements for approval, and (3) an opportunity for a hearing upon request.

Paragraph (d) would permit MSHA to suspend an approval without prior notice to the approval-holder, if a conveyor belt poses an imminent hazard to the safety or health of miners. Under such circumstances, an approval could be suspended immediately to protect the safety and health of any affected miner. If during the manufacturing of a certain lot of belting, specifications have been so altered that the belt's flame resistance has been rendered ineffective or flammability is increased, an imminent hazard may arise. Upon suspension of an approval, the conveyor belt involved is no longer approved and MSHA will require mine operators to withdraw the conveyor belt from use during the course of any suspension. MSHA would also immediately advise the affected approval-holder of any suspension so effective corrective action could be started as soon as possible. The provisions of this paragraph, as proposed, are in accord with the APA.

Subpart B—Technical Requirements

Section 14.20 Flame resistance

This section is based upon joint work of BOM and MSHA to develop a revised test for flame resistance that would be more representative of the mining environment than the present test specified in § 18.65. It would require that conveyor belts be flame resistant when tested in accordance with the flame test specified in § 14.22.

Section 14.21 Belt flame test apparatus

This section describes the principal parts of the apparatus used for the flame test of conveyor belts. Copies of drawings which depict some aspects of the test apparatus would be available from MSHA upon request.

Paragraph (a) would require a horizontal test chamber (tunnel) 5.5 feet (1.68 m) long by 1.5 feet (0.46 m) square (inside dimension) which is constructed from 1-inch (2.5 cm) thick Marinite I, or

equivalent insulating material. Marinite I was selected because it is a noncombustible, insulating material that minimizes thermal losses through the walls and is able to withstand repeated test fires without cracking or warping. The chamber dimensions were established based upon comparison of test results with the large-scale belt flammability studies. Paragraph (b) describes a 16-gauge (0.16 cm) stainless steel duct section, tapering over at least a 24-inch (61 cm) length and lined with ½ inch (1.27 cm) thick ceramic blanket insulation or equivalent insulating material, that would connect the test chamber to a 1-foot (30.5 cm) diameter exhaust duct, or equivalent. Stainless steel would minimize corrosion and the tapered duct section would provide a smooth airflow to enter the exhaust duct. The tapered duct is lined with blanket insulation to minimize high duct temperatures and thermal expansion.

Paragraph (c) would require a U-shaped gas-fueled impinged jet burner igniting source. The U-tube would measure 12 inches (30.5 cm) long and 4 inches (10.2 cm) wide with two parallel rows of 6 jets each. The burner jets are canted so that they point toward each other in pairs and the flames from these pairs impinge upon each other. The burned fuel would be methane or natural gas of suitable purity. This burner was chosen because it is commercially available and provides a reliable, reproducible ignition source that can burn methane or natural gas. Use of the specified burner and gaseous fuel, in conjunction with the other parameters, resulted in agreement between the laboratory-scale (tunnel) test results with the large-scale belt flammability studies.

Paragraph (d) would require a removable steel rack, consisting of 2 rails and supports constructed from slotted angle iron, to hold a belt sample. The rack dimensions of 7 inches (17.8 cm) wide, 60 inches (152.4 cm) long and 5 inches (12.7 cm) between the rails would be specified in the proposal. MSHA and BOM consider these dimensions to be critical to the repeatability of the flammability tests. Typically, commercially available, 1-inch (2.5 cm) by 1¾ inch (4.4 cm) by ⅛ inch (0.3 cm) thick angle iron with predrilled ¼ inch (0.6 cm) diameter holes spaced 1-inch (2.5 cm) apart would be used. The top surface of the rack would be 8 ± ⅛ inches (22.9 ± 0.3 cm) from the inside roof of the test chamber. The rack materials and dimensions were selected so that the rack would adequately support the belt sample, withstand repeated tests with only minor warping due to heat and minimize the thermal mass due to the sample support method. The distance from the top surface of the rack to the inside roof of the test chamber was established based on comparison of the test results with the large-scale belt flammability studies.

Section 14.22 Test for flame resistance of conveyor belts

Paragraph (a) would specify the test procedures to be followed to determine the flame resistance of conveyor belts. It would specify that the test be conducted in the sequence described, as well as require the use of a flame test apparatus meeting the specifications of § 14.21. Paragraph (a)(1) would require 3 belt samples, 60±¼ inches (152.4±0.6 cm) long by 9±⅛ inches (22.9±0.3 cm) wide. The belt samples would be preconditioned by being laid flat at 70±10 °F (21±5 °C) for at least 24 hours prior to the test. The number of samples and the sample dimensions are based on comparison of the test results to the large-scale belt flammability studies. Preconditioning of the samples by laying them flat at 70±10 °F (21±5 °C) for a least 24 hours ensures that the samples are at laboratory temperatures, facilitates sample mounting and minimizes curling during the test. A conveyor belt that has been rolled prior to testing is more likely to rebound to the rolled position during testing. This action is considered "curling" and may lead to erroneous test results. Samples which have been rolled prior to testing can develop sufficient curling forces to overcome the holding capabilities of the cotter pins installed to retain the sample on the rack. Should curling occur, MSHA would be required to test additional samples to ensure reliable test results have been obtained. MSHA and BOM have determined, through their joint testing experience, that the use of flat, unrolled samples greatly reduces the occurrence of this phenomenon.

Paragraph (a)(2) would require that the belt sample be placed on the rails of the rack with the load bearing cover (top cover) up, as appropriate. In some cases, a belt may be constructed without having a designated top cover and would be mounted without regard to cover orientation. For example, many PVC belts are constructed with a solid woven carcass such that a top or bottom cover is not designated. Therefore, either side of the belt could be mounted as the load bearing cover. The sample would extend 1±⅛ inch (2.5±0.3 cm) beyond the front of the rails and about inch (2.5 cm) from the outer lengthwise edge of each rail. This would center the longitudinal axis of the sample along the centerline of the rack with about the first inch of the sample in the ignition area and not in contact with the rack. The 1-inch (2.5 cm) overlap facilitates ignition of the belt sample by minimizing the thermal heat sink created by the sample rack. A greater overlap would result in the sample curling or pulling back from the burner during the ignition period.

Paragraph (a)(3) would require that the belt sample be fastened to the rails of the rack by drilling (or punching) holes along the long edges of the sample and using square steel washers and cotter pins as fasteners. Each washer is typically ¾ inch (1.9 cm) square and 1/16 inch (0.2 cm) thick with a 3/16 inch (0.5 cm) diameter hole. A washer is placed over each sample hole and a cotter pin is inserted through the hole in the belt and rail. The cotter pin is spread apart to secure the sample to the rail. The locations of the fasteners were chosen so that the majority (6 of 10) would be in the ignition area to minimize the belt sample pulling away from the burner, or lifting and curling during the ignition period. Additional fasteners could be used in the ignition region for belts that lift excessively. The fasteners would facilitate the secure mounting of the belt sample. They are not of such size to influence the test results due to heat absorption, even if additional fasteners are used.

Paragraph (a)(4) would require that the rack and mounted sample be centered in the test chamber with the front end of the sample 6±½ inches (15.25±1.27 cm) from the entrance of the chamber. This location was selected to reduce the disturbance of the airflow entering the test chamber and was also based on comparison of the test results to the large-scale belt flammability studies.

Paragraph (a)(5) would require the airflow passing over the belt sample to be 200±20 ft/min (61±6 m/min) as measured by a nominal 4-inch (10.2 cm) diameter vane anemometer, or equivalent device, placed on the centerline of the belt about 1 foot (30.5 cm) from the chamber entrance. The airflow and measuring location were selected based on comparison of the test results with the large-scale belt flammability studies.

Paragraph (a)(6) would require that before the start of a test, the inner surface temperature of the chamber roof measured at points approximately 6, 30, and 60 inches (15.2, 76.2, and 152.4 cm) from the front entrance not exceed 95 °F (35 °C) at any of these points with the specified airflow passing through the chamber. The temperature of the air

entering the chamber during a test would also be required to be not less than 50 °F (10 °C). These temperature limits were selected to assure the reproducibility of the test results and to maintain the comparison obtained with the large-scale belt flammability studies.

Paragraph (a)(7) would specify the burner to be positioned in front of the belt sample's leading edge such that, when ignited, the flames from the two rows of jets impinge in front of the belt's edge and distribute uniformly on the top and bottom surfaces of the sample. This alignment of the burner would provide for uniform heating of the sample, which is necessary to maintain the consistency of the test results.

The exact burner orientation to provide for uniform distribution of flame on the top and bottom surfaces of the test sample may vary depending upon the belt sample's thickness. Based upon comparison tests and experience gained in developing the proposed flame test procedure, the burner must be canted downward, at about a 15° angle, and located about ¾-inch (1.9 cm) in front of the sample's leading edge. Tilting of the burner compensates for the buoyancy of the burner flames. The burner alignment to be used may be determined by experimental means prior to igniting the samples under test.

Paragraph (a)(8) would require that the gas flow to the burner be adjusted to 1.2 ± 0.1 standard cubic feet per minute (SCFM) (34 ± 2.8 liters per minute) and be maintained at this value throughout the ignition period. One standard cubic foot is defined as the amount of gas which occupies one cubic foot at 72 °F and one atmosphere pressure (1 cubic liter at 22 °C and 101 kPa). The specified gas flow provides a stable flame and was selected based on comparison of the test results with the large-scale belt flammability studies.

Paragraph (a)(9) would require that the burner flame be applied to the front edge of the belt sample for an ignition period of 5.0 to 5.1 minutes. At the conclusion of the ignition period, the burner would be lowered and its flame extinguished. This ignition period was based on comparison of the test results with the large-scale belt flammability studies.

After completion of the test, paragraph (a)(10) would require the undamaged portion across the entire width of the sample be determined. Blistering, without charring, would not be considered damage since blistering could result from the effects of heat rather than the presence of flame. Determining the undamaged portion across the entire width of the sample is necessary for specifying acceptable performance.

Paragraph (b) would require, for acceptable belt performance that each of the tested samples exhibit an undamaged portion across its entire width. This criteria was established based on comparison of the test results with the large-scale belt flammability studies.

Paragraph (c) would specify that MSHA reserves the right to modify the test requirements for flame resistance of conveyor belts constructed with thicknesses of more than ¾-inch (1.9 cm). Extensive flame testing of belts of this thickness (more than ¾-inch (1.9 cm)) has not been conducted because insufficient quantities of these belts have been available for testing. Therefore, the test results cannot be sufficiently predicted. As information becomes available, MSHA may need to modify the testing apparatus and procedures to provide comparison of test results between the large-scale belt flammability test and the tests specified in this subpart for belts with thicknesses of more than ¾-inch (1.9 cm).

Section 14.23 New technology.

This section is derived from existing § 18.20(b). The wording would be consistent with that used for the new technology provisions in parts 7 and 15 and would allow MSHA to approve a conveyor belt which incorporates technology for which the requirements of this part are not applicable, provided the Agency determines that the conveyor belt is as safe as those which meet the requirements of this part.

Part 75—Conforming Amendments

The proposal to MSHA's current requirements for acceptance of conveyor belts as flame resistant would also necessitate certain conforming amendments to the agency's safety standards for underground coal mines in 30 CFR part 75. Currently, MSHA's standard at § 75.1108 requires that all conveyor belts purchased for use underground be flame resistant according to specifications established by the Secretary. Further, § 75.1108–1 specifies that conveyor belts which are approved as flame resistant under part 18 meet the requirements of § 75.1108. The proposal would modify these existing standards to require the acquisition of conveyor belts evaluated by MSHA as flame resistant under the revised flame test.

The revised test, as discussed earlier, would identify conveyor belts that are both difficult to ignite and also self-extinguishing under the test conditions. Therefore, conveyor belts passing the revised test would not only be resistant to ignition, but also highly resistant to flame propagation.

Several benefits are expected to accrue from the use of belts meeting the revised flame resistance test. These belts would reduce the number of fires in belt entries because propagation of fire would be severely limited. In turn, the probability that combustibles in the belt entry would ignite would be reduced.

MSHA believes that the fires that do occur in belt entries would be more quickly extinguished because the belt would not readily contribute to fire propagation The severity of the fire and it potential for exposing miners to hazards would thus be reduced. Therefore, belts meeting the revised flame resistance test would reduce the number and the size of fires in the belt entry and, in so doing, the potential for disaster.

As set out in the proposal, the revisions to part 75 would take effect in two stages. The proposed timetable is intended to introduce conveyor belt that has demonstrated increased flame-resistant qualities soon after the product is anticipated to be commercially available. Further, it would replace part 18 belt with belts meeting the revised test as belts are purchased for use in mines on and after a proposed date. This parallels the existing § 75.1108 statutory requirement which states that belt purchased for use in mines on and after a specified date be flame resistant.

The first change to part 75 would become effective at the same time that the revised approval requirements for conveyor belts in part 14 would take effect, i.e., 60 days after publication of the final rule. The proposal would amend § 75.1108–1 to state that, in addition to belts accepted as flame resistant under part 18, conveyor belts approved or accepted by MSHA as flame resistant using the revised flame test under either part 14 or the voluntary acceptance program would meet the requirements of § 75.1108. This modification explicitly would acknowledge the acceptability of a belt which passes the revised flame test as complying with the specifications of the Secretary. The conveyor belts which would be evaluated and accepted under the voluntary acceptance program have demonstrated a much higher degree of flame resistance compared to belts tested under § 18.65. For this reason, MSHA would consider belts accepted under the voluntary program to be comparable to belts approved under proposed part 14 and thus permitted to be used underground.

The second phase, being proposed now, would take effect one year later. At

that time, § 75.1108–1 would be amended by adding a new paragraph to require that all conveyor belts purchased for use in underground coal mines on and after one year from the effective date of part 14 be approved by MSHA as flame resistant under part 14 or accepted by MSHA as flame resistant under the voluntary acceptance program. Mine operators would be able to use part 18 approved belt inventories in their possession which were purchased prior to one year from the effective date of the final rule. After that inventory of part 18 belts is exhausted and existing part 18 belts wear out, the operator would be required to purchase belts meeting the revised flame test.

MSHA believes that a one year period would provide sufficient time for conveyor belt manufacturers to produce and make available to mine operators commercial quantities of conveyor belt meeting the revised flame test. This belief is based upon several factors. Belt manufacturers have been aware of, and monitoring the development of, a revised flame test for conveyor belts since BOM and MSHA initiated their belt fire studies in 1985. As the Government's work on the revised test progressed, belt producers were engaged in research and development to formulate belts that would pass a revised test addressing propagation of fire.

On January 19, 1989, MSHA held a public meeting to discuss the development of a revised laboratory-scale flame resistance test (54 FR 1802). At that time, the Agency, in conjunction with BOM, announced its willingness to test belts using the laboratory scale belt flame test apparatus at no charge. Many manufacturers have submitted samples of their conveyor belts to BOM and MSHA for this testing. As of December 1, 1991, fifteen manufacturers have had one or more different belt constructions demonstrate the ability to pass the revised test for flame resistance. These include both rubber and PVC formulations.

In addition, as indicated earlier, MSHA is implementing a voluntary acceptance program to evaluate the flame resistance of conveyor belt using the revised flame test set out in the proposal. MSHA would require belts meeting the performance criteria after testing to be marked with an acceptance number. The acceptance number would identify those belts as meeting the revised flame resistance test. The agency is aware that some manufacturers have already received orders from mine operators for belts which would pass the revised test. Further, when compatible belts identified by MSHA as having passed the revised flame resistance test become commercially available, mine operators with granted modifications under § 75.326 to use belt air to ventilate will be required to purchase belts meeting the revised test.

The Agency anticipates that manufacturers' participation in the voluntary program will result in sufficient quantities and types of improved flame-resistant conveyor belt being available for purchase by mine operators after one year. However, MSHA solicits information specifically from manufacturers on whether this time period is adequate to supply mine operators with the kind and quantity of belt needed for use in underground coal mines.

Derivation Table

The following derivation table lists: (1) Each section number of the proposed rule (New Section) and (2) the section number of the existing standard from which the proposed section is derived (Old Section).

New section	Old section
14.1	18.1.
14.2	18.2.
14.3	18.9(a).
14.4	18.6.
14.5	18.6(g) and 18.6(h).
14.6	18.10.
14.7	18.65(f).
14.8	New.
14.9	18.9.
14.10	New.
14.11	18.16.
14.20	New.
14.21	New.
14.22	New.
14.23	18.20(b)

Distribution Table

The following distribution table lists: (1) Each section number of the existing standard (Old Section) and (2) each section number of the proposed part 14 (New Section).

Old section	New section
18.1	14.1.
18.2	14.2.
18.6	14.4 and 14.5.
18.9	14.3 and 14.9.
18.10	14.6.
18.16	14.11.
18.20(b)	14.23.
18.65(f)	14.7.

IV. Executive Order 12291 and Regulatory Flexibility Act

In accordance with Executive Order 12291, MSHA has prepared an analysis to identify the potential costs and benefits associated with subpart B. This analysis has formed the basis for the Preliminary Regulatory Impact Analysis (PRIA). In this analysis, MSHA has determined that this rule neither results in major cost increases nor has an effect of $100 million or more on the economy. A copy of the PRIA is available upon request.

MSHA estimates that the annual cost of the proposed rule to mine operators would be between $6.7 million and $8.2 million. As belt manufacturers incur increased research and development cost, their cost would be about $1.2 million the first year, $467,000 the second year, and about $36,500 each year thereafter.

There have been 307 reportable fires in underground coal mines since 1970. Of these, 42 fires involved the conveyor belt and as much as 2,000 feet (600 m) of belt has burned before a fire could be extinguished. One miner suffered a fatal heart attack fighting a conveyor belt fire. Another miner suffered a non-fatal heart attack and several miners have had to be hospitalized and treated for smoke inhalation. The conveyor belt meeting the revised test is expected to be difficult to ignite and extremely resistant to flame propagation. Thus, the number and size of fires in the belt entry will be reduced, as will the potential for disaster.

The Agency has not proposed exemption of small mines from any provision of the proposal. Of the approximately 1,800 underground coal mines affected by the proposed rule, MSHA estimates that 969 are small businesses employing fewer than 20 miners. The annual cost of compliance per miner is estimated to be between $50 and $70 in a small underground coal mine. This cost represents less than 0.095 percent of the average small mines value of shipments.

The Agency solicits comments and data on how the proposed rule would affect all belt manufacturers and all underground coal mines, including small manufacturers and small mine operators. In particular, MSHA requests information on: (1) The quantity of belt currently in use that would pass the proposed test; (2) the size of the market for used underground conveyor belt; (3) the cost of belt that will pass the revised flame test ("new" belt) versus belt that passes the current flame test ("old" belt); (4) whether costs of the "new" belt will decline as production increases and by how much; and (5) whether "new" belts are compatible with "old" belts, with existing hardware, and whether PVC and rubber belts can be spliced together.

V. Metric Measurements

Under section 5164 of the Omnibus Trade and Competitiveness Act of 1988, MSHA intends to begin providing both

metric and English specifications in its rules to assist industry in converting to metric measurements where appropriate. In most cases, the conversion from English units to metric units was made by rounding to one decimal place. However, where tolerances are indicated, rounding of the metric measurement was made to two decimal places to keep the numbers within tolerances. MSHA requests comments on the metric conversion and equivalences of the English inch-pound measurements in this proposed rule.

List of Subjects in 30 CFR Part 14

Approval of equipment, Mine safety and health, Underground mining.

Dated: December 18, 1992.

William J. Tattersall,

Assistant Secretary for Mine Safety and Health.

It is proposed that chapter I of title 30, of the Code of Federal Regulations be amended as follows:

1. Add a new part 14 to subchapter B chapter I, title 30 of Code of Federal Regulations to read as follows:

PART 14—REQUIREMENTS FOR APPROVAL OF FLAME-RESISTANT CONVEYOR BELT

Subpart A—General

Sec.

14.1 Purpose and effective date.
14.2 Definitions.
14.3 Observers at tests and evaluations.
14.4 Application procedures and requirements.
14.5 Test samples.
14.6 Issuance of approval.
14.7 Approval marking and distribution records.
14.8 Quality assurance.
14.9 Disclosure of information.
14.10 Post-approval product audit.
14.11 Revocation.

Subpart B—Technical Requirements

14.20 Flame resistance.
14.21 Belt flame test apparatus.
14.22 Test for flame resistance of conveyor belts.
14.23 New technology.

Authority: 30 U.S.C. 957.

Subpart A—General

§ 14.1 Purpose and effective date.

This part establishes the flame resistance requirements for MSHA approval of conveyor belts for use in underground mines. Applications for approval or extension of approval submitted after [60 DAYS FROM PUBLICATION OF THE FINAL RULE] shall meet the requirements of this part.

§ 14.2 Definitions.

The following definitions apply in this part.

Applicant. An individual or organization that manufactures or controls the production of a conveyor belt and that applies to MSHA for approval of that conveyor belt.

Approval. A document issued by MSHA which states that a conveyor belt has met the requirements of this part and which authorizes an approval marking identifying the conveyor belt as approved.

Conveyor belt. A flexible strip of material typically constructed of interwoven or fabric plies and polymeric compounds which is used to transport coal or other extracted minerals.

Extension of approval. A document issued by MSHA which states that the change to a product previously approved by MSHA under this part meets the requirements of this part and which authorizes the continued use of the approval marking after the appropriate extension number has been added.

Load bearing cover. The cover of a conveyor belt upon which extracted minerals are conveyed.

Post-approval product audit. Examination, testing, or both, by MSHA of an approved conveyor belt selected by MSHA to determine whether it meets the technical requirements and has been manufactured as approved.

§ 14.3 Observers at tests and evaluations.

Only personnel of MSHA and the Bureau of Mines, U.S. Department of the Interior, representatives of the applicant and such other persons as agreed upon by MSHA and the applicant shall be present during tests and evaluations conducted under this part.

§ 14.4 Application procedures and requirements.

(a) *Application.* Requests for an approval or an extension of an approval under this part shall be sent to: U.S. Department of Labor, Mine Safety and Health Administration, Approval and Certification Center, P.O. Box 251, Industrial Park Road, Triadelphia, West Virginia 26059.

(b) *Fees.* Fees calculated in accordance with part 5 of this title shall be submitted in accordance with § 5.40.

(c) *Approval.* Each application for approval of a conveyor belt shall include the following, except that any document which is the same as the one listed by MSHA in a prior approval need not be submitted. Such documents shall be noted in the application.

(1) A technical description of the conveyor belt which includes—

(i) Trade name or identification number;

(ii) Cover compound type and designation number;

(iii) Belt thickness and thickness of top and bottom covers;

(iv) Presence and type of skim coat;

(v) Presence and type of friction coat;

(vi) Carcass construction (number of plies, solid woven);

(vii) Carcass fabric by textile type and weight (ounce per square yard);

(viii) Presence and type of breaker or floated ply; and

(ix) The number, type and size of cords for metal cord belts.

(2) Formulation information on the compounds in the conveyor belt by either—

(i) Specifying each ingredient by its chemical name along with its percentage (weight) and tolerance of percentage range, or;

(ii) Specifying each flame retardant ingredient by its chemical or generic name with its percentage and tolerance or percentage range or its minimum percent. List each flammable ingredient by chemical, generic, or trade name along with the total percentage of all flammable ingredients. List each inert ingredient by chemical, generic, or trade name along with the total percentage of all inert ingredients.

(3) The name, address and telephone number of the applicant's representative responsible for answering any questions regarding the application.

(4) Identification of any similar conveyor belt for which the applicant already holds an approval by including—

(i) The MSHA assigned approval number of the conveyor belt which most closely resembles the new one, and

(ii) An explanation of any changes from the existing approval.

(d) *Extension of approval.* Any change in an approved conveyor belt from the documentation on file at MSHA that affects the technical requirements of this part shall be submitted for approval prior to implementing the change. Each application for an extension of approval shall include—

(1) The MSHA-assigned approval number for the conveyor belt for which the extension is sought;

(2) A description of the proposed change to the conveyor belt; and

(3) The name, address, and telephone number of the applicant's representative responsible for answering any questions regarding the application.

(e) MSHA will determine if testing, additional information, samples, or material are required to evaluate an application. If the applicant believes that flame testing is not required, a

statement explaining the reasons for not testing shall be included in the application.

§ 14.5 Test samples.

Upon request by MSHA, the applicant shall submit 3 unrolled, flat conveyor belt samples for flame testing. Each sample shall be 60±¼-inches long (152.4±0.6 cm) long by 9±⅛-inches (22.9±0.3 cm) wide.

§ 14.6 Issuance of approval.

(a) MSHA will issue an approval or a notice of the reasons for denying approval after completing the evaluation and testing provided for by this part.

(b) An applicant shall not advertise or otherwise represent a conveyor belt as approved until MSHA has issued an approval.

§ 14.7 Approval marking and distribution records.

(a) An approved conveyor belt shall be marketed only under the name specified in the approval.

(b) Approved conveyor belt shall be legibly and permanently marked for the usable life of the belt with the assigned MSHA approval number. The approval marking shall be at least ½-inch (1.27 cm) high, placed at intervals not exceeding 60 feet (18.3 m) and repeated at least once every foot (30.5 cm) across the width of the belt.

(c) Where construction of the conveyor belt does not permit marking in accordance with the foregoing, other permanent marking may be accepted by MSHA.

(d) Applicants shall maintain records of the initial sale of each belt having an approval marking. The record retention period shall be at least the expected service life of the belt.

§ 14.8 Quality assurance.

Applicants granted an approval or an extension of approval under this part shall—

(a) Flame test a sample of each batch or lot of conveyor belts or inspect, test, or both, a sample of each batch or lot of the materials that contribute to the flame-resistance characteristic to ensure that the finished product will meet the flame-resistance test.

(b) Calibrate instruments used for the inspection and testing in paragraph (a) of this section at least as frequently as, and according to, the instrument manufacturer's specifications, using calibration standards traceable to those set by the National Institute of Standards and Technology, U.S. Department of Commerce or other nationally recognized standards and use instruments accurate to at least one significant figure beyond the desired accuracy.

(c) Control production documentation so that the product is manufactured as approved.

(d) Immediately report to the MSHA Approval and Certification Center, any knowledge of a conveyor belt that has been distributed that does not meet the specifications of the approval.

§ 14.9 Disclosure of information.

(a) All information concerning product specifications and performance submitted to MSHA by the applicant shall be considered proprietary information.

(b) MSHA will notify the applicant of requests for disclosure of information concerning its conveyor belts and shall give the applicant an opportunity to provide MSHA with a statement of its position prior to any disclosure.

§ 14.10 Post-approval product audit.

(a) Approved conveyor belts shall be subject to periodic audits by MSHA for the purpose of determining conformity with the technical requirements upon which the approval was based. Any approved conveyor belt which is to be audited shall be selected by MSHA and be representative of those distributed for use in mines. Upon request the approval-holder may obtain any final report resulting from such audit.

(b) No more than once a year, except for cause, the approval-holder at MSHA's request, shall make 3 samples of an approved conveyor belt available at no cost to MSHA for an audit. The approval-holder may observe any tests conducted during this audit.

(c) An approved conveyor belt shall be subject to audit for cause at any time MSHA believes that it is not in compliance with the technical requirement upon which the approval was based.

§ 14.11 Revocation.

(a) MSHA may revoke for cause an approval issued under this part if the conveyor belt—

(1) Fails to meet the technical requirements; or

(2) Creates a hazard when used in a mine.

(b) Prior to revoking an approval, the approval-holder shall be informed in writing of MSHA's intention to revoke. The notice shall—

(1) Explain the specific reasons for the proposed revocation; and

(2) Provide the approval-holder an opportunity to demonstrate or achieve compliance with the product approval requirements.

(c) Upon request, the approval-holder shall be afforded an opportunity for a hearing.

(d) If a conveyor belt poses an imminent hazard to the safety or health of miners, the approval may be immediately suspended without a written notice of the Agency's intention to revoke. The suspension may continue until the revocation proceedings are completed.

Subpart B—Technical Requirements

§ 14.20 Flame resistance.

Conveyor belts shall be flame resistant when tested in accordance with the test for flame resistance specified in § 14.22 of this part.

§ 14.21 Belt flame test apparatus.

The principal parts of the apparatus used to test for flame resistance of conveyor belts are as follows—

(a) A horizontal test chamber 5.5 feet (1.68 m) long by 1.5 feet (0.46 m) square (inside dimensions) constructed from 1-inch (2.5 cm) thick Marinite I, or equivalent insulating material.

(b) A tapered 16-gauge (0.16 cm) stainless steel duct section tapering over a length of at least 24 inches (61 cm) from a 20-inch (51 cm) square cross-sectional area at the test chamber to a 1 foot (30.5 cm) diameter exhaust duct, or equivalent. The interior surface of the tapered duct section is lined with ½-inch (1.27 cm) thick ceramic blanket insulation, or equivalent insulating material. The tapered duct must be tightly connected to the test chamber.

(c) A U-shaped gas-fueled impinged jet burner ignition source, measuring 12 inches (30.5 cm) long and 4 inches (10.2 cm) wide, with two parallel rows of 6 jets. Each jet is spaced alternately along the U-shaped burner tube. The 2 rows of jets are canted so that they point toward each other and their flames impinge upon each other in pairs. The burner fuel is at least 98 percent methane (technical grade, or natural gas containing at least 96 percent combustible gases which includes not less than 93 percent methane.)

(d) A removable steel rack, consisting of 2 parallel rails and supports that form a 7-inch (17.8 cm) wide by 60-inch (152.4 cm) long assembly to hold a belt sample. The 2 rails, with a 5-inch (12.7 cm) space between them, comprise the top of the rack. The rails are constructed of slotted angle iron with holes along the top surface. The top surface of the rack shall be 8 ± ⅛ inches (20.3 ± 0.3 cm) from the inside roof of the test chamber.

§ 14.22 Test for flame resistance of conveyor belts.

(a) *Test procedures.* The test is conducted in the following sequence using a flame test apparatus meeting the specifications of § 14.21 of this part—

(1) Lay three samples of the belt, 60±¼-inches (152.4±0.6 cm) long by 9±⅛-inches (22.9±0.3 cm) wide, flat at 70±10 °F (21±5 °C) for at least 24 hours prior to the test.

(2) For each test, place a belt sample with the load bearing cover up, as appropriate, on the rails of the rack so that the sample extends 1±⅛-inch (2.5±0.3 cm) beyond the front of the rails and about 1 inch (2.5 cm) from the outer lengthwise edge of each rail.

(3) Fasten the sample to the rails of the rack with steel washers and cotter pins of such length that at least ¾-inch (1.9 cm) extends below the rails. Equivalent fasteners may be used. Make a series of 5 holes, about 9/32-inch (0.7 cm) in diameter along both edges of the belt sample starting at the first rail hole within 2 inches (5.1 cm) from the front edge of the sample. Make the next hole about 5 inches (12.7 cm) from the first, the third about 5 inches (12.7 cm) from the second, the fourth about midway along length of sample, and the fifth near the end of the sample. After placing a washer over each sample hole, insert a cotter pin through the hole and spread it apart to secure the sample to the rail.

(4) Center the rack and sample in the test chamber with the front end of the sample 6±½ inches (15.25±1.27 cm) from the entrance.

(5) Measure the airflow with a nominal 4-inch (10.2 cm) diameter vane anemometer, or an equivalent device, placed on the centerline of the belt about 1 foot (30.5 cm) from the chamber entrance. Adjust the airflow passing through the chamber to 200±20 ft/min (61±6 m/min).

(6) Before starting, the inner surface temperature of the chamber roof measured at points approximately 6, 30, and 60 inches (15.2, 76.2, and 152.4 cm) from the front entrance of the chamber, shall not exceed 95 °F (35 °C) at any of these points with the specified airflow passing through the chamber. The temperature of the air entering the chamber during a test shall not be less than 50 °F (10 °C).

(7) Center the burner in front of the sample's leading edge with the plane, defined by the tips of the burner jets, approximately ¾-inch (1.9 cm) from the front edge of the belt.

(8) With the burner lowered away from the sample, set the gas flow at 1.2±0.1 standard cubic feet per minute (SCFM) (34±2.8 liters per minute) and ignite the gas. Maintain the gas flow throughout the ignition period.

(9) After applying the burner flame to the front edge of the sample for a 5.0 to 5.1 minute ignition period, lower the burner away from the sample and extinguish the burner flame.

(10) After completion of the test, determine the undamaged portion across the entire width of the sample. Blistering without charring does not constitute damage.

(b) *Acceptable performance.* For 3 tested samples, each sample shall exhibit an undamaged portion across its entire width.

(c) MSHA reserves the right to modify the procedures of the flammability test for belts constructed of thickness more than ¾-inch (1.9 cm) to provide agreement with results of the large-scale belt flammability tests on these belts.

§ 14.23 New technology.

MSHA may approve a conveyor belt that incorporates technology for which the requirements of this part are not applicable if the Agency determines that the conveyor belt is as safe as those which meet the requirements of this part.

PART 18—[AMENDED]

2. The authority citation for part 18 continues to read as follows:

Authority: 30 U.S.C. 957, 961.

§ 18.1 [Amended]

3. Section 18.1 is amended by revising the phrase "cables, hoses and conveyor belts" to read "cables or hoses".

§ 18.2 [Amended]

4. Section 18.2 is amended by revising the phrase "cable, hose or conveyor belt" in the definitions of "Acceptance", "Acceptance Marking", and "Applicant" to read "cable or hose" and removing the definition for "Fire-resistant".

§ 18.6 [Amended]

5. Section 18.6(a) is amended by revising the phrase "cables, hose or conveyor belt" to read "cables or hose".

6. Section 18.6(c) is removed and reserved.

7. Section 18.6(i) is amended by revising the phrase "cable, hose or conveyor belt" to read "cable or hose" and removing the words "conveyor belt—a sample of each type 8 inches long cut across the entire width of the belt."

§ 18.9 [Amended]

8. Section 18.9(a) is amended by revising the phrase "cable, hose or conveyor belt" to read "cable or hose".

§ 18.65 [Amended]

9. Section 18.65 is amended in the heading by removing the phrase "conveyor belting and" and removing and reserving paragraph (a)(1) and removing and reserving paragraph (f)(1).

10. Section 18.94(a)(2) is revised to read as follows:

§ 18.94 Application for field approval; contents of application.

(a) * * *

(2) The trade name and the flame resistance acceptance or approval number of any cable, cord, hose, or conveyor belt installed on the machine for which prior acceptance or approval by MSHA has been issued.

* * * * *

PART 75—[AMENDED]

11. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 957, 961.

12. Revise § 75.1108–1 to read as follows:

§ 75.1108–1 Approved conveyor belts.

(a) Effective [60 DAYS FROM PUBLICATION OF THE FINAL RULE] conveyor belts meet the requirements of § 75.1108 if they are—

(1) Approved by MSHA as flame resistant under part 14;

(2) Accepted by MSHA as flame resistant under the voluntary acceptance program; or

(3) Accepted by MSHA as flame resistant under part 18.

(b) On and after [ONE YEAR FROM EFFECTIVE DATE OF THE FINAL RULE] all conveyor belts purchased for use in underground coal mines shall be approved by MSHA as flame resistant under part 14 or accepted by MSHA as flame resistant under the voluntary acceptance program.

Department of Labor

Mine Safety and Health Administration

30 CFR Part 75

Safety Standards for Operation and Maintenance of Machinery and Equipment in Underground Coal Mines; Proposed Rule

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 75

RIN 1219–AA80

Safety Standards for Operation and Maintenance of Machinery and Equipment in Underground Coal Mines

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Proposed rule.

SUMMARY: This proposed rule would revise the Mine Safety and Health Administration's (MSHA) safety standard, which addresses the operation and maintenance of equipment in underground coal mines. The revision would clarify that adding or removing conveyor belting is a maintenance activity covered by the standard.

DATE: All comments and information must be submitted by February 22, 1993.

ADDRESS: Send comments to Patricia W. Silvey, Director, Office of Standards, Regulations and Variances, MSHA, 4015 Wilson Boulevard, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Patricia W. Silvey, Director, Office of Standards, Regulations and Variances, MSHA (703) 235–1910.

SUPPLEMENTARY INFORMATION:

I. Paperwork Reduction Act

This proposed rule contains no paperwork requirements.

II. Background

MSHA is proposing to revise its existing safety standard that applies to mechanical work on equipment in underground coal mines. The revision would clarify that adding or removing conveyor belting would be considered maintenance for purposes of 30 CFR 75.1725(c). This revision is proposed under section 101 of the Federal Mine Safety and Health Act of 1977, (30 U.S.C. 811).

On June 25, 1992, the Federal Mine Safety and Health Review Commission (FMSHRC) issued a decision in the case of Southern Ohio Coal Co., 14 FMSHRC 978. In that decision, the Commission reversed an administrative law judge's decision, and concluded in part that extending the conveyor belt, which the mine operator was doing, did not constitute "maintenance" within the meaning of 30 CFR 75.1725(c).

The Commission held that the judge misinterpreted the definition of "maintenance." The Commission determined that the judge's literal interpretation of the terms "maintenance" and "extension" was incorrect when applied to the actual work of extending the belt. Instead, the Commission interpreted the term "maintenance" to mean the act of keeping something in a state of repair or in good order. The Commission concluded that a belt extension was an improvement rather than maintenance, as it shortened the distance between the belt's feeder and the working face.

The accident that gave rise to the case occurred on May 5, 1989, and was followed by the issuance of a citation during MSHA's accident investigation. On the day of the accident a work crew was extending a belt approximately 100 feet toward the face of the mine when the deenergized belt was restarted in order to remove slack from the belt. When the belt was restarted, one miner who was still working on the belt, was caught in a belt chain and thrown from the belt, sustaining an injury to his leg.

The Commission decision also raised other safety issues related to maintenance and repair of mechanical equipment. The Agency also is considering whether other safety procedures are necessary to protect miners while performing work on mechanical equipment.

III. Discussion of Proposed Rule

MSHA's existing standard in 30 CFR 75.1725(c) allows repairs or maintenance on machinery only when the power is off and the machinery is blocked against motion, except where machinery motion is necessary to make adjustments. Since promulgation of this standard in 1973, the Agency has consistently interpreted the requirement to include the types of activities that this revision would address.

The proposed rule would revise paragraph (c) of § 75.1725 to clarify that activities involved in adding or removing conveyor belting are considered maintenance. MSHA believes this revision would eliminate confusion with respect to enforcement of this standard. This approach is consistent with current enforcement of this provision.

Moving or extending conveyor belts becomes necessary as mining progresses and penetrates deeper into the coal seam. The hazards that miners are exposed to while extending the conveyor belt are essentially the same as those involved in more routine belt maintenance such as replacement of rollers and installing and splicing new sections of belt. Similar hazards exist when conveyor belts are shortened by removing belt as mining sections retreat. Therefore, MSHA believes that it is important to clarify that power must be removed from conveyor belts when these activities take place.

IV. Executive Order 12291 and Regulatory Flexibility Act

Executive Order 12291 requires that a regulatory impact analysis (RIA) be done for any rule that would have an annual effect of $100 million or more on the economy or result in a major increase in costs or prices for consumers or individual industries. The Agency has determined that the revision would not be a major action.

The Regulatory Flexibility Act requires that agencies evaluate the potential economic impact of any regulatory actions on small entities. MSHA has determined that this proposal would not have a significant economic impact on a substantial number of small entities.

It is standard operating procedure for mine operators to deenergize electrical equipment before performing maintenance on such equipment, including extending or shortening the conveyor belt. The Agency contends that the proposed revision would clarify the regulatory language to reflect more accurately the existing requirements which have been enforced since the standard was promulgated originally in 1973.

List of Subjects in 30 CFR Part 75

Mandatory safety standards, Mine safety and health, Underground coal mines.

Dated: December 18, 1992.

William J. Tattersall,

Assistant Secretary for Mine Safety and Health.

Accordingly, subchapter O, chapter I, title 30 of the Code of Federal Regulations is proposed to be amended under 30 U.S.C. 811 as follows:

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES

1. The authority citation for part 75 continues to read as follows:

Authority: 30 U.S.C. 811, 957, and 961.

2. Section 75.1725 is proposed to be amended by revising paragraph (c) to read as follows:

§ 75.1725 Machinery and equipment; operation and maintenance.

* * * * *

(c) Repairs or maintenance shall not be performed on machinery until the power is off and the machinery is blocked against motion, except where machinery motion is necessary to make

adjustments. All activities involved in adding or removing conveyor belting are considered maintenance for purposes of this paragraph.

Part VII

Environmental Protection Agency

40 CFR Part 261
Suspension of Toxicity Characteristics Rule for Non-UST Petroleum Product-Contaminated Media and Debris; Proposed Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 261

[FRL–4548–6]

Suspension of the Toxicity Characteristics Rule for Non-UST Petroleum Product-Contaminated Media and Debris

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency is proposing to suspend the Toxicity Characteristics (TC) rule (Hazardous Waste Codes D018 through D043 only) for three years for environmental media and debris contaminated by petroleum products released from sources other than RCRA subtitle I-regulated underground storage tanks (hereafter, these releases and sources of release will be referred to as "non-UST"). During the three year suspension, the Agency would collect additional data, perform additional analyses, and explore other administrative and legal mechanisms to better tailor RCRA regulatory requirements to the unique issues associated with remediation of petroleum releases. The suspension would be applicable only in states that certify that they have in place effective authorities and programs to compel cleanup of non-UST petroleum product spills and control the disposition of wastes generated from such cleanup actions. The suspension would apply only to wastes generated from state supervised or approved cleanup sites, and sites being remediated under Federal authorities.

DATES: Written comments on this proposed rule should be submitted on or before February 8, 1993.

ADDRESSES: Written comments on today's proposal should be addressed to the docket clerk at the following address: U.S. Environmental Protection Agency, RCRA Docket (OS–305), 401 M Street, SW., Washington, DC 20460. One original and two copies should be sent and identified by regulatory docket reference number F–92–STPP–FFFFF. The docket is open from 9 a.m. to 4 p.m., Monday through Friday, excluding Federal holidays. Docket materials may be reviewed by appointment by calling (202) 260–9327. Copies of docket materials may be made at no cost, with a maximum of 100 pages of material from any one regulatory docket. Additional copies are $0.15 per page.

FOR FURTHER INFORMATION CONTACT: General questions about the regulatory requirements under RCRA should be directed to the RCRA/Superfund Hotline, Office of Solid Waste, U.S. Environmental Protection Agency, Washington, DC 20460, (800) 424–9346 (toll-free) or (202) 260–3000 (local). For the hearing impaired, the number is (800) 553–7672 (toll-free), or (202) 260–9652 (local).

Specific questions about the issues discussed in this proposed rule should be directed to David M. Fagan, Office of Solid Waste (OS–341), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460, (202) 260–4740.

SUPPLEMENTARY INFORMATION:

I. Authority

These regulations are issued under the authority of sections 2002 and 3001 *et seq.* of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act, as amended by the Hazardous and Solid Waste Amendments of 1984, 42 U.S.C. 6912 and 6921 *et seq.*

II. Background

A. Toxicity Characteristics Rule

1. General

Under current regulations, EPA uses two procedures to define wastes as hazardous: *Listing and hazardous characteristics*. The listing procedure involves identifying industries or processes that produce wastes that pose hazards to human health and the environment. The second procedure involves identifying properties or "characteristics" that, if exhibited by any waste, indicate a potential hazard if the waste is not properly managed. Toxicity is one of four characteristics that must be considered when identifying a waste as hazardous. The others are ignitability, reactivity, and corrosivity.

The Toxicity Characteristics (TC) Rule was promulgated on March 29, 1990, 55 FR 11798 (March 29, 1990), was amended on June 29, 1990, and became effective on September 25, 1990. The TC rule has three main features. First, it replaced the Extraction Procedure (EP) leach test with the Toxicity Characteristic Leaching Procedure (TCLP). Second, it added 25 organic chemicals to the list of toxic constituents of concern and established regulatory levels for these organic chemicals. These levels were based on health-based concentration thresholds and a dilution/attenuation factor (DAF) that was developed using a subsurface fate and transport model. (A concentration threshold indicates how much of a chemical adversely affects human health, while the dilution/attenuation factor indicates the extent to which the concentration of a chemical is expected to be reduced during transport to and through ground water. The levels set in the TC rule were determined by multiplying the health-based number by a dilution/attenuation factor of 100.

The overall effect of the TC rule was to subject additional wastes to regulatory control under subtitle C of RCRA. A waste may be a "TC waste" if any of the chemicals listed in the rule, such as benzene, are present in waste sample extract (i.e. leachate) resulting from application of the TCLP to that waste. If chemicals are present at or above the specified regulatory levels, the waste is a "TC waste," and is subject to all RCRA hazardous waste requirements. Among these wastes are petroleum contaminated media and debris that fail the TC.

2. Deferral of the Application of the TC Rule to Petroleum Contaminated Media and Debris From Subtitle I—Regulated Underground Storage Tanks

Also on March 29, 1990, the Agency made a decision to defer a final determination regarding the application of the TC to media and debris contaminated with petroleum from underground storage tanks (USTs) subject to the part 280 (*i.e.* RCRA Subtitle I corrective action) requirements. 55 FR 11836. The UST regulations governing cleanups at these sites were deemed adequate to protect human health and the environment in the interim.

At that time the Agency had insufficient information concerning the full impact of the TC rule on UST cleanups, particularly regarding the amount of contaminated media that would become hazardous waste and the type of management feasible and appropriate for such waste (*e.g.* on-site treatment, off-site disposal). However, available information suggested that the impact might be very severe in terms of the administrative feasibility for both the subtitle C and subtitle I programs. In addition, a preliminary assessment indicated that the number of UST cleanup sites and the amount of media and debris at each site that would exhibit the toxicity characteristic could be extremely high, with EPA expecting hundreds of thousands of UST releases to be uncovered in the next few years. EPA believed that subjecting each of these sites to subtitle C requirements could overwhelm the hazardous waste

permitting program and the capacity of existing hazardous waste treatment, storage, and disposal facilities. Moreover, EPA believed that the imposition of these requirements could delay cleanups significantly, require an enormous commitment of federal resources, and undermine the State and local focus of the UST program.

The application of the TC rule to UST cleanups was deferred to allow cleanups under the UST program to proceed while the Agency evaluated the extent and nature of the impacts of Subtitle C on the UST program. Specifically, the Agency is currently studying the characteristics of UST sites (*i.e.* number of UST sites by media type, volumes of media and debris typically removed, fraction of these media and debris that exhibit the TC, if any, etc.), current practices and requirements for management of these media and debris, and how contaminated media and debris from these sites are managed under the Subtitle I state programs. The Agency is also evaluating the impact that Subtitle C management of petroleum-contaminated media and debris from USTs would have on the Agency's and States' hazardous waste management programs. In addition, the inclusion of these media and debris in the Subtitle C management system is being evaluated in comparison to the available capacity for commercial hazardous waste treatment, storage, and disposal. EPA is also studying whether the Agency can make regulatory changes to the subtitle C program which will better tailor the current hazardous waste rules to these particular current hazardous waste rules to these particular types of wastes and the context in which they are managed. (See 57 FR 21450, May 20, 1992.) The Agency plans to complete these studies later in 1992 and make its final determination early in 1993.

B. State Petitions for Rulemaking

Since the Agency announced its decision to defer the TC for UST petroleum contaminated media and debris, a number of States and other affected parties have requested that EPA consider expanding the deferral to include other petroleum contaminated media and debris. In particular, rulemaking petitions were received from the States of New York, Nevada, South Dakota, North Dakota, Maryland, and Maine, requesting that the current UST deferral be expanded to media contaminated from surface and subsurface discharges of petroleum products (from non-UST sources) that are currently being adequately addressed by existing State programs. In addition, the Agency has received letters from several other States which support the requests, concerns, and ideas expressed in the above-mentioned petitions.

The States believe that the numbers and volumes of petroleum releases from non-UST sources almost certainly exceed those from USTS. They argue that there is no technical basis for distinguishing between contaminated media and debris generated from UST cleanups (which is not subject to RCRA subtitle C), and that generated from other cleanups (which potentially is subject). In addition, this distinction presents substantial difficulties for the regulated community, which must determine whether a specific spill derives from an UST or from other sources, and it severely complicates enforcement.

These States further state that they have active and effective response programs for cleanup of spills and other releases of petroleum into the environment. For example, New York has an extensive petroleum cleanup program that, in its judgment, places a stringent set of requirements on petroleum-contaminated media. In New York, any soil left on site must be treated to the point where the extract from a TCLP test meets the New York State groundwater standard for benzene of 5 ppb.

According to the petitioning States, the toxicity characteristics rule has seriously impacted the operations and effectiveness of their programs. For example, in North Dakota the advent of the TC rule placed several existing environmental control rules and programs in conflict with each other. Reclassifying certain petroleum releases as hazardous waste that were previously handled outside of the hazardous waste program by the state above-ground storage tanks program, potentially places an extreme burden on that State's Hazardous Waste Program. In general, States argue that application of the toxicity characteristic to petroleum contaminated media and debris will place extraordinary demands on the RCRA permit program, which in turn could severely affect States' efforts to permit other RCRA facilities that are of higher environmental priority.

Finally, some states have pointed out that the toxicity characteristic has created a disincentive for private party cleanup initiatives by imposing RCRA permit requirements on many of those actions. In addition, some have suggested that the TC rule has created an incentive to simply dilute contaminated media (or delay testing in order to allow certain TC constituents to volatilize) so that the contaminated media no longer exhibit the toxicity characteristic.

C. Public Meetings

In September and December, 1991, EPA met with various affected parties (including representatives from the States, Congressional staff, environmental groups, and the waste-treatment and generating industries) to discuss issues related to the cleanup of petroleum contamination and the potential impacts of the TC rule on this cleanup. During these meetings, the Agency listened to various opinions and views concerning the impact of the TC rule and the potential impacts of a possible Agency decision to expand the UST deferral to all petroleum contaminated media and debris.

EPA was struck by the unanimity of opinion among the thirteen states present concerning the detrimental impacts of the TC rule on their ability to achieve timely and effective cleanup of spilled petroleum product. EPA was also struck by the concern being expressed by State environmental regulators about the adverse environmental impacts resulting from the application of the TC rule to petroleum releases from above-ground sources. The State representatives indicated that subtitle C regulation of petroleum contaminated media and debris would significantly increase the cost of cleanup of these releases, substantially delay cleanup, and in some cases (by delaying cleanup) negatively impact human health and the environment.

A number of States have funds that provide for some reimbursement of cleanup costs for above ground (as well as underground) petroleum spills. Many cleanup contractors provide cleanup services to responsible parties (RPs) "on credit," knowing that they will be paid by the RPs shortly after the work is completed. According to these States, if petroleum cleanup wastes are regulated under RCRA subtitle C, the resulting dramatic increase in costs of waste management would significantly impair the ability of the State to reimburse future cleanups. If there is no guarantee that payment will be forthcoming, several States believe that remediation contractors will be much less willing to respond promptly to spills. Further, it is unlikely that States will substantially increase these funds for the foreseeable future. The net result, according to these States, will be that fewer sites will be remediated. With fewer sites being addressed, spilled material will migrate further and potentially expose more

people, fish, and wildlife to contamination.

Unremediated spills of petroleum product onto soil can result in petroleum product reaching groundwater through infiltration, and, surface water through run-off. Benzene, a common constituent of many types of petroleum products, is carcinogenic and moderately toxic to aquatic organisms.

In the view of many States, the delays associated with RCRA subtitle C management would allow for the volatilization and migration of certain TC constituents such as benzene to the extent that the media may no longer fail the TC. These States point to RCRA testing and permitting as significant sources of delay. In addition, States cautioned EPA to recognize that, because of the high costs associated with subtitle C management and the high volatility of certain TC constituents of petroleum, there is a significant disincentive to promptly report and remediate petroleum spills.

Groups representing the generating industries (*e.g.*, petroleum and petrochemical industries) at the meetings generally agreed with the views being expressed by the States, although several stated that the problem was not unique to petroleum-contaminated media, but rather should be extended to other types of TC hazardous contaminated media.

Environmental interest group representatives were sensitive to the importance of the issues being raised by the States, but saw the States' position as similar to other claims that regulations deter effective actions. The environmental representatives agreed on the merits of streamlining the administrative procedures and processes (e.g., RCRA subtitle C permitting) for petroleum spill response actions, but felt that regulatory control was necessary to ensure environmental safety. They were also concerned about the extent to which State regulatory programs for non-UST spill cleanups are in fact adequately protective of human health and the environment, and the extent to which States place sufficient emphasis on spill prevention. The environmental group representatives also argued that certain features of a RCRA permit which they believe are important—particularly, public involvement and facility-wide corrective action—would be lost if EPA adopted the approach suggested in the States' petitions.

Certain representatives of the hazardous waste treatment industry expressed strong concerns with the Agency pursuing a suspension of the TC rule as the mechanism for solving the implementation problems posed by Subtitle C regulation of petroleum contaminated media and debris. According to these representatives, EPA should consider streamlining the RCRA permitting process for the cleanup and disposal of petroleum contaminated media and debris. They specifically suggested that EPA consider issuing permits-by-rule for petroleum contaminated media and debris, as well as for other cleanup wastes. They also expressed concern that the States' approach would effectively exempt petroleum-contaminated media from RCRA technical standards, in particular the land disposal restrictions. Other representatives of the treatment industry, however, supported the States' approach and favored expanding it to other cleanup wastes.

III. Basis for the Proposed Suspension

A. Purpose of the Suspension

The purpose of today's notice is to propose a suspension of the 1990 Toxicity Characteristics (TC) rule as it applies to non-UST petroleum product-contaminated media and debris for a period of three years.[1] As discussed in more detail below, the Agency believes that the States have raised sufficient concerns about the environmental impacts of applying the TC rule to petroleum contaminated media and debris to warrant study of this issue in the same manner in which the Agency is currently conducting analysis for petroleum contaminated media and debris from USTs. EPA believes, in addition, that the TC should be suspended in the interim while the Agency fully studies this issue and prepares any regulatory adjustments necessary and appropriate for the regulation of this material under the RCRA subtitle C program. Thus, the purpose of this suspension is to give the Agency three years in which to collect additional information on the nature, scope, and environmental impacts of regulating non-UST petroleum product-contaminated media and debris under RCRA Subtitle C and determine whether and how such regulation should be established.

This suspension does not constitute a final decision by the Agency on how to integrate the TC with existing State petroleum cleanup programs. Rather, EPA bases the suspension on the significant issues raised by the States and a recognition that increased human and environmental exposures to petroleum product would likely occur without a period for EPA to undertake additional data gathering and analyses. EPA will make a final decision and implement any regulatory adjustments at the end of the three year suspension.

During the three year suspension, EPA believes that existing State laws and programs will adequately protect human health and the environment. To ensure such protection, EPA is proposing that the suspension would apply only where media or debris is cleaned up under State oversight through enforcement orders or other explicit written State approval. States would have to certify to the EPA Regional Administrator that they have legal authorities and programs in place to administer and enforce those authorities, that can compel cleanup of non-UST petroleum product-contaminated media and debris, and control the treatment, storage and disposal of such waste when cleaned up.

B. Available Information on Scope of the Problem and Impacts of Subtitle C

1. Nature and Frequency of Petroleum Product Contamination

Petroleum product releases occur daily throughout the United States in the course of the transport and storage of the billions of gallons of petroleum product used in this country each year. The majority of spills are under 1,000 gallons and occur from transmission pipelines, gathering lines, pump stations, storage tanks, and transport vehicles. According to a recent American Petroleum Institute survey of 42 States, over 36,000 above ground petroleum product spills occurred in the United States in 1990 alone. The API survey also indicated that over 23,000,000 gallons of product were released in 24 States in 1990. Information from the States of New York and Texas indicate that the majority of petroleum product spills occur to land. Based on these data and data submitted by the State of New York, EPA estimates that over 3.5 million tons of petroleum contaminated environmental media (mostly soil) and debris were created in 1990 alone as a result of these spills.

Regulating the disposal of these contaminated media and debris under Subtitle C of RCRA potentially means: (1) Characterization for TC (which may often involve testing) at as many as 36,000 locations per year, (2) manifesting from many thousands of points of generation (when contaminated media and debris are

[1] Since the scope of today's proposal includes groundwater contaminated with petroleum product, this proposal, if finalized, would supersede the exclusion for injected groundwater from hydrocarbon recovery operations, which was due to expire on January 25, 1993. See 40 CFR 261.4(b)(11), and 56 Fed. Reg. 13406 (April 2, 1991).

disposed of off-site) per year, and (3) treating, storing, and/or disposing of a substantial portion of the 3.5 million tons per year of petroleum contaminated soil in RCRA permitted hazardous waste facilities. If on-site RCRA treatment, storage, or disposal were to be the chosen alternative at even one-half of these 36,000 sites each year, the number of new RCRA hazardous waste permits needed to address petroleum product cleanup would vastly surpass the 4,500 facilities which make up the current RCRA TSDF universe.

In addition to spills which occur as a result of the day-to-day use of petroleum product, EPA expects that there will be many potentially large, complex petroleum product contaminated sites which require remediation as well. One example is the Oil City site in Syracuse, New York, where there has been a great deal of interest on the part of the local government and private parties in converting this 800 acre former petroleum tank terminal property to residential and commercial use. The regulation of petroleum product contamination under RCRA subtitle C at this and other similar sites creates a significant disincentive to private parties to conduct any cleanup activities. Such cleanups can generate hundreds of thousands of cubic yards of contaminated media and cost tens to hundreds of millions of dollars to cleanup. Since few private uses of this land would create economic benefits of this magnitude, the Oil City site and similar sites may not be cleaned up for the foreseeable future.

The nature of petroleum as an environmental contaminant was another factor in the Agency's decision to propose the TC Suspension for petroleum contaminated media. EPA believes that there are significant differences between the investigation and remediation requirements for media known to be contaminated with petroleum (from UST or non-UST sources) and other types of contamination often found at RCRA facilities and other contaminated sites. For sites contaminated with petroleum products, the source(s) of the contamination (e.g., transportation spills, pipeline leaks, aboveground tank spills) can often easily be identified, the substance (petroleum) is known, and therefore the properties and exposure pathways of the contamination, and potential remedial approaches, can also be identified without extensive investigations. In contrast, at other contaminated sites, identifying the sources of contamination, their properties and potential risks, and remedial options will often require extensive and protracted investigations and analysis.

Thus, the Agency believes that for many sites contaminated with petroleum, investigation and remediation can be relatively straightforward. As such, EPA believes that a simplified or streamlined permitting approach, or some other type of simplified administrative mechanism, could be appropriate for dealing with petroleum contaminated sites (see discussion of alternative approaches in Section III. D. of this preamble).

2. Impacts of Subtitle C Regulation on Pace of Cleanup

Information provided by the States suggests that subtitle C regulation of petroleum contaminated media and debris may have profound impacts on the ability of States with existing spill response programs to promptly initiate cleanup. Information from State case studies suggests that at many sites, the initiation of cleanup could be delayed between three and 18 months. The sources of the delay include: sampling and testing requirements associated with the TCLP, the need to register as a hazardous waste generator and obtain a generator identification number, and the increased complexity of evaluating and implementing remedial measures that comply with subtitle C. One example of the increased complexity of implementing remedial measures is the need to specifically evaluate on-site versus off-site options for the management of hazardous waste. This would include identifying RCRA permitted TSDFs that would accept the waste and balancing transportation and off-site disposal costs, risks, and benefits with the costs, risks and benefits of on-site management.

On-site treatment will frequently be the preferred option for sites involving large amounts of contamination. In cases where such treatment would require RCRA permitting, the permitting process would require an additional one to three years. These delays would likely allow volatilization of certain TC constituents such as benzene, and result in further vertical migration of contaminants into the soil and groundwater. This would increase the volume of contaminated soil and the probability that ground water would be impacted by a spill.

It is difficult to quantify at this time the precise differences nationally in the pace of petroleum cleanups with and without subtitle C regulation. The pace of cleanup in a State is highly dependent on the specific provisions of the State program, the available State resources for responding to spills, and the amount of flexibility provided for in authorized State RCRA programs. However, many States which petitioned EPA believe that they do a good job in responding quickly and adequately to petroleum spills. Moreover, based on available information, EPA believes that Subtitle C regulation could significantly increase the time required to initiate and complete remediation. In States with adequate spill response programs and controls on the disposal of cleanup wastes, EPA believes this delay would result in increased risk to human health and the environment.

3. Impacts of Subtitle C Regulation on the Costs of Cleanup

It is clear that Subtitle C regulation of petroleum contaminated soil and debris can substantially increase the cost of remediation. A primary source of the increase is the relative expense of Subtitle C soil treatment technologies compared to those likely to be used in States with spill response programs. Depending upon the treatment technology selected, per site cleanup costs for soil treatment would likely increase by as much as 300 to 900 percent over existing costs.[2]

For example, unit costs for thermal treatment that is being used in one state UST program averages $55.00 per cubic yard of petroleum contaminated soil, compared to treatment costs of $1,060 per cubic yard of soil for subtitle C incineration, and disposal costs of $510.00 for subtitle C landfills.[3] Thus, for every 100 cubic yards of TC hazardous soil, the increase in treatment costs would be between $45,500 and $100,500 per site.

It is unclear whether the increased costs of subtitle C treatment of petroleum product-contaminated soil can be justified on the basis of a reduction in human health risk. In a study on the impacts of removing the TCLP deferral for petroleum-contaminated media at UST sites, it was concluded that one component of risk, residual risk, will likely not decrease with subtitle C management, since Subtitle I cleanup standards are generally more stringent than those implied by the TCLP regulatory standard for benzene.[4] Also ambiguous is the effect of subtitle C management on

[2] Office of Policy Analysis, U.S. EPA, "DRAFT Report: The Impacts of Removing the TCLP Deferral for Petroleum-Contaminated Media at Underground Storage Tank Sites," (April 1992) Appendix B: Minnesota Case Study, p. 27.

[3] Office of Policy Analysis, U.S. EPA, "DRAFT Report: The Impacts of Removing the TCLP Deferral for Petroleum-Contaminated Media at Underground Storage Tank Sites," (April 1992), p. 3–2.

[4] *Ibid*, p. 1–3.

risks associated with soil treatment and disposal. Because the predicted mix of soil treatment technologies includes a variety of methods that would likely vary over time, assessing the ultimate effect on human health risks is extremely complex, and thus a more detailed study of the risk characteristics of the various soil treatment and disposal technologies is needed.[5]

Also, EPA believes that these increased costs of waste management will reduce the number of spills responded to and remediated by States in State-funded petroleum spill cleanup programs. For example, the petroleum spill response program in New York is financed by a dedicated but limited funding source. When there is no responsible party capable of responding to a spill of petroleum product, the New York program takes action using funds specifically dedicated to this purpose. States have argued that regulating these cleanups under subtitle C would increase costs by a factor of 3.[6] Unless New York decides to dedicate significant additional funds to the program, New York will have to substantially decrease the number of spills addressed by State-funded response programs. This same result is expected in other states that have similar programs. Thus, nationally, EPA expects overall petroleum product spill response efforts to decrease as a result of the TC regulation.

EPA also believes that the increased costs of waste management under subtitle C creates substantial disincentives to prompt reporting and cleanup of petroleum spills by responsible parties. Although this disincentive holds true as well to some degree for all subtitle C wastes, EPA believes that petroleum contaminated media are different because of the common and widespread use of petroleum products in this country. Billions of gallons of petroleum product is stored, transported, and used throughout this country every year. In New York state alone, over 10,000 petroleum product spills were reported to the New York Department of Environmental Conservation during the 1989–1990 state fiscal year.

If regulated parties believed that they could escape liability for these releases, little private remediation would likely occur. If severe regulatory disincentives dissuaded responsible parties from reporting even a fraction of these spills, federal and State programs would not know about these spills and therefore could not evaluate them. Therefore, significant volumes of petroleum product would be released to the environment. EPA believes that it is important, given the widespread use of petroleum products, not to create significant disincentives to cleanup actions that provide benefit in terms of reducing risk to human health and the environment.

C. Definition of Hazardous Waste

Today's action is also consistent with the Agency's intention to apply Subtitle C standards to waste which is truly hazardous in the context in which it is actually managed. EPA believes that for those petroleum product-contaminated wastes managed under State oversight as part of effective State cleanup programs, there is a very low likelihood of mismanagement of the waste. Thus the wastes may not be "hazardous" as defined under RCRA Section 1004.

Subtitle C of the Resource Conservation and Recovery Act (RCRA), as amended, establishes a federal program for the comprehensive regulation of hazardous waste. Section 1004(5) of RCRA defines hazardous waste, among other things, as solid waste that may "* * * pose a substantial present or potential hazard to human health and the environment when improperly treated, stored, transported, disposed, or otherwise managed." Under RCRA Section 3001, EPA is charged with defining which solid wastes are hazardous and "should be subject to" Subtitle C requirements either by identifying the characteristics of hazardous waste or listing particular hazardous wastes.

The hazardous waste characteristics promulgated by EPA designate broad classes of wastes which are hazardous by virtue of an inherent property. In the 1980 rule which established EPA's general framework for identifying hazardous waste, EPA set forth two basic criteria for identifying hazardous waste by inherent properties. First, waste exhibiting the property must meet the statutory definition of "hazardous waste"; *e.g.* the waste exhibiting the property must pose a substantial hazard to the environment when improperly managed. Second, the property must be measurable by available standardized testing protocols or reasonably detectible by generators using their knowledge of the waste. 40 CFR 260.10.

EPA has historically identified such waste by assuming that the waste would be mismanaged and evaluating the waste's hazard under such circumstances. See 45 FR 33113 (May 19, 1980). EPA has used a "reasonable worst-case" mismanagement scenario (codisposal in a municipal landfill) to identify these wastes. See 55 FR 11800 (March 29, 1990). However, EPA believes that, based on a decade of experience with hazardous waste management, this mismanagement assumption may no longer be accurate or necessary in defining wastes which should be subject to RCRA hazardous waste requirements.

The Agency believes that it is appropriate to begin tailoring the scope of its hazardous waste characteristic program to reflect how wastes are actually managed, rather than how they might be managed under a worst-case analysis. Today's rule reflects this more tailored approach.

This approach is authorized by the definition of "hazardous waste" in RCRA section 1004(5). Section 1004(5)(B) defines as "hazardous" wastes which may present a hazard "when mismanaged," thus authorizing EPA to determine whether, and under what conditions, a waste may present a hazard and regulating the waste only under such conditions, *i.e.*, when mismanaged. (Note that this is in contrast to section 1004(5)(A) under which EPA regulates as hazardous wastes which are inherently hazardous no matter how managed.)

In addition, EPA believes that section 3001 provides EPA with the flexibility to consider the necessity for, and appropriateness of, hazardous waste regulation for wastes which meet the section 1004(5) criteria. Section 3001 specifies that EPA must make a determination of whether such wastes "should" be subject to the provisions of subtitle C in determining whether to list or otherwise identify wastes as hazardous under that Section. Thus, section 3001 authorizes EPA to determine whether Subtitle C regulation is appropriate in determining whether to designate a waste as "hazardous." EPA thus may determine that subtitle C regulation is not appropriate because such wastes are not "hazardous" when properly managed and, based on information available to the Agency, unlikely to be mismanaged. Regulation of such waste under subtitle C would not be "necessary to protect human health or the environment" (see RCRA sections 1003(a)(4), 3002(a), 3003(a), 3004(a)).

Moreover, EPA interprets its existing regulatory criteria for identifying hazardous waste as providing the flexibility to consider actual management of the waste in order to determine whether to designate such waste as "hazardous." EPA's criteria for identifying hazardous waste

[5] *Ibid*, p. 4–6.

[6] New York State's petition to Administrator Reilly, U.S. EPA, August 17, 1990, p.2. (Baseline cost estimate was not provided.)

characteristics codifies the statutory definition of hazardous waste and thus provides EPA with the same flexibility accorded by the statute to consider actual management practices in determining whether a waste is hazardous. Where mismanagement of the waste is likely to be implausible or has been adequately addressed by other programs, EPA need not identify the waste as hazardous under the regulatory criteria.

As a result, EPA believes that the Agency should tailor its hazardous waste identification program, (see 57 FR 21450, May 20, 1992), to ensure that the stringent Subtitle C program for hazardous waste regulation applies only to waste which is truly hazardous in the context of the way in which the waste is actually, or reasonably likely to be, managed. EPA believes, based on a decade of experience with hazardous waste management, that waste containing hazardous constituents at levels below concern from a human health and environment perspective should not be subject to full Subtitle C management. EPA has proposed concentration-based levels for comment in 57 FR 21450 (May 20, 1992).

EPA has already promulgated several modifications of the 1990 toxicity characteristics rule in several respects based, at least in part, on the manner in which the particular waste is actually managed. 56 FR 13406 (April 2, 1991); 55 FR 11836 (March 29, 1990). Today's proposal is consistent with, and furthers, this approach to identifying hazardous waste characteristics. Because EPA believes that it can be confident that remedial waste managed subject to State oversight and the conditions set forth in this proposal would not be "mismanaged," the waste may not be "hazardous" under RCRA section 1004(5) and "should" not be regulated as hazardous under RCRA section 3001(u).

D. Alternative Approaches

EPA recognizes that not all groups consider the approach it is taking in today's proposal is the most appropriate. The Hazardous Waste Treatment Council, for example, suggests that EPA address the TC issues that have been raised by the States though some means of simplifying the permitting of petroleum cleanups, rather than by suspending the applicability of the TC. The Treatment Council specifically suggested the use of permits by rule as a mechanism which could alleviate the administrative impacts of addressing petroleum contaminated media under RCRA subtitle C, while maintaining the controls and standards (including the land disposal restrictions) provided under subtitle C.

In the context of other previous rulemakings, the Agency has explored the concept of alternative, and more streamlined, types of RCRA permits that could be used to expedite cleanup-type situations. One example is the proposed rulemaking for mobile treatment units (see 52 FR 20914, June 3, 1987). The primary legal impediments to this type of permit are the need to provide for site specific public participation (as required under RCRA section 7004), and the requirement to address facility-wide corrective action (under section 3004(u)). Given that these permits would have to address these statutory requirements, and that doing so would require a considerable time and resource commitment on the part of the issuing government agency(s), as well as the permittee, it may be that creating some such type of permit for petroleum cleanup situations would actually have little "streamlining" effect.

Some have also suggested the use of emergency permits as another alternative to RCRA subtitle C permitting. Emergency permits could be used in some situations involving petroleum releases, albeit not to extended cleanup operations, nor currently to sites where cleanup is not being conducted in response to an actual "emergency" situation. However, one option, upon which we are seeking comment, concerns modifying the emergency permit provisions to accommodate petroleum spill remediation.

Even if the administrative problems associated with issuing permits for petroleum release cleanup activities could be resolved, we recognize that several of the problems cited by the States in this regard may remain. For example, several States point to the need for persons conducting cleanups to register as a hazardous waste generator and obtain a generator identification number as a source of delay in being able to legally allow transport of contaminated media and debris from the spill site to subtitle C disposal. The volumes of such materials requiring RCRA Subtitle C management could also potentially create serious capacity problems for the hazardous waste treatment, storage and disposal system. EPA is specifically soliciting comment and data on the volume of contaminated media and debris associated with petroleum product spill cleanup and the impact of this on the capacity of the existing hazardous waste system.

As discussed above, EPA believes that the existing legal framework in RCRA creates impediments to adapting subtitle C permit requirements to address the problems posed by thousands of petroleum product contaminated sites. However, other modifications to RCRA requirements may be much less problematic. The Agency will continue to examine these types of options, and others, as alternatives to or as additions to today's proposed TC suspension. The Agency invites comment as to how such options may fulfill the general objective of removing unnecessary procedural and substantive subtitle C requirements for petroleum release response, while ensuring that petroleum contaminated media are managed in a manner protective of human health and the environment. Specifically, comment is solicited on the following options:

- Expanding the permit exemption in § 270.1(c)(2)(i) for less than 90-day treatment and storage of on-site generated hazardous wastes. This exemption could be extended for some longer time period specifically for on-site petroleum response actions (e.g., 180 days).
- Providing permits by rule or class permits specifically for remediation of petroleum contaminated media (see preceding discussion).
- Changing the existing emergency permit requirements (§ 270.61) to provide for such permits for short term cleanup actions for petroleum releases that may not actually pose "imminent and substantial threats" to human health and the environment.
- Creating a new type of unit subject to the less than 90-day storage and treatment permit exemptions, that would otherwise be regulated as waste piles, and thus not eligible for this exemption (such units, employing flexible membrane liners and vapor recovery are currently in use, and can remediate relatively large volumes of contaminated soils).
- Developing differential regulatory controls based on the size of the petroleum release (e.g., 10,000 gallons of released product). Under this system, larger spills requiring large scale, long term remediation might be subject to full Subtitle C controls, while smaller releases could be eligible for more streamlined procedural requirements and/or less stringent substantive standards.

In regard to these alternatives, comment is requested particularly in regard to their legal feasibility in light of existing RCRA statutory requirements.

E. Relationship of This Proposal to Contaminated Media Cluster

It should be noted that the Agency has underway a broader consideration of

contaminated media issues related to the issues addressed in this proposal. To improve the overall quality of its regulatory decisionmaking and to develop more integrated approaches to environmental problems, the Agency has begun to look at groups or clusters of regulations. One of these regulatory clusters, the "contaminated media cluster," is charged with developing a more integrated approach among Agency policies and regulations dealing with waste remediation.

The contaminated media cluster project is gathering information to develop a comprehensive view of the quantities and types of waste needing remediation, the types of risks they represent, the current regulatory and statutory framework, elements of an effective cleanup process, and the costs and benefits of cleanups. The culmination of that work will be a regulatory strategy that will include a set of objectives and operating principles for the Agency's remediation programs. Although the cluster effort is not yet complete, this proposed TC suspension rule for petroleum contaminated media and debris has been closely coordinated with the regulatory cluster on contaminated media.

F. Relationship of This Proposal to the Ground Water Protection Principles

This proposed rule is consistent with the Ground Water Protection Principles. One of the Principles states that "With respect to Federal, State, and local responsibilities, the primary responsibility for developing and implementing comprehensive ground-water protection programs continues to and should be vested with the States." Thus, today's proposed TC Suspension and the Ground Water Protection Strategy both reflect the general objective of giving States the lead role in implementing these types of environmental programs.

IV. Explanation of Today's Proposal

A. Scope

1. Wastes Subject to the Proposed Suspension

The proposed suspension of the TC rule (for D018–D043) will be limited to environmental media (groundwater, surface water, soils, and sediments) and debris (see definition in 57 FR 1015, January 9, 1992) that are contaminated by releases of petroleum product from sources other than Subtitle I regulated underground storage tanks (*e.g.* aboveground storage tanks, pipelines, transportation vehicles). Note that the proposal would suspend the TC rule for the 25 organic constituents only (hazardous waste codes D018–D043), and not for the original EP toxic constituents (metals, insecticides, and herbicides; hazardous waste codes D001–D017). EPA believes that suspending the TC rule for the 25 organic constituents will have the effect of suspending RCRA Subtitle C regulation of the treatment, storage, and disposal of petroleum product contaminated media and debris. This is EPA's clear intent. If EPA finds through comments on this proposal or new data that additional EP toxic constituents occur in media resulting from petroleum product contamination, EPA intends to expand the list of constituents subject to the petroleum product suspension in the final rule to include such additional EP constituents. EPA solicits comments on its intention to expand the list of constituents if comments or new data show that this is needed in order to fully suspend the TC regulation for this material.

For the purpose of today's proposal, petroleum product is defined as: (1) Crude petroleum oil or any fraction thereof that is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute); and (2) petroleum-based substances composed of a complex blend of hydrocarbons derived from crude oil through processes of separation, conversion, upgrading, and finishing, such as motor fuels, jet fuels, distillate fuel oils, residual fuel oils, and lubricants. This definition is a modified version of that in the Subtitle I regulations, as it does not include petroleum solvents and used oils.

Today's proposed exclusion would not affect the regulatory status of media or debris contaminated with petroleum-derived listed hazardous wastes (e.g., F037, F038). Although some have suggested that EPA extend the proposed suspension to media and debris contaminated with petroleum-derived wastes (e.g., sludges, landfill leachates, and tank bottoms), in addition to petroleum products, EPA is not at this time proposing to suspend the TC rule for these wastes. These wastes generally contain contaminants of concern at higher concentrations than do petroleum products, can contain hazardous constituents other than those found in petroleum products, and are generally not covered by existing stated petroleum product spill response programs.

EPA is also not extending the application of the TC suspension to used oil, or used-oil processing residuals.[7] Used oil can be contaminated with hazardous constituents other than those found in petroleum product, and these constituents may be present in significant concentrations. Further, state rulemaking petitions submitted to EPA do not specifically request a suspension of the TC rule for media and debris contaminated by used oil. Therefore, this proposed rule does not affect the UST deferral for petroleum contaminated media.

The Agency is soliciting comment on an alternative approach in which the TC suspension for environmental media and debris contaminated by petroleum product would be limited to a subset of the 25 organic constituents. The alternative approach would provide a TC suspension only for those contaminants identified in 40 CFR 261.24 (hazardous waste codes D018–D043) which are known to be indigenous to petroleum product. The Agency is considering the following three contaminants in this regard—benzene, cresols, and methyl ethyl ketone. These contaminants have been identified as indigenous to petroleum product, based on data derived from the delisting program. (See 40 CFR 260.22.) The Agency requests comment on this particular list, as well as on other TC contaminants identified by hazardous waste codes D018–D043 which may also be indigenous to petroleum product. The Agency is considering this approach because it is concerned about the improper application of this suspension to media and debris contaminated by other D018–D043 constituents. In this scenario, the actual source of contamination could be non-petroleum product constituents, or a mixture of such constituents with those common to petroleum product, but the responsible party may argue that the source was petroleum product. On the other hand, petroleum products are complex mixes of chemicals, and adequately characterizing them by a limited subset of codes D018–D043 constituents could prove difficult, as well as require expensive testing, with no commensurate benefit. The Agency requests comment on this alternative approach.

The Agency also considered an alternative that would broaden the scope of the suspension beyond

[7] As defined in 40 CFR 266.40(b), used oil is any oil refined from crude oil, used, and as a result of such use, is contaminated by physical or chemical impurities. A new definition in 40 CFR 279.1, when it becomes effective, is as follows: "Used oil means any oil defined from crude oil, or any synthetic oil, that has been used and as a result of such use is contaminated by physical or chemical impurities."

petroleum product, to include media and debris contaminated by any TC constituent. At this time, the Agency is not proposing to expand the suspension beyond petroleum contaminated media and debris. The Agency believes that there are compelling human health and environmental reasons for proposing the suspension of the TC rule for petroleum contaminated media and debris, and that it should act as quickly as possible to remedy the current situation. Including other TC contaminated media and debris in this proposal would require substantial further analysis, which could delay EPA in addressing the petroleum issue. Moreover, while many States may have adequate petroleum spill response programs, these states may not have programs to adequately manage other TC contaminated media and debris, which could result in these materials being unregulated.

Nevertheless, the Agency notes that similar concerns have been raised by many in the regulated community and States about the disincentives to cleanup associated with RCRA subtitle C regulation of media and debris contaminated by any TC constituent, and that EPA is concerned about these impacts. The Agency requests comment on expanding the scope of the suspension beyond petroleum product to include media and debris contaminated by other TC constituents.

The Agency also considered the particular issue raised by coal tar contaminated media and debris generated from the remediation of historic manufactured gas plant (MGP) sites. For many decades, manufactured coal gas was the primary source of gas for many American cities. There are in excess of 1500 old MGP sites in the United States, all thought to be similar in the nature and extent of coal tar-related contamination. According to electric utility industry sources, a substantial number of these sites will undergo assessment and possibly cleanup in the near future, and many companies planning such remediation activities were hoping to use their own high efficiency utility boilers to burn coal tar remediation-related wastes. The utility industry has expressed to the Agency its concern that the advent of the TC rule has created a disincentive to conduct these cleanups because these wastes may no longer be able to be burned as fuel in their boilers.

EPA is currently exploring various options to encourage responsible parties to undertake the assessment and any necessary remediation of historic MGP sites within the framework of the existing RCRA program. One option under consideration is to include coal tar wastes within the scope of this proposal to suspend the TC rule for petroleum product. However, EPA is not including coal tar wastes in this proposed suspension at this time. First, the primary intent of this suspension is to respond to the requests made by States in their rulemaking petitions to EPA; that is, to suspend the TC rule for media and debris contaminated by petroleum products. Second, although EPA believes that there may be important environmental reasons for including coal tar wastes within the scope of this suspension, EPA lacks information on whether coal tar remediation and waste disposal in utility boilers is effectively regulated outside the RCRA Program by state and local governments.

Should information submitted in response to this proposed rule support a determination that the cleanup and burning of coal tar contaminated media and wastes in high efficiency boilers is effectively regulated by States, EPA may extend the suspension in the final rule to include coal tar contaminated media. The suspension would, however, only apply in States that certify that they have in place adequate authorities and programs to compel MGP site cleanup and control the burning of wastes generated from such cleanup actions.

The Agency requests comment on an option that would include coal tar wastes within the scope of this suspension. The Agency also requests comment on the following: The extent to which coal tar cleanup operations are currently being adequately regulated by state and/or local authorities; the cost of remediation of coal tar contaminated media under Subtitle C and under alternative approaches; the risk posed to human health and the environment by not regulating coal tar wastes under Subtitle C but under alternative approaches; and, the most effective approaches to remediating old coal gasification sites.

2. Size of Release

EPA is proposing that the suspension of the TC rule apply to any non-UST petroleum product release, regardless of the volume of spilled material or amount of contaminated media or debris. Some have suggested, however, that the Agency narrow the suspension to contaminated media and debris resulting from spills of less than 10,000 gallons (this volume is the National Contingency Plan definition of a major discharge of oil to inland waters and an established point of reference for defining a large spill). These parties have suggested this narrowing because there may be unique issues posed by larger releases, and in some States, petroleum spill response programs may not be well suited to address these unique issues. EPA requests comment on the extent to which State spill response programs address the unique issues posed by larger releases.

Recent experiences in EPA's Regional VIII office with large petroleum spills (i.e., spills greater than 10,000 gallons) indicate that larger spills tend to have multi-media environmental impacts and require long term oversight. It is not unusual for a particularly large spill to contaminate surface water, sediment, air, soil, and ground water and require years to remediate. It has been suggested that States may not always have the necessary expertise or resources to oversee remediation of these types of spills.

On the other hand, the State that first approached the Agency on the issue of a TC deferral—New York—did so because of the difficulties that the TC was presenting at a large cleanup site, involving many thousands cubic yards of contaminated soil. In this case, the State hoped to conduct on-site treatment under its State cleanup program; securing a Federal permit (the State is not yet authorized for the TC) would significantly delay the project. In fact, the problem presented by Subtitle C regulation may be greater at these large sites, because smaller sites often can be handled expeditiously within the existing permitting system as emergency responses, wastewater treatment units, or 90-day treatment units, or will not involve on-site treatment. Furthermore, it may be difficult to determine in all cases the volume of material released after the fact, particularly where the release is not a surface spill but rather has occurred as leakage over an extended period of time.

EPA is soliciting comment on whether a limit should be placed on the volume of spills covered under the deferral. In particular, comments should address the extent to which States with petroleum response programs do or do not have the regulatory authority, technical expertise, and/or capability to properly oversee the long term cleanup of large, multi-media spills or other releases of petroleum product. However, as discussed in Section C below, the Agency is not proposing an extensive review of State programs. Any review of this type would be overly prescriptive and deny States the flexibility to tailor response programs to specific spills or site conditions. To the extent that comments and data submitted in response to this proposal support a determination that State petroleum spill

response programs are generally not adequate to respond to large petroleum spills, EPA could limit the suspension in the final rule to contaminated media and debris generated as a result of spills of less than 10,000 gallons of petroleum product. Alternatively, if data suggest that certain States have the ability to adequately respond to larger spills, EPA could, in the final rule, suspend the TC rule for all volumes of spills in states with this capability and limit the suspension to smaller volumes in States that lack the capability.

B. Timing

EPA is proposing that this suspension of applicability of the TC to non-UST petroleum contaminated media and debris be no longer than three years from the effective date of the final rule. Although EPA believes that available data on the negative impacts of Subtitle C regulation of petroleum contaminated media are sufficient to support a 3 year suspension, EPA recognizes that additional data and analyses may suggest the need for a refinement of the basic approach taken in this proposal to better ensure that human health and the environment are being adequately protected. During the three-year period, EPA will conduct studies similar to those now underway pursuant to the UST deferral, including:

- A comprehensive study of the characteristics of sites and wastes affected by application of the TC to contaminated media and debris resulting from non-UST spills of petroleum product, including an analysis of potential cross-media impacts.
- A national survey of state petroleum spill response programs.
- A comprehensive evaluation of the potential economic and environmental impacts of subtitle C regulation of these materials on the Agency's and States' hazardous waste management programs, and an evaluation of the available capacity of commercial hazardous waste treatment, storage and disposal facilities.
- A comprehensive evaluation of whether some alternative regulatory structure would be more appropriate (such as streamlining or otherwise revising subtitle C requirements for these wastes) then the currently available alternatives of a complete suspension of the TC rule or full subtitle C regulations.

EPA considered proposing to suspend the TC rule for a shorter time frame, such as two years or one year. However, given the scope and complexity of the issues involved and the studies to be performed during the suspension, EPA believes that it may need a full three years in order to fully address the issues and develop a generally acceptable permanent solution. EPA is, however, soliciting comment on whether the three year time frame is reasonable and necessary. Comment is solicited regarding alternative time frames for the proposed suspension.

C. Limiting Suspension to States With Effective Programs

EPA is proposing that this suspension be limited to states that certify to the EPA Regional Administrator that they have effective programs in place to response to and remedial non-UST petroleum releases and control remediation-related contaminated media and debris.[8] This is similar to the standard for delegation to State petroleum cleanup programs under section 9003(h)(7) of RCRA (L.U.S.T. Trust Fund and cleanup authorities). EPA believes that limiting the suspension in this manner will provide adequate protection of human health and the environment from the potential impacts associated with the remediation of petroleum product, while at the same time allowing remediations to proceed expeditiously.

EPA considered not limiting the suspension to states with effective petroleum response programs in place. In other words, the TC could be suspended completely as it would apply to petroleum product contaminated media and debris, on a national basis. Such a suspension would be based on the assumption that such contaminated materials inherently do not merit Subtitle C regulation, and that specific state controls *are not* needed to ensure protection of human health and the environment. EPA decided not to propose this option, since the Agency believes that petroleum product contaminated media and debris can pose potential threats if mismanaged. A "blanket" suspension of the TC in this context would likely leave non-UST petroleum spills largely unregulated in some States, with the resulting potential for mismanagement of what may be large volumes of contaminated media and debris. Further, limiting the suspension to states with effective petroleum spill response programs may provide an incentive for states without such programs to establish them.

EPA also considered an alternative for this proposed rule that would have granted the suspension only to states that could demonstrate that their petroleum response programs complied with a comprehensive, Federally defined set of criteria. Under this approach, EPA could develop a very detailed set of requirements explicitly defining the types of legal authorities that states must have, requirements for how releases must be investigated, standards for management of cleanup wastes, cleanup levels to be achieved, and program administration requirements (e.g., staffing levels, qualifications of personnel, etc.). EPA believes that this type of approach would be overly prescriptive, and would not allow states flexibility to tailor response programs to specific responses, or to reflect different conditions across states. For example, cleanup of petroleum releases in a State like Alaska, where much of the State can be reached only by air, might of necessity be approached differently than in a more populated state. Furthermore, this approach would take undue time to put into effect. Not only would cleanups be significantly delayed, but EPA's experience with State authorization under Subtitle C suggests that few if any States would be able to complete the authorization process before the termination of the three-year suspension.

Today's proposal, in specifying requirements for adequate state programs for purposes of obtaining the TC suspension, outlines a set of criteria that the Agency believes will allow flexibility for States, while ensuring effective and protective responses to petroleum product releases in States in which the suspension would apply.

As proposed today, the primary standard for determining adequacy of State programs would be whether a State has both legal authorities (including enforcement authorities), and an administrative program structure sufficient to require cleanup of non-UST petroleum product releases, and to control the management of petroleum contaminated media and debris that are generated from cleanup activities. Specific remedial requirements that may be applied to a particular release situation will continue to be determined by the State, according to applicable State regulations and guidelines. Although States will have to be able to impose appropriate controls on management and disposal of petroleum contaminated media and debris, such controls would be determined by the State.

Similarly, although today's proposal requires that States must, to obtain the TC suspension, have programs in place to effectively administer and enforce the

[8] The proposed suspension would also apply to petroleum product contaminated media and debris that are generated and managed pursuant to Federal remedial authorities, as explained in the following section (E) of this preamble.

requisite cleanup authorities, it does not place any particular requirements as to how such programs must be structured, the type of State agency responsible for implementation of cleanup actions, or any other specific administrative requirements.

One of the key issues associated with today's proposal is the scope of the suspension in a State which receives the suspension; that is, would the suspension apply to all non-UST petroleum contaminated media and debris in that State, or only that which is generated to sites that are being cleaned up under the State program. EPA is proposing today that the suspension would be limited to petroleum contaminated media and debris that are managed pursuant to State-supervised cleanup actions. EPA believes that applying the suspension to all petroleum-contaminated media or debris would contradict one of the basic premises of today's proposal; that is, that the State programs will provide adequate protection in lieu of subtitle C controls. If contaminated media or debris are being managed outside the controls or oversight of the State, such protections cannot be assured.

EPA is not specifying exactly how, or to what degree, States must exercise oversight or enforcement of cleanup actions, so that the proposed suspension would apply to those cleanup wastes. At a minimum, however, it is proposed that such cleanups be conducted under State enforcement orders, or some other written approval from the State agency. EPA recognizes that in emergency situations involving catastrophic releases over the weekend or holidays, written approval may not be able to be provided in advance of emergency response actions. In these cases, verbal direction and approval may be given, to be followed up with written approval on the next working day following the incident.

In addition to specifying criteria for effective State programs, EPA also considered adding a requirement for States to have in place petroleum spill prevention programs which would require inspections and maintenance of non-UST potential sources of release, as well as the development of detailed and specific spill contingency plans. EPA is not proposing this as a criterion because it is unsure of the extent to which generally accepted industry practices and/or existing State laws and regulations require these measures. Moreover, EPA recognizes that there already exist strong incentives for private parties to prevent spills. EPA is soliciting comment, however, on whether the final rule should include such provisions, and on the extent to which such requirements are already in place in individual States. EPA would review this in the same manner as other criteria (See Section D below.)

D. Procedure for Granting the TC Suspension

Under today's proposal, the applicability of the TC would be suspended for media and debris contaminated with petroleum product, based on a certification by the Director of the State hazardous waste program and the State Attorney General that the state petroleum release response program meets the criteria in 261.4(b)(11)(iv).[9] The certification would be made to the EPA Regional Administrator. EPA would review the certification for completeness; if complete, EPA would publish a notice in the **Federal Register** to formally put the suspension into effect in that State.

Under this proposed approach, it is expected that some States will have response programs in place that address only certain types of releases or certain contaminated media. The certifications must therefore explicitly identify the jurisdiction and coverage of the program; the **Federal Register** notice will accordingly specify any limitations to the scope of the suspension in a particular State. The limitations specified in the **Federal Register** notice will be based on the State's own assessment of the limitations in the jurisdiction and coverage of its program.

Today's proposal in effect provides a self-certification process for the States in determining eligibility for the TC suspension. Thus, EPA's review of the certifications submitted by states would be limited to determining whether the certification includes the requisite information and documentation, as specified in the proposed 261.4(b)(11)(v) and (vi). It would not be the role of the Agency during its review to analyze the State's certification or to make a judgment as to the effectiveness of the state's petroleum response program. EPA is proposing that its review be completed within 90 days of receipt. EPA is soliciting comment on the desirability of such a deadline.

In developing today's rule, EPA considered alternative processes for granting the TC suspension that would have created more rigorous review and approval procedures which EPA would follow in granting the suspension to the States. Under this type of process, EPA would have the responsibility of making qualitative assessments as to how effective or "adequate" each State program is. In practice, this type of process would be similar to the current state authorization process for the RCRA subtitle C program.

EPA does not believe that an "authorization-type" process is necessary for the purpose of determining whether States should be eligible for the TC suspension as proposed today. Such a process would likely result in considerable delays in putting the suspension into effect, and would also be resource-intensive for EPA and the States. Further, many states have been on the forefront of this issue for years, establishing programs and funding mechanisms to ensure environmentally protective responses to petroleum spills in their states. Given this, and the relatively limited scope of the proposed suspension in terms of time (*i.e.*, three years) and its regulatory effect, the Agency believes that a more straightforward, self-certification process is most appropriate for this proposed rule.

Proposed § 261.4(b)(11)(v) would require States to submit certain information describing the States' legal authorities and program(s) for petroleum release response. EPA will use this information in conducting the analyses during the suspension period for making a final determination of how the TC should be applied to petroleum contaminated media and debris.

E. Applicability of Suspension to Remedial Actions Under Federal Authorities

In addition to suspending (under certain conditions) the applicability of the TC to petroleum contaminated media and debris for State cleanup actions, today's proposal would provide the same suspension for cleanups that are conducted under Federal statutory authorities. These authorities include the RCRA corrective action authorities of sections 3004(u), 3004(v), 3008(h) and 7003, and the Oil Pollution Act (OPA).

EPA believes that the scope of and degree of control over remedial activities that is provided under RCRA and OPA is certainly equal to, and may in most cases surpass that of State petroleum response programs. Therefore, the Agency is confident that management of petroleum contaminated media at such federally supervised cleanup sites would be fully protective of human health and the environment during the three year suspension period. In addition, several other reasons for granting the proposed suspension for State cleanups apply equally to Federal-

[9] This procedure applies to States that are not authorized for the TC. See discussion in Section VI of this preamble.

lead remediation—potential impacts on subtitle C treatment and disposal capacity, the substantial cost impacts of subtitle C management of these materials with little associated benefits, and the need to obtain RCRA permits for potentially large numbers of units in which petroleum contaminated media and debris will be managed.

EPA solicits comment on extending today's proposed TC suspension to Federally supervised cleanup actions, particularly in regard to whether cleanups supervised by Federal agencies under authorities other than RCRA and OPA should also be eligible for this suspension.

V. Relationship to Other Programs

A. Deferral of the Application of the TC Rule to Petroleum Contaminated Media and Debris From Subtitle I—Regulated USTs

This action would not affect the UST deferral from the TC rule, since it applies only to non-UST petroleum product contaminated media and debris. As explained previously, the Agency is currently evaluating the extent and nature of the potential impact of the TC rule on UST cleanups, as well as the impact that Subtitle C management of petroleum contaminated media and debris from USTs would have on the Agency's and States' hazardous waste management programs. The Agency plans to make its final determination on the UST deferral in early 1993.

The Agency believes it is appropriate to examine the application of the TC rule to petroleum contaminated media and debris from USTs and non-UST sources separately. Programs that regulate USTs and non-UST sources or petroleum contaminated media and debris can be distinct, with their own regulatory and administrative structures. Hence, the impacts of the TC rule on UST and non-UST cleanups can differ. For this reason, the ultimate determinations as to how to regulate UST and non-UST petroleum contaminated media and debris could be different.

B. Enforcement

Effect of Today's Proposal on Section 7003 Authority

The proposed suspension does not affect the Agency's ability to use RCRA section 7003 to compel clean-up of a petroleum release in cases when the Agency has determined that an imminent and substantial endangerment may be present. Product which has been spilled or otherwise placed into or on any land or water and not promptly recovered is a waste material (see 40 CFR 260.10 and 40 CFR 261.2(b)(1)). This includes spilled petroleum product. (See *Zands* v. *Nelson*, 779 F. Supp. 1254 (S.D.Cal.1991)). RCRA Section 7003 applies to solid waste *or* hazardous waste. Therefore, spilled petroleum is potentially subject to this statutory authority, regardless of whether or not it may meet the definition of a characteristic hazardous waste, e.g., TC for benzene.

If the proposed suspension goes into effect, materials other than petroleum that are listed in subpart D of 40 CFR part 261 or that exhibit a characteristic of hazardous waste as defined in subpart C of 40 CFR part 261, will continue to be considered hazardous wastes when spilled or dumped. Handlers misrepresenting such material as non-hazardous waste are in violation of RCRA subtitle C and subject to enforcement.

Effect of Today's Proposal on RCRA Sections 3004(u) and 3008(h) Authorities

Today's proposal has no effect on the scope of 3004(u) and 3008(h) authorities, since those authorities are not limited to hazardous waste, but apply also to hazardous constituents. Since petroleum product contains hazardous constituents, sections 3004(u) and 3008(h) authorities can still be used by the Agency to compel cleanup of petroleum releases at facilities regulated under RCRA subtitle C.

C. Corrective Action

Effect of Today's Proposal on Corrective Actions Underway

As explained in the previous section of this preamble, the proposed suspension of the TC is not expected to have significant impacts on the Agency's ability to require cleanup of facilities under the corrective action authorities of RCRA, Section 7003, 3004(u) or 3008(h). Such authorities are not limited to cleanup of hazardous wastes. This is the case of facilities and sites that are potentially subject to corrective action under these authorities, as well as facilities where the corrective action process is already underway. In addition, the suspension would not be expected to affect States' abilities to require cleanup under State response authorities.

In the case of cleanup operations already underway that involve management of TC hazardous contaminated media, today's proposed suspension could have an effect on the specific requirements that would be applicable to the treatment, storage, disposal or transportation of such hazardous media. For example, a remedial action may be underway which involves excavation of petroleum contaminated soils, and storage of those hazardous soils in a pile at the facility. The pile would be subject to the applicable RCRA subpart L standards for piles, including requirements for liners, ground water monitoring, closure, and other standards. If the proposed TC suspension were to become effective during this cleanup action, the subpart L pile standards would no longer apply, since the contaminated soils would no longer be hazardous. However, the waste management requirements specified in existing orders or permits would remain in effect, despite the suspension, unless the requirements were modified by the regulatory authority.

Effect of Today's Proposal on RCRA Permitting Requirements

There may be a situation in which the Agency has required a RCRA permit for the remedial action at a site solely due to petroleum product contamination of environmental media and debris. Under today's proposal, the permit in this case would no longer be required, since the petroleum product contaminated media and debris would not be considered hazardous waste. The Agency is not aware of any such facility, therefore the impact of today's proposal on permitting is assumed to be minimal.

VI. State Authorization Considerations

A. Applicability of Rules in Authorized States

Under section 3006 of RCRA, EPA may authorize qualified states to administer and enforce the RCRA program within the State. Following authorization, EPA retains enforcement authority under sections 3008, 3013, and 7003 of RCRA, although authorized States have primary enforcement responsibility. The standards and requirements for authorization are found in 40 CFR part 271.

Prior to the Hazardous and Solid Waste Amendments of 1984 (HSWA), a State with final authorization administered its hazardous waste program in lieu of EPA administering the Federal program in that State. The Federal requirements no longer applied in the authorized State, and EPA could not issue permits for any facilities that the State was authorized to permit. When new, more stringent Federal requirements were promulgated or enacted, the State was obliged to enact equivalent authority within specified time frames. New Federal requirements did not take effect in an authorized State

until the State adopted the requirements as State law.

In contrast, under RCRA section 3006(g) (42 U.S.C. 6926(g)), new requirements and prohibitions imposed by HSWA take effect in authorized States at the same time that they take effect in nonauthorized States. EPA is directed to carry out these requirements and prohibitions in authorized States, including the issuance of permits, until the State is granted authorization to do so. While States must still adopt HSWA-related provisions as State law to retain final authorization, HSWA applies in the authorized State in the interim.

B. Effect of Today's Proposal on State Authorization

Today's proposal provides, for a limited period of time, a less stringent standard for petroleum product contaminated media than is imposed in the Toxicity Characteristics regulation. In order to promote environmentally beneficial petroleum product cleanup operations, today's proposed rule provides that wastes generated from such cleanup operations would not be hazardous wastes under Federal regulations until 3 years after the promulgation of today's rule in those states that certify to EPA that they have in place effective petroleum product spill response programs. For states that have adopted the TC regulation, today's proposal is less stringent; therefore, states are not required to adopt it. For states that have not adopted the TC regulation, EPA implements the TC regulation and would implement this suspension of the TC regulation, if finalized, for wastes from petroleum product spills.

However, the relationship of state certification for the proposed suspension to the state's authorization status needs clarification. For states that are not authorized for the base RCRA program, as well as for those states that are RCRA-authorized but not TC-authorized, state certification raises no special state authorization issues. These states could simply certify that they have both legal authorities and an administrative program structure sufficient to require cleanup of non-UST petroleum product releases, and to control the management of petroleum contaminated media and debris that are generated from cleanup activities. In this manner, these states would qualify for the Federal suspension of the TC regulation, without raising any state authorization issues.

States that are both RCRA- and TC-authorized, however, would have to make a decision about whether to adopt a similar suspension, and, if they choose to adopt such a procedure, they would also have to make a decision at the state level on the need to change their state regulations. Some states may choose not to change their regulations, but rather to use a state waiver authority to lift the TC requirements in these cleanup situations. Use of such waiver authority would have to be in a manner no less stringent than the Federal TC suspension.

In cases where a state chooses to certify and chooses to change its regulations, the new state regulations must be no less stringent than the Federal suspension. If State TC regulations are changed in a manner that is less stringent than this proposed suspension (*e.g.*, the State suspension is longer than three years or addresses more than just petroleum product), EPA will not authorize the change and will enforce the more stringent Federally-authorized State TC rule provisions pursuant to Section 3009 of RCRA.

EPA also considered an alternative approach for States that are both RCRA- and TC-authorized. Under this approach, EPA would require authorization of the new State regulations before the suspension could become effective, in order to guarantee that the new State regulations would be no less stringent than the Federal program. The Agency rejected this option because of the need to move cleanups more promptly. Furthermore, the Agency does not believe this would be a workable approach since the three-year suspension would likely run out by the time a State made the necessary changes to its regulations suspending the TC rule, and then applied for and received authorization for these changes.

Finally, for States that have adopted the TC rule but are not yet authorized for it, if these States wish to pursue the suspension, EPA will accept their certification for the purposes of the Federal TC suspension. The State may also need to take other actions (*e.g.*, use of waivers) to satisfy State law requirements.

VII. Risk Assessment/Screening Analysis

EPA performed a screening risk analysis in order to investigate the discussion set forth in the state petitions, which argue that the state programs would be at least as protective as subtitle C management of petroleum contaminated soils. States argue that state program clean-ups would address sites more quickly than clean-ups under the Subtitle C program and therefore more promptly and more effectively reduce risk to human health and the environment.

Any delays under the subtitle C program would increase the incremental risk of subtitle C clean-up versus TC-suspension state management practices if 1) state programs control risks from the spill more quickly than efforts under the subtitle C program and do not experience similar delays and 2) state management practices are as (or almost as) protective as subtitle C management practices.

EPA conducted a screening risk analysis to identify potential increased risks to human health due to delays in clean-up. The screening analysis is based on modeling the fate and transport of benzene from petroleum from the soil surface, through the unsaturated zone and into the groundwater. Because this analysis is a screening analysis, the models use simplified and conservative assumptions, and represent worst case scenarios.

For this screening analysis, EPA modeled the fate of gasoline spilled onto three types of soil: Gravel, sand and clay. Depending on the soil type, the estimated time for a leachate exhibiting the TC for benzene to reach a depth of 3 meters ranges from 1–25 months, and twice that time to reach a depth of 6 meters. In addition, the screening analysis revealed that groundwater may be potentially contaminated above the MCL standard for benzene (5 ppb) in certain locations. Field studies have demonstrated that under some conditions, such as fractured environments, petroleum has been reported to travel more quickly and to reach groundwater in a matter of hours.

Another effect of the penetration of petroleum products through the soil is an increase in the volume of contaminated soil over time and therefore, in most instances, an increase in the amount of TC hazardous waste which would need to be cleaned-up. This results in both an increase in clean-up costs and a potential increase in exposure. EPA will study this effect of delays in clean-ups and is requesting comments on the areal extent of contamination resulting from various size spills of various types of petroleum products.

In summary, the results of this screening analysis indicate that gasoline spill clean-up delays of a few months could result in (1) increased areal extent of contamination, which increases the volume of soil requiring excavation or remediation and thereby increasing potential for exposure and (2) contamination of groundwater, thereby adding to cleanup costs and potentially

posing health risks if groundwater is used for drinking water. The Agency will continue to assess potential risks of petroleum spills. Towards this end, the Agency is requesting comments and information regarding spill size, resulting contamination over time and exposures over time for recent petroleum spills which may be useful in preparation for the final rule.

In order to analyze any change in risk between the TC Suspension and subtitle C management, the Agency will consider the environmental fate of the remediated waste. While the Agency has some information on the residual risks of waste management and disposal under subtitle C, the Agency has less information on State management and disposal requirements for these petroleum wastes. The Agency has limited data on the quantities of material that would be managed in this manner, and on the actual impacts on exposure pathways, and so solicits comment on this issue.

The risk screening analysis used simplified and conservative assumptions, and the results are therefore very preliminary. However, it is clear that in many instances immediate remediation of petroleum spills will reduce risk to human health and the environment in comparison with lengthy delays in clean-up. More information on this analysis is included in the Technical Background Document for Screening Risk Analysis of the TC Suspension for Petroleum-Contaminated Media, RCRA docket number F–92–STPP–FFFFF.

In addition, because of the volatile nature of many petroleum constituents, such as benzene, delayed clean-ups of petroleum contaminated soil may also pose a potential risk to human health through the air pathway. EPA requests comments on the potential exposure rates and risks from the air pathway, both due to delayed clean-ups and due to uncontrolled remediation activities. EPA is particularly interested in laboratory studies, field observations, modeling results or other information about the length of time over which, and the rate at which, benzene (or other constituents) in petroleum products volatilize after a spill or release into the environment, and the effects of competing processes such as percolation through the soil (speed and depth) and biodegradation on the rate of volatilization.

VIII. Cost Savings Analysis

EPA has identified several possible sources of cost savings under a TC suspension for petroleum contaminated media. Cost savings result from the difference between waste management costs under state petroleum response programs and costs under Subtitle C programs.

Below is a discussion of sample cost estimates provided by states and other sources. An EPA memo, "Cost Discussion References for Management and Disposal of Petroleum Product Contaminated Media and Debris," is available in the docket.

Based on limited information available from the states, on-site management technologies of petroleum contaminated media could be similar under state programs and under subtitle C programs. Thus the cost difference between the two on-site remediation regulatory scenarios—state programs and subtitle C programs—may be primarily associated with the difference in administrative costs. EPA solicits comments on subtitle C administrative costs as compared to state program administrative costs, including information on whether new subtitle C permits are likely to be obtained at petroleum spill sites. No information is available on owner/operator administrative costs under state programs, but under Subtitle C programs total TSD permit cost estimates provided by states (Minnesota and Vermont) range between $21,000 and $80,000. Because of this high cost of a subtitle C TSD permit, which would be required for many on-site remediations of hazardous waste, petroleum contaminated soil management and disposal is more likely to be conducted off-site under the subtitle C regulatory scenario.

However, subtitle C off-site remediation unit costs would still be greater than state program remediation unit costs, both (1) due to fees charged by treatment, storage and disposal facilities and (2) due to transportation costs to the disposal site.

In addition, some states have asserted that clean-ups under Subtitle C would take longer than state programs, allowing contamination to spread and resulting in a much larger volume of soil and/or groundwater to be remediated.

In summary, unit costs for subtitle C waste management of petroleum contaminated soil tend to be higher than for state program management of soil. The reason for this cost difference depends on whether the soil is managed on- or off-site.

Subtitle C management	State program management (TC suspension)	Source of cost savings for TC suspension
On-site	On-site	Avoided Subtitle C administrative costs.
Off-site	On-site	Avoided transportation costs; difference between Subtitle C disposal fees and on-site remediation costs.
Off-site	Off-site	Lower transportation costs; lower disposal fees.

Estimates of actual unit cost savings vary, depending on location (i.e. distance from a subtitle C disposal facility) and on remediation method chosen. State estimates of transportation costs to a Subtitle C facility range from $30/ton (Texas) to $300/ton (Minnesota).

[Note: One cubic yard of contaminated soil is assumed to weigh one ton.]

Subtitle C landfill cost estimates provided by states range from $140/ton (Minnesota) to $2,000/ton (New York) and incineration costs estimates provided by states range from $420/ton to $1,700/ton (Minnesota).

Conversely, potential waste management costs using methods that state programs might choose under a TC suspension are substantially lower. State estimates of transportation costs to subtitle D landfills range from $5/ton (Texas) to $20/ton (Vermont). Subtitle D landfill cost estimates provided by states range from $30 (Minnesota, including transport) to $300/ton (New York, not including transport). On-site remediation techniques, such as thermal treatment or bioremediation, are generally less expensive than off-site techniques [states provided ranges from $30/ton (Minnesota, thermal treatment) to $120/ton (Minnesota, bioremediation)] but are reported to be as high as $1,000/ton (Texas, for bioremediation). These cost ranges are based on studies of five different states (Minnesota, Florida, New York, Vermont and Texas); other states' costs may vary widely.

Information on the total amount soil or other media affected by a TC suspension is not readily available. The American Petroleum Institute (API) estimates in January 1992 that 23.5 million gallons of petroleum is spilled in 24 states annually. Of this 23.5 million gallons of petroleum spilled in 24 states, only a portion will contaminate soil or other media in states affected by the TC suspension (i.e. states with adequate programs to address petroleum contamination).

[Note: The Texas Railroad Commission estimates that 1 barrel of oil (42 gallons) contaminates 2.1 cubic yards of soil].

Of the contaminated soil in affected states, only a portion will actually fail the TC. Although these portions are unknown, the amount of TC petroleum-contaminated soil affected annually by the suspension appears to be on the order of hundreds of thousands of cubic yards. Depending on the actual unit cost savings, the total national cost savings due to the TC suspension for petroleum-contaminated media may be in the tens or hundreds of millions of dollars per year for the duration of the three year suspension.

IX. Regulatory Requirements

A. Regulatory Impact Analysis Pursuant to Executive Order No. 12291

Executive Order No. 12291 requires that regulatory agencies determine whether a new regulation constitutes a major rulemaking and, if so, it requires that the agency conduct a Regulatory Impact Analysis (RIA). An RIA consists of the quantification of the potential benefits, costs, and economic impacts of a major rule. A major rule is defined in Executive Order No. 12291 as a regulation likely to result in:

- An annual effect to the economy of $100 million or more; or
- A major increase in costs or prices for consumers, individuals, industries, Federal, State, and local government agencies, or geographic regions; or
- Significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States based enterprises to compete with foreign based enterprises in domestic or export markets.

The Agency has estimated that today's proposed rule will result in significant cost savings to the economy (see VIII. Cost Savings Analysis, above). Also, the Agency does not believe the rule will significantly effect consumers, individuals, industries, Federal, State and local government agencies, or geographic regions, or have significant adverse effects on competition, employment, investment, innovation, or international trade. Therefore, the Agency has determined that today's proposed rule is not a major rule.

Because today's proposed rule is not a major rule, the Agency has performed a Cost Savings Analysis (see section VIII above), rather than an RIA, focusing its analyses on the cost savings of the rule only. The Agency has not assessed the economic impacts and benefits attributable to today's proposed rule.

B. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act, 5 U.S.C. 601–12, whenever an agency is required to publish a general notice of rulemaking for any proposed or final rule, it must prepare and make available for public comment a regulatory flexibility analysis which describes the impact of the rule on small entities (i.e., small businesses, small organizations, and small governmental jurisdictions).

This proposal will generally provide regulatory relief to business facing petroleum-related cleanups and businesses conducting the cleanups. For this reason, the Administrator has certified that this rule will not have a significant negative impact on small entities—in fact, it is likely to have a significant positive impact. Therefore, a regulatory flexibility analysis is not required.

C. Paperwork Reduction Act

The information collection requirements in today's proposed rule have been submitted for approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* An Information Collection Request (ICR) document has been prepared by EPA (ICR No. 1623.01) and a copy may be obtained from Sandy Farmer, Information Policy Branch, EPA, 401 M Street, SW. (PM–223Y), Washington, DC 20460 or by calling (202) 260–2740.

Public reporting burden for this collection of information is estimated to average 26 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the required data, and completing and reviewing the collection of information.

Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Chief, Information Policy Branch, PM–223Y, U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503, marked "Attention: Desk Officer for EPA." The final rule will respond to any OMB or public comments on the information collection requirements contained in this proposal.

List of Subjects in 40 CFR Part 261

Harzardous waste, Recycling, Reporting and recordkeeping requirements.

Dated: December 15, 1992.

William K. Reilly,

Administrator.

For the reasons set out in the preamble, chapter I of title 40 of the Code of Federal Regulations is amended as follows:

PART 261—IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

1. The authority citation for part 261 continues to read as follows:

Authority: 42 U.S.C. 6095, 6912(a), 6921, and 6922.

2. Section 261.4 is amended by revising paragraph (b)(11) to read as follows:

§ 261.4 Exclusions.

* * * * *

(b) * * *

(11) Environmental media and debris contaminated solely by releases of petroleum product that fail the test for the Toxicity Characteristic (Hazardous Waste Codes D018 through D043 only), and that are not subject to the corrective action regulations under part 280 of this chapter (*i.e.* RCRA Subtitle I-regulated underground storage tanks). This exclusion is applicable only as provided under paragraphs (b)(11)(i) through (vii) of this section, as follows:

(i) This exclusion shall be effective until [three years after date of publication of final rule in Federal Register].

(ii) For the purposes of this exclusion only, petroleum product is defined as:

(A) Crude petroleum oil or any fraction thereof that is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute); and

(B) Petroleum-based substances composed of a complex blend of hydrocarbons derived from crude oil through processes of separation, conversion, upgrading, and finishing, such as motor fuels, jet fuels, distillate fuel oils, residual fuel oils, and lubricants.

(iii) Except as provided in § 261.4(b)(11)(vii), the exclusion shall apply only to petroleum product-contaminated media or debris that are being managed pursuant to a remedial action for which State oversight is being provided under a site-specific enforcement order, or other written approval from the State.

(iv) The exclusion shall apply only in a State that certifies in writing to the EPA Regional Administrator that the State:

(A) Has response authorities to:

(*1*) Require cleanup of media and debris contaminated by petroleum

product that is released from sources other than those subject to 40 CFR part 280, subpart F, to levels of protection defined as adequate by the State; and

(2) Control the transportation, treatment, storage, and disposal of petroleum product-contaminated media and debris generated from those response actions; and

(B) Has programs in place to effectively administer and enforce such authorities.

(v) The certification submitted by the State must be signed by the State waste management program director and the State Attorney General, and must contain:

(A) A description of the existing State laws and regulations which constitute the response authorities specified in paragraph (b)(11)(iv)(A) of this section; and

(B) A description of the State programs as specified in paragraph (b)(11)(iv)(B) of this section. Such description must include:

(1) A description of types and numbers of releases which are responded to by the State programs and authorities and the types and numbers of response actions conducted under the State program; and

(2) A description of the standards that are used by the State to establish cleanup goals for media and debris contaminated by petroleum product releases not subject to RCRA Subtitle I. If specific cleanup standards have not been adopted by the State, a description of the process used by the State to determine cleanup goals for such contaminated media and debris shall be provided.

(vi) The Regional Administrator shall review the certification to determine if it is complete within 90 days of receipt. When a certification is determined to be complete, EPA shall publish a notice in the **Federal Register** to suspend the TC in that State at sites meeting the conditions of paragraph (b)(11)(iii) of this section. The suspension shall be effective immediately upon publication of the **Federal Register** notice.

(vii) The exclusion shall also apply to petroleum product-contaminated media and debris that are managed pursuant to remedial actions under RCRA 7003, 3004(u), 3004(v), and 3008(h), and under the Oil Pollution Act.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The seal of the National Archives and Records Administration authenticates this issue of the **Federal Register** as the official serial publication established under the Federal Register Act. 44 U.S.C. 1507 provides that the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper, 24x microfiche format and magnetic tape. The annual subscription price for the **Federal Register** paper edition is $375, or $415 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $353; and magnetic tape is $37,500. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $4.50 for each issue, or $4.50 for each group of pages as actually bound; or $1.50 for each issue in microfiche form; or $175.00 per magnetic tape. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA or MasterCard. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 57 FR 12345.

Rules and Regulations

Federal Register
Vol. 57, No. 249
Monday, December 28, 1992

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 92–NM–143–AD; Amendment 39–8433; AD 92–26–06]

Airworthiness Directives; British Aerospace Model BAe 125–800A Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain British Aerospace Model BAe 125–800A series airplanes, that requires the installation of an indicator label on certain circuit breakers that must be disabled by the flight crew during smoke drill procedures. This amendment is prompted by a report that certain additional circuit breakers must be clearly identified in order to ensure that the flight crew disables them in an emergency. The actions specified by this AD are intended to prevent reduced effectivity of smoke elimination and passenger evacuation procedures by allowing the crew to disable all appropriate circuit breakers in an emergency situation.

DATES: Effective February 1, 1993.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of February 1, 1993.

ADDRESSES: The service information referenced in this AD may be obtained from British Aerospace, PLC, Librarian for Service Bulletins, P.O. Box 17414, Dulles International Airport, Washington, DC 20041–0414. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. William Schroeder, Aerospace Engineer, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (206) 227–2148; fax (206) 227–1320.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations to include an airworthiness directive (AD) that is applicable to certain British Aerospace Model BAe 125–800A series airplanes was published in the **Federal Register** on October 2, 1992 (57 FR 45584). That action proposed to require the installation of an indicator label on certain circuit breakers that must be disabled by the flight crew during smoke drill procedures.

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the single comment received.

The commenter supports the proposed rule.

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

The FAA estimates that 137 airplanes of U.S. registry will be affected by this AD, that it will take approximately 1 work hour per airplane to accomplish the required actions, and that the average labor rate is $55 per work hour. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $7,535, or $55 per airplane. This total cost figure assumes that no operator has yet accomplished the requirements of this AD.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption "**ADDRESSES.**"

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. App. 1354(a), 1421 and 1423; 49 U.S.C. 106(g); and 14 CFR 11.89.

Section 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

92–26–06. British Aerosapce: Amendment 39–8433. Docket 92–NM–143–AD.

Applicability: All Model BAe 125–800A series airplanes on which Modification No. 253284A has not been installed; certificated in any category.

Compliance: Required as indicated, unless accomplished previously.

To prevent the crew from failing to disable all appropriate circuit breakers in an emergency, accomplish the following:

(a) Within 3 months after the effective date of this AD, install Modification No. 253284A by painting the perimeters of the "A SCRN" and "B SCRN" heat control circuit breakers with matte white (non-cellulose) paint, in accordance with British Aerospace Service Bulletin SB.24–288–3284A, dated February 7, 1992.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Standardization Branch, ANM–113, FAA,

Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Standardization Branch.

Note: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Standardization Branch, ANM-113.

(c) Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The installation shall be done in accordance with British Aerospace Service Bulletin SB.24-288-3284A, dated February 7, 1992.

(Note: The issue date of that service bulletin is indicated only on "page 1 of 7"; no other page of the document is dated.)

This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from British Aerospace, PLC, Librarian for Service Bulletins, P.O. Box 17414, Dulles International Airport, Washington, DC 20041-0414. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(e) This amendment becomes effective on February 1, 1993.

Issued in Renton, Washington, on December 2, 1992.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate Aircraft Certification Service

[FR Doc. 92-31382 Filed 12-24-92; 8:45 am]

BILLING CODE 4910-13-M

---

14 CFR Part 39

[Docket No. 92-NM-72-AD; Amendment 39-8432; AD 92-26-05]

Airworthiness Directives; British Aerospace Model ATP Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain British Aerospace Model ATP series airplanes, that requires a one-time functional inspection to detect tightness or seizure of the nose wheel steering quadrant pivot and the upper steering control toggle link assembly, and repair, replacement, or refit, if necessary. This amendment also requires, under certain circumstances, a further visual inspection of the support channels/structure for deformation or cracks, and repair or replacement of damaged parts. This amendment is prompted by a report of an airplane running off the runway as a result of failure of the nose wheel steering quadrant support structure. The actions specified by this AD are intended to prevent failure of the nose wheel steering structure, which could adversely affect the controllability of the airplane.

DATES: Effective February 1, 1993.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the **Federal Register** as of February 1, 1993.

ADDRESSES: The service information referericed in this AD may be obtained from British Aerospace, PLC, Librarian for Service Bulletins, P.O. Box 17414, Dulles International Airport, Washington, DC. 20041-0414. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: William Schroeder, Aerospace Engineer, Standardization Branch, ANM-113, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055-4056; telephone (206) 227-2148; fax (206) 227-1320.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations to include an airworthiness directive (AD) that is applicable to certain British Aerospace Model ATP series airplanes was published in the **Federal Register** on July 23, 1992 (57 FR 32747). That action proposed to require a one-time functional inspection to detect tightness or seizure of the nose wheel steering quadrant pivot and the upper steering control toggle link assembly, and repair, replacement, or refit, if necessary. That action also proposed to require, under certain circumstances, a further visual inspection of the support channels/structure for deformation or cracks, and repair or replacement of damaged parts.

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the single comment received.

The commenter supports the proposed rule, but recommends that it be issued as a telegraphic AD or immediately adopted rule to assure timely action to prevent failure of the nose wheel steering structure, which could adversely affect the controllability of the airplane. The FAA does not concur with the commenter's suggestion. Although the FAA recognizes the unsafe condition presented by this situation, as was described in the preamble to the notice, the FAA could not justify that an immediate safety of flight problem existed, especially in light of the fact that the entire U.S. fleet of British Aerospace Model ATP series airplanes had already been inspected in accordance with the proposed requirements. None of the operators found a steering linkage binding problem and no additional action in accordance with the related service bulletin was required. In developing this AD action, the FAA considered these items, and determined that it was not impracticable to provide notice and the opportunity for public comment on the proposed rule.

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

The FAA estimates that 10 airplanes of U.S. registry will be affected by this AD. The FAA has been advised that all 10 affected airplanes have been inspected in accordance with the requirements of this AD. Therefore, currently, this AD action imposes no additional economic burden on any U.S. operator.

However, should an unmodified airplane be imported and placed on the U.S. Register in the future, it will take approximately .5 work hour per airplane to accomplish the proposed actions, at an average labor rate of $55 per work hour. Based on these figures, the total cost impact of the AD is estimated to be $28 per airplane.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is

contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption "ADDRESSES."

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. App. 1354(a), 1421 and 1423; 49 U.S.C. 106(g); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

92–26–05. British Aerospace: Amendment 39–8432. Docket 92–NM–72–AD.

Applicability: Model ATP series airplanes, serial numbers 2001 through 2044, inclusive; certificated in any category.

Compliance: Required as indicated, unless accomplished previously.

To prevent reduced controllability of the airplane, accomplish the following:

(a) Within 30 days after the effective date of this AD, perform a one-time functional inspection to detect tightness or seizure of the nose wheel steering quadrant pivot and the upper steering control toggle link assembly, in accordance with British Aerospace Service Bulletin ATP–32–37, dated February 14, 1992.

(1) If the quadrant pivot/upper toggle link attachment bolt can be turned freely, in accordance with paragraph 2.A.(1) through 2.A.(8) of the Service Bulletin, no further action is necessary.

(2) If the quadrant pivot/upper toggle link attachment bolt is still tight, prior to further flight, if possible, remove and replace the bolt, in accordance with paragraphs 2.A.(9) and 2.A.(8) of the Service Bulletin. After this procedure, if the bolt turns freely, no further action is necessary.

(3) If the quadrant pivot/upper toggle link attachment bolt is found to be seized and cannot be removed, prior to further flight, check to see if the upper toggle link is free to rotate about the bolt, in accordance with paragraphs 2.A.(10) through 2.A.(12) of the Service Bulletin.

(i) If the upper toggle link is free to rotate about the bolt, prior to the accumulation of 50 landings after the functional inspection required by this AD, accomplish paragraph (a)(4) of this AD.

(ii) If the upper toggle link is not free to rotate about the bolt, prior to further flight, accomplish paragraph (a)(4) of this AD.

(4) If the upper toggle link has been checked in accordance with paragraph (a)(3)(i) or (a)(3)(ii) of this AD, repair the quadrant pivot/upper toggle link and bolt assembly, visually inspect the support channels/structure for deformation or cracks, and repair or replace any deformed or cracked structure, in accordance with paragraph 2.B. of the Service Bulletin.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Standardization Branch, ANM–113. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Standardization Branch, ANM–113.

Note: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Standardization Branch, ANM–113.

(c) Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The inspections, repair, and replacement shall be done in accordance with British Aerospace Service Bulletin ATP–32–37, dated February 14, 1992. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51. Copies may be obtained from British Aerospace, PLC, Librarian for Service Bulletins, P.O. Box 17414, Dulles International Airport, Washington, DC. 20041–0414. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(e) This amendment becomes effective on February 1, 1993.

Issued in Renton, Washington, on December 2, 1992.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate Aircraft Certification Service.

BILLING CODE 4910–13–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

45 CFR Parts 302 and 303

RIN 0970–AA91

Child Support Enforcement Program: Review and Adjustment of Child Support Orders

AGENCY: Office of Child Support Enforcement (OCSE), ACF, HHS.

ACTION: Final rule.

SUMMARY: These regulations implement the requirements of section 103(c) of the Family Support Act of 1988 (Pub. L. 100–485) which are effective October 13, 1993. Section 103(c) requires periodic review of child support orders and adjustment, as appropriate, in accordance with State guidelines for support award amounts. These regulations implement the requirement that States have a process under which child support orders in IV–D cases are periodically reviewed not later than 36 months after the establishment of the order or the most recent review, and adjusted, as appropriate, in accordance with State guidelines. These regulations also implement the requirement that States notify each parent subject to a child support order in the State, being enforced under Title IV–D, of the right to request a review of the order. Final rules implementing certain other requirements of section 103(c) which were effective October 13, 1990 were published separately (57 FR 30658, dated July 10, 1992).

EFFECTIVE DATE: These regulations are effective on and after October 13, 1993.

FOR FURTHER INFORMATION CONTACT: Marianne Clifford Upton, OCSE Division of Policy and Planning, (202) 401–5373.

SUPPLEMENTARY INFORMATION:

Paperwork Reduction Act

This regulation contains no information collection requirements that are subject to OMB review under the Paperwork Reduction Act of 1980 (Pub. L. 96–511).

Statutory Authority

These regulations are published under the authority of section 466(a)(10) of the Social Security Act (the Act), as amended by Public Law 100–485 and the general authority of section 1102 of the Act, which requires the Secretary to publish regulations that may be necessary for the efficient

administration of the functions for which he is responsible under the Act.

Background

Review and Adjustment of Child Support Orders

Historically, State laws governing modification of child support orders have required that the party seeking a change in the award amount must prove that a material change in circumstances has occurred since entry of the order. Several States require that the change in circumstances be substantial and continuing. Still others impose a condition that the change be one that could not have been contemplated at the time the order was initially established. Meeting this burden of proof has often made obtaining a change in the amount of child support a difficult undertaking for many parties. The existence of such a standard has frequently meant the need for an adversary proceeding and protracted litigation to demonstrate the occurrence of a sufficient change in circumstances or to resist an allegation that the requisite change in circumstances has occurred.

Section 103 of the Family Support Act of 1988 (Pub. L. 100–485) requires that States must use guidelines as a rebuttable presumption in all proceedings for the award of child support and that review and adjustment of child support orders be done "in accordance with guidelines." These provisions evidence Congressional intent to make obtaining an adjustment in the amount of child support easier by requiring a process in which the standard for modification must be related to State child support guidelines. The enactment of these requirements reflects a recognition that the traditional burden of proof for making a change in the amount of support ordered may have contributed to many awards remaining unchanged throughout the life of the order and thus, inadequate or inappropriate with the passage of time. It also signals a need for States to at least expand, if not replace, the traditional "change in circumstances" test as the legal prerequisite for changing the amount of child support to be paid, by making State guidelines the presumptively correct amount of support to be paid.

Beginning with the enactment of the Child Support Enforcement Amendments of 1984 (Pub. L. 98–378), each State had to establish guidelines for child support award amounts in the State, as a condition of State IV–D plan approval. These guidelines were not binding, but had to be made available to all judges and other officials with authority to determine award amounts.

Under section 103(a) of Public Law 100–485, Congress required that States must use guidelines and that the amount of the child support award computed according to the guidelines is rebuttably presumed to be the correct amount to be awarded. A written finding or specific finding on the record of the support proceeding that the application of the guidelines would be unjust or inappropriate in a particular case, as determined by State criteria, is sufficient to rebut the presumption in that case. To ensure that the use of the guidelines will result in appropriate support award amounts, section 103(b) of Public Law 100–485 requires that States review guidelines at least once every four years.

Final regulations governing these aspects of section 103 were published in the **Federal Register** on May 15, 1991 (56 FR 22335). In response to comments, OCSE stressed that the use of guidelines is not limited to setting the initial award, and that guidelines must be used to modify existing orders.

The challenge of keeping child support orders up-to-date has emerged as an issue of concern for legislators, policymakers, IV–D personnel, the judiciary, child advocates, and parents. Analysis done by the HHS Office of the Inspector General (OIG) suggests that States and AFDC recipients would benefit substantially if State IV–D agencies reviewed child support orders of $50 per month or less in cases in which the State and/or Federal wage data indicates that the absent parent's income is more than $10,000 per year (see OIA–05–87–00035). This study also suggests that non-AFDC families would benefit substantially if State IV–D agencies determined the income of absent parents from State and/or Federal wage data in non–AFDC cases with low child support orders and informed custodial parents how a modification might affect the amount of support awarded.

Child support orders established prior to the adoption of State guidelines may be grossly inadequate. Even the use of guidelines in establishing the initial award amount does not ensure that orders, over time, continue to meet the support standards set by the guidelines. To address this problem, section 103(c) of Public Law 100–485 phases-in a requirement for the periodic adjustment of support orders, in accordance with the support guidelines in the State.

Under section 103(c), the Act is amended by inserting a new section 466(a)(10). Section 466(a)(10)(A), effective October 13, 1990, requires State procedures for review and adjustment of orders, consistent with a plan indicating how and when child support orders are to be reviewed and adjusted. Review may take place at the request of either parent subject to the order or at the request of a State IV–D agency. Any adjustment to the award must be in accordance with the State's guidelines, which must be used as a rebuttable presumption in establishing or adjusting support obligations in the State.

Section 466(a)(10)(B), effective October 13, 1993 (or earlier at State option), requires the State to have implemented a process whereby orders being enforced under title IV–D will be reviewed no later than 36 months after establishment of the order or the most recent review of the order and adjusted in accordance with the State's guidelines for support award amounts. Review is required in IV–D cases in which support rights are assigned to the State, unless the State has determined that review would not be in the best interests of the child and neither parent has requested a review. This encompasses child support orders in cases in which benefits under the AFDC, Title IV–E foster care, or Medicaid programs are currently being provided. It does not include orders in former AFDC, Title IV–E foster care, or Medicaid cases, even if the State retains an assignment of support rights to the extent of any unpaid support that accrued under the assignment which remains due to the State after assistance terminates. In IV–D cases in which there is no current assignment of support rights to the State, including former recipients of AFDC, Title IV–E foster care, or Medicaid benefits receiving continued IV–D services, review is required at least once every 36 months only if a parent requests it. In all IV–D cases, if such a review indicates that adjustment of the support amount is appropriate, the State must proceed to adjust the award accordingly.

Section 466(a)(10)(C) requires States to have procedures for notifying each parent subject to an order in effect in the State, being enforced under title IV–D, of their rights concerning reviews and proposed adjustments. Each parent must be notified of the right to request the State to review the order; of any review, at least 30 days before it commences; and of a proposed adjustment or determination that there should be no change in the award amount. In the latter case, the parent must be given at least 30 days after notification to initiate proceedings to challenge the proposed adjustment or determination.

Proposed regulations governing all section 103(c) requirements were published in the **Federal Register** on August 15, 1990 (55 FR 33414). Final rules implementing only those review and adjustment requirements which are effective October 13, 1990 were published on July 10, 1992 (57 FR 30658). Section 303.8(a) of the final rule published earlier contains definitions designed to clarify key aspects of the review and adjustment process. Under § 303.8(a)(1)(i), "adjustment" means an upward or downward change in the amount of child support based upon an application of the State guidelines for setting and adjusting child support. Under § 303.8(a)(1)(ii), "adjustment" also means the provision for the health care needs of the child through health insurance or other means.

Section 303.8(a)(2) defines "parent" to include any custodial parent or noncustodial parent (or for purposes of requesting a review, any other person or entity who may have standing to request an adjustment to the child support order). "Review" is defined in § 303.8(a)(3) as an objective evaluation, conducted through a proceeding before a court, quasi-judicial process, or administrative body or agency, of information necessary for application of the State's guidelines for support to determine the appropriate support award amount, and the need for a provision in the order addressing the child(ren)'s health care needs through health insurance or other means under State guidelines.

Section 303.8(b) of the final rule published earlier requires the State to have a written and publicly available plan indicating how and when child support orders in effect in the State will be periodically reviewed and adjusted. It also specifies the requirements that the State must meet between October 13, 1990 and October 12, 1993, with respect to orders being enforced in IV–D cases.

In accordance with section 103(e) of Public Law 100–485, OCSE conducted two-year demonstration projects in Colorado, Delaware, Florida, and Illinois to test and evaluate model procedures for reviewing child support award amounts. Project findings corroborated that many child support orders are inadequate, outdated, and not reflective of parental ability to pay. At the conclusion of the projects, adjusted orders had been obtained in over 3,200 cases across the four projects. These cases represented 10 percent of those initially selected for review. [Another 17 percent were pending at the conclusion of the demonstration projects.] The vast majority (87%) of the modifications were upward adjustments in the child support award. The average percentage increase in the monthly support obligation ranged from 47 percent in Delaware to 135 percent in Illinois. Across the four projects, the average percentage increase was 92 percent.

We urge interested parties to examine the findings of these demonstration projects, as well as the results of a similar project initiated earlier in Oregon, to determine innovative methods for conducting review and adjustment processes on an ongoing basis. States may find the practical experiences and various approaches of other jurisdictions beneficial in implementing the review and adjustment requirements. To this end, OCSE will continue to broadly disseminate reports of the experiences of the demonstration States and best practices of other jurisdictions as they integrate review and adjustment into their routine support enforcement program operations.

In response to numerous comments urging us to delay publication of final regulations until completion of the demonstration projects mentioned previously, we decided to publish this separate rule governing the requirements for review and adjustment which are effective October 13, 1993. This action has enabled us to benefit from the experience and wisdom gained from the review and adjustment demonstration projects.

Description of Regulatory Provisions

Required State Laws—Section 302.70

With the issuance of the final rule with respect to the review and adjustment requirements which are effective October 13, 1990, regulations at 45 CFR 302.70(a)(10) require that States enact necessary laws and have procedures in effect for the review and adjustment of support orders, in accordance with the requirements of 45 CFR 303.8. We amend § 302.70(a)(10) to specify the requirements for review and adjustment by the respective effective dates. Current § 302.70(a)(10) is redesignated as paragraph (a)(10)(i) to require that States enact laws and implement procedures for review and adjustment of child support orders in accordance with § 303.8 (a) and (b) effective on October 13, 1990 until October 12, 1993. Paragraph (a)(10)(ii) requires States to enact laws and implement procedures for review and adjustment of child support orders in accordance with § 303.8 (a) and (c) through (f), effective on October 13, 1993, or earlier at State option.

Provision of Services in Interstate Cases—Section 303.7

This final rule amends § 303.7 (b) and (c) to add review and adjustment activities to the required functions to be performed by initiating and responding States in interstate IV–D cases. Paragraph (b) is amended by adding new subparagraph (6) which requires an initiating State to send a request for review of a child support order to another State within 20 calendar days of determining that review of a child support order should be requested in such other State and receipt of information necessary for conducting the review, in accordance with § 303.8(f)(1). We add a new subparagraph (v) to § 303.7(c)(7) to include review and adjustment of child support orders upon request, in accordance with § 303.8(f)(2), to the services a IV–D agency in a responding State must provide if necessary in interstate IV–D cases. We amend paragraph (c)(8) to replace the term "modification" with the term "adjustment" to make the terminology of the regulation consistent with the language of P.L. 100–485. Section 303.8(f) of this regulation sets forth specific requirements for review and adjustment in interstate cases. We address and clarify these interstate review and adjustment responsibilities in greater detail under the section of this preamble which explains § 303.8(f) of the regulation.

Review and Adjustment of Orders—Section 303.8

Section 303.8(c)—Periodic Review and Adjustment After October 13, 1993

Section 303.8(c) contains the requirements that are effective October 13, 1993, or earlier at State option, regarding review of child support orders being enforced under the IV–D program. Beginning at that time, under paragraph (c)(1), the State must have in effect and use a process for review and adjustment of child support orders in effect in the State, including a process for challenging any proposed adjustment or other determination. The review and adjustment process may be conducted within a State's judicial arena, within an administrative process structure available within an executive agency, within a combination of the judicial and administrative systems, or within any other designated forum at the discretion of the State. The law does not mandate that the IV–D agency substitute for or assume the functions of a court or administrative forum which has the legal authority in the State to adjust child support orders. Alternatively,

nothing in the law precludes a State, if it so chooses, from extending such authority to the IV–D agency.

Notice of the Right to Request Review. Paragraph (c)(2) requires that the State must notify each parent subject to a child support order in the State being enforced under Title IV–D of the right to request a review of the order. It further requires that the parents be notified of the appropriate place and manner in which the request for review should be made. States may meet this requirement by sending a one-time notice to each parent subject to an order in the State.

This requirement applies in all cases in which there is a valid order in effect, which can be adjusted under State law, including orders entered as a result of interstate activity, such as those obtained or registered in the State through the Uniform Reciprocal Enforcement of Support Act (URESA) or the Revised Uniform Reciprocal Enforcement of Support Act (RURESA). We recognize that a URESA order is a separate order which stands on its own merit. Such order may be additional to a divorce decree or other order for support, and may be in a different amount than such other orders. On the other hand, in some cases, a URESA order may be the only order in effect. This requirement recognizes that in some instances, there may be orders in effect and being enforced in more than one State. As a result, it is possible that the parents involved in such cases may receive multiple notices from different States regarding the right to request a review of the order. The responsibilities of initiating and responding States for requesting and conducting reviews and adjusting child support award amounts in interstate cases are discussed in greater detail later in this preamble.

The duty to send a notice of the right to request a review does not, however, extend to those cases in which a State, acting in a responding capacity, has registered or entered an order for enforcement purposes only and, under State law, cannot modify the underlying child support award amount. In these cases, the State is providing only enforcement services such as income withholding or State income tax refund offset, and the State's jurisdiction over the parties is limited to the specific purpose of enforcement.

Periodic Publicizing of Right to Request Review. Paragraph (c)(3) requires States to periodically publicize the right to request a review as part of its support enforcement services as required under § 302.30 and to include notice of this right as part of the information on IV–D services required under § 303.2(a)(2). Thus, States must regularly and frequently publicize information about the availability of review and adjustment services, as well as all other support enforcement services, through public service announcements. States could, for instance, incorporate appropriate information about review and adjustment of child support orders in any pertinent notices to child support recipients and obligors or use other media such as brochures, pamphlets, radio, television, posters, and billboards. Additionally, States could sponsor advertising campaigns or utilize public service announcements to inform parents of the right to request review of child support orders.

Frequency and Conditions of Reviews. Paragraph (c)(4) specifies the frequency and conditions under which child support orders in effect in the State and being enforced under Title IV–D must be reviewed. With certain exceptions, States must review, at 36-month intervals after establishment of the order or the most recent review, child support orders in IV–D cases in which rights to child support are assigned to the State. In IV–D cases in which there is no assignment of support rights to the State, reviews are required only upon the request of either parent.

Although the statute requires periodic reviews only in cases in which rights to child support are assigned to the State under section 402(a)(26) of the Act (i.e., AFDC cases), we are using our authority under section 1102 of the Act to publish regulations that are necessary for the efficient administration of the IV–D program to require such reviews in all IV–D cases in which support rights are assigned to the State. This includes, in addition to cases assigned as a condition of receipt of AFDC under 45 CFR 232.11, title IV–E foster care cases in which the support rights are assigned under section 471(a)(17) of the Act and non-AFDC Medicaid cases in which the rights to medical support or to payments for medical care from any third party are assigned under 42 CFR 433.146. In any non-AFDC Medicaid case in which the support order does not provide for the health care needs of the children or the custodial parent does not have satisfactory health insurance other than Medicaid, a review is required to determine the need to provide in the order for the health care needs of the children, through health insurance or other means.

Regulations implementing the requirement for extension of IV–D services to non-AFDC Medicaid recipients and continuation of IV–D services to former AFDC recipients were published in the **Federal Register** on February 26, 1991 (56 FR 7988). IV–D services include those unrelated to securing medical support under §§ 303.30 and 303.31, unless the non-AFDC Medicaid recipient notifies the IV–D agency that child support enforcement services unrelated to securing medical support are not wanted. Individuals who have assigned medical support rights must cooperate with the IV–D agency in establishing paternity and in securing medical support, unless the Medicaid agency determines that good cause for not cooperating exists. Other than the fact that medical support rights are assigned and a duty to cooperate with the IV–D agency in establishing paternity and securing medical support exists, a non-AFDC Medicaid case is similar to a non-AFDC case. Therefore, if a support order requiring the provision of health insurance or otherwise addressing the health care needs of the children already exists in a non-AFDC Medicaid case, a review of the child support order is not required every 36 months unless a parent requests a review.

For the purpose of review and adjustment requirements, former AFDC cases which continue to receive IV–D services are considered to be non-AFDC cases, such that review is not required in such cases unless requested by either parent. Similarly, cases in which the State, by virtue of a previous assignment of rights to child support, is entitled to arrearages, but in which continued services are no longer being provided to the former recipient, are not subject to the mandatory review requirement.

These requirements are discussed more extensively in the Response to Comments section of this preamble.

Exceptions to Mandatory Review. Paragraph (c)(4) also sets forth three exceptions to the mandatory review requirement. First, under paragraph (c)(4)(i), review is not required in cases in which support rights are assigned to the State, as defined at § 301.1, if the State determines, in accordance with § 303.8(c)(5), that a review would not be in the best interests of the child and neither parent has requested a review.

Paragraph (c)(4)(ii) specifies the second exception, by providing that review is not required in IV–D cases, in which there is no assignment of support rights to the State, if neither parent requests a review.

Lastly, paragraph (c)(4)(iii) exempts from mandatory review any IV–D case in which medical support rights are assigned under 42 CFR 433.146, but in which child support rights are not assigned under 45 CFR 232.11 or section 471(a)(17) of the Act, the order requires

the provision of health insurance, and neither parent has requested a review. Recipients of Medicaid are required under section 1912(a)(1) of the Act to assign to the State their rights to support for medical care from any third party and to cooperate with the State in establishing paternity and securing medical support. Effective July 1, 1988, section 9142 of Public Law 100–203 amended section 454(4) of the Act to require that State IV–D agencies provide IV–D services to families who have assigned their rights under section 1912 of the Act as a condition of receipt of Medicaid. The IV–D agency must provide all appropriate IV–D services to Medicaid recipients referred to the IV–D agency, whether or not they are also eligible for AFDC, without an application or application fee.

Circumstances Under Which Review Would Not Be in the Best Interests of the Child. Paragraph (c)(5) provides that, in cases in which support rights are assigned to the State as defined in § 301.1, a State must determine that a review of the child support order would not be in the best interests of a child if there has been a finding of good cause as set forth at 45 CFR 302.31(c) and 45 CFR 232.40 through 232.49 or 42 CFR 433.147(c) and the State or local IV–A, XIX, or IV–E agency has determined that support enforcement may not proceed without risk of harm to the child or caretaker relative.

Section 466(a)(10)(B)(i) provides that the State's determination regarding whether a review would not be in the best interests of the child must be in accordance with regulations of the Secretary. In the proposed rule, we requested input from commenters as to how to best define "not in the best interests of the child." These regulations reflect our decision, in consideration of many insightful comments, to limit the "not in the best interests of the child" exception to mandatory reviews to cases in which good cause for not cooperating has been determined to exist. Since the statute specifies that the regulations of the Secretary dictate the State's determinations in this regard, States may not establish or use other criteria for determining that a review would not be in the best interests of the child.

Under section 466(a)(10)(B)(i), a review is not required in any case in which an assignment of support rights is in effect, if the State has determined that such a review would "not be in the best interests of the child and neither parent has requested review." This creates a two-prong test, both conditions of which must be satisfied to meet the exception to the requirement that a review be conducted. Even if it is determined that good cause exists, a request by a parent would require a review. This could result in requests from absent parents in cases in which good cause for not cooperating exists and in which the IV–D agency is therefore not pursuing support. However, we believe this to be a remote possibility because § 303.11(b)(10) permits States to close cases in which there has been a finding of good cause as set forth at §§ 302.31(c) and 45 CFR 232.40 through 232.49 and the State or local IV–A or IV–E agency has determined that support enforcement may not proceed without risk of harm to the child or caretaker relative.

Pre-Review Notice. Paragraph (c)(6) contains the requirements for notifying each parent subject to a child support order in effect in the State in advance of any review. Under paragraph (c)(6)(i), States must notify each parent of any review at least 30 calendar days before commencement of the review.

The requirement that States provide advance notice prior to conducting a review is applicable in all IV–D cases, regardless of whether the State is proceeding with a mandatory review or whether the review was requested by a parent. Notices must be issued to both parties, including the requesting party. The purpose of the notice is to advise the parties that a review will be conducted. We strongly encourage that the language in the notice be "reader-friendly": i.e., clear and easy to understand. The notice can serve as a vehicle for requesting information from the parties, explaining the steps in the process, and advising of the date, time, and location of hearings, if any. The notice can be tailored to fit the particular State circumstances. If State due process or other rules established for the review process allow, the notice requirement may be satisfied by sending a copy of the petition, motion, or administrative notice to each party, provided that any hearing on such pleading not occur until 30 calendar days following the mailing or service of the notice. This requirement is further explained in the Response to Comments section of this preamble.

Information Requirements. Under paragraph (c)(6)(ii), States must notify each parent of any information necessary to conduct the review and the date by which such information must be provided. States are encouraged to incorporate both aspects of this requirement in the notice issued 30 calendar days in advance of a review. This requirement to provide information was included as authority for States to advise parties of the types of information needed to conduct the review, such as wage statements, income tax returns, health insurance coverage verification, financial affidavits, completed guideline worksheets, or other documents. Any information necessary for computing the child support obligation using State guidelines should be listed and the parties urged to submit any additional facts or documents they wish to have considered during the review process. If a State's statute or procedures which specify guideline computation requirements permit the imputing of income to a party (as a way of dealing with either a lack of necessary financial information to calculate the support amount or situations of voluntary underemployment or unemployment), States are encouraged to advise parties in the notice that failure to provide the specified information may result in imputing income to that party for purposes of determining the amount or entry of an adjusted order.

States are also encouraged to consider requiring that parties, in all cases or perhaps only certain categories of cases, furnish on a routine basis, financial information directly pertinent to the application of State guidelines to either the court or administrative agency which entered the child support order or which will be conducting any review. States may wish to consider adopting legislation which requires any party to a child support order to file, with the court or administrative agency which entered the order, on a regular basis, a financial statement relevant to the guidelines. For example, at least one State requires, by statute, any absent parent to complete, at the request of the IV–D agency, a statement under oath, providing specified information. Under this law, such information includes, but is not limited to, the absent parent's monthly income, his or her total income for the previous year, the number and name of his or her dependents and the amount of support he or she provides to each, the nature and extent of his or her assets, and such other information as requested. Under this State's law, at the agency's request, such statements must be completed annually. Failure to comply is considered to be a class A misdemeanor.

As part of its guideline, another State specifies that "a party to a child support proceeding shall exchange relevant information on finances or dependents every 3 years, and shall be encouraged to update a support order voluntarily using the updated information and the guideline." Adoption of similar laws or practices may help eliminate the necessity of having to first file a modification petition in order to

conduct any discovery activities. As several commenters noted, until an action is pending before a court or administrative forum, proceedings to obtain information and other evidence cannot be initiated.)

Post-Review Notice and Challenge. Paragraph (c)(7) specifies the requirements for providing notices following any review. Under paragraph (c)(7), following any review, the State must notify each parent subject to a child support order in effect in the State of: (i) A proposed adjustment or a determination that there should be no change in the order and (ii) each parent's right to initiate proceedings to challenge the proposed adjustment or determination, not less than 30 calendar days after the notice.

The post-review notice serves to inform the parties of the findings and decision of the reviewer, whether such review is conducted by a court, through a quasi-judicial process, or by an administrative body or agency. Depending upon how a State establishes its review process, the post-review notice can take the form of a standardized letter issued by the IV–D agency indicating the review findings, a judicial order, a recommendation of a mediator or referee, an administrative finding, or other document reflecting the results of the review.

Each State has discretion and flexibility in determining how the proposed adjustment or determination not to adjust the order may be challenged by a party. The only statutory requirement is that the State provide the parties at least 30 calendar days to initiate proceedings to challenge the determination. In the four demonstration projects, if an adjustment of the child support award amount was indicated as a result of the review, all four States initiated the adjustment process in conjunction with the notification of the review results. As a result, there was considerable overlap between completion of the review process which included a response to the challenges received and the initiation of the process to adjust the order.

All four projects informed the parents in the notification of review of the opportunity to challenge or contest the result indicated by the review. All four projects had specific time periods within which a challenge must be received and established procedures for responding to challenges made. Although each of the States' procedures varied, the most commonly used approach to a challenge was to review any new or additional information provided by the parent and recompute the amount of child support using guidelines. The parties were notified of the redetermination and asked to stipulate to entry of an order reflecting the findings of the review. As a rule, none of the demonstration States conducted more than two reviews before referring a case for legal action. We believe that arrangements similar to those used in the demonstration States which allow for a reexamination or additional review upon challenge and allow an opportunity to present evidence to the judicial or administrative authority which ultimately decides whether to adjust or not adjust the order satisfy the intent of the Congress that an opportunity to challenge the findings be provided.

In any State which establishes its review and adjustment process entirely within a judicial arena, with court staff conducting the reviews, the post-review notice requirement may be fulfilled by permitting the parties to challenge the court's decision through appeal. We believe that the availability of an appeal satisfies the statutory right to challenge the adjustment or determination and meets the intent of Congress that parties have an opportunity to challenge a decision. In a judicial setting, hearings provide an opportunity for parties to present evidence and make objections prior to entry of the ruling. Generally, the ruling of the court is considered final, except for purposes of appeal, on the date the order is signed by the judge, unless a subsequent judgment must be filed. Upon entry of the order, the appeal period begins to run. In most States, the time to appeal ends 30 calendar days after entry of the order. The appeal right affords a party the opportunity to have a higher court examine the decision to determine whether error or an abuse of discretion occurred.

Adjustments to Child Support Orders. Paragraph (c)(8) requires that following any review, the State must adjust the order, or determine that there should be no adjustment, as appropriate, in accordance with the State's guidelines for setting support awards and paragraph (d), which addresses the basis for petitioning for an adjustment. This would also include determinations which indicate the need to provide for the health care needs of the children, through health insurance or other means, in the order. Further discussion of the adjustment phase of the process follows in our discussion of paragraph (d) concerning the basis for petitioning for adjustment and later in the Response to Comments section of this preamble.

Basis for Seeking Adjustment—Section 303.8(d)

Section 303.8(d) specifies the requirements States must meet with respect to seeking adjustments to child support orders in IV–D cases. Paragraph (d)(1) requires that inconsistency between the existent child support order amount and the amount of child support which results from application of the State guidelines must be an adequate basis, under State law, for petitioning for an adjustment of an order in a IV–D case, regardless of whether or not the order was established using guidelines.

Two exceptions to this requirement are set forth in subparagraphs (d)(1)(i) and (ii). The first exception is allowed if the inconsistency does not meet a reasonable quantitative standard established by the State, as permitted under subparagraph (d)(2). Paragraph (d)(2) provides that States may establish a quantitative standard based upon either a fixed dollar amount or percentage, or both. This quantitative standard, or threshold, is to be used as a basis for determining whether the inconsistency is sufficient to justify proceeding with a petition or motion for adjustment of an award, not as a criterion for deciding whether to review. Threshold standards are not mandatory if States adjust all orders regardless of the degree of inconsistency with the guidelines. However, thresholds may serve to prevent inundating the adjustment process with cases in which the variance in amount between the current order and the amount an application of guidelines would require is minimal. The reasonable quantitative standard and change in circumstances topics are further discussed and explained in the Response to Comments section of this preamble.

The quantitative standard contemplated by § 303.8(d)(2) should be used as a post-review decision-making tool. It should not be considered a restriction on the requirement that the court or administrative process must use guidelines in setting and modifying support or a limitation on the authority of the court or other authority to find, in a particular case, that an award based on guidelines is unfair or inappropriate. In making any adjustment to the amount of support, the judicial or administrative process must apply the State guidelines and, pursuant to § 302.56(f), the child support award calculated to be due under the guidelines is rebuttably presumed to be the correct amount of support to be paid.

Under subparagraph (d)(1)(ii), a second exception to the requirement that an inconsistency between the

current amount of support and the amount of support resulting from application of the guidelines is permitted. This exception is allowed if the basis for the inconsistency is the fact that the amount of the current child support award resulted from a rebuttal of the guideline amount and there has not been a change in the circumstances which resulted in rebuttal of the guideline amount at the time the current order was established. This exception recognizes the existence of cases in which the amount of child support was initially established using guidelines, but the court or administrative authority determined that the amount presumed to be correct was unfair or inappropriate, and set an amount which varies from the guideline amount. Consequently, reapplication of guidelines in such cases may always reflect inconsistency simply because the amount of the current support award was established as a rebuttal of the guideline amount. In these cases, the petitioner would have to show a change in the circumstances which resulted in the original rebuttal of the guideline amount.

Need for Provision for Health Care Needs. Paragraph (d)(3) requires that if the review indicates the need to provide for the health care needs of the children in the order, through health insurance coverage or other means, such need must constitute adequate justification under State law to petition for adjustment of the order to provide for the health care needs of the children, regardless of whether an adjustment in the amount of child support ordered is necessary. It further stipulates that in no event shall the eligibility for or receipt of Medicaid be considered to meet the need to provide for the child's health care needs in the order.

This provision effectively requires that the review process must include a determination of whether the health care needs of the children are being met, other than through Medicaid, either through health insurance coverage available to the custodial parent, health insurance coverage available to the absent parent, or other means. Even if adjustment of the child support award amount is not sought, the need to provide for the health care needs of the children must be a sufficient reason to seek adjustment of the order. As defined in § 303.8(a), "review" includes a determination of the need to provide for the child's health care needs in the order through health insurance coverage or other means. "Adjustment" means "provision for the child's health care needs, through health insurance coverage or other means."

Providing for the health care needs of children is an integral part of the general obligation that parents have to support their children. Ensuring that children have available medical care is essential to their general welfare. Private insurance provided by parents to cover their children who are eligible for Medicaid assistance also reduces the public costs of supporting a child and results in significant cost savings or cost avoidance to the government under the Medicaid program.

As part of the final regulations published on May 15, 1991 (56 FR 22335) governing presumptive guidelines, State guidelines are required, under § 302.56(c)(3) to take into consideration the child(ren)'s health care needs. As we stated in response to comments on that rule, States have flexibility to determine how their guidelines will provide for the health care needs of the children as long as the requirements of § 302.56(c)(3) are met. Since guidelines must in some way address the children's health care needs, any review of the child support order using guidelines would, by necessity, include a determination of the children's health care needs. Similarly, since any adjustment to the child support order resulting from a review must be in accordance with guidelines, the health care needs of the children must be taken into consideration as part of the application of the guidelines. Furthermore, regulations governing securing and enforcing medical support at § 303.31(b)(2) require IV-D agencies to petition the court or administrative authority to include health insurance that is available to the absent parent at reasonable cost in new and modified court or administrative orders, unless the custodial parent and children have satisfactory health insurance other than Medicaid.

Timeframes for Review and Adjustment—Section 303.8(e)

Section 303.8(e) specifies the timeframes for review and adjustment activities. Paragraph (e)(1) requires that in any case in which support rights are assigned to the State under § 301.1, the State must determine, within 15 calendar days of October 13, 1993, or the date the child support order is 36 months old, whichever date occurs later, whether a review should be conducted, as required under § 303.8(c)(4). Subsequent determinations about whether to conduct a review must be made in accordance with paragraph (c)(4), at 36-month intervals based upon the date the child support order was adjusted or the date an order was entered determining that the child support order should not be adjusted, or, in any case in which a petition or motion for adjustment was not filed following a review, the date upon which the post-review challenge period ended. Paragraph (e)(2) requires that within 15 calendar days of receipt of a request for a review, the State must determine whether a review should be conducted, as required under § 303.8(c)(4).

Paragraph (e)(3) specifies that within 180 calendar days of determining that a review should be conducted, or locating the non-requesting parent, if necessary, whichever occurs later, the State must perform four required activities. The State has 180 calendar days to: (1) Send the notice or serve process required under paragraph (c)(6) that a review will be conducted; (2) conduct the review of the order; (3) send the notice required under paragraph (c)(7); and (4) adjust the order, or determine that the order should not be adjusted, in accordance with paragraph (c)(8).

To ensure that States are subject to timeframes for conducting review and adjustment activities, the proposed rule proposed to add a reference to modification in the timeframes for establishing an order under § 303.4(d), which was added by final regulations, establishing standards for program operations, including timeframes for processing cases, published August 4, 1989 (54 FR 32284). As proposed, the addition of modification to § 303.4(d) would have required States to modify an order for support or complete service of process necessary to commence proceedings to modify a support order within 90 calendar days of locating an absent parent.

However, as a result of comments received regarding this proposal, as well as the findings of the demonstration projects regarding the average span of time involved from case selection through disposition, we have carefully reconsidered the proposed timeframe requirement. We believe that the timeframe should be measured from the date an order is determined to be eligible for review based on its age or the date of a request, allow for a reasonable period to determine whether a review is required, take into consideration the statutory pre- and post-review notice requirements, and accommodate the variations among State legal structures with respect to how child support orders can be legally adjusted.

The findings of the demonstration projects substantiate that a 180-calendar-day timeframe is both necessary and reasonable. The time for completing the review and adjustment

process experienced in the demonstration States was measured from case selection as the starting point. Location of the non-requesting parent was not a criteria for selection, but a post-selection, pre-review activity. Thus, time devoted to location was a component of the processing times used to compute the average length of time the review and adjustment process encompasses. The 180-calendar-day timeframe imposed by these regulations does not commence to run until the non-requesting parent is located or determination to review is made, whichever is later. Further discussion of these requirements and the rationale for establishing the 15-calendar-day and 180-calendar-day timeframes is presented in the Response to Comments section of this preamble.

Interstate Requirements—Section 303.8(f)

Section 303.8(f) designates the requirements for conducting review and adjustment activities across State lines. The inherent complications in enforcing and establishing child support orders when parties live in different States or move from the State in which the original order was entered are no less difficult when review and adjustment of orders is added to the configuration. We are equally mindful of the complexities in reviewing cases with multiple orders in different amounts as a result of intervening URESAs or modified registered orders, in determining the effect of an adjustment made by one State on other orders in existence in other States, and in improving communications about cases among States.

The National Conference of Commissioners on Uniform State Laws (NCCUSL) is currently redrafting URESA/RURESA and will address review and adjustment of orders in interstate cases in the revised act. The Commission on Interstate Child Support, established by section 126 of Public Law 100–485, is gathering public input on possible reform and improvement to the interstate system, as well as working closely with the NCCUSL on the redraft of URESA. The work of both the NCCUSL and the Interstate Commission is scheduled for completion in 1992. These bodies are scrutinizing the complex legal, jurisdictional, and operational issues involved in review and adjustment of child support orders in interstate cases. OCSE is involved in, and will follow, developments as a result of these groups' efforts, in anticipation that answers and guidance on the many interstate concerns will emerge.

However, in order to provide States essential guidance as they begin to review and adjust child support orders under the new requirements, we believe that Federal rulemaking is necessary at this time to clarify the roles and responsibilities of initiating and responding States in performing review and adjustment activities in interstate cases.

Initiating State Responsibilities

Paragraph (f)(1) specifies the responsibilities of an initiating State with respect to review and adjustment requirements. Paragraph (f)(1)(i) requires that the State in which there is an assignment of rights to child support, as defined under § 301.1, must, in any case in which support rights are assigned to the State under § 301.1, determine within 15 calendar days of October 13, 1993, or the date the child support order is 36 months old, whichever date occurs later, whether a review should be conducted, as required under § 303.8(c)(4) and in which State a review and adjustment will be sought. As stated previously, this requirement encompasses orders in cases currently receiving benefits through the AFDC, title IV–E foster care, or Medicaid programs, and does not apply to cases involving former recipients of public assistance or cases in which the State retains an assignment of support rights to the extent of any unpaid support that accrued under the assignment which remains due to the State after assistance terminates.

Subsequent determinations about whether to conduct a review must be made in accordance with paragraph (c)(4), at 36-month intervals based upon the date the child support order was adjusted or the date an order was entered determining that the child support order should not be adjusted, or, in any case in which a petition or motion for adjustment was not filed following a review, the date upon which the post-review challenge period ended.

We use our regulatory authority under section 1102 of the Act to require that States must also request review every 36 months in any case in which support rights are assigned to the State but where an order for child support was entered in another State. In meeting this requirement, States are governed by the requirements of §§ 303.7(b)(7) and 303.8(f)(1), applicable to initiating States. This places responsibility upon the State to review or request that another State review the child support order in all cases in which support rights are assigned to the State, as defined by § 301.1. Again, this would not encompass IV–D cases involving former recipients of AFDC, title IV–E foster care benefits, or Medicaid, or cases in which the State retains an assignment of support rights, after public assistance has ceased to be provided, to the extent of any unpaid support remaining due to the State under such assignment.

Paragraph (f)(1)(ii) requires that the State in which a request for review is made, must, within 15 calendar days of a request for a review, determine whether a review should be conducted, as required under § 303.8(c)(4) and in which State a review and adjustment will be sought.

The State in which a request for review is made or in which there is an assignment of support rights is required to determine whether a review should be conducted and if so, in which State the review should take place or be requested. The factors which States must evaluate in making a decision as to whether a review must be conducted are governed by § 303.8(c)(4) which specifies the conditions under which a review is not required. For example, a review is not required in a case in which there is an assignment of support rights to the State and the State determines that a review would not be in the best interests of the child and neither parent has requested a review. The factors which States might evaluate in making a decision as to the suitable forum for conducting the review and making any appropriate adjustment to the child support order include the location of existing order(s), the present residence of each party, and jurisdiction over the parties.

Paragraph (f)(1)(iii) provides that if the State determines under paragraph (f)(1)(i) or paragraph (f)(1)(ii) that it should review a child support order in effect in the State, it must provide notice, conduct a review, and adjust the order, or determine that the order should not be adjusted, in accordance with paragraphs (c)(6) through (8), and complete these activities within the 180-calendar-day timeframe in paragraph (e)(2). If the initiating State has an order which can be reviewed locally, even if one or both of the parties is no longer a resident, the case does not become an interstate case for review and adjustment purposes, and the provisions of §§ 303.8(c) through (e) given the review process. We believe this is the most efficient and preferred approach, as it prevents the establishment of multiple orders in various jurisdictions.

However, the initiating State may determine that it is more appropriate to request that a review be conducted in another State because there is an order in such other State that can be adjusted.

In these instances, the provisions of paragraph (f)(1)(iv) would apply.

Paragraph (f)(1)(iv) requires that if the State determines under paragraph (f)(1)(i) or paragraph (f)(1)(ii) to request a review of an order in another State, it must send a request for review to that State within 20 calendar days of receipt of sufficient information to conduct the review and provide that State with sufficient information to act on the request. Under this provision, the initiating State must transmit a case to the State it determines is an appropriate place for a review, indicating on the standardized interstate transmittal form that a review is requested and attaching documents necessary to permit review in the responding State.

The current requirements of §§ 303.7(b)(3) and (4) governing providing sufficient, accurate information for the responding State to act on the request, and providing any additional information requested by the responding State also apply to requests for review.

Paragraph (f)(1)(v) specifies the requirements for transmitting requests for review to other States. If the request for review is the first contact between the initiating and responding States in the case, the request for review must be sent to the interstate central registry in the responding State. However, if the initiating State has previously referred the case to a responding State for action, the initiating State may request a review of the order (if it can be modified under the responding State's law) by sending the request for review directly to the local office or agency working the case, rather than routing the request as a new action through the interstate central registry of the responding State.

Paragraph (f)(vi) requires the initiating State to send, to the parent in the initiating State, a copy of any notice issued by a responding State in connection with the review and adjustment of an order, within 5 working days of receipt of such notice by the initiating State.

Responding State Responsibilities. Paragraph (f)(2) details the responsibilities of a responding State in response to receipt of a request for a review from another State. Paragraph (f)(2)(i) requires that, within 15 calendar days of receipt of a referral from another State requesting review of an order in effect in the responding State, the appropriate processing agency in the responding State must determine whether a review should be conducted, in accordance with § 303.8(c)(4) and the responding State's procedures for review and adjustment of child support orders. We have included a 15-calendar-day timeframe for the responding State in order to address requests for review of orders that are less than 36 months old. The determination of whether or not to conduct a review in such situations is governed by the responding State's procedures for review and adjustment of child support orders. This affords the responding State an opportunity to examine the case to determine whether the child support order should be reviewed using as a basis the requirement that reviews must be conducted at 36-month intervals after the establishment of the order or the most recent review. It also makes clear that the decision of whether a review should be conducted is made by the appropriate processing agency, rather than by the central registry. Therefore, the 15 calendar days begin to run upon receipt of the request from the central registry. However, in no event, should a responding State make a good cause determination not to review an order based on the best interests of the child, if the initiating State has requested a review. The determination that good cause not to review an order exists in any case in which there is an assignment of support rights to the State shall be made only by the State to which such assignment of rights to support has been made.

Paragraph (f)(2)(ii) requires that within 180 calendar days of determining that a review should be conducted or locating the non-requesting parent, whichever occurs later, the responding State must send the notice to each parent that a review will be conducted, conduct a review, send the notice of the proposed adjustment or determination that there should be no adjustment, and adjust the order or determine that the order should not be adjusted, in accordance with paragraphs (c)(6) through (8).

Although we devote a separate section of this final regulation to interstate processing of required and requested reviews, the determination of whether a case should be reviewed, the processing steps, and timeframes are identical to those applicable in an intrastate case. Once the case is received in the responsible local office, the procedures involved in conducting the review should be no different than those used in intrastate cases. A State may not establish a separate process for handling requests for review from other States. If the information received is inadequate, the provisions of § 303.7(c)(4)(ii) require the responding State to notify the IV–D agency in the initiating State of the necessary corrections or additions to the interstate form or documentation. As provided under § 303.7(c)(4)(iii), if the documentation received with a case is inadequate and cannot be remedied by the responding IV–D agency without the assistance of the initiating State, the IV–D agency must process the interstate IV–D case to the extent possible pending necessary action by the initiating State.

Under paragraph (f)(2)(iii), States may meet the notice requirement of § 303.7(c)(8) by sending notice of the review required under § 303.8(c)(6) to the parent in the initiating State through the IV–D agency in the initiating State. Thus, a responding State would not have to prepare and issue two different notices contemplated by the mutual existence of the requirement under § 303.8(c)(6)(i) that advance notice of any review be sent to each parent and the requirement under § 303.7(c)(8) that the responding State IV–D agency provide timely notice to the IV–D agency in the initiating State in advance of any formal hearings which may result in the establishment or modification of an order. This requirement effectively permits the advance notice of review to the parent in the initiating State to also serve as the notice to the initiating State itself, by requiring that the notice be transmitted to the parent through the initiating State IV–D agency. As explained previously, § 303.8(f)(1)(vi) requires the initiating State to forward any notices, to the parent in the initiating State, within 5 working days of receipt of the notice from the responding State.

Paragraph (f)(3) specifies that the applicable laws and procedures for review and adjustment of child support orders, including the State guidelines for setting child support awards, established to § 302.56, are those of the State in which the review and adjustment, or determination that there be no adjustment, take place.

Response to Comments

In response to the Notice of Proposed Rulemaking published August 15, 1990, in the **Federal Register** (55 FR 33414), we received comments from over 70 commenters, representing national organizations, State and local IV–D agencies, advocacy groups, and private citizens. The comments concerning the 1993 requirements and our responses are as follows:

Periodic Review and Adjustment After October 13, 1993—Section 303.8(c)

1. Comment: Numerous commenters questioned what duties are placed by the Act on the State IV–D agency. Can only a IV–D agency conduct review or can other State entities such as the court system?

Response: While nothing in the Act requires the IV–D agency to be the entity responsible for the review and adjustment of orders, nothing prevents the IV–D agency from doing so or from playing an integral role. We retain flexibility in the regulations to allow States to allocate the various review and adjustment functions according to historical practice or to the exercise of State discretion. We recognize the possible distinction between the State and the IV–D agency.

Nothwithstanding this flexibility to develop a workable process in the State, the IV–D agency retains overall responsibility for ensuring that the requirements are met. Placement of certain review and adjustment functions within other organizational entities or branches of government in no way diminishes the responsibility of the IV–D agency to ensure that, overall, the State is in compliance with all Federal requirements.

Because the Act refrains from specifying which State entity is required to conduct the review and adjustment process, "review" is broadly defined in § 303.8(a) to encompass many possible alternatives. Because these regulations do not necessarily place responsibility on the State IV–D agency to conduct reviews and make adjustments, a State has the discretion and the flexibility to design a review process that will be effective within or as a complement to its respective child support enforcement program. For example, under one possible model, States which use administrative processes for the establishment of child support awards, which allow for fair hearings and rights of appeal, may find it feasible to use such procedures for the review and adjustment process.

2. Comment: One commenter warned that unless constitutionally-sound State legislation provides for administration modification of judicial orders, it will be necessary in an administrative process State for a judicial or quasi-judicial decision-maker to conduct reviews in cases in which the existent order was established through a judicial process.

Response: We encourage States to consider the various options available for implementing an effective mechanism for conducting reviews of child support orders. In some States, the preferred forum may be the State judicial system. In States which designate that review and adjustment be done entirely by the same entity which entered the initial order, the review and adjustment activities of the State IV–D agency may be limited to filing the action, issuing the notices of the right to request review, and facilitating the exchange of information.

As indicated previously, we urge States to examine the work of the States which conducted demonstration projects. These projects illustrate that various approaches for reviewing and adjusting orders are feasible. In all of the demonstration projects, the review was a fairly simple and straightfo ward task once the necessary financial information was obtained. Reviews were conducted by computing a new support amount based on the application of the child support guidelines and the required financial information. In Colorado, modification technicians conducted the reviews. In Delaware, mediators or masters conducted reviews if mediation was used; if stipulations were used, child support specialists conducted the reviews. Child support case analysts were responsible for the reviews in Florida, while in Illinois, reviews were conducted by modification unit staff members. If adjustments to orders were appropriate, the demonstration project States varied somewhat in how the adjustments were sought. For example, Colorado used an expedited judicial process: If the IV–D agency could not obtain a stipulation, cases were heard before court referees or commissioners; if either party disagreed with the referee's decision, cases were referred to a judge. Delaware used an expedited quasi-judicial process with family court mediators conducting mediation sessions to obtain stipulations. If stipulations could not be obtained, cases were referred for a hearing before a court master. Any party disagreeing with the master's ruling could request a de novo hearing before a judge. In Florida, IV–D staff attempted to obtain stipulations prior to legal referral; hearings were conducted by either a hearing officer or a judge. Illinois employed dual judicial and administrative processes for establishing orders. However, the use of the administrative process was limited to cases not previously or currently under the court's jurisdiction.

Oregon used an administrative process for establishing child support orders where no court order for child support existed. If a court order was subsequently established, as in a divorce action, the administrative order was superseded. Alternatively, if a court order already existed when a case acquired IV–D status, no administrative order was established. Because Oregon enforced both administratively and judicially established orders, modifying these orders had to proceed through the appropriate process. The Final Report on the Oregon Child Support Updating Project (February 1991) explains that the project was able to test the relative efficacy of using an administrative and a judicial process to modify support orders. According to the report, modification of orders through the judicial process did not take significantly longer than those modified through the administrative process. The report emphasized, however, that this result may have occurred because the project was able to arrange expedited docketing and priority calendaring for court hearings. The report further noted that the advantages of an administrative process were more evident with respect to the costs of modifying orders. The report cited data that the comparative cost per case to modify child support orders was considerably lower for administrative modification ($496 per case) than for judicial modification ($770 per case).

Role of the IV–D Agency

1. Comment: Many commenters offered opinions concerning the conflicts of interest discussion in the preamble to the proposed rule. In that document we presented our position that the IV–D agency does not provide legal services *per se*. Several commenters explained the difficulties and dilemmas often encountered because of various, and often contradictory, rulings and interpretations of the role of the IV–D program and staff in their jurisdiction in relation to the individuals receiving IV–D services.

Response: The issue of "legal representation" of parties in child support proceedings is a matter to be determined by State law, regulations, or bar association requirements. There are no Federal statutory or regulatory requirements addressing this matter. The IV–D agency, on the other hand, must perform certain functions in accordance with Federal statutory and regulatory requirements. As required under § 303.20(f), States must have staff to achieve the standards for an effective program which must include attorneys or prosecutors to represent the agency in court or administrative proceedings with respect to the establishment and enforcement of orders of paternity and support. Generally, conflicts of interest should not arise, but if they do exist, the State must resolve the conflict and still perform the requisite functions.

Clearly, Congress has mandated that each party to a child support order in effect in the State and being enforced through the IV–D program has a right to request a review of that order. In addition, if appropriate, the State must adjust the order, in accordance with

State guidelines for setting child support award amounts. However, this does not mean that the IV–D agency or its attorneys must "represent" the parties in the process of conducting a review and/or adjusting the order. The State's role is not to advocate either an increase or a reduction in the amount of the order, but rather, to facilitate whatever adjustment is appropriate in accordance with the guidelines.

We are aware that some States have developed processes through which the review is conducted by the IV–D agency. Following the review, any adjustments are made through the judicial or administrative process in place in the State for setting child support orders, without any necessity of "representation" of either party by the IV–D agency in an advocacy capacity. Several States are exploring *pro se* procedures for enabling the parties to have better and easier access to the judicial or administrative process to obtain an adjustment.

It is our understanding that a number of States, through legislation and bar association opinions, have taken the position that neither the custodial parent nor the non-custodial parent is the "client" of the IV–D program or the attorneys who work for the IV–D program. Additionally, we are aware that several States are making statutory, regulatory, and procedural changes to clarify or redefine the IV–D agency's relationship with the parties in IV–D cases. Some of the efforts States are taking to address these concerns include: removing references to the parent or child as "clients" in all statutes, regulations, policies, forms, and legal pleadings; captioning all legal pleadings relating to the delivery of IV–D services for establishment and enforcement of child support in the name of the State and clearly specifying that the IV–D attorney is not the attorney for either of the parents; and notifying both parents, in writing, that the IV–D agency or its attorneys do not represent either parent and that either parent may obtain private counsel.

2. Comment: Several commenters stressed the need to recognize that in some States the IV–D agency cannot initiate proceedings to reduce child support obligations due to an inherent conflict of interests that would apparently exist in those States because of their administrative structure. They cited ethical problems which would arise for a IV–D attorney in seeking results on behalf of the one party in a case which are directly contrary to the interests of another party in the same case for whom the attorney has previously provided services.

Response: Because the statute does not differentiate between the parties with respect to the right to request a review, each parent is entitled to make a request. Consequently, it is conceivable that a review may be requested by an absent parent for the purpose of obtaining a reduction in the amount of child support previously ordered. As indicated by several commenters, in the IV–D context, the issue of client representation has not been universally resolved. As previously indicated, a growing number of State bar associations, attorneys general, or legislatures have issued opinions or statutory interpretations providing guidance to practitioners.

For those cases which were not terminated from the review process, the number of downward adjustments in the demonstration projects was very low. In only 170 cases, representing five percent of the total modifications obtained, did a lower support award amount result. Of these 170 cases, 150 (88 percent) occurred in Colorado and Delaware. Only six downward modifications occurred in Florida, and in Illinois, only 14 of the approximately 1400 orders modified resulted in a reduction in the amount of child support. While Delaware had the largest number of downward adjustments (82 orders representing 10.7 percent), Delaware also had 19 cases in which a downward adjustment was indicated, but the obligor agreed to no change. Delaware also had 139 cases in which the modification disposition was "no change." The earlier project in Oregon reflected that overall, 81 percent of the adjusted orders were for increases in the monthly support obligation and 19 percent produced decreases in the monthly obligation. Moreover, in Oregon, downward adjustments tended to be situations in which the original order had been entered by default, with income imputed to the obligor. In these instances, the subsequent availability of information as to the obligor's income produced a lower support order. These reported data illustrate that an expected high income of downward adjustments did not materialize. The results reflect that the impact of downward adjustments was minimal.

Making the review and adjustment process more accessible does not imply that it must be the responsibility of the IV–D agency to directly operate the process or to initiate all petitions for adjustment. It is, of course, permissible and for simplicity, may be desirable, for the IV–D agency to perform these functions in States which do not perceive that there are conflict of interests problems. Within a review process, a IV–D agency may be able to seek voluntary agreements consenting to an adjustment, without taking an advocacy role. Such agreements could be ratified and given legal effect through the judicial, quasi-judicial, administrative, or other designated process in which reviews are conducted. If a stipulation for an adjustment to the order cannot be reached, the case could be submitted to the designated judicial or administrative process for a hearing on the merits of whether an adjustment is appropriate.

It is also permissible under the statute and this regulation for States to allocate the required functions within the review and adjustment process among various entities (courts, administrative hearing officers, IV–D agency staff, etc.). Thus, the potential for perceived conflicts of interest arising in some States if the IVS–D agency is required to seek downward adjustments on behalf of parties in cases in which it previously represented the interests of the other party in the same case may be reduced or avoided by careful and clear designation of these functions to another entity. However, should a State establish a process outside of the IV–D agency, it is imperative that the IV–D agency remain ultimately responsible for ensuring that all Federal requirements under the Act and regulations are satisfied.

3. Comment: Several commenters contended that even if there is no attorney-client relationship with either party, and the IV–D agency is considered the client of the IV–D attorney, the interests of the agency in reducing AFDC dependency, promoting economic self-sufficiency of families, and seeing that children are adequately supported may be compromised if the IV–D agency or its agents advocate for or represent individuals seeking downward adjustments.

Response: Providing an avenue or opportunity for parties to a child support order to access the court for the purpose of updating or changing a child support obligation does not mean that the State places itself in an advocacy role with respect to the interests of either party, and does not create an attorney-client relationship between the IV–D agency and either party. As aptly stated by one commenter, if States are unbiased in the application of child support guidelines, then they should proceed with a review in all eligible cases regardless of the nature of the request or the anticipated outcome. In some cases, a downward adjustment may even be advantageous to the child if it results in an amount of support

which can be paid fully, regularly, and timely by the obligor.

4. Comment: One commenter noted that an implied attorney/client relationship can arise if the custodial parent reasonably believes that one exists based upon the conduct of the attorney and communications between the IV–D attorney and the agency.

Response: Although many States have and will continue to make efforts to resolve any problems in this area, we are mindful of and acknowledge the concern raised by commenters concerning the posture a State IV–D agency or its attorneys and other staff may have taken previously in the case or perceptions and beliefs the parties may have regarding the IV–D agency/attorney's role Furthermore, we recognize that even in States which have made it clear that no attorney-client relationship is created by virtue of the application for or delivery of IV–D services, rules governing the legal profession may dictate ethical responsibilities and certain duties of disclosure on the part of attorneys dealing with "unrepresented persons." However, these are matters which State law and individuals bound by such professional rules of conduct must address at the State level, and not issues governed by Federal law and regulations on the IV–D program.

We encourage States to enact legislation or obtain an Attorney General opinion that specifically identifies who the IV–D agency and its attorneys represent. It may also be helpful for States to include an explicit statement on the IV–D application or referral form that provision of IV–D services does not constitute or create an attorney-client relationship between either party and the State IV–D agency or its employees or agents. Such a statement could also specify that IV–D attorneys are bound by and will follow State and Federal rules and policy. The interests of the applicant or recipient of IV–D services, although important, do not prescribe the IV–D attorney's activities as they might in a private attorney-client relationship.

5. Comment: One commenter questioned whether an application for IV–D services is required in situations in which the party making the request for a review is not the named recipient of IV–D services.

Response: If the case is currently receiving services through the IV–D program, a separate or additional application for IV–D services under § 302.33 is not necessary even if the individual requesting a review is not the original applicant. The statute requires that notice of the right to request a review be provided to both parties, not just the individual who applied for services through the IV–D program. The statute specifies that non-custodial parents in IV–D cases are entitled to notice of the right to request a review of the child support order and the right to request a review by virtue of being a party to a IV–D case. Although there is no requirement to do so, a State may, at its option, take applications for services and required fees from non-custodial parents in existent IV–D cases. However, if a IV–D agency is asked to conduct a review in a non-IV–D case, the requesting party must apply for services and pay the fee before IV–D services may be provided. Certainly, a review and adjustment process may be generally available in the State, independent of the IV–D program, to any party seeking an adjustment.

Pro SE Processes

1. Comment: Several commenters responded to the preamble discussion in the proposed rule regarding establishing *pro se* processes. One commenter suggested that *pro se* be used for cases seeking review sooner than they would otherwise be eligible on the 36-month cycle.

Response: We encourage States to establish simple procedures that do not unduly burden a party seeking a review and adjustment of a child support order. States may find it useful to develop *pro se* procedures and/or establish means to provide legal services in cases in which an adjustment is sought. *Pro se* was suggested as a mechanism for improving access to the legal process (judicial or administrative) to parties seeking a change in a child support order without the necessity of retaining legal counsel. For example, if a review is requested sooner than the interval for conducting mandatory reviews, a State may suggest *pro se* or other alternative routes to the individual seeking the review. The suggested use of *pro se* procedures is not intended as a way for States to avoid their statutory responsibilities for responding to requests for review from either party to a child support order, but a way to reduce the expense and time for the parties and the State wherever appropriate.

Several States have successfully implemented such a *pro se* process. In Michigan, forms and instructions are available through the Friend of the Court to enable parties to file their own actions. New Hampshire has developed a "do it yourself" modification kit which is available to any party upon request, and which offers another option if review through the State review plan is not possible or not elected. In September 1991, OCSE published, through its contract with the American Bar Association Center on Children and the Law, a monograph, "Developing Effective Procedures for *Pro Se* Modification of Child Support Awards" which examines selected State practices and policy issues in developing a successful *pro se* modification program. In order to enable parties to accomplish their legal objectives through self-representation, *pro se* processes may contemplate that the State, courts, IV–D agency, or other sources make copies of guideline worksheets and charts, rebuttal criteria, and other explanations publicly available in order for the parties to effectively proceed *pro se*.

Notice of the Right to Request Review—Sections 303.8(c) (2) and (3)

1. Comment: Several questions were raised by commenters concerning the effective dates of the notice requirements.

Response: The effective date for the notification of the right to request review is October 13, 1993, or such earlier date as the State may select. In response to many questions received concerning this notice requirement, OCSE issued a letter to State IV–D Directors on November 28, 1990 clarifying this requirement. As specified in the final rules published earlier which govern the review and adjustment requirements which are effective October 13, 1990, the pre-review and post-review notices are required in any case in which a review is conducted under the State's plan specifying how and when child support orders in IV–D cases are to be reviewed.

2. Comment: A number of commenters inquired as to alternatives for meeting the requirement for notifying each parent subject to an order in effect in the State being enforced through the IV–D program of the right to request a review.

Response: Paragraph (c)(2) specifies that this requirement may be met by sending a one-time notice to each parent in a IV–D case in which there is a child support order in the State. Such notices could also be incorporated in any informational materials presented to the parties at the time the order is originally entered. Some court clerks routinely distribute instructions to parties, which could be expanded to include information about the right to request review. Adding a specific review clause in every child support order at the time of establishment or adjustment is another alternative for satisfying this notice requirement with respect to new cases. This requirement affords States flexibility in creating mechanisms for

notifying each parent of the right to request review, provided that the methods selected are reasonably calculated to provide the necessary notification of both the right to request review and how and where to exercise this right.

3. Comment: One commenter inquired whether a newspaper advertisement about the availability of reviews would satisfy this mandate.

Response: Although there is no requirement for proof of actual receipt, section 466(a)(10)(C)(ii) of the Act contemplates that the notice be issued in a matter reasonably calculated to reach the intended recipients, as it directs that notice be given to "each parent." Therefore, placing an advertisement in a newspaper of general circulation will not, in itself, suffice to meet this requirement, as it is conceivable that not all parents who should receive the required notice will receive it. Certainly, States may consider advertisement as a means of complying with paragraph (c)(3), which requires the State to periodically publicize the right to request a review as part of its support enforcement services as required under § 302.30 and to include notice of this right as part of the information on IV–D services required under § 303.2(a)(2).

4. Comment: Several commenters questioned the propriety of including other information in the one-time notice.

Response: We use our regulatory authority under section 1102 of the Act to require that the notice under paragraph (c)(2) inform the parents where and how to make their requests for review. Section 1102 authorizes the Secretary of HHS to publish regulations (not inconsistent with the Act) which are necessary to efficiently administer his functions under the Act. Although the Act only requires that "notice of the right to request a review" be provided, we believe it is essential for the notice document to designate how and to whom the request must be made. Giving more detailed instructions about making requests for reviews may actually serve to reduce the number of inquiries for further information as well as misdirected or incomplete requests.

5. Comment: Some commenters asked that we specify in regulations how a parent exercises the right to request a review. They inquired whether parents must make a one-time decision about whether to have a triennial review or if they may decide every 36 months whether they want a review. These commenters further inquired whether a State may limit the time a party has to elect a review, and if so, what is considered an adequate opportunity to exercise the option.

Response: We believe that requiring parents to elect only once whether or not a review is desired, which binds all future actions, is too restrictive. Therefore, parents cannot be required to make a one-time decision. States may not limit the time a parent has to request a review, for example, to no later than three months after the order is 36 months old. However, States may limit the frequency with which they conduct reviews, to, for example, once every 24 months. If they choose, States may include in the notice information about these and other matters, such as explanations of specific procedures or a telephone number or address to contact for further details about the review process.

Frequency and Conditions of Reviews—Section 303.8(c)(4)

1. Comment: Numerous commenters questioned whether States must act in advance of October 13, 1993 to address cases in which the child support order will be over 36 months old on October 13, 1993. Several objected to the proposal for targeting cases for review and OCSE's interpretation of the statutory requirement. Some asked whether a State must initiate review of all AFDC cases with orders that have not been reviewed or adjusted in the last 36 months or whether a State may phase-in a review process beginning on October 13, 1993.

Response: Section 466(a)(10)(B) of the Act, added by section 103(c) of Public Law 100–485 states that "(b)eginning 5 years after enactment [October 13, 1993] . . . States must implement a process for the periodic review and adjustment of orders. . . ." In the preamble to the proposed rule, we stated that this section effectively requires that orders in AFDC cases that were entered or last modified before October 13, 1990 must be reviewed before October 13, 1993, upon request of either parent or a State child support enforcement agency. Furthermore, in the proposed § 303.8(b)(1), we specified that the State plan for periodic review and modification must "target for review" orders in IV–D cases in which there is an assignment of support rights to the State. After reviewing the comments received and deliberating on the language of the statute, we have deleted the requirement that between 1990 and 1993, States, must conduct reviews and adjust all pre-October 13, 1990 orders upon request prior to October 13, 1993. It is our position that because the requirement for reviews at 36-month intervals is effective starting October 13, 1993, a State has no explicit duty prior to that date to conduct reviews other than as specified in its plan for how and when orders are to be periodically reviewed and adjusted as required under § 303.8(b). However, as a practical matter, if the State's plan and procedures do not address orders older than 36 months, and if these older cases are not actually processed through to completion with respect to review and adjustment, the number of such cases awaiting appropriate handling on October 13, 1993 may be overwhelming.

Although there is no mandate to do so, States may find it advantageous to the best interests of the children involved and the taxpayer to examine these older cases in a measured way beginning now, in anticipation of the requirement for mandatory triennial reviews. Since reviews are required only in cases in which the support rights are assigned to the State and in which the order is 36 months old or more, the impact of mandatory reviews may not be as severe as expected. Unpublished tabulations from the Bureau of the Census Current Population Studies, Child Support and Alimony Supplement 1988, reflect that of the 2.4 million women with children from an absent parent who are recipients of AFDC, 41 percent had support awards. According to the data, on these 990,000 awards, approximately 51 percent are over 3 years old. Thus, a nationwide total of 550,000 orders would be subject to review. The impact of reviewing these eligible orders would be further reduced by findings of good cause and inability to locate obligors. In this context, and given the potential benefits to children and taxpayers, we do not believe the statutory requirement is overly burdensome. To reap these benefits and to further minimize the volume of cases requiring reviews beginning on October 13, 1993, a number of States are already reviewing, in manageable installments, AFDC cases with orders over 36 months old.

2. Comment: One commenter questioned whether an AFDC IV–D case would be considered flawed for audit purposes if the court order is more than 36 months old and a review was not conducted.

Response: Audit regulations governing substantial compliance with the requirements for review and adjustment of child support orders have not yet been published. This issue will be addressed in those regulations.

Compelling evidence about inadequate and out-of-date support awards prompted enactment of the review and adjustment provisions in the first instance. Therefore, it is essential

that States examine cases in which there is an assignment of support rights to the State and begin reviewing (and updating as necessary) any cases with orders over three years old as soon as possible.

As previously indicated, some States have implemented plans under which the entire AFDC caseload is being reviewed in equal monthly increments in advance of the October 13, 1993 effective date, so that the number of cases with orders which have not been reviewed for over 36 months will be far fewer, and more manageable. For example, subsequent review of a case reviewed in June 1991 would not be required until June 1994. However, within 15 calendar days of October 13, 1993, in any IV–D case in which child support rights are assigned to the State and the current child support order was established on or before October 13, 1990 and not subsequently reviewed, the State must determine whether to initiate a review in order to comport with the statutory requirement that orders be reviewed "not later than 36 months after the establishment of the order or the most recent review." Advance planning in recognition of the potential impact of reviewing certain cases at 36-month intervals is crucial.

3. Comment: One commenter suggested allowing a one-year grace period to review all existent orders required to be reviewed that are older than 36 months on October 13, 1993.

Response: Unlike the Child Support Enforcement Amendments of 1984 (Pub. L. 98–378), wherein the statute permitted States needing legislation to come into compliance some additional time to enact such legislation, the Family Support Act of 1988 (Pub. L. 100–485) makes no such provision of additional time after October 13, 1993, to phase-in a review process. Moreover, because the 1993 requirements are effective a full five years after enactment of the Family Support Act, States have considerable advance notice in order to adopt any necessary laws, to anticipate the number of cases potentially needing review when the 36-month requirement becomes effective, and to otherwise address the operational implementation in a meaningful way. Further delay would only result in children being deprived of the appropriate amount of support to which they are entitled.

Under the timeframe requirements for conducting review and adjustment activities set forth in § 303.8(e), and explained in detail later in this Response to Comments section, States have 15 calendar days after October 13, 1993 to determine whether to initiate a review of any order in which a review is required in cases with orders older than 36 months on October 13, 1993. The timeframe requirements provide that States must complete the review and adjustment activities within 180 days of determining that a review is required or locating the non-requesting parent, whichever occurs later.

4. Comment: Another commenter requested that we address for audit purposes situations in which the child support order is older than 36 months at the time of application for IV–D services.

Response: A State may not specify a time period during which a new IV–D case must receive services before the case becomes eligible to be considered for review. A State must initiate a review of any case in which a review is required (cases in which there is an assignment of rights) or requested (by either parent in a non-AFDC case), in accordance with § 303.8(c)(4), regardless of the length of time services through the IV–D program have been provided. With the limited exception under § 303.72(a)(3)(iii) allowing States to limit past-due support amounts submitted for Federal income tax refund offsets to amounts which have accrued since the IV–D agency began to enforce the support order, States may not deny or restrict any services, including review, based on the length of time a case has been receiving IV–D services. Accordingly, the duration a case has been receiving IV–D services may not be a criterion for evaluating requests for review. Certainly, the order in which requests for review are received may be a factor in determining the relative order in which the request is processed within the framework of the required timeframes.

5. Comment: One commenter inquired whether the review must be initiated, or actually completed, not later than 36 months after establishment of the order or the most recent review.

Response: The timeframes established under § 303.8(e) allow States a 15-calendar-day period within which to determine whether a review is required based upon the age of the order, the timing of the last review, or a request from either parent. Because the time allotted for conducting various review activities and actually completing the review through entry of an adjustment or determination that there be no adjustment may span up to 180 calendar days, or longer, if location is required, we consider the date of the "most recent review" to be either the date on which the order adjusting or determining not to adjust the order was signed by the judge or administrative hearing officer or, where no petition for adjustment was filed by either parent or the IV–D agency following the most recent review, the date that the 30-day period for challenging the review findings expired.

We recognize the possibility that in some cases, no action will be taken by either parent or the State following the review to petition for adjustment of the order. Therefore, since an order adjusting the amount of support or determining not to adjust the order may not exist in such instances, the date for the next required review must be based upon when the last review was concluded, that is, the date upon which the period for challenging the results of the review elapses. In any case in which a petition for adjustment is filed with the judicial or administrative process which results in entry of an order adjusting or determining not to adjust the previous order, the date the judicial or administrative hearing official signs the order is the date from which the 36-month period for determining the age of the order runs. Furthermore, we believe that using the date the order is signed is the customary practice and the simplest for case tracking and monitoring purposes, even if such order specifies an earlier effective date for the change in the obligation, within the limitations permitted under § 303.106(b), governing retroactive modification of orders. Thus, States can incorporate, within an automated case tracking and monitoring system, a trigger or flagging of each case on a 36-month cycle measured from either the date the most recent order was signed, or where appropriate, the date upon which the post-review challenge period ended. However, absent a request for a review in a non-AFDC case, the State need not conduct a review.

6. Comment: Several commenters objected to our proposed requirement that States must establish procedures specifying circumstances under which orders will be reviewed more frequently than every 36 months. Commenters indicated that to direct that States establish an inclusive list of all circumstances in which child support orders would be reviewed more frequently than every 36 months would create an impossible task. One commenter requested that States not be required to impose guidelines for reviewing orders more frequently than every 36 months, because either party has an absolute right to petition the court at any time, if they believe the support order is no longer equitable. The commenter argued that such a guideline requirement could unnecesarily restrict this right to petition the court.

Response: We agree with these commenters and have not included a

requirement in the final rule that States must have procedures specifying the circumstances under which reviews would be conducted more frequently than the minimum interval of "no later than 36 months after the establishment of the order or the most recent review" as mandated by statute.

States will undoubtedly encounter requests for reviews more frequently than every 36 months or other interval established by the State for conducting mandatory reviews. Although States are not required to conduct reviews more frequently than every 36 months, there are certainly circumstances which would warrant a review sooner than 36 months after the most recent order was established. Changes in the financial circumstances which may justify an adjustment in the amount of child support are unpredictable events. A party may offer a reason that would be considered a suitable basis for adjustment (such as proof of a salary increase or decrease) and ask for another review. For example, if a minimum support amount is ordered because the obligor is unemployed or employed part-time at the time the order is entered and the custodial parent or IV–D agency learns one year later that the obligor has secured significantly higher paying employment, a review may be warranted. Alternatively, if the obligor becomes permanently disabled, a review may be warranted although three years have not elapsed since the last review. These situations may occur at intervals sooner than 36 months following the previous decision to adjust or not adjust the order.

The statute does not place a limit on the number or frequency of requests for review a party may make, but requires reviews not later than 36 months after establishment of the order or the most recent review. Thus, States have the flexibility to establish their own criteria for performing more frequent reviews.

Although States are not required to conduct reviews more frequently than every 36 months, we urge States to consider the best interests of children in establishing any criteria for conducting reviews more frequently than at 36-month intervals. Should a State choose to review orders more frequently than required by Federal requirements, States are encouraged to adopt an objective standard applicable to all requests rather than making subjective decisions about whether a case qualifies for a review. If a State does not allow, or restricts the availability of review if a request is made sooner than the interval established by the State for conducting reviews, it may wish to identify alternative avenues for review and consider referring requestors whose requests are made sooner than the established frequency to these other alternatives. One premise of the review and adjustment legislation was that *child support orders become inadequate over time and that a mechanism for* routinely checking the adequacy of the award amount which can be easily accessed by the parties is necessary. We urge States to respond to what we believe to be the spirit and intent of the Congress in enacting this provision of the Family Support Act: to promote easier access to opportunities to seek adjustments in child support award amounts based on changes in the circumstances of the individuals affected by the obligations.

Exceptions to Mandatory Review—Section 303.8(c)(4)(i)–(iii)

1. Comment: One commenter contended that because reviews are required in AFDC cases, but are not required unless a parent requests in non-AFDC cases, the statute fails to promote equal treatment.

Response: We disagree. In conducting reviews and determining whether adjustments are warranted, States may not differentiate between non-AFDC cases and cases in which there is an assignment of support rights to the State. The only distinction made in the statute is whether reviews are mandatory (cases in which there is an assignment of support rights to the State) or performed only upon request (non-AFDC cases in which there is no such assignment to the State). Procedures used for reviewing cases and standards for making adjustments should be identical regardless of the public assistance status of a case.

It is our position that the State has an affirmative duty to seek reviews in cases in which there is an assignment of support rights to the State. However, Congress did not mandate reviews in non-AFDC IV–D cases if neither parent requests a review. Requiring States to conduct reviews only upon request in non-AFDC IV–D cases may eliminate the unnecessary expense of time, paperwork, and personnel if the parties themselves do not want a review. It does place an affirmative duty on a parent to make the request in such cases. It also signals a need to make known the existence of this service and to clearly explain the processes and potential outcomes of a review so that the parties can make an informed decision.

Data from the five demonstration projects reflect an overwhelmingly low rate of authorization to conduct reviews among non-AFDC IV–D cases. In Oregon, authorizations were received in only 16 percent of the 1,626 non-AFDC IV–D cases determined to be eligible for review. Consistent findings are reflected among the other four demonstration projects. In Illinois, for example, fully *60 percent of non-AFDC cases with orders eligible for review were* terminated from the review process due to lack of authorization. Reasons cited by non-AFDC obligees for refusing the available review indicate concerns about "rocking the boat" and jeopardizing compliance with current support payments or good relations with the obligor. In instances where payments are not being made, non-AFDC obligees claim that a review would be a waste of time. Other responses reflect a desire to avoid going to court, seeing the other parent, or risking custody or visitation issues being raised.

Circumstances Under Which Review Would Not Be in the Best Interests of the Child—Section 303.8(c)(5)

1. Comment: Several commenters recommended that the responsibility for defining "best interests" be left to the States. Many other commenters suggested that we define the circumstances in which a "review would not be in the best interests of a child" to be instances in which a determination of good cause not to cooperate in establishing paternity or securing support has been rendered in an AFDC case.

Response: In the preamble to the proposed rule, we indicated that we had not otherwise defined "best interests of the child" in the proposed rule, and solicited comments regarding this provision. We specified that one approach to establishing a complete definition of the best interests of the child would be to tie the definition to that contained in AFDC regulations at 45 CFR 232.41 for refusal to cooperate. We further stated that another approach would allow States to establish criteria which would define the best interests of the child for purposes of reviewing an order, since a review and adjustment of a previously established order may not necessitate the cooperation of the custodial parent. Of the suggestions offered in response to our solicitation, we elected to follow those of the commenters who urged that the "best interests of the child" be linked to good cause determinations in cases in which the support rights are assigned to the State.

Circumstances under which cooperation in establishing paternity or securing support is against the best interests of the child for which good cause may be determined are specified

in § 232.42. Regulations of the Health Care Financing Administration (HCFA) [42 CFR 433.147(c)(1)] governing waiver of cooperation in obtaining medical care support and payments require that the good cause determination be in accordance with factors specified in 45 CFR part 232 for other good cause determinations.

The "good cause" exception to required reviews does not require a separate determination of good cause circumstances. Under § 303.31(b), upon receiving notice from IV–A, IV–E, or Medicaid agency that there has been a claim of good cause for failure to cooperate, the IV–D agency will suspend all activities to establish paternity or secure support until notified of a final determination by the appropriate agency. Additionally, under § 303.31(c), the IV–D agency will not undertake to establish paternity or secure support in any case for which it has received notice from the IV–A, IV–E, or Medicaid agency that there has been a finding of good cause unless there has been a determination by the IV–A, IV–E, or Medicaid agency, as appropriate, that support enforcement may proceed without the participation of the caretaker relative. Therefore, unless there has been a determination under § 232.41 that good cause exists, and that child support enforcement may not proceed without risk of harm to the child or caretaker relative, a case in which there is an assignment of support rights must be reviewed.

In proposed § 303.8(c)(4), we specified that in a IV–D case in which there is an assignment of support rights to the State, an increase in support or the availability of health insurance must be considered to be in the best interests of the child unless either parent demonstrates it would not be in the child's best interests after a hearing. We have not included such a provision in the final rule, for several reasons. First, such a rule would essentially require a review to be done in order to determine whether a review should be done, since without a review, it may be difficult to determine whether an increase is likely or that health insurance is available. Secondly, the statute links the best interests test to whether a review should be conducted, not to whether an adjustment should be entered. Thirdly, such a rule implies that a hearing be conducted to determine whether a result would be in the child's best interest, which may be burdensome on States. Fourthly, such a requirement may reflect a misinterpretation of the statutory language in section 466(a)(10)(B)(i) of the Act which specifies a "not in the best interests of the child" test for when a review is not required rather than an "in the best interests of the child" test governing when a review is required.

2. Comment: Several commenters urged that "not in the best interests" be governed by the outcome of the review such that requests to increase the child support award amount should be honored and requests to decrease the child support award amount should be refused.

Response: We cannot support this approach. Section 466(a)(10)(B)(i) clearly specifies that an exception is permitted for cases in which a "review" would not be in the best interests of the child. It does not, however, provide any exception in the event the "adjustment or determination that there be no adjustment" would not be in the best interests of the child. Thus, the statute plainly connects the "child's best interest" test to the review, not the adjustment. The test applies to the process, not the results. States cannot fail to proceed with a required review or refuse a request to pursue a potential downward adjustment on the basis that the possible outcome would not be in a child's best interests. Decisions of whether or not to conduct reviews cannot be predicated on speculation that the results may be unfavorable to one or the other party or the child.

Furthermore, because review is defined in § 303.8(a) as an objective evaluation, conducted through a proceeding before a court, quasi-judicial process, or administrative body or agency, of information necessary for application of the State's guidelines for support to determine the appropriate child support award amount and the availability of health insurance, it implies the absence of any preconceived ideas or biases about the outcome. It also requires consistent and uniform application of presumptive guidelines in all cases. Thus, once the review begins, it should proceed to completion. If a party is dissatisfied with the result and wishes to challenge the determination, an opportunity to do so must be available. To allow parties the option to stop a review in progress to prevent undesired results would render meaningless the statutory language which provides that the parties be given notice following any review of the proposed adjustment or determination that there be "no adjustment." The decision-maker may determine that the order should not be adjusted, but cannot render such a determination absent a review.

Pre-Review Notice Requirement—Section 303.8(c)(6)

1. Comment: Several commenters requested removal of the 30-calendar-day notice requirement, so that reviews could begin immediately upon receipt of the necessary information.

Response: We recognize that in certain cases, waiting for the 30 calendar days to expire may create unnecessary delay. The 30-calendar-day requirement placed upon the notice is statutory. Until the 30 calendar days elapse, the formal review cannot begin, even if all the necessary information is available in advance. States may request that the parties consent, on a case-by-case basis, to waive the 30-calendar-day requirement and begin the review once the necessary information is available. However, without an amendment to the statute, the requirement cannot be changed or deleted. We have taken the notice requirements into consideration in determining timeframes for completion of review and adjustment activities.

Obtaining Information to Conduct Reviews—Section 303.8(c)(6)(ii)

1. Comment: A number of commenters suggested the need for administrative agencies to obtain subpoena power in order to more efficiently obtain necessary information from parties and other sources.

Response: We urge States to consider practices used by the States which conducted the demonstration projects as well as other jurisdictions to improve the information gathering and verification process. For example, in Illinois, the principal method for obtaining the information necessary to conduct a review was through a computer-generated administrative subpoena automatically issued to obligors' employers and sent by certified mail at the same time the initial notice packets were sent to both parents. Illinois officials reported positive responses from employers. In fact, the information contained in the employer responses to the administrative subpoenas was sufficient for conducting reviews, as well as a valuable source of current address information.

Colorado, another demonstration State, issued administrative subpoenas to any obligor who failed to return an affidavit for child support issued with the initial notice. The administrative subpoenas, served via certified mail or a process server, directed the obligor to bring specified financial information to an adjustment hearing at the IV–D office. If the obligor failed to appear as directed after service of an

administrative subpoena, a motion to compel could be filed, requiring the obligor to appear for a court hearing. Because information on the financial situation of both parents is necessary for application of Colorado guidelines, administrative subpoenas could also be served upon non-AFDC obligees who failed to return affidavits after two notices.

Another alternative would be for the court or administrative agency to include a provision in each new or adjusted order which requires each party to produce an annual income statement or for such a requirement to be adopted as a matter of State law. If a party then fails to comply, they have violated a term of the order, or if the requirement is statutory, a State law, which may be punishable by contempt or fine, as governed by State law, court rule, or the language of the order itself.

2. *Comment*: Some commenters requested that we specify what information should be shared or exchanged between the parties as part of the review process. Several raised issues concerning confidentiality and safeguarding requirements. One commenter suggested that making the provision of information a term of every support order in all States would benefit States responding to requests for review in interstate cases.

Response: States should investigate options such as clauses in the orders or statutory authorization requiring that certain information be exchanged between the parties or filed with the court or agency to reduce the need for elaborate and protracted discovery. The required information should be limited to the necessary data required to compute the support award using State guidelines. Limiting the scope of information required and informing the parties in advance of the responsibility to provide it and that it will be shared will make the requirement less burdensome and minimize possible breach of confidentiality claims.

3. *Comment*: Several commenters noted problems with ensuring the accuracy and completeness of information provided by the parties or obtained from automated databases. Some contended that it is unreasonable to expect or assume that the necessary information can be easily obtained, and that discovery techniques to compel disclosure are often cumbersome.

Response: We encourage States to consider alternative solutions to these operational concerns, from simplifying existing discovery techniques to possibly developing and requiring the use of standardized financial affidavits. Additionally, States may wish to consider contacting employers or other income sources to obtain, verify, and update wage information. Many States routinely ask employers or other income sources to confirm income in the course of imposing income withholding. Certainly, such practices could be extended to the review process as a means of ensuring the reliability of the information.

With the exception of Federal income tax data and income information obtained from the Internal Revenue Service, Federal regulations do not specify verification requirements or procedures for using information obtained on behalf of IV–D cases. The same policies and procedures developed by the State for verifying IV–D information generally should be applied to verifying information obtained for use in the review process. The key point is that verified data, not unsubstantiated allegations, should form the basis of the decision-making process.

Scope of a Review

1. *Comment:* Several commenters inquired whether automated reviews would satisfy the requirement for conducting reviews.

Response: As defined in § 303.8(a)(3), a review is an objective evaluation, conducted through a proceeding before a court, quasi-judicial process, or administrative body or agency, of information necessary for application of the State's guidelines for support to determine the appropriate support award amount and the availability of health insurance. By definition, review contemplates more than a computer match of a case against wage reporting systems, public assistance records, unemployment insurance rolls, and other automated databases. Because review is intricately connected to guidelines for setting child support awards and is designed to result in a determination of the appropriate amount of child support to be paid, a key component of the process is the computation of the child support amount using presumptive State guidelines. Typically, in most States, this will require gathering information sufficient to complete a worksheet or performs calculations, much of which may be known only to the parties involved. Some States have automated the State guidelines. Unless the databases accessed by the State permit retrieval of the necessary information sufficient to conduct a review as defined in § 303.8(a)(3), such access cannot be considered a complete review. In States which permit income to be imputed to a party in certain situations for the purpose of applying support guidelines, information from databases may be the only objective evidence available and considered sufficient for conducting a review in those instances. If a review is required, a full review must be conducted to reach a decision that the order be adjusted upward, downward, or not at all. Only a review could produce a "determination that there should be no change." Thus, the review itself is a "screen" to determine whether an adjustment in the amount of child support should be sought. In situations in which a review is not required, such as a case in which the support order is less than a year old, relying on information from automated databases to determine whether a complete review is warranted is permissible, unless supplemental information is brought to the attention of the agency conducting the review.

The experience of the Oregon Child Support Updating Project in using partial automated reviews indicated that sole reliance on computer matching to conduct reviews cannot ensure the accuracy of the information used to compute the appropriate child support amount under State guidelines. Oregon determined that case disposition using the Partial Automated Review (PAR) process often took longer and required greater work than the full manual procedure. Under the PAR process, the child support agent accessed automated data sources, computed a new child support award amount using that data, and notified the parents of the result. Because the results were often based on incomplete data, parents usually submitted additional information, which required that the support amount be recalculated. The initial computations obtained under PAR created false parental expectations in many situations, with the consequence that staff time had to be diverted to responding to complaints and explaining why the final result was lower or higher than expected.

Two reasons were cited in the final report on the Oregon project to explain the difficulty with PAR. First, for every case in which adequate Oregon Employment Wage Commission (EWC) earnings information was available for the obligor, the child support agent prepared a child support calculation worksheet and a proposed consent agreement and attached these documents to the initial notice letters to both parents. Because both parents rarely agreed to the new support amount specified in the notice, preparing the documents was usually wasted effort. Secondly, the simulated child support calculation was based only on financial information obtained from EWC or

imputed. If either parent provided additional earnings or allowable deductions information in response to the notice, the child support agent had to calculate a new child support amount.

2. Comment: One commenter argued that to complete a full review on all cases would require significant additional resources and cause unnecessary work.

Response: If an order is eligible for review based on its age, a State may not substitute a pre-screening or a partial review for a complete review by speculating as to the ultimate outcome. If, however, an objective evaluation of the circumstances in a particular case indicates no apparent change in the parents' situation (*e.g.* the obligation was originally established under guidelines, neither the obligee nor the obligor's income have changed), the State could readily assess that no adjustment is appropriate and notify the parties accordingly, allowing the parties the right to challenge such determination. States are also permitted to establish a reasonable quantitative standard, or threshold, to guide decisions whether to petition for an adjustment following a review. This topic is discussed more extensively elsewhere in this preamble.

To reduce the need suggested by the commenter for additional resource requirements and the possibility of unnecessary work, we encourage States to adopt procedures and other means that facilitate entering adjusted orders on the basis of stipulations or consent agreements between the parties, as long as the appropriate amount of child support to be paid is determined in accordance with State guidelines. For example, all of the demonstration projects originally proposed to test a consent-oriented approach to obtaining adjusted orders, with streamlined or simplified administrative, quasi-judicial, or expedited judicial processes. Prior to processing a case through the regular judicial or administrative channels, project staff would attempt to obtain stipulations to a modified order based on guidelines.

In their demonstration projects, Colorado, Delaware, and Florida were able to obtain adjusted orders based upon out-of-court stipulations. Data from the Colorado project reflect that 62 percent of adjusted orders were accomplished by consent of the parties. Similarly, in Florida, 77 percent of the adjusted orders were obtained through stipulation of the parties. The vast majority (99.6 percent) of Delaware's modifications were obtained through the mediation process. In Illinois, all but one of the 1,382 adjusted orders were obtained through the judicial process. In Oregon, overall, 42 percent of the adjusted orders were obtained by consent of the parents, 28 percent were obtained by default, and 30 percent were obtained in an administrative or judicial hearing.

States have considerable latitude and flexibility in determining the site and degree of formality for reviews, as long as required reviews are conducted through a proceeding before a court, quasi-judicial process, administrative body or agency, notices are issued, timeframes are met, and guidelines are used, in compliance with Federal law and regulations. The experiences of the demonstration project States illustrate that not every case in which an adjustment is warranted requires a full judicial or administrative hearing to obtain a disposition.

Permissive Review

1. Comment: Several commenters questioned whether reviews may be pursued in non–AFDC cases without a request from a parent. They asked whether, in a non-AFDC IV–D case, a potential adjustment could be forced upon unwilling parties if the State chooses to review and the review results in a determination that the child support amount should be changed. If a State decides to review absent a request, is there a right to refuse the review before it is conducted or must the parties await the review results and then challenge the determination?

Response: The Act requires that States review, upon the request of either parent, any order that does not have an assignment of support rights as defined in § 301.1. The law does not preclude a State from going beyond the statutory requirement, therefore, States may conduct a review of all non-AFDC IV–D cases with orders. The notice of the rights to request a review required at § 303.8(c)(2) would provide parents with information on the circumstances under which the State would conduct a review. If the State determines that a review is warranted, even if not requested, either or both parents have a right to initiate proceedings to challenge the proposed adjustment or any other determination made on the basis of the review. Therefore, while such a review may be conducted without a request from either party, to conduct a review absent a request may be an inefficient use of State resources.

With respect to the question concerning the right to refuse a review conducted on the State's own initiative, once the State has decided to conduct a review absent a request from either parent, the review and adjustment process may proceed to completion despite the parents' objections. The parties may not refuse the review. The opportunity to challenge the proposed adjustment is available to the parents following notification of the results of the review or within the judicial or administrative proceedings for adjusting the order. Certainly, a State may not close a case or deny further services to a non-AFDC custodial parent who did not request, and refuses to cooperate in, a review conducted at the State's initiative. Based on the experiences in the demonstration projects, we believe that States' efforts will be focused upon conducting the required and requested reviews, and if the State chooses, reviews on their own initiative with which the parties are cooperative, rather than devoting time and expense to elective activities in which both parties are unwilling participants in the process.

The reason for not requesting a review may be a lack of knowledge that review is available. This underscores the importance of notifying the parties of the right to request a review. In its preliminary report on the Wisconsin Order Revision Pilots, the Institute for Research on Poverty, University of Wisconsin-Madison, cites various reasons why custodial parents might not pursue an action to upgrade an order which could potentially increase the income available for the children in their custody. These reasons include: (1) A perception that the existing award is "final"; (2) lack of knowledge as to how to pursue a change; (3) an assumption that the process would be too expensive; (4) fear of "rocking the boat" (causing custody or visitation issues to surface); (5) fear that action would produce a lower award; and (6) lack of awareness of the effect of inflation on the real value of the support award over time. The Oregon Child Support Updating Project conducted a telephone survey or interviews of non-AFDC parents who failed to return a review authorization form, in order to better understand why parents did not authorize a review of their child support orders. Numerous reasons were mentioned by parents for not authorizing a review. Many responses suggested that obligees believed it was pointless to adjust a support amount that the obligor was not presently paying. Other obligees seemed concerned that the obligor may stop paying support if the ordered amount was increased. Still others appeared to have some problems with the forms or were concerned about what direction (upward or downward) the adjustment

would take. Similar findings are indicated in the results among the other four demonstration projects. Across the four projects, non-AFDC cases were terminated from the review process at a much higher rate (72 percent) than AFDC cases (60 percent), principally because of a lack of authorization or cooperation needed from non-AFDC IV–D cases to conduct a review. Reasons typically cited for refusing a review mirror those raised in the earlier Wisconsin and Oregon updating projects. Review terminations in AFDC cases generally resulted from AFDC case closings, inability to locate the obligor, or lack of employer or income information upon which the review could be conducted.

Basis for Seeking Adjustment—Section 303.8(d)

1. *Comment:* Several commenters requested regulatory language to enhance their efforts in securing legislative amendments to change their statutory change in circumstances requirements. As indicated by the commenters, in most States, the party seeking the modification of a child support order, must allege and prove that a material, significant change in circumstances has occurred since establishment of the current order before a change is warranted. As noted by commenters, this burden in many States has traditionally been quite stringent, often requiring that parties prove that the claimed change in circumstances could not have been contemplated at the time of entry of the original order.

Response: As required under section 467(b)(2) of the Act, added by section 103(a) of Public Law 100–485, effective October 13, 1989, there shall be a rebuttable presumption, in any judicial or administrative proceeding for the award of child support, that the amount of the award which would result from the application of guidelines for child support award amounts within the State is the correct amount of child support to be awarded. In § 303.8(d)(1), we specify that inconsistency between the existent child support award amount and the amount of child support which results from an application of the State guidelines must be an adequate basis, under State law, for petitioning for an adjustment of an order in a IV–D case. Two exceptions to this requirement are permitted. The first exception is allowed if the State establishes a reasonable quantitative standard based upon either a fixed dollar amount or percentage, or both, as a basis for determining whether an inconsistency between the existent child support award amount and the amount of support which results from application of the guidelines is adequate grounds for petitioning for adjustment of the order. The second exception is permitted if the inconsistency is due to the fact that the amount of the current child support award resulted from a rebuttal of the guideline amount and there has not been a change in the circumstances which resulted in the rebuttal of the guideline amount.

In recent years, several States have adopted legislation expanding the definition of material or substantial change in circumstances to specify that adoption of guidelines alone constitutes a requisite change in circumstances or otherwise addressing the application of guidelines in modification proceedings. Illinois permits a one-time modification of those orders established before the guidelines were implemented to adjust the child support award to guideline levels, without the necessity of proving a change in circumstances. Appellate courts in at least two States have ruled that the adoption of support guidelines changed the rules for determining child support. One opinion holds that the material change in circumstances test no longer applies, that the question now is whether there is a "significant variance" between the guidelines and the amount of child support agreed to by the parties or ordered by the judge, and that, had the State legislature intended that the guideline statute could only be invoked upon a change in circumstances, it would have clearly said so.

2. *Comment:* One commenter suggested that States, in establishing the threshold, consider percentage amounts rather than fixed dollar amounts, noting that a $10 change makes a greater impact on a $50 monthly award than a $100 monthly award. Another commenter stressed that setting the threshold too low would literally bury the system with cases requesting upward or downward adjustments where there are minor fluctuations in either party's income; setting the threshold too high would foreclose cases otherwise appropriate for adjustment.

Response: We do not prescribe a particular fixed dollar or percentage in the regulation, as we believe this will allow States the necessary flexibility and discretion to establish an appropriate and reasonable quantitative standard. If a State establishes a threshold test, we urge the State not to aim too high or too low. In establishing a threshold, States may wish to consider adopting one which combines a "percentage or fixed dollar amount, whichever is lesser" so as to make the test more equitable across both income levels and family size. For example, meeting a 20 percent increase/decrease test is considerably more difficult in the case of a $500 order for three children than a $150 order for one child. In the former situation, the order would have to increase/decrease under guidelines by at least $100 in order to meet the threshold. In the latter, a $30 difference would suffice to warrant seeking an adjustment.

We encourage States to consider the experiences of the demonstration project States as well as other jurisdictions which have adopted thresholds applicable to review and adjustment processes. For example, Colorado and Florida will seek adjustment if there is a difference of at least 10 percent (plus or minus) from the current order amount. Illinois requires a change of plus or minus 10 percent and at least $5 in the order amount. Delaware requires a change of at least $25 in the monthly order amount. At the time of the Oregon project's inception, the criterion for modification in the State was that the moving party allege and prove a "substantial change in circumstances since entry of the order." Processing modifications became less burdensome and more predictable when Oregon adopted a guidelines-based modification standard and implemented an administrative criterion for the project of plus or minus 10 percent of the current support amount, and at least $25 per month as the minimum requisite change. We encourage States not only to examine the approaches adopted elsewhere, but to involve and work closely with the judiciary, the private bar, parents' groups, and other concerned parties in establishing the percentage or fixed dollar amount, or both, as a threshold.

We recognize that the traditional "substantial change in circumstances" test is applicable in many States. However, we believe that, by requiring States to use guidelines as a rebuttable presumption of the correct amount of support to be paid and requiring periodic review and adjustment, if appropriate, in accordance with such support guidelines, the Congress intended that States use guidelines as the basis for determining the need to change the amount of the child support award, rather than any other standard. The adoption of a threshold amount constituting a change sufficient to proceed with a request for an adjustment, following a review, will allow the review to be the means through which potential eligibility or

suitability of an order for adjustment is determined.

Establishment of a threshold will enable a reviewer to ascertain, based on a calculation of the amount of support presumed to be correct under guidelines, whether an adjustment is warranted. For example, if the VI–D agency conducts a review and determines that the proposed change in the amount of support does not meet the threshold established by the State for determining whether to petition for an adjustment, the IV–D agency does not have to proceed to file a petition. Certainly, under such circumstances, the decision by the IV–D agency not to proceed with a petition or motion to adjust the order does not preclude either parent from filing such a petition through the judicial or administrative process, either through counsel or *pro se*. We encourage States to include, as part of the notice sent to each parent concerning the right to request a review and other publicity about the review and adjustment process, information about any thresholds used in the review process and the avenues available for obtaining adjustments to the support order.

3. Comment: Several commenters suggested that the threshold be merely a starting point for deciding whether an adjustment is warranted. One commenter asked that we consider permitting States to use the numeric standard in concert with non-quantifiable standards to ensure that determinations about the appropriateness of adjustment are accurate.

Response: We believe that using the reasonable quantitative standard, or threshold, as merely the starting point or using non-quantifiable standards along with guidelines would provide more latitude to apply additional critieria to decide whether adjustment is warranted than was intended by the Act. Because the Act ties adjustment directly to guidelines, any latitude or variance should come from the guidelines computation itself and the opportunity afforded parties to rebut the presumption that the guideline amount is the correct amount of child support to be awarded in a case. We do not believe that requiring stricter criteria for adjustment beyond inconsistency with guidelines is necessary, because the opportunity to present other non-quantifiable evidence is a component of the right to rebut the presumption by demonstrating that application of the guidelines in a particular case would be unfair or inappropriate.

As indicated earlier, the reasonable quantitative standard, or threshold, established by the State should be used as a basis for deciding whether to petition for an adjustment. Presumptive guidelines, not the threshold established by the State, must be the basis upon which the judicial or administrative entity with authority to adjust child support order determines whether or not to adjust the order. Therefore, even if an established threshold is not met in a particular case, such that the IV-D agency or other reviewer decides not to proceed with a petition to adjust the order, the court or administrative authority may still act upon a petition from either parent, apply the guidelines, and establish an adjusted order.

4. Comment: One commenter observed that because guidelines are to be used as a rebuttable presumption, any order established under guidelines which differs from the guideline amount is immediately inconsistent. The commenter indicated that it may be inappropriate to petition for an adjustment merely because of an inconsistency due solely to a rebuttal of the presumption. The commenter suggested that all financial factors originally considered by the court should be reviewed when determining whether an adjustment is warranted.

Response: We agree with the commenter's analysis and have incorporated an exception to the inconsistency with guidelines requirement in § 303.8(d)(1) to address such situations. The exception encompasses cases in which the inconsistency between the current child support award amount and the amount of support required under guidelines is due to the fact that the amount of the current support award resulted from a rebuttal of the guideline amount and there has not been a change in the circumstances which resulted in the rebuttal of the guideline amount. The existence of situations such as that illustrated by the commenter underscores the importance of compliance with the requirement regarding written findings or specific findings on the record of a judicial or administrative proceeding for the award of child support regarding rebuttal of the guidelines. As required by § 302.56(g), findings that rebut the guidelines shall state the amount of support that would have been required under the guidelines and include a justification of why the order varies from the guidelines. Having such information available should prove beneficial in determining whether an adjustment is appropriate due to an inconsistency or whether the exception is applicable in a particular case.

Need for Provision for Health Care Needs

1. Comment: One commenter indicated a belief that determining the availability of health insurance will not result in enough benefits to the child to justify a substantial investment in staff time.

Response: Since December 2, 1985, under § 303.31(b)(1), IV-D agencies have been required to petition the court or administrative authority to include health insurance that is available to the absent parent at reasonable cost in new or modified court or administrative orders for support, unless the custodial parent and the children have satisfactory health insurance other than Medicaid. The IV-D agency is also required to petition the court or administrative authority to include medical support whether or not health insurance at reasonable cost is actually available to the absent parent at the time the order is entered or modification of current coverage to include the children is immediately possible. Additionally, since September 16, 1988, under § 303.31(b)(4), IV-D agencies are required to petition the court or administrative body to modify support orders to include a requirement for medical support in the form of health insurance, in cases identified under State criteria as having high potential for obtaining medical support. Thus, medical support responsibilities are not new requirements for States.

We believe that requiring States to determine the need to provide for the health care needs of the children as part of the review process reinforces the existent medical support enforcement requirements. Furthermore, the review process serves as a convenient way to deal with both the financial support and the health care needs of the children in the same transaction and to eliminate duplication of effort. Section 302.56(c)(3) requires that State guidelines for setting child support award amounts must provide for the children's health care needs, through health insurance coverage or other means.

In all five demonstration project States, modification for medical support could be sought independently of any change in the amount of the child support award and associated legal standards. In the earlier demonstration project in Oregon, some provision was made for obligors to carry medical insurance for their supported children in all but four percent of the adjusted orders. Oregon determined that a major benefit of reviewing previous support orders was the high proportion of

adjusted orders that included a provision for the obligor to carry medical insurance. Among the orders adjusted through the Oregon project, 63 percent of orders in AFDC cases, 75 percent of orders in former AFDC cases, and 54 percent of orders in non-AFDC cases did not previously provide for the health care needs of the children, but did so as a result of the adjustment process. Data from the other demonstrations projects indicate similar outcomes. For example, modifications for medical support were obtained in conjunction with adjustments in the order amount in 69 percent of the cases in Colorado and nearly half of the cases in Illinois.

Given the high cost of health care and the relatively nominal cost of health insurance, OCSE considers medical support to be generally advantageous to children. In cases in which there is an assignment of support rights, as defined under § 301.1, medical support need not be sought if the custodial parent has satisfactory health insurance coverage other than Medicaid available on behalf of the children. However, as provided under § 303.31(b)(2)(i), the medical support requirement is not dependent on the absent parent actually having coverage available at reasonable cost at the time the order is entered or adjusted. With respect to non-AFDC cases not receiving Medicaid, the decision to petition for inclusion of medical support is guided by a determination of high potential cases under State criteria required under § 303.31(b)(3) and the consent of the individual applying for IV–D services, as specified under § 303.31(c).

Timeframes for Review and Adjustment—Section 303.8(e)

1. *Comment:* Numerous commenters objected to placing timeframes for review and adjustment with those governing establishment of support obligations. In general, most commenters urged us to put timeframes in a separate section, apart from the timeframes in § 303.4. Many commenters expressed concern that the proposed wording and inclusion with the establishment requirements made the timeframe confusing, and subject to the potential misinterpretation that every time a parent was located or paternity was established, a review had to be conducted. Most commenters urged us to wait until the reports from the review and adjustment demonstration projects were completed before establishing timeframes (and before making regulations effective).

Response: In response to these comments, the final regulation specifies two explicit timeframes which must be met by States in conducting review and adjustment activities. Section 303.8(e)(1) requires that in any case in which support rights are assigned to the State under § 301.1, the State must determine, within 15 calendar days of October 13, 1993, or the date the child support order is 36 months old, whichever date occurs later, whether a review should be conducted. Subsequent determinations about whether to conduct a review must be made in accordance with paragraph (c)(4), at 36-month intervals based upon the date the child support order was adjusted or the date an order was entered determining that the child support order should not be adjusted, or, in any case in which a petition or motion for adjustment was not filed following a review, the date upon which the post-review challenge period ended.

Section 303.8(e)(2) imposes a 15-calendar-day timeframe on the State for making a determination whether a review should be conducted where a request for a review is made, based upon the date of receipt of a request. Section 303.8(e)(3) specifies a 180-calendar-day period for conducting specified review and adjustment activities, measured from the date of determining that a review should be conducted or locating the non-requesting parent, if necessary, whichever is later. Our decision to expand the timeframe from the 90 days specified on the proposed rule is based upon the suggestions of commenters and indications from the experiences in the demonstration projects, as well as recognition of the need to incorporate the statutory 30-day pre-notice and 30-day post-notice requirements.

The findings and experiences of the demonstration projects substantiate that a 180-calendar timeframe is both necessary and reasonable. The time for completing the review and adjustment process experienced in the demonstration States was measured from case selection as the starting point. Location of the non-requesting parent was not a criteria for selection, but a post-selection, pre-review activity. Thus, time devoted to location was a component of the processing times used to compute the average length of time the review and adjustment process encompasses. The 180-calendar-day timeframe imposed by these regulations does not commence to run until the non-requesting parent is located or determination to review is made, whichever is later. We believe including location as a necessary prerequisite allows States additional time of up to 75 calendar days after determining location is necessary to access location sources and ensure that locate information is sufficient to take the next appropriate action in the case, as required by § 303.3(b)(3).

In the Oregon Child Support Updating Project, modified orders required an average of 200 calendar days to be established, measured from the date a case was selected for review to the date a modified order was entered. This average was achieved using expedited court dockets in the nine participating counties, involving designating a half day of court time each month strictly for handling modification cases. The Oregon demonstration project found no significant difference in time required to obtain adjusted orders by administrative process (190 calendar days) as compared to judicial processes (212 calendar days). As noted in the "Findings from the Third Year Research" (September 1991) under Oregon's project, the greater time required to obtain judicial modifications prompted Oregon to adopt legislation giving the Oregon Support Enforcement Division authority to modify all orders under its jurisdiction—both those established by administrative process and those established by judicial process—through an administrative process. Under this law, administratively-modified orders that had been originally established by a judge, will still be ratified and approved by a judge. Because such a process is anticipated to eliminate delays associated with docketing court hearings, the change to a totally administrative process is expected to reduce the calendar time required to obtain an adjusted order. Third-year supplemental data from the Oregon project reflect that the method used for obtaining the adjusted order also influenced the amount of time required to complete the process. The average time was significantly less for adjusted orders obtained by consent (146 calendar days) than those obtained by default (217 calendar days) or after a judicial or administrative hearing (248 calendar days).

Data from the demonstration projects conducted in Colorado, Delaware, Florida, and Illinois reflect that the overall average length of time from case selection to adjustment across all four projects for 3,207 cases in which adjustment activities were completed was 195 calendar days. In Delaware, the average time required was 174 calendar days and in Illinois, an average of 171 calendar days was necessary. The average time to obtain an adjusted order in the Florida project was 162 calendar days. Colorado experienced the longest

average time (252 calendar days) from selection to adjustment. This average was clearly affected by the method by which the adjustment was obtained. Of the orders adjusted, 576 were obtained by stipulation of the parties, representing 62 percent of the total cases modified. The average time required for processing these cases was 216 calendar days. Cases in which obtaining an adjustment involved a court hearing, including modified orders by default, took longer, and affected the overall average amount of time required. Data from the demonstration projects also indicate that interstate cases do take longer, but only about one month longer. In Colorado, for example, findings indicate that, on average, adjusting an interstate case took only nine days longer than an in-State case. These findings are consistent with those from the Oregon project. In Oregon, the average calendar time to obtain an adjusted order was only slightly longer (16–19 calendar days) for cases in which one parent lived in the State than for cases in which both parents lived in the State.

During the 180-calendar-day timeframe, all necessary preliminary activities must occur, including preparation of any pleadings and documents necessary before issuance of the advance notice of the review. Following the issuance of the notice, and as explicitly required by statute, at least 30 calendar days must elapse before the review is actually conducted. This period should be the time for gathering information, both from the parties and by accessing any other databases or information sources available to the State (labor/wage screens or employer inquiries, for example).

The balance of the period following the 30-calendar-day pre-review period allows time for conducting the review, determining whether an adjustment is warranted, preparing any written findings, sending the post-review notice of the results to the parties, petitioning for adjustment, where indicated, and adjusting the order or determining that no adjustment should be made, no later than the 180th calendar day following the determination that a review should be conducted or locating the non-requesting parent, whichever occurs later. Depending upon the State's processes for conducting reviews and making adjustments to child support orders, each of the various activities within the 180-calendar-day timeframe may be the responsibility of a different entity, including the IV–D agency, the judicial or administrative process, and the parties.

2. Comment: Several commenters contended that a timeframe is not intended by Congress because review and adjustment are not mentioned in section 121 of Public Law 100–485, which requires the Secretary to establish time limits within which States must accept and respond to requests for assistance in establishing and enforcing support orders, including requests to locate absent parents, establish paternity and initiate proceedings to establish and collect support awards.

Response: We disagree with the commenter's contention that Congress intended that no timeframes apply to the process for review and adjustment of orders. As set forth in section 452(a) of the Act, OCSE is required to establish such standards for State programs as determined to be necessary to assure that such programs will be effective. Additionally, as specified in section 452(h) of the Act, these standards shall include standards establishing time limits governing the period or periods within which a State must accept and respond to requests for assistance in establishing and enforcing orders. While the statute mentions the kinds of requests included, the specific activities enumerated are by no means inclusive of the various activities involved in establishing and enforcing support orders for which standards or time limits are appropriate. We use our regulatory authority, under section 1102 of the Act, to impose a timeframe requirement for completion of review and adjustment activities. The timeframe of 180 calendar days means that review and adjustment falls outside of the basic expedited processes requirement under § 303.101(b)(2), which requires that actions to establish or enforce child support must be completed from time of successful service of process to the time of disposition within the following timeframes: 90 percent in 3 months, 98 percent in 6 months, and 100 percent in 12 months.

Review and Adjustment in Interstate Cases—Section 303.8(f)

1. Comment: One commenter asked that regulations address whether a rendering court has jurisdiction to honor a request to adjust an order for support if neither party presently resides in that State.

Response: We believe that absent any controlling Federal law, State law governs such circumstances. Therefore, it would be inappropriate to delineate in regulations matters within the authority of each State. Generally, a court which enters a child support order retains continuing subject matter jurisdiction to review and adjust such order and continuing personal jurisdiction over the parties regardless of their present residence provided that the court had personal jurisdiction over the parties at the time the order was entered.

If the rendering court had personal jurisdiction over the parties at the time the order was entered, such jurisdiction is not lost with respect to actions flowing out of the original order such as enforcement or adjustment, regardless of where the parties are presently situated. However, a rendering court, although it may have ongoing jurisdiction, may decline to exercise such jurisdiction if it considers itself to be an inconvenient forum because none of the parties to the original action currently reside in or have any present connection with that State. For example, following a divorce decree in one State, both parties may have relocated to other States. Instead of conducting the review "long-distance" or forcing both parties to litigate the adjustment in the original court, one party could register the child support order in the court of another State which has personal jurisdiction over the other party.

2. Comment: One commenter inquired whether States will be required to share their review and adjustment criteria with all other States so that in interstate cases the initiating jurisdiction can provide necessary documentation for the responding State to act on the request and so that individuals affected will know in advance what criteria will be used to make a determination.

Response: In Decemeber 1990, OCSE distributed a "State At A Glance" directory on computer diskette to each State, which contains State profile information about each State as well as specific documentation requirements for each of the various establishment and enforcement functions, including modification. This publication may be a valuable resource for States in preparing requests for review for referral to other States. OCSE is exploring the possibility of periodically updating this reference tool to reflect changes in State law and practices.

3. Comment: Several commenters urged that regulations include a separate section on interstate review and adjustment.

Response: Accordingly, we added § 303.8(f) to address specific requirements for providing review and adjustment services in interstate cases.

Executive Order 12291

The Secretary has determined, in accordance with Executive Order 12291, that this proposed rule does not

constitute a "major" rule. A major rule is one that is likely to result in:

(1) An annual effect on the economy of $100 million;

(2) A major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or

(3) Significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

This rule implements specific requirements of Public Law 100–485. We expect the additional costs to the States will be less than $100 million. Any costs will be administrative and can be minimized through careful State planning. We believe increased collections as a result of adjustments to child support award amounts and the imposition of immediate wage withholding in these cases will exceed increased administrative costs.

Regulatory Flexibility Analysis

The Secretary certifies, under 5 U.S.C. 605(b), as enacted by the Regulatory Flexibility Act (Pub. L. 96–354), that this proposed regulation will not result in a significant impact on a substantial number of small entities. The primary impact is on State governments and individuals, which are not considered small entities under the Act.

List of Subjects in 45 CFR Parts 302 and 303

Child support, Grant programs—social programs, Reporting and recordkeeping requirements.

(Catalog of Federal Domestic Assistance Program No. 93.023, Child Support Enforcement Program)

Dated: May 16, 1992.

Jo Anne B. Barnhart,

Assistant Secretary for Children and Families.

Dated: July 22, 1992.

Louis W. Sullivan,

Secretary.

Editorial Note: This document was received at the Office of the Federal Register on December 18, 1992.

For the reasons set out in the preamble, 45 CFR chapter III is amended as follows:

PART 302—STATE PLAN REQUIREMENTS

1. The authority citation for part 302 continues to read as follows:

Authority: 42 U.S.C. 651 through 658, 660, 664, 666, 667, 1302, 1396a(a)(25), 1396b(d)(2), 1396b(o), 1396b(p), and 1396(k).

2. Section 302.70 is amended by revising paragraph (a)(10) to read as follows:

§ 302.70 Required State laws.

(a) * * *

(10) Procedures for the review and adjustment of child support orders:

(i) Effective on October 13, 1990 until October 12, 1993, in accordance with the requirements of §§ 303.8 (a) and (b) of this chapter; and

(ii) Effective October 13, 1993, or an earlier date the State may select, in accordance with the requirements of § 303.8 (a) and (c) through (f) of this chapter.

* * * * *

PART 303—STANDARDS FOR PROGRAM OPERATIONS

3. The authority citation for part 303 continues to read as follows:

Authority: 42 U.S.C. 651 through 658, 660, 663, 664, 666, 667, 1302, 1396a(a)(25), 1396b(d)(2), 1396b(o), 1396b(p), and 1396(k).

4. Section 303.7 is amended by adding paragraph (b)(6), by adding paragraph (c)(7)(v), and by amending paragraph (c)(8) by replacing the word "modification" with the word "adjustment," to read as follows:

§ 303.7 Provision of services in interstate IV–D cases.

* * * * *

(b) * * *

(6) Send a request for review of a child support order to another State within 20 calendar days of determining that a request for review of the order should be sent to the other State and of receipt of information from the requestor necessary to conduct the review in accordance with §§ 303.8(f)(1) of this part.

(c) * * *

(7) * * *

(v) Reviewing and adjusting child support orders upon request in accordance with § 303.8(f)(2) of this part.

* * * * *

5. Section 303.8 is amended by adding new paragraphs (c), (d), (e), and (f) to read as follows:

§ 303.8 Review and adjustment of child support orders.

* * * * *

(c) *Review of child support orders.* Effective October 13, 1993 or an earlier date the State may select, the State must, when providing services under this chapter:

(1) Have in effect and use a process for review and adjustment of child support orders in effect in the State, including a process for challenging a proposed adjustment or determination.

(2) Notify each parent subject to a child support order in the State of the right to request a review of the order, and the appropriate place and manner in which the request should be made.

(3) Periodically publicize the right to request a review as part of its support enforcement services as required under § 302.30 of this chapter and include notice of this right as part of information on IV–D services under § 303.2(a)(2) of this part.

(4) Review child support orders at 36-month intervals after establishment of the order or the most recent review, unless:

(i) In a case in which there is an assignment as defined in § 301.1 of this chapter, the State determines, in accordance with § 303.8(c)(5) of this section, that a review would not be in the best interests of the child and neither parent has requested a review; or

(ii) In a case in which there is no such assignment of support rights to the State, neither parent has requested a review; or

(iii) In a case in which medical support rights are assigned under 42 CFR 433.146, but child support rights are not assigned to the State under § 232.11 of this title or § 471(a)(17) of the Act, the order requires the provision of health insurance coverage, and neither parent has requested a review; or

(5) Determine that a review of the child support order would not be in the best interests of a child if there has been a finding of good cause as set forth at §§ 302.31(c) and 232.40 through 232.49 of this title or under 42 CFR 433.17(c), and the State of local IV–A, XIX, or IV–E agency has determined that support enforcement may not proceed without risk of harm to the child or caretaker relative.

(6) Notify or serve process upon each parent subject to a child support order in effect in the State of:

(i) Any review of such order at least 30 calendar days before commencement of the review, and

(ii) Any information necessary to conduct the review that each parent must provide and the date by which such information must be provided.

(7) Following any review, notify each parent subject to the child support order of:

(i) A proposed adjustment or a determination that there should be no adjustment in the order; and

(ii) Each parent's right to initiate proceedings to challenge the proposed adjustment or other determination, not

less than 30 calendar days after the notice.

(8) Adjust the order, or determine that there should be no adjustment, as appropriate, in accordance with the State's guidelines for setting child support awards and paragraph (d) of this section.

(d) *Basis for seeking adjustment.* (1) Inconsistency between the existent child support award amount and the amount of child support which results from application of the State guidelines must be an adequate basis, under State law, for petitioning for an adjustment of an order in a IV–D case, unless:

(i) the inconsistency does not meet a reasonable quantitative standard established by the State, in accordance with paragraph (d)(2) of this section or

(ii) the inconsistency is due to the fact that the amount of the current child support award resulted from a rebuttal of the guideline amount and there has not been a change in the circumstances which resulted in the rebuttal of the guideline amount.

(2) The State may establish a reasonable quantitative standard based upon either a fixed dollar amount or percentage, or both, as a basis for determining whether an inconsistency between the existent child support award amount and the amount of support which results from application of the guidelines is adequate grounds for petitioning for adjustment of the order.

(3) The need to provide for the child's health care needs in the order, through health insurance or other means, must be an adequate basis under State law to petition for adjustment of an order to provide for the children's health care needs, regardless of whether an adjustment in the amount of child support is necessary. In no event shall the eligibility for or receipt of Medicaid be considered to meet the need to provide for the child's health care needs in the order.

(e) *Timeframes for review and adjustment.* (1) In any case in which support rights are assigned to the State under § 301.1 of this part, the State must determine, within 15 calendar days of October 13, 1993 or the date the child support order is 36 months old, whichever date occurs later, whether a review should be conducted, as required under paragraph (c)(4) of this section. Subsequent determinations about whether to conduct a review must be made in accordance with paragraph (c)(4) of this section, at 36-month intervals based upon the date the child support order was adjusted or the date an order was entered determining that the child support order should not be adjusted, or, in any case in which a petition or motion for adjustment was not filed following a review, the date upon which the post-review challenge period ended.

(2) Within 15 calendar days of receipt of a request for a review, the State must determine whether a review should be conducted, as required under paragraph (c)(4) of this section.

(3) Within 180 calendar days of determining that a review should be conducted or locating the non-requesting parent, whichever occurs later, a State must:

(i) Send the notice or serve process required under paragraph (c)(6) of this section that a review will be conducted;

(ii) Conduct a review of the order;

(iii) Send the notice of the proposed adjustment or determination that there should be no adjustment as required under paragraph (c)(7) of this section; and

(iv) Adjust the order or determine that the order should not be adjusted in accordance with paragraph (c)(8) of this section.

(f) *Interstate review and adjustment.* Effective October 13, 1993, or such earlier date the State may select:

(1) *Initiating State responsibilities.* The State in which a request for review is made, or in which there is an assignment of rights to support, as defined under § 301.1 of this part, must:

(i) In any case in which support rights are assigned to the State under § 301.1, determine, within 15 calendar days of October 13, 1993, or the date the child support order is 36 months old, whichever date occurs later, whether a review should be conducted, as required under paragraph (c)(4) of this section, and in which State a review and adjustment will be sought. Subsequent determinations about whether to conduct a review must be made in accordance with paragraph (c)(4) of this section, at 36-month intervals based upon the date the child support order was adjusted or the date an order was entered determining that the child support order should not be adjusted, or, in any case in which a petition or motion for adjustment was not filed following a review, the date upon which the post-review challenge period ended.

(ii) Within 15 calendar days of receipt of a request for a review, determine whether a review should be conducted, as required under paragraph (c)(4) of this section, and in which State a review and adjustment will be sought.

(iii) If the State determines under paragraph (f)(1)(i) or paragraph (f)(1)(ii) of this section that it should review a child support order in effect in the State, the State shall, within the 180-calendar-day timeframe for review and adjustment of child support orders set forth in paragraph (e)(2) of this section, send the notice that a review will be conducted to each parent, conduct a review, provide notice to the parties of the right to challenge the proposed adjustment or other determination, and adjust the order or determine that the order should not be adjusted, in accordance with paragraphs (c) (6) through (8) of this section.

(iv) If the State determines under paragraph (f)(1)(i) or paragraph (f)(1)(ii) of this section to request a review of a child support order in another State, send a request for review to that State within 20 calendar days of receipt of sufficient information to conduct the review and provide that State with sufficient information on the requestor to act on the request, in accordance with the requirements of § 303.7(b)(6) of this part.

(v) If the request for review is the first contact between the initiating and responding States in the case, send the request for review to the interstate central registry in the responding State. However, if the initiating State has previously referred the case to a responding State for action and determines under paragraph (f)(1)(i) or paragraph (f)(1)(ii) of this section that the child support order should be reviewed in that responding State, the request for review may be sent directly to the appropriate agency in the responding State for processing.

(vi) Send, to the parent in the initiating State, a copy of any notice issued by a responding State in connection with the review and adjustment of an order, within 5 working days of receipt of such notice in the initiating State.

(2) *Responding State responsibilities.* (i) Within 15 calendar days of receipt of a request for a review of a child support order in the responding State, the appropriate processing agency in the responding State must determine whether a review should be conducted, in accordance with paragraph (c)(4) of this section and the responding State's procedures for review and adjustment of child support orders.

(ii) Within 180 calendar days of determining that a review should be conducted or locating the non-requesting parent, whichever occurs later, the responding State must send the notice that a review will be conducted to each parent, conduct a review, adjust the order or determine that the order should not be adjusted, and provide the notice of the adjustment or determination and the right to challenge the adjustment or determination in accordance with

paragraphs (c) (6) through (8) of this section.

(iii) The State may meet the notice requirements of § 303.7(c)(8) of this part by sending the notices of the review required under paragraphs (c)(6) and (c)(7) of this section to the parent in the initiating State through the IV–D agency in the initiating State.

(3) *Applicable laws and procedures.* The applicable laws and procedures for review and adjustment of child support orders, including the State guidelines for setting child support awards, established in accordance with § 302.56 of this chapter, are those of the State in which the review and adjustment, or determination that there be no adjustment, take place.

General Services Administration Acquisition Regulation; Miscellaneous, Changes

AGENCY: Office of Acquisition Policy, GSA.

ACTION: Final rule.

SUMMARY: The General Services Administration Acquisition Regulation (GSAR), Chapter 5, is amended to revise section 501.603–70 to modify the training requirements under the Contracting Officer Warrant Program; to revise section 501.670–4 to modify the requirements for legal review of contract modifications; to revise section 502.101 to modify the definition of "Agency Competition Advocate" and "Contracting Activity Competition Advocate;" to revise section 504.201 to clarify circumstances when contract award data is to be submitted to the paying office; to revise section 504.803 to provide for maintaining evidence of submission of award data in the contract file; to revise section 508.304–5 to eliminate the requirement for use of the GSA–1533 Utility Contract; to delete section 508.371; to revise section 510.011 to add instructions to modify FAR 52.210–1 to update the address and phone number and to delete reference to certain Business Service Centers; to revise section 515.406–1 to eliminate the exception for utility contracts from use of the uniform contract format; to revise section 515.414–70 to provide for use of the GSA–3503 in utility contracts; to add section 530.470 and to revise 533.104 to clarify from whom the notice of a protest after award must be received and the number of days refers to calendar days.

EFFECTIVE DATE: January 1, 1993.

FOR FURTHER INFORMATION CONTACT: Teresa Elmendorf, Office of GSA Acquisition Policy (202) 501–1224.

SUPPLEMENTARY INFORMATION:

A. Executive Order 12291

The Director, Office of Management and Budget (OMB), by memorandum dated December 14, 1984, exempted certain agency procurement regulations from Executive Order 12291. The exemption applies to this rule.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act is not applicable because the changes made in this final rule do not have a significant effect beyond the internal operating procedures of the agency or have a significant cost or administrative impact on contractors or offerors and, therefore, are not subject to publication for comment under section 22 of the Office of Federal Procurement Policy Act, 41 U.S.C. 418b.

C. Paperwork Reduction Act

This rule does not contain any recordkeeping or information collection requirements that require the approval of OMB under 44 U.S.C. 3501 et seq.

List of Subjects in 48 CFR Parts 501, 502, 504, 508, 510, 515, 530, and 533

Government procurement.

Accordingly, 48 CFR parts 501, 502, 504, 508, 510, 515, 530 and 533 are amended to read as follows:

1. The authority citation for 48 CFR parts 501, 502, 504, 508, 510, 515, 530, and 533 continues to read as follows:

Authority: 40 U.S.C. 486(c).

PART 501—GENERAL SERVICES ADMINISTRATION ACQUISITION REGULATION SYSTEM

2. Section 501.603–70 is amended by revising paragraph (h)(1)(iv)(K) to read as follows:

501.603–70 Contracting officer warrant program (COWP).

* * * * *

(h) * * *

(1) * * *

(iv) * * *

(K) Public Utility Contracts—24–40 hours (Applicable to personnel handling public utility procurements)

* * * * *

3. Section 501.670–4 is amended by revising paragraph (a)(3) to read as follows:

501.670–4 Legal review.

(a) * * *

(3) Award of any contract which requires pre-award or post-award clearance by the Office of Acquisition Policy or by a service or regional clearance office under GSA Order, Contract Clearance (APD 2800.1C), and any modifications thereof valued at $25,000 or greater.

* * * * *

PART 502—DEFINITION OF WORDS AND TERMS

4. Section 502.101 is amended by revising the definition of "Agency competition advocate" and "contracting activity competition advocate" to read as follows:

502.101 Definitions.

Agency competition advocate means the Deputy Associate Administrator for Acquisition Policy.

* * * * *

Contracting activity competition advocate means the (1) Deputy Associate Administrator for Acquisition Policy, (2) FSS Competition Advocate, Office of Commodity Management, (3) IRMS Competition Advocate, Office of Information Resources Management Policy, (4) Special Assistant to the Director, Program Support Office, FPRS, (5) Deputy Regional Administrator for Regions 2, 3, 4, 5, 6, 7, 9, and the National Capital Region and (6) the Senior Advisor to the Regional Administrator for Regions 8 and 10. The Deputy Associate Administrator for Acquisition Policy serves as the contracting activity competition advocate for Central Office contracting activities outside of FSS, IRMS, and FPRS.

* * * * *

PART 504—ADMINISTRATIVE MATTERS

5. Section 504.201 is revised to read as follows:

504.201 Procedures.

(a) Contracting Officers are required to send documentation to the paying office on all contracts where a delivery order will be generated by GSA. The documentation shall consist of a "Duplicate Original" of the entire contract or modification, except as provided in paragraph (c), below.

(b) The Contracting Officer shall certify that the "Duplicate Original" is a true copy of the contract or

modification by means of a handwritten signature, in ink, on the award or modification form (i.e., SF 26, 33, 1442, etc.). The certification requirement does not apply to:

(1) Leases of real property;

(2) Schedule contracts; or

(3) Standard or GSA multipage purchase/delivery order carbon forms.

(c) For Federal Supply Service contracts entered into the FSS–19 system and subject to the requirement in paragraph (a), above, distribution to the paying office shall be accomplished through the use of a system-generated contract listing.

6. Section 504.803 is amended by revising paragraph (a)(23) to read as follows:

504.803 Contents of contract files.

(a) * * *

(23) Contractual action. Successful bid or proposal and all pertinent correspondence applicable to the contractual action including evidence of submission of contract award data to paying office, if applicable (see 504.201). Subcontracting plans that are incorporated in and made a material part of a contract, as required by FAR 19.705–5(a)(5), and the successful competing contractor's certificate of procurement integrity required by FAR 3.104–9(b), should be filed under this tab.

* * * * *

PART 508—REQUIRED SOURCES OF SUPPLIES AND SERVICES

7. Section 508.304–5 is revised to read as follows:

508.304–5 Agency acquisition.

Contracting officers shall notify the Public Utilities Services Division (PPU) in accordance with FAR 8.304–5(g), when a utility service supplier refuses to execute a contract.

508.371 [REMOVED]

8. Section 508.371 is removed.

PART 510—SPECIFICATIONS, STANDARDS, AND OTHER PURCHASE DESCRIPTIONS

9. Section 510.011 is amended by adding paragraph (j) to read as follows:

510.011 Solicitation provisions and contract clauses.

* * * * *

(j) When the provision at 52.210–1, Availability of Specifications Listed in the GSA Index of Federal Specifications, Standards and Commercial Item Descriptions, is used in solicitations, the contracting officer is authorized to deviate from the FAR provision by substituting 490 L'Enfant Plaza, SW, Suite 8100, for the street address and 202–755–0325 or 0326 for the telephone numbers of the GSA Specification Unit shown in the provision. Business Service Centers in Chicago, IL; Los Angeles, CA; and Auburn, WA, also must be deleted from the provision because these offices no longer maintain and distribute Federal specifications and standards.

PART 515—CONTRACTING BY NEGOTIATION

10. Section 515.406–1 is amended by revising paragraph (a) to read as follows:

515.406–1 Uniform contract format.

(a) Leases of real property are exempted from the requirement for use of the uniform contract format.

* * * * *

11. Section 515.414–70 is amended by revising paragraph (b) to read as follows:

515.414–70 GSA Forms.

* * * * *

(b) The GSA Form 3503, Representations and Certifications, may be used in solicitations and contracts, except leases of real property.

* * * * *

PART 530—COST ACCOUNTING STANDARDS

12. Section 530.201–5 is revised to read as follows:

530.201–5 Waiver.

Requests to waive CAS requirements under FAR 30.201–5 shall be submitted to the CAS Board through the Associate Administrator for Acquisition Policy.

13. Subpart 530.4 is added consisting of section 530.470 to read as follows:

Subpart 530.4 Cost Accounting Standards

530.470 Waiver of Cost Accounting Standard 9904.412–40(c).

The Associate Administrator for Acquisition Policy (V) on a non-delegable basis may waive the cost assignment provisions of 48 CFR 9904.412–40(c). Requests for waivers shall be forwarded to the Associate Administrator with supporting documentation and rationale. A copy of each approved waiver will be furnished by the Associate Administrator to the CAS Board's Executive Secretary.

PART 533—PROTESTS, DISPUTES, AND APPEALS

14. Section 533.104 is amended by revising paragraph (c) to read as follows:

533.104 Protests to GAO.

* * * * *

(c) *Protests after award.* The procedures in paragraph (a) of this section apply to the handling of protests filed with GAO after award. If the protest is received from GAO (not from protester or any other party) within 10 calendar days after an award, contract performance must be suspended under FAR 33.104(c) unless the HCA determines in writing that contract performance is in the best interests of the United States or that urgent and compelling circumstances that significantly affect the interests of the United States do not permit waiting for the GAO's decision. The written determination and findings (D&F), in the format shown at 501.704–70(e)(2), should be prepared by the contracting officer for signature of the HCA. The D&F must be concurred in by the Regional Counsel (on regional procurements), and the appropriate AGC. After the D&F is approved, it must be returned to the AGC who notifies GAO of the agency's findings and intended action before contract performance is authorized.

BILLING CODE 6820–61–M

INTERSTATE COMMERCE COMMISSION

49 CFR Part 1033

[Ex Parte No. 334 (Sub-Nos. 8 and 8A)]

Joint Petitions for Rulemaking on Railroad Car Hire Compensation and for Exemption of Arbitration Rule and Motion to Dismiss

AGENCY: Interstate Commerce Commission.

ACTION: Revisions to final rules.

SUMMARY: The Commission has revised two of its final rules scheduled to become effective January 1, 1993, governing the 10-year phased deprescription of the car hire rates. As revised, the final rules now treat cars rebuilt on or after January 1, 1991, essentially the same as they treat new cars.

EFFECTIVE DATE: The decision revising the rules is effective on December 28, 1992. The new rules, including these revisions, are effective January 1, 1993.

FOR FURTHER INFORMATION CONTACT:

Richard B. Felder, (202) 927–5610 [TDD for hearing impaired: (202) 927–5721.]

SUPPLEMENTARY INFORMATION: The Commission adopted final rules governing car hire rates in a decision served and published in the **Federal Register** on November 10, 1992, at 57 FR 53450. That decision became effective December 10, 1992. It provided that the rules will become effective January 1, 1993. Based on petitions for reconsideration that were filed, the Commission has revised §§ 1033.1(a)(3) and 1033.1(b)(1) of the new rules. The revisions were made so that new cars and cars rebuilt since January 1, 1991, would be treated similarly. The final rules, including the revisions to these sections, will still become effective January 1, 1993.

Additional information is contained in the Commission's decision. To purchase a copy of the full decision, write to, call, or pick up in person from: Dynamic Concepts, Inc., Room 2229, Interstate Commerce Commission Building, Washington, DC 20423. Telephone: (202) 289–4357/4359. [Assistance for the hearing impaired is available through TDD services (202) 927–5721.]

Regulatory Flexibility Analysis

The Commission certified in its decision served November 10, 1992, that its action will not have a significant impact on a substantial number of small entities. The Petitions for Reconsideration did not challenge that certification, and the revisions of the rules adopted on reconsideration affect only two sections. As treating recently rebuilt cars and recently purchased cars similarly will not have a material effect on small purchased cars similarly will not have a material effect on small entities, the Commission certifies that its action will not have a significant impact on a substantial number of small entities.

This action will not significantly affect either the quality of the human environment or the conservation of energy resources.

List of Subjects

49 CFR Part 1033

Railroads.

49 CFR Part 1039

Agricultural commodities, Intermodal transportation, Railroads.

Decided: December 21, 1992.

By the Commission, Chairman Philbin, Vice Chairman McDonald, Commissioners Simmons and Phillips. Vice Chairman McDonald and Commissioner Simmons would have granted the stay.

Sidney L. Strickland, Jr.,

Secretary.

For the reasons set forth in the preamble, title 49, chapter X, part 1033 of the Code of Federal Regulations is amended as follows:

PART 1033—CAR SERVICE

1. The authority citation for Part 1033 continues to read as follows:

Authority: 49 U.S.C. 10321, 10326, 11121, and 11122; 5 U.S.C. 553.

2. In section 1033.1 Paragraphs (a)(3) and (b)(1) are revised to read as follows:

§ 1033.1 Car hire rates.

(a) * * *

(3) *Fixed rate car.* Any car placed in service or rebuilt prior to January 1, 1991 or for which there was a written and binding contract to purchase, rebuild, or build prior to July 1, 1990, regardless of whether such car bore railroad reporting marks prior to January 1, 1991. Cars purchased or rebuilt on or after January 1, 1991, or under contract after July 1, 1990, will be deemed to be market rate cars. Provided, however, that for a period of one year from January 1, 1993, all cars shall be deemed to be fixed rate cars.

* * * * * *

(b) * * *

(1) Except as provided in paragraph (b)(3) of this section, for a 10-year period beginning January 1, 1993, the prescribed rates shall continue to apply to fixed rate cars without regard to the aging of such cars subsequent to December 31, 1990.

BILLING CODE 7035–01–M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration (NOAA)

50 CFR Part 672

Groundfish of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Approval of a fishery management plan amendment.

SUMMARY: NMFS announces the approval of Amendment 26 to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP). The amendment continues the authorization of time/area closures around Kodiak Island to protect king and Tanner crab habitat areas. The action is intended to promote the recovery of these crab stocks and further the goals and objectives of the FMP that governs fishing for Gulf of Alaska groundfish.

ADDRESSES: Copies of the environmental assessment may be obtained from the North Pacific Fishery Management Council, P.O. Box 103136, Anchorage, AK 99510 (907–271–2809).

SUPPLEMENTARY INFORMATION: During its June 23–28, 1992, meeting, the North

Pacific Fishery Management Council (Council) recommended Amendment 26 for review by the Secretary of Commerce (Secretary) under section 304(b) of the Magnuson Fishery Conservation and Management Act (Magnuson Act). A notice of availability of Amendment 26 was published in the **Federal Register** on September 25, 1992 (57 FR 44355). It invited review of, and comment on, the amendment until November 20, 1992. A full description of these time/area closures and their justification was published on October 15, 1992 (57 FR 47321).

Response to Comments

Two letters of comment were received during the comment period. Comments are summarized and responded to below.

Comment 1: Regulations implementing Amendment 26 and its predecessor, Amendment 18, exemplify a wise approach to the conservation of the crab resource without unnecessarily impacting commercial fishing operations.

Response: NMFS notes this comment.

Comment 2: NMFS invited comment on the enforcement concerns about aerial monitoring of the time/area closures to non-pelagic trawl gear when pelagic trawl gear could still be deployed in the closed areas. These concerns are unfounded in the Gulf of Alaska (GOA). Pollock is the only pelagic trawl fishery in the GOA. All other groundfish trawl fisheries are prosecuted with non-pelagic trawl gear. Additionally, all non-pelagic groundfish fisheries are restricted by a single halibut bycatch limit that is apportioned into seasonal allowances. When a seasonal allowance is reached, the GOA is closed to directed fishing for groundfish by vessels using trawl gear, except that fishing for pollock with pelagic trawl gear may continue when directed fishing for pollock is open. The only time pelagic and non-pelagic trawl gear operations simultaneously occur in the GOA is when directed fisheries for pollock and other groundfish are both open. The trawl fleet normally fishes for pollock at the beginning of each quarterly reporting period when quarterly apportionments of the annual pollock quota become available. Quarterly apportionments are harvested within a short time period and the trawl fleet typically shifts to other groundfish species during the remainder of the quarter. Therefore, monitoring of the non-pelagic trawl gear closures around Kodiak Island may only be complicated during the seasonal openings of the pollock fishery. NMFS enforcement need not resort to aerial monitoring in this case, but could simply confirm a vessel's participation in the pelagic trawl pollock fishery by checking observer reports, landings documents, or vessel logbooks.

Response: NMFS concurs that enforcement of the Kodiak Island closures to trawl gear other than pelagic trawl gear is possible. However, aerial surveillance of areas closed to specified gear types is the most effective and least costly and intrusive means to monitor such closures. NMFS may pursue an FMP amendment in the future that would prohibit the deployment of all trawl gear in the Kodiak Island time/area closures implemented under Amendment 26.

Comment 3: Fisheries enforcement would be enhanced if the time/area closures implemented under Amendment 26 applied to all trawl operations. Allowing only pelagic trawls in the closed areas renders aerial enforcement ineffective. As a result, enforcement of these closures will continue to require air/sea coordination to board and verify whether pelagic or non-pelagic trawl gear activity is occurring. The U.S. Coast Guard does not object to the regulations implementing Amendment 26 because they continue current practices and minimize impacts on pelagic trawl fisheries in the Kodiak Island area.

Response: NMFS notes this comment. Also, see response to Comment 2.

Amendment 26 authorizes time/area closures around Kodiak Island to protect sensitive king and Tanner habitat areas from on-bottom trawl operations by continuing the effectiveness of such closures that were authorized under Amendment 18 to the FMP (54 FR 50386, December 6, 1989) and for which authorization would have expired on December 31, 1992. Section 672.24 (d)(1) and (d)(3), in 50 CFR part 672 currently implement Amendment 26.

The Secretary has determined that Amendment 26 is consistent with the Magnuson Act and other applicable laws as authorized under section 304 of the Magnuson Act.

Dated: December 17, 1992.

William W. Fox, Jr.,

Assistant Administrator for Fisheries, National Marine Fisheries Service.

[FR Doc. 92-31127 Filed 12-23-92; 8:45 am]

BILLING CODE 3510-22-M

Proposed Rules

Federal Register
Vol. 57, No. 249
Monday, December 28, 1992

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF JUSTICE

8 CFR Part 3

[AG Order No. 1641–92]

Executive Office for Immigration Review; Deportation Proceedings: Alien Convicted of Aggravated Felony

AGENCY: Department of Justice.

ACTION: Proposed rule.

SUMMARY: This proposed rule amends 8 CFR Part 3 by requiring an Immigration Judge to conduct a hearing on the merits within 30 days after the filing of the order to show cause in the case of an alien who is charged in the order as an alien who has been convicted of an aggravated felony. The Immigration Judge may not grant more than one continuance absent extraordinary or compelling circumstances. If an appeal is taken from an order of deportation, the Board of Immigration Appeals shall decide the appeal within 60 days of the filing thereof.

DATES: Written comments must be received no later than January 27, 1993.

ADDRESSES: Please submit written comments, in triplate, to Director, Policy Directives and Instructions Branch, Immigration and Naturalization Service, room 5304, 425 I Street NW., Washington, DC 20536.

FOR FURTHER INFORMATION CONTACT: Gerald S. Hurwitz, Counsel to the Executive Director, Executive Office for Immigration Review, Suite 2400 Skyline Tower, 5107 Leesburg Pike, Falls Church, Virginia 22041, (703) 756–6470; Robert K. Bingham, Acting Associate General Counsel, Office of the General Counsel, Room 7048, Immigration and Naturalization Service, 425 I Street, NW, Washington, DC 20436, (202) 514–2895.

SUPPLEMENTARY INFORMATION: The proposed rule amends section 3.14 of Part 3 by adding a new paragraph (c) requiring the Executive Office of Immigration Review to expedite the administrative hearing and appeals of aliens charged, under section 241(a)(2)(A)(iii) of the Immigration and Naturalization Act (Act), as amended, as an alien convicted of an aggravated felony. In addition, the proposed rule amends section 3.3 to provide that an appeal from an order of deportation pursuant to section 241(a)(2)(A)(iii) shall be decided by the Board of Immigration Appeals within 60 days of the filing of the Notice of Appeal; and to limit the time that parties in such an appeal to file their briefs. This rule would implement the congressional mandate to protect society from serious criminal offenders pursuant to sections 242 (h)–(i) and 242A of the Act by facilitating their removal as expeditiously as possible upon a finding of deportability under section 241(a)(2)(A)(iii).

In accordance with 5 U.S.C. 605(b), the Attorney General certifies that this proposed rule does not have a significant adverse economic impact on a substantial number of small entities. This proposed rule is not a major rule within the meaning of section 1(b) of E.O. 12291, nor does this proposed rule have Federalism implications warranting the preparation of a Federalism Assessment in accordance with E.O. 12612.

List of Subjects in 8 CFR Part 3

Administrative practice and procedure, Immigration, Organization and functions (Government agencies).

For the reasons set out in the preamble, 8 CFR part 3 is proposed to be amended as set forth below.

PART 3—EXECUTIVE OFFICE FOR IMMIGRATION REVIEW

1. The authority citation for part 3 continues to read as follows:

Authority: 5 U.S.C. 301; 8 U.S.C. 1103, 1252 note, 1252b, 1362; 28 U.S.C. 509, 510, 1746; 5 U.S.C. 301; Sec. 2, Reorganization Plan No. 2 of 1950, 3 CFR, 1949–1953 Comp., p. 1002.

2. Section 3.3 is amended by adding a sentence at the end of paragraph (c) and by adding a new paragraph (d) to read as follows:

§ 3.3 Notice of appeal.

* * * * *

(c) *Briefs.* * * * In an appeal governed by paragraph (d) of this section, the brief of the appealing party must be filed within 10 days after service of the transcript of the hearing, and the opposing party shall be allowed ten days to respond.

(d) *Aggravated felony.* An appeal from an order of deportation pursuant to section 241(a)(2)(A)(iii) of the Act shall be considered and decided by the Board within 60 days of the filing of the Notice of Appeal. In extraordinary and compelling circumstances the Board may extend this 60 days period for an additional time not to exceed 60 days.

3. Section 3.14 is amended by adding a new paragraph (c) to read as follows:

§ 3.14 Jurisdiction and commencement of proceedings.

* * * * *

(c) When an Immigration Judge has jurisdiction over an alien charged with being deportable pursuant to section 241(a)(2)(A)(iii) of the Act, the hearing must be scheduled and completed within 30 days after the commencement of proceedings. In extraordinary and compelling circumstances the Immigration Judge may continue the hearing, or extend the scheduled date for a hearing, provided that the hearing is completed no more than 60 days after the commencement of proceedings.

Dated: December 14, 1992.

William P. Barr,

Attorney General.

[FR Doc. 92–31340 Filed 12–24–92; 8:45 am]

BILLING CODE 4410–01–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 92–NM–211–AD]

Airworthiness Directives; British Aerospace Model ATP Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to all British Aerospace Model ATP series airplanes. This proposal would require an inspection to detect cracking of the aft end of the wing rib boom angles on the left and right engine, and repair or replacement of the wing rib boom angle assemblies, if necessary. This proposal

is prompted by the detection of cracks during routine maintenance of the wing rib boom angles at the main landing gear (MLG) actuator attachment point. The actions specified by the proposed AD are intended to prevent structural failure of the actuator attachment point, which could lead to collapse of the MLG.

DATES: Comments must be received by February 22, 1993.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–103, Attention: Rules Docket No. 92–NM–211–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9 a.m. and 3 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from British Aerospace, PLC, Librarian for Service Bulletins, P.O. Box 17414, Dulles International Airport, Washington, DC. 20041–0414. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: William Schroeder, Aerospace Engineer, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (206) 227–2148; fax (206) 227–1320.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 92–NM–211–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–103, Attention: Rules Docket No. 92–NM–211–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

The United Kingdom Civil Aviation Authority (CAA), which is the airworthiness authority for the United Kingdom, recently notified the FAA that an unsafe condition may exist on all British Aerospace Model ATP series airplanes. The CAA advises that one operator of a Model ATP series airplane detected a fatigue crack in a wing rib boom angle at the main landing gear (MLG) actuator attachment point. Fatigue cracking will reduce the strength of the attachment of the MLG actuator support structure to the airframe. This condition, if not detected and corrected, could result in structural failure of the actuator attachment point, which could lead to collapse of the MLG.

British Aerospace has issued Service Bulletin ATP–57–13, dated September 18, 1992, which describes procedures for a visual inspection to detect cracking of the aft end of the wing rib boom angles on the wing rib outboard of the left and right engine, and replacement of the wing rib boom angle assemblies, if necessary. The CAA classified this service bulletin as mandatory.

This airplane model is manufactured in the United Kingdom and is type certificated for operation in the United States under the provisions of § 21.29 of the Federal Aviation Regulations and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement, the CAA has kept the FAA informed of the situation described above. The FAA has examined the findings of the CAA, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design registered in the United States, the proposed AD would require a visual inspection to detect cracking of the aft end of the wing rib boom angles on the wing rib outboard of the left and right engine, and repair or replacement of the wing rib boom angle assemblies, if necessary. The actions would be required to be accomplished in accordance with the service bulletin described previously.

The requirements of this rule are considered interim action until final action is identified, at which time the FAA may consider further rulemaking.

The FAA estimates that 10 airplanes of U.S. registry would be affected by this proposed AD, that it would take approximately 2 work hours per airplane to accomplish the proposed actions, and that the average labor rate is $55 per work hour. Based on these figures, the total cost impact of the proposed AD on U.S. operators is estimated to be $1,100, or $110 per airplane. This total cost figure assumes that no operator has yet accomplished the proposed requirements of this AD action.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption "**ADDRESSES**."

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. App. 1354(a), 1421 and 1423; 49 U.S.C. 106(g); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

British Aerospace: Docket 92–NM–211–AD.

Applicability: All Model ATP series airplanes, certificated in any category.

Compliance: Required as indicated, unless accomplished previously.

To prevent structural failure of the main landing gear actuator attachment point, which could lead to collapse of the main landing gear, accomplish the following:

(a) Within 200 hours time-in-service after the effective date of this AD, conduct a visual inspection to detect cracking of the aft end of the wing rib boom angles on the wing rib outboard of the left and right engine, in accordance with British Aerospace Service Bulletin ATP–57–13, dated September 18, 1992.

(b) If no crack is detected, no further action is required.

(c) If any crack is detected and that crack does not extend beyond bolt hole X, accomplish either paragraph (c)(1) or (c)(2) of this AD.

(1) Prior to further flight, repair or replace the wing rib boom angle assembly in accordance with a method approved by the Manager, Standardization Branch; ANM–113, FAA, Transport Airplane Directorate.

(2) Within 150 hours time-in-service after accomplishing the initial inspection, reinspect the wing rib boom angles for crack propagation, in accordance with British Aerospace Service Bulletin ATP–57–13, dated September 18, 1992.

(i) If no additional crack propagation is detected, prior to the accumulation of 300 hours time-in-service after the initial inspection in accordance with paragraph (a) of this AD, repair or replace the wing rib boom angle assembly in accordance with a method approved by the Manager, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate.

(ii) If additional crack propagation is detected or if cracking has exceeded the limits specified in paragraphs (d) or (e) of this AD, prior to further flight, repair or replace the wing rib boom angle assembly in accordance with a method approved by the Manager, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate.

(d) If any crack is detected and that crack extends beyond bolt hole X, but not beyond bolt hole Y or down towards bolt hole A, accomplish either paragraph (d)(1) or (d)(2) of this AD.

(1) Prior to further flight, repair or replace the wing rib boom angle assembly in accordance with a method approved by the Manager, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate.

(2) At intervals not to exceed 25 hours time-in-service, reinspect the wing rib boom angles for additional crack propagation, in accordance with British Aerospace Service Bulletin ATP–57–13, dated September 18, 1992.

(i) If no additional crack propagation is detected during any of the repeat inspections, prior to the accumulation of 150 hours time-in-service after the initial inspection in accordance with paragraph (a) of this AD, repair or replace the wing rib boom angle assembly in accordance with a method approved by the Manager, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate.

(ii) If additional crack propagation is detected during any of the repeat inspections or if any crack propagation has exceeded the limits specified in paragraphs (d) or (e) of this AD, prior to further flight, repair or replace the wing rib boom angle assembly in accordance with a method approved by the Manager, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate.

(e) If any crack is detected and that crack extends beyond bolt hole Y or into bolt hole A, prior to further flight, repair or replace the wing rib boom angle assembly in accordance with a method approved by the Manager, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate.

(f) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Standardization Branch, ANM–113, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Standardization Branch, ANM–113.

Note: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Standardization Branch, ANM–113.

(g) Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate the airplane to a location where the requirements of this AD can be accomplished.

Issued in Renton, Washington, on December 18, 1992.

Bill R. Boxwell,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 92–31344 Filed 12–23–92; 8:45 am]

BILLING CODE 4910–13–M

DEPARTMENT OF STATE

Bureau of Politico-Military Affairs

22 CFR Part 121

[Public Notice 1747]

Amendent to the International Traffic in Arms Regulations (ITAR)

AGENCY: Department of State.

ACTION: Proposed rule.

SUMMARY: This proposed rule is the result of an advanced notice of proposed rulemaking published in **Federal Register**, 56 FR 43894, dated September 5, 1991. This proposed rule is intended to amend the regulations implementing section 38 of the Arms Export Control Act, which governs the export of defense articles and defense services. The Department previously amended the U.S. Munitions List by adding category XV for space-related articles and moving certain spacecraft-related items from the coverage of categories VIII and XI into the new category XV.

This proposed rule is intended to reduce the burden on exporters by clarifying that all remote sensing type satellites are covered under the U.S. Munitions List (USML). In addition, the language on components, parts, accessories and associated equipment has been modified in order to begin the process of moving some components of satellites off the USML to the Commerce Control List (CCL). Only those components which are specifically designed or modified for the satellites or other equipment controlled in category XV will themselves be controlled in category XV. All other components of satellites not specifically designed for one or more of the satellites controlled in category XV will be controlled under the CCL. At the same time, the new language in paragraph (e) cites five parameters, all five of which must be met, in order for radiation hardened microelectronic circuits to be controlled under category XV of the USML.

DATES: Comments must be submitted on or before January 27, 1993.

ADDRESSES: Written comments should be sent to: Kenneth M. Peoples, Office of Defense Trade Controls, SA–6, room 200, U.S. Department of State, Washington, DC 20522–0602, fax (703) 875–6647. Public comments will be made available for public inspection.

FOR FURTHER INFORMATION CONTACT: Kenneth M. Peoples, Office of Defense Trade Controls, Department of State, tel. (703) 875–6619, or Thomas Oldenburg, Office of Advanced Technology, Department of State, tel. (202) 647–2432.

SUPPLEMENTARY INFORMATION: On November 16, 1990, the President signed Executive Order 12735 on Chemical and Biological Weapons Proliferation and directed various other export control measures. The measures directed by the President include removal from the USML of all items contained on the COCOM dual-use list (also known as the "CORE" list) unless significant U.S. national security interests would be jeopardized. In

implementing this directive, the Department headed an interagency working group which reviewed the coverage of spacecraft and related components and determined that in the time allotted for this exercise, specific items could not be determined for removal. Therefore, in further implementation of the Presidential directive, the Department of State began chairing a space technical working group comprised of the Departments of State, Commerce, Defense, other national security agencies, NASA and other interested agencies. The group meets to recommend the movement of commercial satellites and related articles identified by the COCOM IL off the USML except for such commodities and technical data that it recommends be kept on the USML for reasons related to the U.S. national security. Previously, the group proposed the creation of Category XV, including the language for Global Positioning Service (GPS) receivers and commercial communications satellites and their components and technical data and defense services, all of which have been formally moved into Category XV. This proposed rule stipulates that all remote sensing type satellites and their related ground stations will continue to be controlled under new Category XV (b) of the USML, except for passive, receive-only ground stations for such satellites. This proposed rule constitutes the STWG's final recommendation. At the conclusion of the requisite thirty day public comment period, the group will review the comments and recommend a final rule, which in turn will conclude the rationalization exercise.

Note that this proposed rule changes the language of all of the headings for the various paragraphs in Category XV as outlined in previous **Federal Register** Notices. Paragraph (a) continues to cover all military satellites, but paragraph (b) now covers only "remote sensing" type satellites, paragraph (c) now covers only communications satellites, paragraph (d) now covers GPS receivers, paragraph (e) now covers components, parts, accessories, associated and attached equipment for the commodities in category XV, and paragraph (f) now covers technical data and defense services for the commodities in category XV.

This amendment involves a foreign affairs function of the United States and thus is excluded from the major rule procedures of Executive Order 12291 (46 FR 13193) and the procedures of 5 U.S.C. 553 and 554. Nevertheless, this amendment is being published as a notice of proposed rulemaking in order to provide the public with an opportunity to comment and provide advice and suggestions regarding the proposal. The period for submission of comments will close 30 days after publication of this notice of proposed rulemaking. In addition, this rule affects collection of information subject to the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), and will serve to reduce the burden on exporters by clarifying USML coverage of space-related articles. The relevant information collection is to be reviewed by the Office of Management and Budget under control no. 1404–0013.

Accordingly, for the reasons set forth in the preamble, it is proposed that title 22, chapter I, subchapter M (consisting of parts 120 through 130) of the Code of Federal Regulations, be amended as set forth below:

List of Subjects in 22 CFR Part 121

Arms and Munitions, Exports.

PART 121—THE UNITED STATES MUNITIONS LIST

1. The authority citation for part 121 continues to read as follows:

Authority: Sec. 38, Arms Export Control Act, 90 Stat. 744 (22 U.S.C. 2778); E.O. 11958, 42 FR 4311; 22 U.S.C. 2658.

2. In § 121.1, category XV is amended by revising paragraphs (a) through (e) and by adding paragraph (f) to read as follows:

§ 121.1 General. The United States Munitions List.

* * * * *

Category XV—Spacecraft Systems and Associated Equipment

*(a) Spacecraft and associated hardware, including ground support equipment, specifically designed or modified for military use.

(b) Remote sensing satellite systems as follows:

*(1) All Remote sensing satellites;

(2) Ground control stations for remote sensing satellites as follows:

(i) Ground control stations for telemetry, tracking and control of such satellites; or

(ii) Passive ground stations for remote sensing satellites having any of the following characteristics:

(a) Employing any of the cryptographic items controlled under Category XIII of this subchapter; or

(b) Employing any uplink command capability.

Note: for export licensing controls over any passive ground receive only stations for remote sensing satellites not having any of the above parameters nor any systems or major components controlled elsewhere under this subchapter, see the Commerce Control List.

(c) Communications satellites (excluding ground stations and their associated equipment and technical data not enumerated elsewhere in this § 121.1; for controls on such ground stations, see the Commerce Control List) with any of the following characteristics:

1. Anti-jam capability. Antennas and/or antenna systems with ability to respond to incoming interference by adaptively reducing antenna gain in the direction of the interference.

2. Antennas:

(i). With aperture (overall dimension of the radiating portions of the antenna) greater than 30 feet; or

(ii). With sidelobes less than or equal to −35dB; or

(iii). Designed, modified, or configured to provide coverage area on the surface of the earth less than 200 nm in diameter, where "coverage area" is defined as that area on the surface of the earth that is illuminated by the main beam width of the antenna (which is the angular distance between half power points of the beam).

3. Designed, modified or configured for intersatellite data relay links that do not involve a ground relay terminal ("cross-links").

4. Spaceborne baseband processing equipment that uses any technique other than frequency translation which can be changed several times a day on a channel by channel basis among previously assigned fixed frequencies.

5. Employing any of the cryptographic items controlled under Category XIII (b) of this section.

6. Employing radiation-hardened devices controlled elsewhere in this § 121.1 that are not embedded in the satellite in such a way as to deny physical access. (Here "embedded" means that the device either cannot feasibly be removed from the satellite or be used for other purposes.)

7. Having propulsion systems which permit acceleration of the satellite on-orbit (i.e., after mission orbit injection) at rates greater than 0.1g.

8. Having attitude control and determination systems designed to provide spacecraft pointing determination and control better than 0.02 degrees azimuth and elevation.

9. Having orbit transfer engines ("kick-motors") which remain permanently with the spacecraft and are capable of being restarted after achievement of mission orbit and providing acceleration greater than 1g. (Orbit transfer engines which are not designed, built, and shipped as an integral part of the satellite are controlled under Category IV of this section.)

(d) Global Positioning System (GPS) receiving equipment specifically designed, modified or configured for military use; or GPS receiving equipment with any of the following characteristics:

1. Designed for encryption or decryption (e.g., Y-Code) of GPS precise positioning service (PPS) signals;

2. Designed for producing navigation results above 60,000 feet altitude and at 1,000 knots velocity or greater;

3. Specifically designed or modified for use with a null steering antenna or including a null steering antenna designed to reduce or avoid jamming signals;

4. Designed or modified for use with unmanned air vehicle systems capable of delivering at least a 500 kg payload to a range of at least 300 km.

Note: GPS receivers designed or modified for use with military unmanned air vehicle systems with less capability are considered to be specifically designed, modified or configured for military use and therefore covered under this subparagraph.

Any GPS equipment not meeting this definition is subject to the jurisdiction of the Department of Commerce (DOC). Manufacturers or exporters of equipment under DOC jurisdiction are advised that the U.S. Government does not assure the availability of the GPS P-Code for civil navigation. It is the policy of the Department of Defense (DOD) that GPS receivers using P-Code without clarification as to whether or not those receivers were designed or modified to use Y-Code will be presumed to be Y-Code capable and covered under this subparagraph. The DOD policy further requires that a notice be attached to all P-Code receivers presented for export. The notice must state the following: "ADVISORY NOTICE: This receiver uses the GPS P-Code signal, which by U.S. policy, may be switched off without notice."

(e) Components, parts, accessories, attachments, and associated equipment (including ground support equipment) as follows:

(1) Specifically designed, modified or configured for the articles in paragraphs (a) through (d) of this category.

(2) Radiation hardened microelectronic circuits that are specifically designed or rated to meet or exceed all five of the following characteristics:

Note: For export controls on all other radiation hardened microelectronic circuits not captured below, see the Commerce Control List.

(i) A total dose of 5×10^5 Rads (Si);

(ii) A dose rate upset of 5×10^8 Rads (Si)/Sec.;

(iii) A neutron dose of 1×10^{14} N/cm^2;

(iv) A single event upset of 1×10^{-7} or less error/bit/day; and

(v) Single event latch-up free and having a dose rate latch-up of 5×10^8 Rads(Si)/sec or greater.

(f) Technical data (as defined in § 120.21) and defense services (as defined in § 120.8) directly related to the defense articles enumerated in paragraphs (a) through (f) of this category. (See § 125.4 for exceptions.) Technical data directly related to the manufacture or production of any defense articles enumerated elsewhere in this category that are designated as Significant Military Equipment (SME) shall itself be designated SME. In addition, detailed design, development, production or manufacturing data for all spacecraft systems and specifically designed or modified components thereof, regardless of which U.S. Government agency has jurisdiction for export of the hardware. (See § 125.4 for exceptions.) This restriction does not include that level of technical data (including marketing data) necessary and reasonable for a purchaser to have assurance that a U.S.-built item intended to operate in space has been designed, manufactured and tested in conformance with specified contract requirements (e.g., operational performance, reliability, lifetime, product quality, or delivery expectations), as well as data necessary to evaluate in-orbit anomalies and to operate and maintain associated ground equipment.

* * * * *

Dated: November 30, 1992.

R. Rand Beers,

Deputy Assistant Secretary of State, Bureau of Politico-Military Affairs.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 61 and 69

[CC Docket No. 91-213; FCC 92-442]

Transport Rate Structure and Pricing

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; correction.

SUMMARY: The FCC inadvertently did not publish in the **Federal Register** a certification statement required by the Regulatory Flexibility Act. The FCC has determined that the Regulatory Flexibility Act does not apply to the proposed rules in CC Docket No. 91-213, Transport Rate Structure and Pricing, FCC 92-442, which appeared in the **Federal Register** on November 17, 1992 (57 FR 54205), because, if promulgated, these rules would not have a significant economic impact on a substantial number of small business entities, as defined by section 601(3) of the Federal Regulatory Act. For this reason, the FCC did not prepare an initial Regulatory Flexibility Act analysis.

FOR FURTHER INFORMATION CONTACT: Melissa Newman, (202) 632-9342.

SUPPLEMENTARY INFORMATION: This notice corrects the FCC's Further Notice of Proposed Rulemaking, CC Docket No. 91-213, FCC 92-442, adopted September 17, 1992, and released October 16, 1992, which appeared in the **Federal Register** on November 17, 1992 (57 FR 54205), FR Doc. 92-27747, by adding a certification statement that the Regulatory Flexibility Act does not apply to this rulemaking.

The following correction is made in CC Docket No. 91-213, Transport Rate Structure and Pricing, FCC 92-442, which was published in the **Federal Register** on November 17, 1992 (57 FR 54205):

1. After the first full paragraph in the third column on page 54207, the following should be inserted:

Regulatory Flexibility Act

We certify that the Regulatory Flexibility Act of 1980 does not apply to this rulemaking proceeding because the proposed rules, if adopted, would not have a significant economic impact on a substantial number of small business entities, as defined by section 601(3) of the Regulatory Flexibility Act. Carriers providing interstate transport services directly subject to the proposed rule amendment do not quality as small businesses since they are dominant in their field of operation. The Commission will, however, take appropriate steps to ensure that the special circumstances of the smaller LECs are carefully considered in resolving those issues. The Secretary shall send a copy of this Notice of Proposed Rulemaking, including the certification, to the Chief Counsel for Advocacy of the Small Business Administration in accordance with paragraph 603(a) of the Regulatory Flexibility Act. Pub. L. No. 96-354, 94 Stat. 1164, 5 U.S.C. 601 *et seq.* (1980).

Federal Communications Commission.

Donna R. Searcy,

Secretary.

BILLING CODE 6712-01-M

47 CFR Part 73

[MM Docket No. 87-268, DA 92-1714]

Broadcast Service; Advanced Television Systems

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; extension of comment period.

SUMMARY: This action, in response to a request to extend comment period filed by The Association of America's Public Television Stations, the Corporation for Public Broadcasting and the Public Broadcasting Service, extends the deadline for submitting comments and reply comments in the Third Further Notice of Proposed Rule Making portion of the Memorandum Opinion and Order/Third Report and Order/Third Further Notice of Proposed Rule Making in the above-cited docket (57 FR 53679, November 12, 1992, FR Doc. 92-27348). The Third Further Notice of Proposed Rule Making segment of that decision solicited comment on issues fundamental to the implementation of advanced television service in this

country. The deadline for comments was originally due December 21, 1992, and is extended to January 7, 1993. The deadline for accepting reply comments was scheduled for January 29, 1993, and is not extended to February 8, 1993.

DATES: Comments are now due on January 7, 1993, and reply comments are due on February 8, 1993.

ADDRESSES: Federal Communications Commission, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Gina Harrison, Policy and Rules Division, Mass Media Bureau, (202) 632–7792.

SUPPLEMENTARY INFORMATION:

Order

In the Matter of: Advanced Television System and Their Impact upon the Existing Television Broadcast Service.

Adopted: December 17, 1992; Released: December 18, 1992.

Comment Date: January 7, 1993.

Reply Comment Date: February 8, 1993.

By the Chief, Mass Media Bureau.

1. This action extends the deadline for filing comments and reply comments in response to the Memorandum Opinion and Order/Third Report and Order/Third Further Notice of Proposed Rule Making in the above-cited docket (7 FCC Rcd 6924, 1992) pertaining to the implementation of advanced television service in this country. The deadline for initial comments was originally set for December 21, 1992, and the deadline for accepting reply comments for January 29, 1993.

2. The Association of America's Public Television Stations, the Corporation for Public Broadcasting and the Public Broadcasting Service request extension of the comment deadline to January 7, 1993 in order that they can give fuller and more careful consideration to the important issues raised, and to reach a consensus on their recommendations to the Commission. They argue that the press of business has made it difficult to address these issues, particularly in light of the December 16, 1992 deadline for filing reply comments to a Second Further Notice of Proposed Rule Making in this same proceeding (7 FCC Rcd 3340, 1992).

3. In light of the foregoing, the Bureau finds that good cause exists for an extension. Pursuant to 47 CFR 0.283, the deadline for filing comments in this proceeding is extended to January 7, 1993. The deadline for filing reply comments is extended commensurately until February 8, 1993.

Federal Communications Commission.

Roy J. Stewart,

Chief, Mass Media Bureau.

[FR Doc. 92–31363 Filed 12–24–92; 8:45 am]

Notices

Federal Register
Vol. 57, No. 249
Monday, December 28, 1992

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forest Service

Agua/Caballos Timber Sale, Carson National Forest, Rio Arriba County, NM

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare an Environmental Impact Statement.

SUMMARY: The Department of Agriculture, Forest Service will prepare an Environmental Impact Statement (EIS) to disclose the environmental consequences of the Agua/Caballos Project, a timber sale proposal. After examining the project in light of the ten points of significance, 40 CFR 1509.25, it is my decision as responsible official to prepare an EIS for this project.

The Draft EIS will be issued by fall/winter of 1993, with the Final EIS planned for the spring, 1994.

DATE: Comments concerning the project should be received in writing by the Forest Service. Interested public will be notified of the comment due date.

ADDRESSES: Send written comments to Graciela A. Terrazas, El Rito District Ranger, P.O. Box 56, El Rito, NM 87530 or Gene Onken, Interdisciplinary Team Leader, Canjilon Ranger District, P.O. Box 488, Canjilon, NM 87515. The telephone number is (505) 581–4554 in El Rito and (505) 684–2486 in Canjilon, respectively.

FOR FURTHER INFORMATION CONTACT: Graciela A. Terrazas, El Rito District Ranger or Gene Onken, Interdisciplinary Team Leader; addresses and phone numbers above.

SUPPLEMENTARY INFORMATION:

Proposed Action

The Carson National Forest, El Rito Ranger District, proposes to harvest timber within a portion of the approximately 24,000 acre Agua/Caballos Project area. Implementation is projected for September, 1994. The USDA Forest Service will be the lead agency.

Location

Agua/Caballos Project Area is on the Carson National Forest, El Rito Ranger District, in Rio Arriba County, New Mexico. It is located on the south end of the Vallecitos Federal Sustained Yield Unit (VFSYU), in Township 25 North, Range 7 East, Sections 1, 2, 3, 4, 9, 10, and 11; and Township 26 North, Range 6 East, Sections, 1, 12, 25, and 36, and 36 Township 26 North, Range 7 East Sections 4, 5, 6, 7, 8, 9, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 32, 33, 34, 35, and 36, and Township 26 North, Range 8 East, Sections 5, 7, 8, 17, 18, 19, 20, 29, 30, 31, 32; and Township 27 North, Range 6 East, Sections 25 and 36 and Township 27 North, Range 7 East, Sections 30 and 31.

Purpose

The purpose of the proposed action is to meet the intent of the Vallecitos Federal Sustained Yield Unit (VFSYU) by providing stability to the local, affected northern New Mexico communities of Cañon Plaza, Vallecitos, La Madera, Las Tablas, Petaca, Tres Piedras, Ojo Caliente, El Rito, and Canjilon. This proposal also tiers to the Carson National Forest Land and Resource Management Plan (USDA, 1986) which directs that timber sales be offered at a rate of 5.5 million board feet (MMBF) per year to Duke City Lumber, the single, approved, responsible operator for the VFSYU, plus 1.0 MMBF to smaller, local operators. The Agua/Caballos Project could contribute to two-year's mill operation, more or less, depending on the decision and timber sale scheduling.

Decisions

The decisions to be made are as follows:

Should a timber sale(s) be used to help achieve the desired future condition?

If so, which areas in the Agua/Caballos analysis area should be harvested and what vegetation conditions should be created in the harvest areas?

What products should be offered (sawtimber, firewood, vigas, poles) and who much?

How should the slash be treated?

What, if any, roads should be reconstructed? Should new roads be built?

What, if any, roads should be obliterated or closed?

Which areas should be thinned?

Which areas should be allocated to old growth?

Improvements/Opportunities

Scoping

The project is in the initial stages of scoping. The Interdisciplinary Team will involve the public and media with letters to organizations, media and individuals on a large mailing list, meetings, and an open house and field trip to obtain issues, concerns, and comments on the proposed action and the alternatives as they are developed.

The Key Issues for the project have not been determined.

Alternatives: Alternatives will be developed to respond to key public issues.

Supplemental Information for Public Participation

There will be a 45-day comment period on the draft EIS. A public participation plan will be prepared for the project within the next few months. The Forest Service believes, at this early stage, it is important to give reviewers notice of several court rulings related to public participation in the environmental review process. First, reviewers of draft environmental impact statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer's position and contentions. *Vermont Yankee Power Corp.* v. *NRDC, 435 U.S. 519, 553 (1978).* Also, environmental objections that could be raised at the draft environmental impact statement stage but are not raised until after completion of the final environmental impact statement may be waived or dismissed by the courts. *City of Angoon* v. *Hodel,* 803 F.2d 1016, 1022 (9th Cir. 1986) and *Wisconsin Heritages, Inc.* v. *Harris,* 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the 45-day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the final environmental impact statement.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the proposed action and

the draft environmental impact statement should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft environmental impact statement or the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

Dated: December 18, 1992.

Leonard L. Lucero,

Forest Supervisor.

[FR Doc. 92–31351 Filed 12–24–92; 8:45 am]

BILLING CODE 3410–11–M

Upper Sunday Timber Sales and Associated Activities; Kootenai National Forest, Lincoln and Flathead Counties, Montana; Intent To Prepare an Environmental Impact Statement

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare an Environmental Impact Statement.

SUMMARY: Notice is hereby given that the Forest Service, USDA, is gathering information in order to prepare an Environmental Impact Statement (EIS) for a proposal to harvest timber, reforest the site, and construct haul roads in the southern portion of the Sunday Creek drainage. The Sunday Creek drainage is located approximately 34 air miles northeast of Libby, Montana.

The Forest Service proposes to harvest approximately 19 million board feet of timber through application of a variety of harvest methods on approximately 1,556 acres of forest land. The proposal also includes approximately 7.2 miles of new road construction and 1.5 miles of road reconstruction to access the specific harvest units.

The EIS will tier to the Kootenai National Forest Land and Resource Management Plan and Final EIS of September 1987, which provides program goals, objectives, and standards and guidelines for conducting management activities in this area. All activities associated with the proposal will be designed to maintain high quality wildlife, fisheries, and watershed objectives.

DATES: Comments concerning the scope and implementation of this proposal must be received in writing on or before January 27, 1993.

ADDRESSES: The Responsible Official is Jane P. Kollmeyer, District Ranger, Fortine Ranger District, P.O. Box 116, Fortine, Montana, 59918. Written comments and suggestions concerning the scope of the analysis may be sent to her at that address.

FOR FURTHER INFORMATION CONTACT: Rob Carlin, Project Coordinator, Fortine Ranger District. Phone: (406) 882–4451.

SUPPLEMENTARY INFORMATION: The decision area contains approximately 12,374 acres within the Kootenai National Forest in Lincoln and Flathead Counties, Montana. All of the proposed projects are located in the Sunday Creek drainage with sub-drainages of Tom, Advent, Blessed and Skillet Creek included. The legal location of the decision area is as follows: Sections 4, 5, 6, 7, 8, 9, 16, 17, 18, 19, 20, 21, and 30 of Township 32 North, Range 25 West; Sections 1, 2, 11, 12, 13, 14, 23, 24, and 25 of Township 32 North, Range 26 West; and Sections 26, 27, 28, 29, 32, 33, 34, and 35 of Township 33 North, Range 25 West; Principle Montana Meridian.

All proposed activities are outside the boundaries of any roadless area or any areas considered for inclusion to the National Wilderness System as recommended by the Kootenai National Forest Plan or by any past or present legislative wilderness proposals.

Prescribed harvest treatments in this proposal are as follows:

Prescription	Acres (approx.)	No. of units	Maximum opening size (acres)
Intermediate Harvest	51	1	0
Sanitation/Salvage Harvest	273	11	<1
Special Shelterwood Harvest with Reserve Trees	309	10	38
Shelterwood Harvest with Reserve Trees	105	4	32
Seed Tree Harvest with Reserve Trees	645	21	40
Clearcut Harvest with Reserve Trees	173	6	40

The prescriptions included in this proposal are defined as follows:

Intermediate Harvest—Some individual trees are selected and designated for harvest. The remaining trees provide a fully stocked stand of the highest quality, most vigorous individuals, with little disturbance to the existing forest habitat conditions.

Sanitation/Salvage Harvest—Trees selected for harvest include the salvage of dead and down merchantable trees; as well as, all lodgepole pine susceptible to a mountain pine beetle infestation. The remaining stand is fully stocked with species other than lodgepole pine.

Special Shelterwood Harvest with Reserve Trees—Harvest would be designed to maintain two important components of old growth forests; large diameter trees and existing down woody material on site. All windfirm large diameter trees (up to 25 per acre) greater than 17 inches diameter at breast height would be reserved on each acre and remain through the next rotation. All other merchantable trees would be harvested. Most existing large down woody material would be left on site.

Shelterwood Harvest with Reserve Trees—Twenty to thirty trees would be selected and designated to remain on each acre to provide seed, shade, and site protection. All other merchantable trees would be harvested. Once seedlings reestablish in the stand, six to ten trees per acre would be selected to remain through the next rotation and form the upper story of a multi-storied stand. All other seed and shelterwood trees would be harvested.

Seed Tree Harvest with Reserve Trees.—Six to ten seed producing trees would be selected and designated to remain on each acre. All other merchantable trees would be harvested. All or some of the six to ten seed trees may be retained as reserve trees, while those not selected to be retained would be removed once new seedlings become established. Reserve trees would remain through the next rotation and form the upper story of a multi-storied stand.

Clearcut Harvest with Reserve Trees—All windfirm trees (one to four per acre) would be selected and designated to remain on site as reserve trees. Reserve trees would remain through the next rotation and form the upper story of a multi-storied stand. All other merchantable trees would be harvested.

The Kootenai National Forest Land and Resource Management Plan provides overall management objectives in individual delineated management areas (MA's). The proposed projects encompass three predominant MA's; 12, 13, and 15. Only two include timber harvest; 12 and 15. Briefly described, MA 12 is managed to maintain or enhance non-winter big-game habitat (summer/fall) and produce a programmed yield of timber. MA 15 focuses on timber production using various silvicultural practices. This MA also provides for other resource values such as soil, air, water, wildlife, recreation, and forage for domestic livestock. MA 13 is managed for the special habitat necessary for old growth dependent wildlife. No harvest is proposed for this management area.

Issues: Tentatively, several issues of concern have been identified through the scoping process. These issues are briefly described below:

- Old Growth—What effect will the proposed action have on old growth, including effects on size, and location?
- Timber Supply—How will the proposed action help satisfy local and national needs?
- Management Intensity—How many acres should be harvested, and how much timber should be cut from each acre?
- Road Construction—What type of road construction is needed, and what are the effects of road construction on different aspects of the resource?
- Riparian Area Management—What effects will the proposed action have on riparian areas?
- Forest Health—A large portion of the trees in the Upper Sunday drainage are at high risk due to susceptibility to bark beetle populations. What effect will the proposed action have to reduce susceptibility to bark beetles?

Public Involvement and Scoping: Public participation to this point has been extensive. On July 16, 1992 a proposal for timber harvest in the Upper Sunday Decision Area was taken to the public at an open house. Alternatives to that proposal were then identified and again submitted to the public in the form of an information sheet. A public field trip to the decision area was conducted on September 19, 1992. Comments were requested in writing during all of these public involvement efforts. Consultation with appropriate State and Federal agencies has been initiated. Taking into account the comments received and information gathered during analysis it was decided to prepare an EIS for the Upper Sunday Timber Sales. Comments received prior to this notice will be included in the documentation for the EIS.

This environmental analysis and decision making process will enable additional interested and affected people to participate and contribute to the final decision. Public participation will be requested at several points during the analysis. The Forest Service will be seeking information, comments, and assistance from Federal, State, local agencies and other individuals or organizations who may be interested in or affected by the proposed projects. This input will be used in preparation of the draft and final EIS.

The scoping process will include:

- Identifying potential issues.
- Identifying major issues to be analyzed in depth.
- Exploring additional alternatives which will be derived from issues recognized during scoping activities.
- Identifying potential environmental effects of this project and alternatives (i.e. direct, indirect, and cumulative effects and connected actions).

The analysis will consider a range of alternatives, including the proposed action, no action, and other reasonable action alternatives.

Estimated Dates for Filing: The draft EIS is expected to be filed with the Environmental Protection Agency (EPA) and to be available for public review by April, 1993. At that time EPA will publish a Notice of Availability of the draft EIS in the **Federal Register**. The comment period on the draft EIS will be 45 days from the date the EPA publishes the Notice of Availability in the **Federal Register**.

The final EIS is scheduled to be completed by July, 1993. In the final EIS, the Forest Service is required to respond to comments and responses received during the comment period that pertain to the environmental consequences discussed in the draft EIS and applicable laws, regulations, and policies considered in making a decision regarding the proposal.

Reviewer's Obligations: The Forest Service believes, at this early stage, it is important to give reviewers notice of several court rulings related to public participation in the environmental review process. First, reviewers of draft environmental impact statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer's position and contentions. *Vermont Yankee Nuclear Power Corp.* v. *NRDC*, 435 U.S. 519, 553 (1978). Also, environmental objections that could be raised at the draft environmental impact statement stage may be waived or dismissed by the courts. *City of Angoon* v. *Hodel*, 803 F.2d 1016, 1022 (9th Cir. 1986) and *Wisconsin Heritages, Inc.* v. *Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the 45 day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider and respond to them in the final EIS.

To assist the Forest Service is identifying and considering issues and concerns on the proposed action, comments on the draft environmental impact statement should be as specified as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft environmental impact statement or the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council on Environmental Quality regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

Responsible Official: Jane P. Kollmeyer, District Ranger, Fortine Ranger District, Kootenai National Forest, P.O. Box 116, Fortine, Montana, 59918, is the Responsible Official. As the Responsible Official she will decide which, if any, of the proposed projects will be implemented. The Responsible Official will document the decision and reasons for the decision in the Record of Decision. That decision will be subject to Forest Service Appeal Regulations.

Dated: December 17, 1992.

Jane P. Kollmeyer,

District Ranger, Fortine Ranger District.

[FR Doc. 92-31352 Filed 12-24-92; 8:45 am]

BILLING CODE 3410-11-M

Motorized Vehicle Use, Salem and Potosi Ranger Districts, Mark Twain National Forest; Crawford, Dent, Iron, Reynolds, Shannon and Washington Counties, MO

AGENCY: Forest Service, USDA.

ACTION: Revised Notice of Intent to prepare an environmental impact statement. (This notice replaces the Notice of Intent published April 14, 1992, FR Vol 57, No. 72 p. 12910.)

SUMMARY: The Forest Service, USDA, will prepare an environmental impact statement (EIS) to analyze a range of alternatives regarding the use of recreational motorized off highway vehicles (OHV) on National Forest

System lands within the adjacent Salem and Potosi Ranger Districts, Mark Twain National Forest, in response to various public demands including no motorized off highway vehicle use.

DATES: The anticipated distribution dates of the draft environmental impact statement and the final environmental impact statement are changed to June, 1993, and September, 1993, respectively.

ADDRESSES: Send any written comments to Darsan Wang, Forest Supervisor's Office, 401 Fairgrounds Road, Rolla, MO 65401.

FOR FURTHER INFORMATION CONTACT: Darsan Wang, Recreation Specialist (314) 364–4621.

SUPPLEMENTARY INFORMATION: The purpose of the proposed action is to respond to expressed public demands for motorized use by all-terrain vehicles, motorcycles, dune buggies, and 4x4 drive off highway vehicles over parts of the adjoining Salem Ranger District and Potosi Ranger District. The option of no motorized off highway vehicles will be considered. Consideration of motorized trails for ATVs and motorcycles has been underway on both Districts for some time. There has been previous scoping initiatives by both Districts. The information gathered is relevant to the decision to be made and will be used along with any new information received. In April, 1990, both Districts issued separate decisions based on the NEPA process to establish an ORV trail. Both decisions were appealed and subsequently withdrawn by the Deciding Officers. Off highway motor vehicles have been extensively used on both Districts in the past and presently. Under the Forest Plan, the Forest Service transportation system and designated OHV trails are available for OHV use unless closed to this type use on specific roads. Cross-country use is prohibited. Unauthorized use has been a problem with the proliferation of OHVs.

The draft EIS is expected to be filed with the Environmental Protection Agency (EPA) and to be available for public review by June, 1993. At that time copies of the draft EIS will be distributed to interested and affected agencies, organizations, and members of the public for their review and comment. EPA will publish a Notice of Availability of the draft EIS in the **Federal Register**. The comment period on the draft EIS will be 60 days from the date the EPA publishes the Notice of Availability in the **Federal Register**.

The Forest Service believes it is important to give reviewers notice of this early stage of public participation and of several court rulings related to public participation in the environmental review process. First, reviewers of a draft EIS must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer's position and contentions. *Vermont Yankee Nuclear Power Corp* v. *NRDC, 435 U.S. 519,553 (1978).* Also, environmental objections that could have raised at the draft stage but that are not raised until after completion of the final Environmental Impact Statement may be waived or dismissed by the court. *City of Angoon* v. *Hodel*, 803 F.2d. 1016, 1022 (9th Cir. 1986) and *Wisconsin Heritages, Inc.* v. *Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in these proposed actions participate by the close of the 60-day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider and respond to them in the final EIS.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the draft EIS should be as specific as possible. Comments may address the adequacy of the draft environmental impact statement or the merits of the alternatives discussed; reviewers may wish to refer to the Council on Environmental Quality regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3.

The final EIS is scheduled to be completed by September, 1993. In the final EIS, the Forest Service is required to respond to comments and responses received during the comment period that pertain to the environmental consequences discussed in the draft EIS and applicable laws, regulations, and policies considered in making a decision regarding the proposal. The Forest Service is the lead agency. B. Eric Morse is the responsible official. As the responsible official, he will decide which, if any, of the alternatives will be implemented. The responsible official will document the decision and reasons for the decision in the Record of Decision. That decision will be subject to Forest Service Appeal Regulations (36 CFR part 217).

Dated: December 14, 1992.

B. Eric Morse,

Forest Supervisor.

BILLING CODE 3410–11–M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Taking and Importing of Marine Mammals Incidental and Commercial Fishing Operations

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of removal of Pelly certification.

SUMMARY: The Marine Mammal Protection Act (MMPA) requires that 6 months after the importation of yellowfin tuna has been banned from a nation, certification of the importation prohibition be made to the President. Certification under this provision is considered a certification for the purposes of section 8(a) of the Fishermen's Protective Act (the Pelly Amendment). The Pelly Amendment requires periodic review of the activities of the national subject to the importation prohibition to determine if the reasons for which the certification was made no longer prevail. NMFS has lifted the intermediary nation yellowfin tuna embargoes that were in place against Canada, Malaysia, the Netherlands Antilles, Singapore, and the United Kingdom and, therefore, the Secretary of Commerce has removed the Pelly certifications that resulted from those embargoes.

EFFECTIVE DATE: The termination of these Pelly Certifications was effective December 14, 1992.

ADDRESSES: Michael Tillman, Acting Director, Office of Protected Resources, NMFS, 1335 East-West Highway, Silver Spring, MD 20910.

FOR FURTHER INFORMATION CONTACT: Wanda L. Cain, Office of Protected Resources, NMFS, 1335 East-West Highway, Silver Spring, MD 20910 (301/713–2055).

SUPPLEMENTARY INFORMATION: On January 31, 1992, the United States imposed a court-ordered prohibition on the importation of all yellowfin tuna and yellowfin tuna products from Canada, Malaysia, the Netherlands Antilles, Singapore, and the United Kingdom.

On July 31, 1992, the Secretary of Commerce certified to the President that the intermediary nation embargoes on all yellowfin tuna and yellowfin tuna products from these countries had been in effect for 6 months. As required by the MMPA, this certification is considered a certification for purposes of section 8(a) of the Fishermen's Protective Act of 1967 (the Pelly Amendment, 22 U.S.C. 1978). The Pelly Amendment authorizes, at the discretion of the President, a restriction on imports of fish and fish products from certified nations to the extent such restrictions are sanctioned by the General Agreement on Tariffs and Trade. No sanctions were recommended or imposed as a result of the certification of these intermediary nations.

On October 26, 1992, the President signed the International Dolphin Conservation Act of 1992. Among other things, this Act amended the MMPA to provide a legislative definition of "intermediary nation". As a result, NMFS was able to lift the intermediary nation embargoes on yellowfin tuna and yellowfin tuna products from several countries (57 FR 59979).

NMFS, therefore, announces that the Pelly Certifications imposed on Canada, Malaysia, the Netherlands Antilles, Singapore, and the United Kingdom as a result of intermediary nation yellowfin tuna embargoes, were removed on December 14, 1992, as a result of the lifting of those intermediary nation embargoes.

Dated: December 21, 1992.

William W. Fox, Jr.,

Assistant Administrator for Fisheries.

BILLING CODE 3510–22–M

Endangered Species; Permits

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Issuance of modification No. 2 to Permit No. 585.

SUMMARY: On June 16, 1987, notice was published in the **Federal Register** (52 FR 22835) that Permit No. 585 had been issued to the Southeast Fisheries Center, National Marine Fisheries Service, 75 Virginia Beach Drive, Miami, Florida 33149.

Notice is hereby given that on December 16, 1992, as authorized by the provisions of the Endangered Species Act of 1973 (16 U.S.C. 1531–1543) and the Regulations Governing Endangered Fish and Wildlife (50 CFR parts 217–222), NMFS modified Permit No. 585 to extend the effective date through March 31, 1993.

The modified Permit is available for review by interested persons in the following offices by appointment:

Office of Protected Resources, NMFS, NOAA, 1335 East-West Highway, room 7324, Silver Spring, Maryland 20910 (301/713/2289); and

Director, Southeast Region, NMFS, 9450 Koger Boulevard, St. Petersburg, Florida 33702 (813/893–3366).

Dated: December 16, 1992.

Michael F. Tillman,

Acting Director, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF DEFENSE

Office of the Secretary

DOD Government-Industry Technical Data Committee

AGENCY: Office of the Under Secretary of Defense (Acquisition).

ACTION: Notice.

SUMMARY: Pursuant to section 807 of Public Law 102–120, the National Defense Authorization Act for Fiscal Years 1992 and 1993, a Government-Industry Technical Data Committee has been formed. The committee will make recommendations to the Secretary of Defense for the final regulations

required by subsection (a) of 10 U.S.C. 2320, "Rights in Technical Data."

The committee's January and February meetings are scheduled for January 12–13, 1993, and February 9–10, 1993, from 9:30 a.m. to 4 p.m. at the Herman Lay Room, the U.S. Chamber of Commerce, 1615 "H" Street, NW., Washington, DC 20062–2000. These meetings will be open to the public. For more information, please contact the Committee Executive Secretary, Angelena Moy at (703) 693–5639.

Dated: December 21, 1992.

L.M. Bynum,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

BILLING CODE 3810–01–M

DEPARTMENT OF EDUCATION

[CFDA 84.060A]

Formula Grant Program Under the Indian Education Act of 1988, Subpart 1; Notice Inviting Applications for New Awards for Fiscal Year (FY) 1993

Purpose: Provides grants for supplementary projects that meet the special educational and culturally related academic needs of Indian children. This program should be seen as an opportunity for local educational agencies to support those elements of the National Education Goals and the AMERICA 2000 Education Strategy that are relevant to their unique missions.

Eligible Applicants: Local educational agencies (LEAs) and certain schools operated by Indian Tribes and organizations (Tribal schools) that received funds under this program in fiscal year 1988, and, if sufficient funds are available, LEAs and Tribal schools that were not grantees in fiscal year 1988 and to schools operated by the Bureau of Indian Affairs (BIA).

Deadline for Transmittal of Applications: March 12, 1993. Applicants not meeting the deadline will not be considered for funding in the initial allocation of awards. Applications not meeting the deadline may be considered for funding if the Secretary determines, under section 5316(b) of the Indian Education Act, that funds are available and that reallocation of those funds to those applicants would best assist in advancing the purposes of the program. However, the amount and date of an individual award, if any, made under section 5316(b) of the Act may not be the same to which the applicant would have been entitled if the application had been submitted on time.

Deadline for Intergovernmental Review: May 10, 1993.

Applications Available: January 8, 1993.

Available Funds: The appropriation for this program for fiscal year 1993 is $56,330,000, which should be sufficient to fund all eligible applicants. Therefore, the Department encourages all eligible applicants to apply, including those entities that were not grantees under the program in fiscal year 1988.

Estimated Range of Awards: $700 to $1,400,000.

Estimated Average Size of Awards: $47,000.

Estimated Number of Awards: 1,200.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 36 months.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 75, 77, 79, 80, 81, 82, 85, and 86; and (b) The regulations for this program in 34 CFR parts 250 and 251.

For Applications or Information Contact: Sandra Spaulding, U.S. Department of Education, 400 Maryland Avenue, SW., room 2177, Washington, DC 20202–6335. Telephone: (202) 401–1907 (FTS 441–1907). Deaf and hearing impaired individuals may call the Federal Dual Party Relay Service at 1–800–877–8339 (in the Washington, DC 202 area code, telephone 708–9300) between 8 a.m. and 7 p.m., Eastern time.

Program Authority: 25 U.S.C. 2601–2606, 2651.

Dated: December 18, 1992.

John T. MacDonald,

Assistant Secretary, Elementary and Secondary Education.

BILLING CODE 4000–01–M

FEDERAL COMMUNICATIONS COMMISSION

Public Information Collection Requirements Submitted to Office of Management and Budget for Review

December 17, 1992.

The Federal Communications Commission has submitted the following information collection requirements to OMB for review and clearance under the Paperwork Reduction Act of 1980 (44 U.S.C. 3507).

Copies of these submissions may be purchased from the Commission's copy contractor, Downtown Copy Center, 1990 M Street, NW, suite 640, Washington, DC 20036, (202) 452–1422. For further information on these submissions contact Judy Boley, Federal Communications Commission, (202) 632–7513. Persons wishing to comment on these information collections should contact Jonas Neihardt, Office of Management and Budget, room 3235 NEOB, Washington, DC 20503, (202) 395–4814.

OMB Number: 3060–0384.

Title: Section 64.904, Annual Auditor's Certification.

Action: Extension of a currently approved collection.

Respondents: Business or other for-profit.

Frequency of Response: Annually.

Estimated Annual Burden: 19 responses; 500 hours average burden per response; 9,500 hours total annual burden.

Needs and Uses: Over the years, several methods have been adopted by the Commission, such as structural separation, which required carriers to establish separate corporate entities for their common carrier and data processing services. Structural separation provided maximum separation of cost; however, it proved to be inefficient and not in the public interest. Recently, the Commission developed a system of accounting separation. To deter cost shifting both in the form of misallocation of joint and common costs and in the form of improper intracorporate transfer pricing, the Commission adopted cost allocation standards in 1987 and also imposed a requirement for the one-time filing of cost allocation manuals by the Tier 1 local

exchange carriers and dominant interexchange carriers. These carriers are required to file annually the report of an auditor attesting that: (1) The cost system in place reflects the carrier's cost manual requirements; and (2) the cost allocations performed in accordance with that system are the product of accurate methods. In CC Docket No. 90–623, Computer III Remand Proceedings: Bell Operating Company Safeguards and Tier 1 Local Exchange Company Safeguards, the Commission codified the auditor's attestation requirement. The Commission strengthened the standard to be used by independent auditors in preparing their reports on carrier's cost allocation manual implementation and results by requiring that the independent auditors provide the same level of assurance in audits as they provide in a financial statement audit engagement. The Commission also clarified that the independent auditors must evaluate the results of the carrier's cost allocation manuals in light of the requirements of the manuals as well as the Commission's joint cost rules and rules and regulations including 47 CFR 32.23, 32.27, 64.901 and 65.903 in force as of the date of the auditor's report. Independent auditors must follow all of the ten standards of generally accepted auditing standards (GAAS) in preparing the required reports. The attestation requirement is imposed to ensure that the carriers are properly implementing their cost allocation manual. The independent audits serve as an important aid to the Commission's monitoring program. Without this information, the Commission would not be able to efficiently carry out its responsibilities.

OMB Number: 3060–0439.

Title: Regulations Concerning Indecent Communications by Telephone (sector 64.201).

Action: Extension of a currently approved collection.

Respondents: Individuals or households, and businesses or other for-profit (including small businesses).

Frequency of Response: On occasion reporting.

Estimated Annual Burden: 10,200 responses; .16 hours average burden per response; 1,632 hours total annual burden.

Needs and Uses: Section 64.201 contains several information collection requirements including: (1) A requirement that certain common carriers block access to indecent messages unless the subscriber seeks access from the common carrier (telephone company) in writing; (2) a requirement that adult message service providers notify their carriers of the nature of their programming; and (3) a requirement that a provider of adult message services request that their carrier identify it as such in bills to its subscribers. Section 223 of the Communications Act of 1934, as amended, imposes fines and penalties on those who knowingly use the telephone to make obscene or indecent communications for commercial purposes. The fines and penalties are applicable to those who use the telephone, or permit their telephone to be used, for obscene communications to any person and to those who use the telephone for indecent communications to persons under 18 years of age or to adults without their consent. The information requirements are imposed on carriers, adult message service providers and those who solicit their services to ensure that minors are denied access to material deemed indecent.

Federal Communications Commission.

Donna R. Searcy,

Secretary.

BILLING CODE 6712–01–M

FEDERAL MARITIME COMMISSION

Agreement(s) Filed; Port of Portland and James River II, Inc., et al.

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 800 North Capitol Street, NW., 9th Floor. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 224–200307–004.

Title: Port of Portland and James River II, Inc., DBA Western Transportation Terminal Leasing Agreement.

Parties:

The Port of Portland ("Port")
James River II, Inc., DBA Western Transportation

Synopsis: The modification removes the Port's ability to repossess House 103; leases a portion of the premises to the Port of Cascade Locks and sets new rental rates.

Agreement No.: 224–200565–001.

Title: Port Everglades Marine Terminal Operating Co., Inc. ("PEMTOC") Agreement.

Parties:

Eller & Company, Inc.
Sel Maduro (Florida), Inc.
Strachan Shipping Company
Harrington & Company, Inc.

Synopsis: The subject Agreement authorizes the parties, as shareholders in PEMTOC, to operate a common user container terminal at Port Everglades or other locations in Broward County, Florida.

Agreement No.: 202–010676–057.

Title: South Europe/U.S.A. Freight Conference.

Parties:

Achille Lauro
Compania Trasatlantic Espanola, S.A.
Evergreen Marine Corporation (Taiwan) Ltd.
Farrell Lines, Inc.
Italia di Navigazione, S.p.A.
Jugolinija
Lykes Lines
A.P. Moller Maersk Line
Nedlloyd Lines
Sea-Land Service, Inc.
P & O Containers Limited
Zim Israel Navigation Company, Ltd

Synopsis: The proposed amendment modifies the provisions in Article 6.4 governing the committee structures under the Agreement. It also sets forth guidelines for members to follow in negotiating service contracts.

Agreement No.: 203–011393.

Title: United States/Canary Islands and West Africa Carrier Discussion Agreement.

Parties:

Lykes Bros. Steamship Co., Inc.
Safbank Line, Ltd.

Synopsis: The proposed Agreement authorizes the parties to meet, discuss and agree upon rates, charges and practices in the trade between United States ports and points (excluding ports in Alaska and Hawaii), and all ports and points in the range from the northern border of Mauritania to the southern border of Angola and the Canary Islands and to all inland points in Mali, Burkina, Niger, Chad, Central African Republic and Zambia. Adherence to any agreement reached by the parties is strictly voluntary.

Dated: December 21, 1992.

By Order of the Federal Maritime Commission.

Joseph C. Polking,

Secretary.

FEDERAL RESERVE SYSTEM

Banc One Corporation; Acquisition of Company Engaged in Permissible Nonbanking Activities; Correction

This notice corrects a previous Federal Register notice (FR Doc. 92-29708) published at page 58021 of the issue for Tuesday, December 8, 1992.

Under the Federal Reserve Bank of Cleveland, the entry for Banc One Corporation is revised to read as follows:

A. Federal Reserve Bank of Cleveland (John J. Wixted, Jr., Vice President) 1455 East Sixth Street, Cleveland, Ohio 44101:

1. Banc One Corporation, Columbus, Ohio, and Banc One West Virginia Corporation, Charlestown, West Virginia; to acquire 100 percent of the voting shares of Key Centurion Bancshares, Inc., Charleston, West Virginia, and thereby indirectly acquire Charleston National Bank, Charleston, West Virginia; Citizens National Bank of St. Albans, St. Albans, West Virginia; Beckley National Bank, Beckley, West Virginia; The National Bank of Logan, Logan, West Virginia; The National Bank of Commerce of Williamson, Williamson, West Virginia; Boone National Bank, Madison, West Virginia; Nicholas County Bank, Summersville, West Virginia; The Central National Bank of Buckhannon, Buckhannon, West Virginia; The Lincoln National Bank of Hamlin, Hamlin, West Virginia; Security National Bank & Trust Company, Wheeling, West Virginia; The First National Bank of New Martinsville, New Martinsville, West Virginia; Peoples Bank of Charles Town, Charles Town, West Virginia; and The First Huntington National Bank, Huntington, West Virginia; Union Bancorp of West Virginia, Clarksburg, West Virginia, and thereby indirectly acquire Union National Bank of West Virginia, Clarksburg, West Virginia, and First National Bank of Philippi, Philippi, West Virginia; Wayne Bancorp, Inc., Wayne, West Virginia, and thereby indirectly acquire Wayne County Bank, Inc., Wayne, West Virginia; and First National Company, Pikeville, Kentucky, and thereby indirectly acquire The First National Bank of Pikeville, Pikeville, Kentucky. In connection with this proposal, Banc One West Virginia Corporation has applied to become a bank holding company.

In connection with this application, Applicants also propose to acquire Reliable Mortgage Company, Charleston, West Virginia, and thereby engage in mortgage banking activities, pursuant to § 225.25(b)(1)(iii) of the Board's Regulation Y.

Comments on this application must be received by January 6, 1993.

Board of Governors of the Federal Reserve System, December 21, 1992.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-F

Citizens, Inc., et al.; Notice of Applications to Engage de novo in Permissible Nonbanking Activities

The companies listed in this notice have filed an application under § 225.23(a)(1) of the Board's Regulation Y (12 CFR 225.23(a)(1)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to commence or to engage *de novo*, either directly or through a subsidiary, in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than January 19, 1993.

A. Federal Reserve Bank of Cleveland (John J. Wixted, Jr., Vice President) 1455 East Sixth Street, Cleveland, Ohio 44101:

1. Citizens, Inc., Evans City, Pennsylvania; to engage *de novo* in the activity of making, acquiring, or servicing loans or other extensions of credit, pursuant to § 225.25(b)(1) of the Board's Regulation Y.

B. Federal Reserve Bank of Chicago (David S. Epstein, Vice President) 230 South LaSalle Street, Chicago, Illinois 60690:

1. Withee Bank Shares, Inc., Withee, Wisconsin; to engage *de novo* in developing and owning a low-income housing project under the Farmers Home Administration 515 program, pursuant to § 225.25(b)(6) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, December 21, 1992.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-F

Farmers & Merchants Bancshares, Inc., et al.; Formations of; Acquisitions by; and Mergers of Bank Holding Companies

The companies listed in this notice have applied for the Board's approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842) and § 225.14 of the Board's Regulation Y (12 CFR 225.14) to become a bank holding company or to acquire a bank or bank holding company. The factors that are considered in acting on the applications are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank or to the offices of the Board of Governors. Any comment on an application that requests a hearing must include a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

Unless otherwise noted, comments regarding each of these applications must be received not later than January 21, 1993.

A. Federal Reserve Bank of Chicago (David S. Epstein, Vice President) 230 South LaSalle Street, Chicago, Illinois 60690:

1. Farmers & Merchants Bancshares, Inc., Burlington, Iowa; to become a bank holding company by acquiring 100 percent of the voting shares of Farmers & Merchants Bank & Trust, Burlington, Iowa.

B. Federal Reserve Bank of Kansas City (John E. Yorke, Senior Vice President) 925 Grand Avenue, Kansas City, Missouri 64198:

1. Midwest National Bancshares, Inc., Midwest City, Oklahoma; to merge with Harrah National Bancshares, Inc., Harrah, Oklahoma, and thereby indirectly acquire The National Bank of Harrah, Harrah, Nebraska.

C. Federal Reserve Bank of Dallas (W. Arthur Tribble, Vice President) 400 South Akard Street, Dallas, Texas 75222:

1. Heritage Bancshares, Inc., Dover, Delaware; to become a bank holding company by acquiring 87.33 percent of the voting shares of Wharton Bank and Trust Company, Wharton, Texas.

D. Federal Reserve Bank of San Francisco (Kenneth R. Binning, Director, Bank Holding Company) 101 Market Street, San Francisco, California 94105:

1. Security Bank Holding Company Employee Stock Ownership Plan, Coos Bay, Oregon; to become a bank holding company by acquiring 29.3 percent of the voting shares of Security Bank Holding Company, Coos Bay, Oregon, and thereby indirectly acquire Security Bank, Coos Bay, Oregon.

Board of Governors of the Federal Reserve System, December 21, 1992.

Norwest Corporation; Acquisition of Company Engaged in Permissible Nonbanking Activities

Norwest Corporation, Minneapolis, Minnesota, has applied to acquire Community Title Guaranty Company, Lombard, Illinois, and thereby engage in its title insurance agency activities pursuant to § 4(c)(8)(G) ("exemption G") of the BHC Act and § 225.25(b)(8)(vii) of the Board's Regulation Y (12 CFR 225.25(b)(8)(vii). The Board has previously approved this activity for exemption G companies. *See*, First Wisconsin Corporation, 75 Federal Reserve Bulletin 31 (1989); *American Land Title Association v. Board of Governors of the Federal Reserve System*, 892 F.2d 1059 (DC Cir. 1989). In connection with its title insurance agency activities, Applicant will perform title abstracting through searches and examinations of titles to real estate.

Applicant also proposes to conduct real estate closing or settlements. In particular, these activities will include: reviewing the title commitment to determine the status of the title, verifying payoffs on existing loans secured by the real estate, reviewing the purchase agreement to identify any requirements contained in the agreement and ensuring their satisfaction, verifying the amount of and then calculating the pro rating of special assessments and taxes at closing, establishing a time and place for the closing, updating the title insurance commitment to the date of closing, preparing the checks, the deed, and affidavits required for the closing and authorization letters, conducting the closing and ensuring all parties properly execute the appropriate documents, collecting funds from the parties, preparing the HUD settlement statement, deed of trust, mortgage notice, Truth-in-Lending statement, and the purchaser's affidavits, and recording all these documents as required under law.

Section 4(c)(8) of the BHC Act provides that a bank holding company may, with prior Board approval, engage directly and indirectly in any activities "which the Board after due notice and opportunity for hearing has determined (by order or regulation) to be so closely related to banking or managing or controlling banks as to be a proper incident thereto."

A particular activity may be found to meet the "closely related to banking" test if it is demonstrated that banks have generally provided the proposed activity; that banks generally provide services that are operationally or functionally so similar to the proposed activity so as to equip them particularly well to provide the proposed activity; or that banks generally provide services that are so integrally related to the proposed activity as to require their provision in a specialized form. *National Courier Ass'n v. Board of Governors*, 516 F.2d 1229, 1237 (DC Cir.

1975) ("National Courier"). In addition, the Board may consider any other basis that may demonstrate that the activity has reasonable or close relationship to banking or managing or controlling banks. "Board Statement Regarding Regulation Y," 49 Federal Register 808 (1984).

In determining whether an activity meets the second, or proper incident to banking, test of section 4(c)(8), the Board must consider whether the performance of the activity by an affiliate of a holding company "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices."

Applicant maintains that banks provide these real estate closing services as a normal element of their real estate lending activity. Also, many of the above activities are conducted in basic loan transactions performed by banks especially in the secured real estate lending area. Accordingly, Applicant believes the proposed activities should be regarded as closely related to banking.

Applicant also maintains that the substantial overlap between the tasks of preparing a title insurance binder and performing a real estate settlement allow for increased efficiencies if conducted by the same company. Also, the customer will receive increased convenience through one-stop-shopping for these services. Accordingly, the proposed activities should be regarded as a proper incident to banking.

In publishing the proposal for comment, the Board does not take any position on issues raised by the proposal under the BHC Act. Notices of the proposal is published solely in order to seek the views of interested persons on the issues presented by the application and does not represent a determination by the Board that the proposal meets or is likely to meet the standard of the BHC Act.

Any comments or requests for a hearing should be submitted in writing and received by William W. Wiles, Secretary, Board of Governors of the Federal Reserve System, Washington DC 20551, not later than January 21, 1993.

Any request for a hearing on this application must, as required by § 262.3(e) of the Board's Rules of Procedures (12 CFR 262.3(e)), be accompanied by a statement of reasons why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

This application may be inspected at the office of the Board of Governors or the Federal Reserve Bank of Minneapolis.

Board of Governors of the Federal Reserve System, December 21, 1992.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-F

Willard Belton Simmons, Jr., et al.; Change in Bank Control Notices; Acquisitions of Shares of Banks or Bank Holding Companies

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. Once the notices have been accepted for processing, they will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than January 19, 1993.

A. Federal Reserve Bank of Atlanta (Zane R. Kelley, Vice President) 104 Marietta Street, N.W., Atlanta, Georgia 30303:

1. Willard Belton Simmons, Jr., Daphne, Alabama; to acquire an additional 7.2 percent, for a total of 25.9 percent, of the voting shares of FirstBanc Holding Company, Inc., Robertsdale, Alabama, and thereby indirectly acquire First Bank of Baldwin County, Robertsdale, Alabama.

B. Federal Reserve Bank of St. Louis (Randall C. Sumner, Vice President) 411 Locust Street, St. Louis, Missouri 63166:

1. Charles Tuck, Jr. and Frances L. Tuck, Springfield, Missouri; to acquire an additional 1.67 percent, for a total of 10.39 percent, of the voting shares of Citizens National Bancorp, Inc., Springfield, Missouri, and thereby indirectly acquire Citizens National Bank of Springfield, Springfield, Missouri.

Board of Governors of the Federal Reserve System, December 21, 1992.

Jennifer J. Johnson,

Associate Secretary of the Board.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[Program Announcement Number 315]

Demonstration Program for State Health Departments to Conduct Health Consultations and Public Health Assessment Activities; Amendment

A notice announcing the availability of Fiscal Year 1993 funds for cooperative agreements for conducting health consultations and public health assessment activities was published in the **Federal Register** on November 25, 1992, [57 FR 55540]. This notice extends the deadline date for application submission to February 1, 1993. Also, the notice is amended as follows:

On page 55540, second column, under the heading "Availability of Funds," after the second sentence, insert the following: "However, consideration will also be given to funding a single application up to the maximum available amount of approximately $150,000 for a meritorious proposal that, if well executed, would not only meet but exceed program requirements and produce desired impact." The next sentence is revised to read: "It is expected that the awards will begin on or about April 15, 1993, for a 12-month budget period within a 12-month project period."

On page 55542, third column, under the heading "Application Submission and Deadline," the first sentence is revised to read: "The original and two copies of application PHS Form 5161–1 must be submitted to Henry S. Cassell, III, Grants Management Officer, Grants Management Branch, Procurement and Grants Office, Centers for Disease Control and Prevention (CDC), 255 East Paces Ferry Road, NE., room 300, Mailstop E–13, Atlanta, Georgia 30305, on or before February 1, 1993."

All other information and requirements of the November 25, 1992, **Federal Register** notice remain the same.

Dated: December 21, 1992.

Walter R. Dowdle,

Acting Administrator, Agency for Toxic Substances and Disease Registry.

BILLING CODE 4160-70-M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[CA-066-4331-13]

Notice of Closure on Public Land; Riverside County, California

AGENCY: Bureau of Land Management; Interior.

ACTION: Notice of closure to vehicular traffic on public land for the protection of cultural resources.

SUMMARY: Notice is hereby given that Public Land in the area of the mouth and alluvial fan of Toro Canyon is closed to all vehicular traffic.

San Bernardino Meridian, California

T.7S., R.7E.,
Section 10.

The purpose of this notice is to establish a supplemental rule to help protect archaeological resources.

Exceptions to the closure would include law enforcement patrol and emergency services and administratively approved access for actions such as monitoring, research studies, mining activities, and access to private lands. Other actions would be considered on a case by case basis.

A map of the area described above may be viewed in the Palm Springs-South Coast Resource Area office. This closure is necessary to protect archaeological resources.

EFFECTIVE DATE: This closure is effective upon publication in the **Federal Register** and shall remain in effect until rescinded by the authorized officer.

FOR FURTHER INFORMATION CONTACT: Mike Mitchell, Archaeologist, Palm Springs-South Coast Resource Area, 63-500 Garnet Ave., North Palm Springs, CA 92258-2000, (619) 251-0812.

SUPPLEMENTARY INFORMATION: Authority for this Closure and Restriction Order may be found in 43 CFR 8364.1. Violation of this closure is punishable by a fine not to exceed $10,000 and/or imprisonment not to exceed 12 months. Resource monitoring over the last year has shown that archaeological resources are being directly impacted by vehicular traffic.

Dated: December 16, 1992.

Russell L. Kaldenberg,

Area Manager.

BILLING CODE 4310-40-M

[ID-943-03-4210-04; IDI-27201]

Notice of Exchange and Order Providing for Opening of Public Lands; Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Exchange and Opening Order.

SUMMARY: The United States has issued an exchange conveyance document to the State of Idaho under section 206 of the Federal Land Policy and Management Act. In addition to providing official public notice of the exchange, this document contains an order which opens lands received by the United States to the public land, mining, and mineral leasing laws.

EFFECTIVE DATE: January 27, 1993.

FOR FURTHER INFORMATION CONTACT: Sally Carpenter, BLM, Idaho State Office, 3380 Americana Terrace, Boise, Idaho, (208) 384-3163.

1. In an exchange made under the provisions of section 206 of the Act of October 21, 1976, 90 Stat. 2756, 43 U.S.C. 1716, the following described lands have been conveyed from the United States:

Boise Meridian

T. 16 N., R. 4 W.,
Sec. 8, NE¼NW¼;
Sec. 17, NW¼NW¼;
Sec. 18, E½NE¼.
T. 17 N., R. 4 W.,
Sec. 6, lots 6 and 7 and E½SW¼;
Sec. 7, lots 1 and 2, E½NW¼ and NE¼ SW¼;
Sec. 18, lots 1, 3, and 4, SE¼NW¼, and E½SW¼;
Sec. 19, lots 1 and 5, E½NW¼, NE¼ SW¼, E½SW¼NW¼, E½NW¼SW¼, and N½SE¼SW¼.
T. 17 N., R. 5 W.,
Sec. 1, E½SW¼SW¼, E½SW¼, and SE¼;
Sec. 11, NE¼NE¼SE¼, S½NE¼SE¼, SW¼SW¼SE¼, E½SW¼SE¼, and SE¼SE¼;
Sec. 12, SW¼NE¼, S½NW¼, N½SW¼, and W½SE¼;
Sec. 13, SW¼NE¼, S½NW¼, and N½ S½;
Sec. 14, E½NE¼, NW¼NE¼, and NE¼ SE¼;
Sec. 23, NW¼SE¼SW¼, E½SW¼SE¼ SW¼, and E½SE¼SW¼;
Sec. 24, E½NE¼;
Sec. 25, NW¼NE¼, SE¼NE¼, and E½ SE¼;
Sec. 27, SW¼NE¼ and NE¼SW¼;
Sec. 28, E½NE¼SE¼SE¼ and S½SE¼ SE¼;
Sec. 32, SW¼SW¼;
Sec. 34, S½;
Sec. 35, SE¼SE¼.

Comprising 6,221.70 acres of public lands.

2. In exchange for these lands, the United States acquired the following described lands:

Boise Meridian

T. 13 N., R. 4 W.,
Sec. 16.
T. 16 N., R. 5 W.,
Sec. 2, lot 3;
Sec. 4, NE¼SW¼;
Sec. 5, N½SW¼ and SE¼SW¼;
Sec. 6, lots 1, 5, and 6;
Sec. 8, SE¼NE¼ and E½NW¼;
Sec. 9, NW¼NW¼, SE¼NW¼, SE¼ SW¼, and W½SE¼;
Sec. 10, SW¼;
Sec. 11, NE¼;
Sec. 15, NW¼NE¼, NW¼NW¼, N½ SW¼, and SW¼SW¼;
Sec. 19, lots 3 and 4 and E½SW¼;
Sec. 21, NW¼NE¼ and N½NW¼;
Sec. 23, SE¼NW¼ and E½SW¼;
Sec. 24, E½NW¼.
T. 16 N., R. 6 W.,
Sec. 1, NW¼SE¼;
Sec. 10, E½SE¼;
Sec. 14, S½NE¼;
Sec. 23, SE¼SW¼ and SE¼;
Sec. 24, SW¼ and S½SE¼;
Sec. 25, W½;
Sec. 26, N½ and N½S½;
Sec. 27, NW¼NW¼ and S½;
Sec. 28, SE¼NE¼ and NE¼SE¼.
T. 18 N., R. 4 W.,
Sec. 4, lot 1 and SE¼ NE¼.
T. 19 N., R. 4 W.,
Sec. 27, NW¼SW¼;
Sec. 33, SE¼SE¼.
T. 13 N., R. 5 W.,
Sec. 2, SW¼NW¼ and W½SW¼;
Sec. 3, SE¼NW¼ and W½SE¼;
Sec. 10, NE¼NE¼;
Sec. 11, SW¼NE¼, NW¼, N½SW¼, and W½SE¼;
Sec. 16;
Sec. 36, NE¼NE¼, W½NE¼, W½, and SE¼SE¼.
T. 14 N., R. 5 W.,
Sec. 36.
T. 15 N., R. 6 W.,
Sec. 1, lots 1 and 2, S½NE¼, and SE¼;
Sec. 16.
T. 16 N., R. 6 W.,
Sec. 35, N½N½;
Sec. 36.
T. 13 N., R. 7 W.,
Sec. 16.
T. 14 N., R. 7 W.,
Sec. 36, N½, SW¼, and S½SE¼.
T. 15 N., R. 7 W.,
Sec. 36, lots 1 to 4, inclusive.

Comprising 6,239.20 acres of State lands.

The purpose of the exchange was to acquire State lands which have important wildlife and riparian values as well as important habitat for Columbia sharp-tailed grouse. The public interest was sell served through completion of this exchange. The values of the Federal and State lands were appraised at $330,000 and $330,700, respectively.

3. At 9 a.m. on January 27, 1993, the reconveyed State lands described in

paragraph 2 will be opened to the operation of the public land laws generally, subject to valid existing rights, the provisions of existing withdrawals, other segregations of record, and the requirements of applicable law. All valid applications received at or prior to 9 a.m. on January 27, 1993, shall be considered as simultaneously filed at that time. Those received thereafter shall be considered in the order of filing.

4. At 9 a.m. on January 27, 1993, the reconveyed State lands described in paragraph 2 will be opened to location and entry under the United States mining laws and to the operation of the mineral leasing laws, subject to valid existing rights, the provisions of existing withdrawals, other segregations of record, and the requirements of applicable law. Appropriation of any of the lands described in paragraph 2 under the general mining laws prior to the date and time of restoration is unauthorized. Any such attempted appropriation, including attempted adverse possession under 30 U.S.C. 38 (1988), shall vest no rights against the United States. Acts required to establish a location and to initiate a right of possession are governed by State law where not in conflict with Federal law. The Bureau of Land Management will not intervene in disputes between rival locators over possessory rights since Congress has provided for such determinations in local courts.

Dated: December 17, 1992.

William E. Ireland,

Chief, Realty Operations Section.

Idaho: Filing of Plats of Survey

The plat of survey of the following described land was officially filed in the Idaho State Office, Bureau of Land Management, Boise, Idaho, effective 9 a.m., December 16, 1992.

The plat, in two sheets, representing the dependent resurvey of portions of the east boundary, subdivisional lines, subdivision of section 26, and the 1963–1968 adjustments of the 1879 meander lines of Henrys Fork, and the survey of portions of the 1991 meanders of Henrys Fork and islands in section 26, T. 7 N., R. 39 E., Boise Meridian, Idaho, Group No. 816, was accepted December 14, 1992.

This survey was executed to meet certain administrative needs of this Bureau.

All inquiries concerning the survey of the above-described land must be sent to the Chief, Branch of Cadastral Survey, Idaho State Office, Bureau of land Management, 3380 Americana Terrace, Boise, Idaho, 83706.

Dated: December 16, 1992.

Duane E. Olsen,

Chief Cadastral Surveyor for Idaho.

DEPARTMENT OF JUSTICE

Antitrust Division

Notice Pursuant to the National Cooperative Research Act of 1984—Bell Communications Research, Inc.

Notice if hereby given that, on November 6, 1992, pursuant to section 6(a) of the National Cooperative Research Act of 1984, 15 U.S.C. 4301 *et seq.* ("the Act"), Bell Communications Research, Inc. ("Bellcore") filed a written notification on behalf of Bellcore and Citicorp International Communications, Inc. ("CICI") simultaneously with the Attorney General and the Federal Trade Commission disclosing (1) the identities of the parties and (2) the nature and objectives of the venture. The notification was filed for the purpose of invoking the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Pursuant to section 6(b) of the Act, the identities of the parties are Bellcore, Livingston, NJ; and CICI, Long Island City, NY. Bellcore and CICI entered into an agreement effective as of October 1, 1992, to engage in cooperative research of network based directory services to better understand the technologies for the provision of directory services as exchange and exchange access services, including research prototype fabrication for the experimental demonstration of such technologies.

Joseph H. Widmar,

Director of Operations, Antitrust Division.

Notice Pursuant to the National Cooperative Research Act of 1984

Notice is hereby given that, on October 1, 1992, pursuant to section 6(a) of the National Cooperative Research Act of 1984, 15 U.S.C. 4301, *et seq.* ("the Act"), Cable Television Laboratories, Inc. ("CableLabs") has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing additions to the membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, the following parties have become members of CableLabs: New Heritage Associates, Des Moines, IA; Buckeye Cablevision, Inc., Toledo, OH; and CUC Broadcasting Limited, Scarborough, Ontario, CANADA.

No other changes have been made in either the membership or planned activity of CableLabs. The membership remains open.

On August 8, 1988, CableLabs filed its original notification pursuant to section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to section 6(b) on September 7, 1988 (53 FR 34593).

The last notification was filed with the Department on May 18, 1992. A notice was published in the **Federal**

Register pursuant to section 6(b) of the Act on July 24, 1992 (57 FR 33012).

This submission will also serve as notification with respect to the following joint research ventures to which CableLabs is a member although there is no change in membership of any of the joint research ventures:

Cable Television Laboratories, Inc./PCN America, Inc.
Date of original notification: March 25, 1991
Federal Register notice: June 14, 1991(56 FR 27539)

BILLING CODE 4410-01-M

Notice Pursuant to the National Cooperative Research Act of 1984: "IHPTET Fiber Development Consortium"

Notice is hereby given that, on November 17, 1992, pursuant to section 6(a) of the National Cooperative Research Act of 1984, 15 U.S.C. 4301 *et seq.* ("the Act"), General Motors Corporation filed a written notification simultaneously with the Attorney General and the Federal Trade Commission disclosing (1) the identities of the parties to and (2) the nature and objectives of the "IHPTET Fiber Development Consortium." The notification was filed for the purpose of invoking the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Pursuant to section 6(b) of the Act, the parties to the Consortium are Allied Signal Aerospace Company, Phoenix, AZ; AVCO Corporation, Stratford, CT; General Electric Company, Cincinnati, OH; General Motors Corporation, Detroit, MI; Teledyne Industries, Inc., Toledo, OH; United Technologies Corporation, West Palm Beach, FL; and Williams International, Walled Lake, MI, and its general area of planned activity is to identify opportunities for joining aspects of their independent research and development efforts pertaining to advanced fibers for use in composites for parts and components of advanced aircraft propulsion engines. The objectives are to avoid inefficient duplication of effort and expense, accelerate the development of advanced fibers for ceramic, metal matrix, and intermetallic matrix composites for gas turbine engines to meet the U.S. Government's Integrated High Performance Turbine Engine Technology goals (with a primary emphasis on fiber technology for ceramic matrix composites) and promote a United States advanced fiber manufacturing capability. To meet these objectives, the parties will collect, exchange, and analyze research information in these areas; conduct or direct joint research in the most promising of these high risk/high cost areas; and perform further acts allowed by the National Cooperative Research Act that would advance the Parties' objectives in this area. Membership in the Consortium remains open, and the parties intend to file additional written notification disclosing all changes in membership to the Consortium.

Joseph H. Widmar,

Director of Operations, Antitrust Division.

BILLING CODE 4410-01-M

Notice Pursuant to the National Cooperative Research Act of 1984; Petrotechnical Open Software Corporation

Notice is hereby given that, on October 19, 1992, pursuant to section 6(a) of the National Cooperative Research Act of 1984, 15 U.S.C. 4301, *et seq.* ("the Act"), Petrotechnical Open Software Corporation ("POSC") has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the protections of the Act limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances.

Specifically, the following additional parties have become new, non-voting members of POSC: Australian Geological Survey Organisation, Canberra, Australia; Merak Projects Ltd., Calgary, Alberta, Canada; the Norwegian Petroleum Directorate, Stravanger, Norway; Base Line Computer Corporation, Southlake, TX; UNISQL, Incorporated, Austin, TX; Geomath International, Rueil-Malmaison, France; and Britannia Data Management, London, England.

No other changes have been made in either the membership or planned activity of POSC.

On January 14, 1991, POSC filed its original notification pursuant to section 6(a) of the Act. The Department of Justice published a notice in the Federal Register pursuant to section 6(b) of the Act on February 7, 1991, 56 FR 5021. The last notification was filed with the Department on July 20, 1992. A notice was published in the Federal Register pursuant to section 6(b) of the Act on August 20, 1992, 57 FR 37840.

Lodging of Consent Decree Pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act

In accordance with Department policy, 28 CFR 50.7, notice is hereby given that on December 18, 1992, a proposed Consent Decree in *United States* v. *PBM Enterprises, et al.*, Civil Action No. 88CV-74073-DT, was lodged in the United States District Court for the Eastern District of Michigan. The Complaint filed by the United States alleged claims under Section 107 of the Comprehensive Environmental Response, Compensation, and Liability Act ("CERCLA"), 42 U.S.C. 9607(a), for costs incurred by the United States in responding to the release or threat of release of hazardous substances at the PBM Enterprises Site located at 10100 Harrison Road in Romulus, Michigan ("the Site"). The Consent Decree requires defendants PBM Enterprises,

Edward F. Martin, William B. Matakas, and Phillipa C. Matakas to pay $190,000 to reimburse the United States Environmental Protection Agency for unrecovered past response costs at the Site.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication comments concerning the proposed Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, U.S. Department of Justice, P.O. Box 7611, Ben Franklin Station, Washington, DC 20044, and should refer to *United States* v. *PBM Enterprises, et al.*, D.J. Ref. No. 90–11–3–347.

The proposed Consent Decree may be examined at any of the following offices: (1) the United States Attorney for the Eastern District of Michigan, 231 West Lafayette, Detroit, Michigan, 48226 (contact Assistant United States Attorney Geneva Halliday; (2) the U.S. Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604–3590 (contact Assistant Regional Counsel Richard Nagle); and the Consent Decree Library, 601 Pennsylvania Avenue, NW., Washington, DC 20044, (202) 347–2072. Copies of the proposed Consent Decree may be obtained in person or by mail from the Consent Decree Library, 601 Pennsylvania Avenue, NW., Washington, DC 20044, telephone (202) 347–7829. For a copy of the Consent Decree please enclose a check in the amount of $4.25 (25 cents per page reproduction charge) payable to Consent Decree Library.

Vicki A. O'Meara,

Acting Assistant Attorney General, Environmental and Natural Resources Division.

BILLING CODE 4410–01–M

Lodging of Consent Decree Pursuant to the Clean Water Act

In accordance with Departmental policy at 28 CFR 50.7, notice is hereby given that on December 10, 1992, a proposed consent decree in *United States* vs. *NICOR National Louisiana, Inc.*, Civil Action No. 92–0960, was lodged with the United States District Court for the Eastern District of Louisiana. The complaint filed by the United States sought injunctive relief and civil penalties for violations by defendant NICOR National Louisiana, Inc. (NL) of sections 301 and 402 of the Clean Water Act and the terms and conditions of its National Pollutant Discharge Elimination System (NPDES) permit issued by the U.S. Environmental Protection Agency (EPA) in 1989. The proposed consent decree imposes a $225,000 penalty for these violations.

For a period of thirty (30) days from the date of this publication, the Department of Justice will receive written comments relating to the proposed consent decree from persons who are not parties to the action. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, U.S. Department of Justice, Washington, DC 20530, and should refer to *United States* vs. *NICOR National Louisiana, Inc.*, DOJ # 90–5–1–3379.

The proposed consent decree may be examined at the offices of the United States Attorney for the Eastern District of Louisiana, 400 Poydras Street, Suite 1900, New Orleans, Louisiana and at the office of the United States Environmental Protection Agency, Region VI, 1445 Ross Avenue, Dallas, Texas 75202 (Attention: Quinton Farley, Assistant Regional Counsel). A copy of the consent decree may also be examined at the Environmental Enforcement Section Document Center, 601 Pennsylvania Avenue, NW., Washington, DC 20004. Copies of the decree may be obtained in person or by mail from the Environmental Enforcement Section Document Center. Such requests should be accompanied by a check in the amount of $2.00 (25 cents per page reproduction charge) payable to "Consent Decree Library". When requesting copies, please refer to *United States* vs. *NICOR National Louisiana, Inc.*, DOJ # 90–5–1–1–3379.

Vicki A. O'Meara,

Acting Assistant Attorney General, Environment and Natural Resources Division.

BILLING CODE 4410–01–M

DEPARTMENT OF LABOR

Employment Standards Administration

Wage and Hour Division; Minimum Wages for Federal and Federally Assisted Construction; General Wage Determination; Decisions

General wage determination decisions of the Secretary of Labor are issued in accordance with applicable law and are based on the information obtained by the Department of Labor from its study of local wage conditions and data more made available from other sources. They specify the basic hourly wage rates and fringe benefits which are determined to be prevailing for the described classes of laborers and mechanics employed on construction projects of a similar character and in the localities specified therein.

The determinations in these decisions of prevailing rates and fringe benefits have been made in accordance with 29 CFR part 1, by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR part 1, Appendix, as well as such additional statutes as may from time to time be enacted containing provisions for the payment of wages determined to be prevailing by the Secretary of Labor in accordance with the Davis-Bacon Act. The prevailing rates and fringe benefits determined in these decisions shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged on contract work of the character and in the localities described therein.

Good cause is hereby found for not utilizing notice and public comment procedure thereon prior to the issuance of these determinations as prescribed in 5 U.S.C. 553 and not providing for delay in the effective date as prescribed in that section, because the necessity to issue current construction industry wage determinations frequently and in large volume causes procedures to be impractical and contrary to the public interest.

General wage determination decisions, and modifications and supersedeas decisions thereto, contain no expiration dates and are effective from their date of notice in the **Federal Register**, or on the date written notice is received by the agency, whichever is earlier. These decisions are to be used in accordance with the provisions of 29 CFR parts 1 and 5. Accordingly, the applicable decision, together with any modifications issued, must be made a part of every contract for performance of the described work within the geographic area indicated as required by an applicable Federal prevailing wage law and 29 CFR part 5. The wage rates and fringe benefits, notice of which is published herein, and which are contained in the Government Printing Office (GPO) document entitled "General Wage Determination Issued Under the Davis-Bacon And Related Acts," shall be the minimum paid by contractors and subcontractors to laborers and mechanics.

Any person, organization, or governmental agency having an interest

in the rates determined as prevailing is encouraged to submit wage rate and fringe benefit information for consideration by the Department. Further information and self-explanatory forms for the purpose of submitting this data may be obtained by writing to the U.S. Department of Labor, Employment Standards Administration, Wage and Hour Division, Division of Wage Determinations, 200 Constitution Avenue, NW., room S–3014, Washington, DC 20210.

Corrections to General Wage Determination Decisions

Pursuant to the provisions of the Regulations set forth in title 29 of the Code of Federal Regulations, part 1, § 1.6(d), the Administrator of the Wage and Hour Division may correct any wage determination that contains clerical errors.

Corrections being issued in the Government Printing Office document entitled "General Wage Determinations Issued Under the Davis-Bacon and Related Acts" are indicated by Volume and are included immediately following the transmittal sheet(s) for the appropriate Volume(s).

Volume I

Wage Decision No. NY91–3, Modification Nos. 5 Through 9

Pursuant to the Regulations, 29 CFR part 1, § 1.6(d), such corrections shall be included in any bid specifications containing the wage determinations, or in any on-going contracts containing the wage determinations in question, retroactively to the start of construction.

Modification to General Wage Determination Decisions

The number of decisions listed in the Government Printing Office document entitled "General Wage Determinations Issued Under the Davis-Bacon and Related Acts" being modified are listed by Volume, State, and page number(s). Dates of Publication in the **Federal Register** are in parentheses following the decisions being modified.

Volume I

Kentucky:
KY91–25 (Feb. 22, 1991) ..... p. All
KY91–26 (Feb. 22, 1991) ..... p. All
KY91–27 (Feb. 22, 1991) ..... p. All
KY91–28 (Feb. 22, 1991) ..... p. All
New Jersey:
NJ91–2 (Feb. 22, 1991) ..... p. 701 pp. 705
NJ91–3 (Feb. 22, 1991) ..... p. 721 pp. 725, 727–728
South Carolina: SC91–23 (Feb. 22, 1991). p. All

Volume II

Illinois: IL91–19 (Feb. 22, 1991) p. All
Indiana: IN91–18 (Feb. 22, 1991) p. All

General Wage Determination Publication

General wage determinations issued under the Davis-Bacon and related Acts, including those noted above, may be found in the Government Printing Office (GPO) document entitled "General Wage Determinations Issued Under the Davis-Bacon And Related Acts". This publication is available at each of the 50 Regional Government Depository Libraries and many of the 1,400 Government Depository Libraries across the country. Subscriptions may be purchased from: Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. (202) 783–3238.

When ordering subscription(s), be sure to specify the State(s) of interest, since subscriptions may be ordered for any or all of the three separate volumes, arranged by State. Subscriptions include an annual edition (issues on or about January 1) which includes all current general wage determinations for the States covered by each volume. Throughout the remainder of the year, regular weekly updates will be distributed to subscribers.

Signed at Washington, DC this 18th day of December 1992.

Alan L. Moss,

Director, Division of Wage Determinations.

[FR Doc. 92–31184 Filed 12–24–92; 8:45 am]

BILLING CODE 4510–27–M

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Records Schedules; Availability and Request for Comments

AGENCY: National Archives and Records Administration, Office of Records Administration.

ACTION: Notice of availability of proposed records schedules; request for comments.

SUMMARY: The National Archives and Records Administration (NARA) publishes notice at least once monthly of certain Federal agency requests for records disposition authority (records schedules). Records schedules identify records of sufficient value to warrant preservation in the National Archives of the United States. Schedules also authorize agencies after a specified period to dispose of records lacking administrative, legal, research, or other value. Notice is published for records schedules that: (1) Propose the destruction of records not previously authorized for disposal, or (2) reduce the retention period for records already authorized for disposal. NARA invites public comments on such schedules, as required by 44 U.S.C. 3303a(a).

DATES: Request for copies must be received in writing on or before February 11, 1993. Once the appraisal of the records is completed, NARA will send a copy of the schedule. The requester will be given 30 days to submit comments.

ADDRESSES: Address requests for single copies of schedules identified in this notice to the Records Appraisal and Disposition Division (NIR), National Archives and Records Administration, Washington, DC 20408. Requesters must cite the control number assigned to each schedule when requesting a copy. The control number appears in the parentheses immediately after the name of the requesting agency.

SUPPLEMENTARY INFORMATION: Each year U.S. Government agencies create billions of records on paper, film, magnetic tape, and other media. In order to control this accumulation, agency records managers prepare records schedules specifying when the agency no longer needs the records and what happens to the records after this period. Some schedules are comprehensive and cover all the records of an agency or one of its major subdivisions. These comprehensive schedules provide for the eventual transfer to the National Archives of historically valuable records and authorize the disposal of all other records. Most schedules, however, cover records of only one office or program or a few series of records, and many are updates of previously approved schedules. Such schedules also may include records that are designated for permanent retention.

Destruction of records requires the approval of the Archivist of the United States. This approval is granted after a thorough study of the records that takes into account their administrative use by the agency of origin, the rights of the Government and of private persons directly affected by the Government's activities, and historical or other value.

This public notice identifies the Federal agencies and their subdivisions requesting disposition authority, includes the control number assigned to each schedule, and briefly describes the records proposed for disposal. The records schedule contains additional information about the records and their disposition. Further information about

the disposition process will be furnished to each requester.

Schedules Pending:

1. Department of the Air Force (N1–AFU–93–1). Routine background files to the Journal of Military Assistance, 1963–72.
2. Department of the Air Force (N1–AFU–93–2). Routine records of the Education Services Program.
3. Department of the Army (N1–AU–91–6). Files relating to changes in the organization of installation support activities.
4. Department of Commerce, National Institute of Standards and Technology (N1 167–92–3). Records of the U.S. Metric Board.
5. Department of Commerce, Patent and Trademark Office (N1–241–92–1). Case folders of registered attorneys and agents.
6. Department of Commerce, Patent and Trademark Office (N1–241–92–2). Records of the Office of Enrollment and Discipline.
7. Department of Health and Human Services, Health Care Financing Agency (N1–440–93–2). Case files of the MEDICARE Geographic Classification Review Board.
8. Department of Labor, Employees Compensation Appeals Board (N1–386–92–1). Legislative reference files.
9. Department of State, Bureau of Politico-Military Affairs (N1–59–92–31). Routine, facilitative, and duplicative records of the Office of Defense Relations and Security Assistance.
10. General Services Administration (N1–269–93–1). Records relating to Real and Personal Property Management.
11. National Archives and Records Administration (N2–121–93–1). Glass plate photographic negatives, the images of which have been copied, accessioned from the General Services Administration, Public Buildings Service

Dated: December 15, 1992.

Don W. Wilson,

Archivist of the United States.

BILLING CODE 7515–01–M

PACIFIC NORTHWEST ELECTRIC POWER AND CONSERVATION PLANNING COUNCIL

Notice of Recommendations for Amendments to the Columbia River Basin Fish and Wildlife Program (Measures for Resident Fish and Wildlife)

December 18, 1992.

AGENCY: Pacific Northwest Electric Power and Conservation Planning Council (Northwest Power Planning Council).

SUMMARY: Pursuant to the Pacific Electric Power Planning and Conservation Act (the Northwest Power Act, 16 U.S.C. 839, et seq.) interested parties have submitted to the Pacific Northwest Electric Power and Conservation Planning Council (Council) recommendations for amendments to resident fish and wildlife provisions of the Columbia River Basin Fish and Wildlife Program (program). Copies of the recommendations are now available, and comments are solicited.

Background: The Council is in the last phase of a four-part process to amend the Columbia River Basin Fish and Wildlife Program (program). In phases one through three, the Council adopted amendments regarding salmon and steelhead. The Council is now initiating the fourth phase, in which resident fish and wildlife amendments to the program will be considered.

Opportunity for Comment: The Council will receive written comment on the recommendations through 5 p.m. Pacific time, February 11, 1993. Comments should be clearly marked "Phase Four Comments," and submitted to the Council's Public Affairs Division, 851 SW. Sixth Avenue, suite 1100, Portland, Oregon 97204. After the close of comment on the recommendations, the Council will propose program amendments, and opportunities for comment on these proposed amendments, including hearings in the four states, will be afforded. The Council expects to make final decisions on the proposed amendments in October 1993.

FOR FURTHER INFORMATION CONTACT: A summary of the recommendations is available. For the summary, or for copies of the recommendations, contact the Council at 851 SW. Sixth Avenue, suite 1100, Portland, Oregon 97204 or (503) 222–5161, toll free 1–800–222–3355.

Edward W. Sheets,

Executive Director.

BILLING CODE 4830-01-M

Sunshine Act Meetings

Federal Register
Vol. 57, No. 249
December 28, 1992

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

DEFENSE NUCLEAR FACILITIES SAFETY BOARD

Pursuant to the provisions of the "Government in the Sunshine Act" (5 U.S.C. 552b), notice is hereby given of the Board's meeting described below. The Board will also conduct a public hearing pursuant to 42 U.S.C. 2286b and invites any interested persons or groups to present any comments, technical information, or data concerning the Department of Energy's Operational Readiness Review and other matters related to the resumption of plutonium operations in Building 707 at the Rocky Flats Plant.

TIME AND DATE: 5:30 p.m. January 12, 1993—Department of Energy presentations; 8:00 p.m.—Opportunity for interested persons to present oral comments concerning the matters to be considered.

PLACE: The Boulder Broker Inn, The Ballroom, 555–30th Street, Boulder, Colorado 80303.

STATUS: Open. While the Government in the Sunshine Act does not require that the scheduled briefing be conducted in a meeting, the Board has determined that an open meeting in this specific case furthers the public interests underlying both the Sunshine Act and the Board's enabling legislation.

MATTERS TO BE CONSIDERED: The open public meeting and hearing will address the Department of Energy's Operational Readiness Review and other matters related to the resumption of plutonium operations in Building 707 at the Rocky Flats Plant. The Department of Energy will take appropriate measures to safeguard any classified or controlled nuclear information it presents at this meeting. The public hearing portion is independently authorized by 42 U.S.C. 2286b.

FOR FURTHER INFORMATION CONTACT: Kenneth M. Pusateri, General Manager, Defense Nuclear Facilities Safety Board, 625 Indiana Avenue, NW, Suite 700, Washington, DC 20004, (202) 208–6400. This is not a toll free number.

SUPPLEMENTARY INFORMATION: Requests to speak at the hearing may be submitted in writing or by telephone. We ask that commentators describe the nature and scope of the oral presentation. Those who contact the Board prior to close of business on January 8, 1993, will be scheduled for time slots, beginning at approximately 8:00 p.m. The Board will post a schedule for those speakers who have contacted the Board before the hearing. The posting will be made at the entrance to the Ballroom at The Boulder Broker Inn at the start of the 5:30 p.m. meeting.

Anyone who wishes to comment, provide technical information or data may do so in writing, either in lieu of, or in addition to making an oral presentation. The Board members may question presenters to the extent deemed appropriate. The Board will hold the record open until January 22, 1993, for the receipt of materials. A transcript of the meeting will be made available by the Board for inspection by the public at the Defense Nuclear Facilities Safety Board's Washington office and a the DOE's public reading room at DOE's Front Range Community College, 3645 West 112 Avenue, Westminster, CO 80030.

The Board specifically reserves its right to further schedule and otherwise regulate the course of the meeting and hearing, to recess, reconvene, postpone or adjourn the meeting, conduct further reviews, and otherwise exercise its power under the Atomic Energy Act of 1954, as amended.

Dated: December 22, 1992.

Kenneth M. Pusateri,

General Manager

[FR Doc. 92–31495 Filed 12–22–92; 4:54 pm]

BILLING CODE 6820–KD–M

FEDERAL DEPOSIT INSURANCE CORPORATION

Notice of Agency Meeting

Pursuant to the provisions of the "Government in the Sunshine Act" (5 U.S.C. 552b), notice is hereby given that at 10:03 a.m. on Tuesday, December 22, 1992, the Board of Directors of the Federal Deposit Insurance Corporation met in closed session to consider the following:

Matters relating to the Corporation's corporate and supervisory activities.

Matters relating to an assistance agreement with an insured bank.

Recommendations concerning administrative enforcement proceedings.

Reports of the Office of Inspector General.

Matters relating to the cross-guaranty provisions of the Federal Deposit Insurance Act and issuance of notices of assessment of liability pursuant to those provisions.

Recommendation regarding the liquidation of a depository institution's assets acquired by the Corporation in its capacity as receiver, liquidator, or liquidating agent of those assets:

Case No. 47,846 VMS National Properties' Bankruptcy Reorganization Plan

In calling the meeting, the Board determined, on motion of Director C.C. Hope Jr. (Appointive), seconded by Director Stephen R. Steinbrink (Acting Comptroller of the Currency), concurred in by Acting Chairman Andrew C. Hove, Jr., and Director Jonathan L. Fiechter (Acting Director, Office of Thrift Supervision), that Corporation business required its consideration of the matters on less than seven days' notice to the public; that no earlier notice of the meeting was practicable; that the public interest did not require consideration of the matters in a meeting open to public observation; and that the matters could be considered in a closed meeting by authority of subsections (c)(2), (c)(4), (c)(6), (c)(8), (c)(9)(A)(ii), (c)(9)(B), and (c)(10) of the "Government in the Sunshine Act" (5 U.S.C. 552b(c)(2), (c)(4), (c)(6), (c)(8), (c)(9)(A)(ii), (c)(9)(B), and (c)(10)).

The meeting was held in the Board Room of the FDIC Building located at 550—17th Street, NW., Washington, DC.

Dated: December 22, 1992.

Federal Deposit Insurance Corporation

Robert E. Feldman,

Deputy Executive Secretary.

Medicare and Medicaid; Resident Assessment in Long Term Care Facilities

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Proposed rule.

SUMMARY: Sections 1819(b)(3) and 1919(b)(3) of the Social Security Act (the Act) require long term care facilities participating in the Medicare and Medicaid programs to conduct periodic assessments of each resident's functional capacity. Sections 1819(f)(6) and 1919(f)(6) of the Act require the Secretary to specify a minimum data set of core elements and common definitions for use by the facilities, to establish guidelines for use of the data set, and to designate one or more assessment instruments which a State may require facilities to use. This proposed rule would set forth these required items. It would also implement sections 1819(e)(5) and 1919(e)(5), which require the States to specify a resident assessment instrument (RAI) to be used by long term care facilities in complying with sections 1819(b)(3) and 1919(b)(3).

To conform the regulations to section 4214(d)(1)(A) of the Omnibus Budget Reconciliation Act of 1987, we would also revise sections of part 456 that deal with Inspections of Care. We would substitute "intermediate care facility for the mentally retarded" for intermediate care facility and eliminate skilled nursing facility. Also, "mental hospitals" and "psychiatric facilities" would be substituted for institutions for mental diseases.

DATES: Written comments will be considered if we receive them at the appropriate address, as provided below, no later than 5 p.m. on February 26, 1993.

ADDRESSES: Mail written comments (1 original and 3 copies) to the following address: Health Care Financing Administration, Department of Health and Human Services, Attention: HSQ–180–P, P.O. Box 26676, Baltimore, Maryland 21207.

If you prefer, you may deliver your written comments (1 original and 3 copies) to one of the following addresses:

Room 309–G, Hubert H. Humphrey Building, 200 Independence Ave., SW., Washington, DC, or

Room 132, East High Rise Building, 6325 Security Boulevard, Baltimore, Maryland.

Due to staffing and resource limitations, we cannot accept audio, visual, or facsimile (FAX) copies of comments.

In commenting, please refer to file code HSQ–180–P. Comments received timely will be available for public inspection as they are received, generally beginning approximately three weeks after publication of a document, in room 309–G of the Department's offices at 200 Independence Ave., SW., Washington, DC, on Monday through Friday of each week from 8:30 a.m. to 5 p.m. (phone: 202–690–7890).

FOR FURTHER INFORMATION CONTACT: Sue Nonemaker, (410) 966–6825.

SUPPLEMENTARY INFORMATION:

I. Background

Under the Social Security Act (the Act), long term care facilities must meet certain requirements in order to participate in the Medicare and Medicaid programs. Sections 1819(a) through (d) of the Act set forth the requirements for Medicare skilled nursing facilities (SNFs), and sections 1919 (a) through (d) set forth the requirements for Medicaid nursing facilities (NFs). The State responsibilities relating to Medicare SNFs are set forth in section 1819(e), the Federal responsibilities in section 1819(f), and joint State-Federal responsibilities in sections 1819 (g) through (i). The State responsibilities relating to Medicaid NFs are set forth in section 1919(e), the Federal responsibilities in section 1919(f), and joint State-Federal responsibilities in sections 1919 (g) through (i).

The requirements that SNFs and NFs must meet in order to qualify to participate in the Medicare and Medicaid programs are set forth at 42 CFR part 483, subpart B ("Requirements for Long Term Care Facilities"). These requirements are enforced through a survey process which provides for annual recertification surveys and additional surveys as needed. The surveys are conducted by State agencies under contract with the Health Care Financing Administration (HCFA) and are monitored through its ten regional offices.

Certain new requirements regarding resident assessment were published in the **Federal Register** on February 2, 1989 (54 FR 5316). These new requirements conform with sections 4201(a)(3) and 4211(a)(3) of the Omnibus Budget Reconciliation Act of 1987 (Pub. L. 100–203). Public Law 100–203 added sections 1819(a)(3), (e)(5), and (f)(6), and sections 1919(a)(3), (e)(5), and (f)(6) of the Act. Public Law 100–203, as subsequently amended, requires that—

- Long term care facilities participating in the Medicare and Medicaid programs conduct a comprehensive, accurate, standardized, reproducible assessment of each resident's functional capacity;
- The assessment describe the resident's capability to perform daily life functions and significant impairments in functional capacity;
- Effective October 1, 1990, the assessment be based on a uniform minimum data set (MDS) of core elements and common definitions specified by the Secretary;
- The Secretary specify the MDS and guidelines for using it no later than January 1, 1989;
- Long term care facilities use a resident assessment instrument specified by the State;
- The instrument specified by the State be either specified by the Secretary or approved by the Secretary as consistent with the MDS of core elements, common definitions, and utilization guidelines specified by the Secretary; and
- No later than April 1, 1990, the Secretary designate one or more resident assessment instruments.

These provisions of the Act were the basis of the new requirements published as part of a final rule on February 2, 1989. The rule added 42 CFR 483.20 ("Level A requirement: Resident assessment"), which sets forth resident assessment requirements for long term care facilities. But, while the rule set forth the requirements for resident assessment, it did not set forth the MDS consisting of core elements and common definitions, guidelines for using the MDS, and one or more resident assessment instruments.

Public Law 100–203 also amended a part of the Act which deals with Inspection of Care (IoC) reviews. IoC reviews are independent professional reviews to determine quality of care and appropriateness of the levels of care furnished to Medicaid recipients in Medicaid participating facilities. The reviews are the responsibility of the State and may either be conducted by teams of State employees or by outside teams under contract to the State.

Section 4212(d)(1)(A) of Public Law 100–203 removed references to skilled nursing facilities (SNFs) and substituted references to intermediate care facilities

for the mentally retarded (ICFs/MR) in place of intermediate care facilities (ICFs) in section 1903(g)(1) of the Act, which relates to IoC reviews. However, the law specifies that this change shall not apply to a State until the Secretary has determined that the State has specified its resident assessment instrument and has begun conducting surveys under the new survey and certification process. Therefore, States must continue to conduct IoC reviews in NFs (on October 1, 1990, ICFs other than ICFs/MR became NFs) until the resident assessment process and the new survey and certification process is fully implemented.

II. Provisions of the Proposed Regulation

To conform the regulations to section 4212(d)(1)(A) of Public Law 100–203, we would revise the sections of Part 456 that make specific reference to IoC reviews of SNFs and ICFs. We would substitute "ICFs/MR" for SNFs and ICFs. In addition, we would substitute the terms "mental hospitals" and "psychiatric facilities" for Institutions for Mental Diseases (IMDs). Since Public Law 100–203 excludes SNFs and ICFs from the provisions of section 1903(g)(1) of the Act, this means that the only types of IMDs remaining are mental hospitals and psychiatric facilities. Accordingly, we would substitute the terms "mental hospitals" and "psychiatric facilities" for IMDs. The sections involved are—

§ 456.1(b)(5)	"Inspections of care and services in institutions".
§ 456.600	"Purpose [of Subpart I ("Inspections of Care in Skilled Nursing and Intermediate Care Facilities and Institutions for Mental Diseases")]".
§ 456.601	"Definitions [of terms used in Subpart I]".
§ 456.602(c), (d), and (f).	"Inspection team".
§ 456.603	"Financial interests and employment of team members".
§ 456.608	"Personal contact with and observation of recipients and review of records".
§ 456.609	"Determinations by team".
§ 456.610	"Basis for determinations".
§ 456.612	"Copies of reports".
§ 456.651	"Definitions [of terms used in Subpart J ("Penalty for Failure to Make a Satisfactory Showing of an Effective Institutional Utilization Control Program")]".
§ 456.654	"Requirements for content of showings and procedures for submittal".

The resident assessment instrument (RAI) is designed to produce "a comprehensive, accurate, standardized, reproducible assessment of each [long term care facility] resident's functional capacity" required by sections 4201(a)(3) and 4211(a)(3) of Public Law 100–203. To meet this requirement, we have designed an RAI comprised of the MDS and the Resident Assessment Protocols (RAPs). States may choose to specify it or to specify an alternate RAI approved by HCFA.

We would revise the current § 483.20(b)(1) to state that facilities must make a comprehensive assessment of each resident's needs, using the RAI specified by the State, and that the assessment process must include direct observation and communication with the resident, as well as communication with licensed and nonlicensed direct care staff members on all shifts.

In October 1988, HCFA contracted with the Research Triangle Institute (RTI) to develop the RAI (HCFA Contract No. 500–88–0055). During the period October 1988 to March 1990, RTI and its principal subcontractors, the Hebrew Rehabilitation Center for Aged, Brown University, and The University of Michigan, assisted HCFA in developing an RAI, to include the MDS (which appears at the proposed § 483.315(b)(1)). A complete copy of the RAI developed by RTI, along with instructions and guidelines, appears in the appendix to this preamble, and a description of the development of the elements of the RAI and guidelines follows below:

A. The Development of the MDS

The principal task in developing the RAI was specifying the MDS. The MDS is a minimum set of screening and assessment elements, including common definitions and coding categories, needed to perform a comprehensive assessment of a long-term care facility resident. Its development involved two major activities: (1) Organizing and analyzing the recommendations of clinical experts and persons knowledgeable about the assessment needs of nursing facility residents as to what core elements to include in the data set, including creating a conceptual framework to organize these elements; and (2) conducting extensive reliability testing of this data set, including producing training materials for nurse assessors. We have included in the proposed MDS only those individual core data elements that—

- Are necessary to consider in developing a plan of care;
- Show acceptable levels of inter-rater reliability (that is, if two assessors were independently to gather this information, they would reach a similar conclusion about a resident's status and care needs);
- Are cost-efficient to gather (that is, the time and resources needed by nursing staff to collect and record this information would be commensurate with the information's utility in planning a resident's care);
- Assess a resident's actual performance and functioning levels, rather than their potential performance and function;
- Describe evident conditions or behaviors (that is, "resident expresses sadness", rather than describe conditions and behaviors that are not readily manifested, such as, "resident feels sad");
- Provide a time frame for assessing the behavior or condition (for example, "within the last 7 days" or "bedfast at least 22 hours per day"); and
- When applicable, specify the frequency and intensity of services required (for example, in the assessment of a need for specialized rehabilitation therapies such as physical, occupational, or speech therapy)

The framework for performing a comprehensive assessment is found at the current § 483.20(b)(2), which states:

The comprehensive assessment must include at least the following information:

(i) Medically defined conditions and prior medical history;
(ii) Medical status measurement;
(iii) Physical and mental functional status;
(iv) Sensory and physical impairments;
(v) Nutritional status and requirements;
(vi) Special treatments or procedures;
(vii) Mental and psychosocial status;
(viii) Discharge potential;
(ix) Dental condition;
(x) Activities potential;
(xi) Rehabilitation potential;
(xii) Cognitive status; and
(xiii) Drug therapy.

In devising the MDS, HCFA and its contractors first reviewed over 60 assessment instruments developed for the purposes of preadmission screening, State case-mix payment determination, nursing facility management, and geriatric research. We asked States using standardized assessment instruments to forward their forms to us for analysis. Twelve instruments that met a criterion for comprehensiveness consistent with the areas detailed in the current § 483.20(b) were reviewed further to identify common items, definitions, and coding categories.

Most previously used instruments measured activities of daily living (ADLs), mobility, and selected nursing care needs and services. However, few instruments measured behavioral disorders, mood disturbances, activities potential and cognitive functioning. Not one assessment tool addressed

residents' preferences for, and involvement in, activities. Based on this review of existing instruments, HCFA concluded that none could serve "as is" or with simple modifications as the MDS or RAI. However, this analysis of common assessment items and definitions did provide a starting point for developing the first draft of the MDS.

The second stage of MDS development focused on the formation of a Clinical Consultant Panel and a National Advisory Committee of professionals from a spectrum of disciplines, including: nursing; social work; medicine; physical, occupational, and speech therapy; pharmacy; and nutrition. We also included resident advocates, individual nursing facility providers, nursing facility industry representatives, regulators, and statistical experts in these deliberations.

Based on the suggestions of these expert consultants, HCFA's contractors prepared and circulated for comment 38 drafts of the MDS to various provider groups, consumer organizations, professional associations, and State government representatives, over a 6-month period. We received comment from approximately 90 organizations and 200 individuals. This developmental process resulted in an MDS suitable for field testing.

The goal of field testing was to produce an MDS with elements having both high inter-rater reliability and clinical utility. The first field test of the MDS occurred in 10 nursing facilities in North Carolina and Massachusetts in May–June 1989. HCFA contractors analyzed the use of the MDS for 383 nursing facility residents in these 10 facilities.

This field trial of the MDS provided objective evidence for retaining, modifying, or dropping proposed MDS items. We concluded from our analysis of this field test that 39 percent of the items were reliable and should be retained in their tested form; 40 percent required some modification and additional testing; and 21 percent of items were dropped. After sharing these findings with the Clinical Consultant Panel and the National Advisory Committee, HCFA's contractors produced a revised MDS.

We subjected this revised MDS to additional field testing with 123 residents in 15 nursing facilities in North Carolina, Massachusetts, Ohio, Minnesota, and Connecticut from December 1989–February 1990. The result of this research and testing is the MDS at the proposed § 483.315(b)(1). It consists of the following information:

- Identification and background information;
- Cognitive patterns;
- Communication/hearing patterns;
- Vision patterns;
- Physical functioning and structural problems;
- Continence in last 14 days;
- Psychosocial well-being;
- Mood and behavior patterns;
- Activity pursuit patterns;
- Disease diagnoses;
- Health conditions;
- Oral/nutritional status;
- Oral/dental status;
- Skin condition;
- Medication use; and
- Special treatment and procedures.

In addition to conducting additional reliability testing of MDS elements, this second field test used MDS items to construct valid "resident assessment protocols." Despite extensive review and consultation with a clear attempt to reduce the number of data elements in the MDS, we encourage comment on whether there may be still more items that are valuable for care planning purposes.

B. Resident Assessment Protocols

In the Appendix, we set forth proposed resident assessment protocols (RAPs). We are using the term "resident assessment protocols" to refer to structured frameworks for organizing MDS elements and gathering additional clinically relevant information about an individual that contributes to care planning.

Although a required part of the proposed RAI at § 483.315(b)(2), the RAPS would not be listed in the regulations text because we believe that, to be truly responsive to the needs of the health care community, the RAPS should be flexible and easy to change and update without the necessity of revising the CFR each time. In addition, States have the option of using the RAPS developed by HCFA in specifying an RAI, or developing their own frameworks for additional assessment, as long as they meet the HCFA criteria for approval at the proposed § 483.315(c)(2). Although the RAPS in the Appendix are not part of the regulations text, we encourage public comment on their usefulness.

The proposed RAPS would require facility staff to make a structured review of MDS elements and additional clinical items to identify resident problems, complicating conditions, and risk factors around which a multi-dimensional view of the resident's unique physical, mental, and psychosocial status can be constructed. At the proposed § 483.315(b), we would require that, in order to receive Secretarial approval, a State's alternate RAI must include triggers and frameworks for additional assessment.

A critical part of the RAI is the "trigger." Triggers are specific MDS elements that prompt additional assessment using the RAPS. HCFA's proposed RAI includes 18 RAPS. These RAPS would cover the following care areas that collectively address the comprehensive assessment and quality of care requirements currently at § 483.20(b)(2)(i) through (xiii) and at paragraphs (a) through (l) of § 483.25 ("Level A requirement: Quality of care."):

- Delirium;
- Cognitive loss/dementia;
- Visual function;
- Communication;
- Activities of daily living and functional rehabilitation potential;
- Urinary incontinence and indwelling catheter;
- Psychosocial well-being;
- Mood state;
- Behavior problems;
- Activities;
- Falls;
- Nutritional status;
- Feeding tubes;
- Dehydration/fluid maintenance;
- Dental care;
- Pressure ulcers;
- Psychotropic drug use; and
- Physical restraints.

An example of how RAPs are triggered would be that a psychosocial well-being problem would be suggested if any of the following is checked on the MDS form:

- G2a ("Covert/open conflict with and/or repeated criticism of staff").
- G2b ("Unhappy with roommate").
- G2c ("Unhappy with residents other than roommate").
- G2d ("Openly expresses conflict/anger with family or friends").
- G3b ("Expresses sadness/anger/empty feeling over lost roles/status").

Besides assessing the reliability of all MDS items, HCFA's contractors tested the validity of the RAPs during field tests that were completed in June 1990.

The results of these field tests indicate that HCFA's proposed RAI, composed of the MDS and RAPs, is a feasible system for use by long term care facilities to collect resident information for the development of appropriate plans of care for nursing facility residents. Detailed reports of the field test findings can be obtained from the HCFA contact person listed in this preamble.

RAPs are not intended to prescribe clinical courses of action or to usurp appropriate professional judgment. We include RAPs as part of the RAI to provide frameworks for additional assessment if the MDS indicates that it

may be warranted. RAPs complement the MDS to ensure a comprehensive, accurate, reproducible assessment of individualized resident needs for use in care planning.

Each of the 18 RAPs proposed in the Appendix organizes a systematic approach for evaluating targeted clinical information to assist facility staff in thinking about care planning and treatment decisions. For a given resident, we propose that facility staff use only those RAPs triggered by specific MDS elements or additional clinical items. The RAP Trigger Legend in the Appendix summarizes the relationship between MDS items that serve as triggers and RAPs.

Because RAPs build on MDS items, we suggest strongly that the facility delegate completion of a particular RAP to the most knowledgeable facility staff who can address that care area, whether it be nursing personnel, therapists, social workers, activity specialists, or physicians. Whenever possible, it is desirable that the person who gathered information for the MDS triggered item(s), complete the RAP associated with those triggers.

The RAP Summary in the HCFA RAI which appears in the Appendix is one means by which the long term care facility can document the care planning decision resulting from applying relevant RAPs. At the proposed § 483.315(c)(2), we would state that an alternate resident assessment instrument must include structured frameworks for organizing MDS elements and additional clinically relevant information about an individual that contributes to care planning. The State is not required to use the term "RAP" in an alternate instrument, and a State's protocols may include all, some, or none of the same RAPs contained in HCFA's RAI. States must, however, specify a standardized format for documentation of information obtained from additional assessment and care-planning decisions.

We expect that the use of the MDS and RAPs would ultimately reduce the amount of time required to complete the assessment, including the paperwork associated with assessment and care planning practices and related requirements. The RAI process would minimize duplication of effort by various disciplines involved in evaluating a resident by providing a standard core of information as well as a centralized location for assessment data. The standardized documentation process would also minimize the time necessary to retrieve information from the clinical record as well as allow various disciplines to access relevant information now compiled in a central source. We believe that the efficiency of the RAI will be even more obvious after the MDS is computerized.

C. Long Term Care Facility Requirements

1. Frequency of Assessments

As required by sections 4008(h)(2)(C) and 4801(e)(3) of the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508), the current § 483.20(b)(4) requires long term care facilities to assess a resident—

- No later than 14 days after admission;
- No later than October 1, 1991 for current Medicaid residents;
- No later than January 1, 1991 for current Medicare residents;
- Promptly after a significant change in the resident's physical or mental condition; and
- In no case, less often than once every 12 months.

These requirements pertain to completion of the comprehensive assessment, which consists of the MDS, triggers and RAPs in HCFA's RAI.

We would delete the current § 483.20(b)(3), which is reserved, and redesignate the current § 483.20(b)(4) as § 483.20(b)(2). (We would delete the current § 483.20(b)(2), because the 13 elements it lists would be included in the 16 MDS items and the other RAI data required at § 483.315(b).) We would then revise the newly redesignated § 483.20(b)(2) to state that, while each facility must conduct an admission assessment when a resident is first admitted, it need not conduct one if the resident is readmitted unless the resident has experienced a significant change in status. A readmission is a return to the facility following a temporary absence for hospitalization or for therapeutic leave. If a significant change in status has occurred, we propose that long-term care facilities apply the procedures for conducting an assessment after a significant change in status.

To initiate care planning, the long term care facility must collect as much information as possible for the MDS elements and any additional data elements found in an approved State RAI within 14 days after admission.

We realize that rigid enforcement of the current requirement at § 483.20(b)(4)(i) that assessments be conducted no later than 14 days after admission from individuals admitted on or after October 1, 1990 may mean that the clinical status of a newly admitted resident may affect the validity and reliability of some MDS elements, and thus their clinical utility for care planning purposes. Therefore, at the proposed § 483.20(b)(2)(i) (A) through (C), we would set forth circumstances under which a long term care facility may amend the MDS information collected during the 14 days post-admission period up until the 21st day after admission. These are situations when—

- All information necessary for performing the assessment is not available during the 14-day post-admission period but can be obtained afterward;
- Further observation and interaction with the resident reveals the need to alter the initial assessments in any of the following MDS domains: cognitive patterns, communication patterns, potential for self-care improvement/rehabilitation, psychosocial well-being, mood and behavior patterns, nutritional status, and activity pursuit patterns; and
- The resident's condition is unstable upon admission because he or she is experiencing an acute illness or flare-up of a chronic problem and the acute illness or chronic problem is controlled by the 21st day.

The proposed definition of "significant change" in § 483.20(b)(2)(iv) is particularly important because of the impact it can have on the use of long term care facility resources, particularly nursing staff. Defining "significant change" too broadly can lead staff to perform excessive assessments. The additional information about the resident gained from these assessments may not materially enhance care planning or treatment. Conversely, defining "significant change" too narrowly can contribute to staff not paying sufficient and timely attention to resident changes in physical and cognitive functioning. Not reassessing residents under such circumstances can contribute directly to increasing the rate of functional and cognitive decline among residents.

At § 483.20(b)(2)(iv), we would state that a significant change is one or more of the following:

- Apparent permanent deterioration or improvement in two or more activities of daily living, communication, and/or cognitive abilities, or any combination of deterioration in two or more areas that appears to be permanent;
- Non-reversible loss of ability to freely ambulate or to use hands to grasp small objects to feed or groom oneself;
- Deterioration in behavior, mood, or relationships that requires staff intervention;

• Deterioration in a resident's health status when this places the resident's life in danger;

• A factor associated with a serious clinical complication that has not responded to treatment;

• A new diagnosis of a condition that is likely to affect the resident's physical, mental, or psychosocial well-being over a prolonged period of time;

• A marked and sudden improvement in the resident's status.

Examples of changes in a resident's condition that are probably transitory and therefore not significant include:

• Anticipated, easily reversible side effects of psychotropic medication while attempting to establish a clinically effective dose level;

• Short-term acute illness or episodic event such as a mild fever secondary to a cold from which facility staff expect full recovery of the resident's pre-morbid functional abilities and health status;

• Well established, predictive cyclical patterns of clinical signs and symptoms associated with previously diagnosed conditions such as depressive symptoms in a resident previously diagnosed with bipolar disease when an appropriate course of treatment is in progress; or

• The resident continues to make steady progress under the current course of care. Reassessment is required only when the condition has stabilized.

At § 483.20(b)(2)(iv), we propose that within 14 calendar days after the facility determines or should have determined that the resident's change in status is likely to be permanent, staff must complete a full comprehensive assessment within 14 days of this determination.

To minimize the burden on facility staff in collecting MDS information, we propose in the MDS instructions in the Appendix that if the long term care facility has already completed and posted Sections I and III ("Identification Information" and "Customary Routine" respectively) of the MDS found at § 483.315(b)(1) to the resident's record, then the long term care facility need not collect this information upon a return stay or readmission.

The current § 483.20(b)(5) requires that facilities must examine each resident quarterly and that the resident's assessments be revised as necessary to assure accuracy. At the proposed § 483.20(b)(3), we would be more specific, stating that the following core MDS elements be a part of that quarterly review, with the resident's status for each of these items noted in the resident's record:

• Section B: Cognitive patterns.
—Item 2 (Memory); and
—Item 4 (Cognitive skills for daily decisionmaking).

• Section C: Communication/hearing patterns.
—Item 4 (Making self understood); and
—Item 5 (Ability to understand others).

• Section E: Physical functioning and structural problems.
—Item 1b–f (activity of daily living self-performance); and
—Item 3a (Bathing).

• Section F: Continence in last 14 days.
—Item 1 (Continence self-control categories).

• Section H: Mood and behavior patterns.
—Item 2 (Mood persistence); and
—Item 3 (Problem behavior).

• N Section J: Disease diagnoses. Note only those diseases diagnosed in the last 90 days that have a relationship to current activity of daily living status, behavior status, medical treatments, or risk of death.

• N Section L: Oral/nutritional status. Item 2c (Weight loss).

• N Section O: Medication use. Item 4 (Days received the following medication).

• N Section P: Special treatment and procedures.
—Item 3b (Trunk restraint); and
—Item 3d (Chair prevents rising).

We would state at § 483.20(b)(3) that the assessment and plan of care must be revised if indicated by the quarterly review.

2. Use of Assessments

At the proposed § 483.20(b)(4), we would require facilities to maintain all resident assessments completed within the most recent 2-year period in the resident's active record and use the results of the assessments to develop, review, and revise the resident's comprehensive plan of care. This would include assessments, quarterly reviews and RAP summaries. This differs from the current requirement for use of assessments at § 483.20(b)(6) only in that it would set a specific 2-year time frame. We believe that having up to 2 years of assessment information in the active record would aid nursing facility staff in closely monitoring resident changes in functional and cognitive status.

3. Development of a National Resident Assessment System of Records

We propose as a requirement of participation at § 483.20(b)(6) that long term care facilities encode the MDS in a machine-readable form, and be capable of routinely reporting this information to a system of records maintained by HCFA and/or States beginning October 1, 1994. We will collect MDS data only, and believe that the development of an information system containing MDS data on all nursing home residents across the nation has many uses. These uses are:

• Facility Management. The requirement to computerize the MDS and report this information to a national data base would foster the growth of more sophisticated management information systems in long term care facilities. The information potential that lies in resident assessment data can be expected to lead to ways in which long term care facilities can use these data to improve the cost-effectiveness of services delivery.

• Identification of Effective Care Patterns. Computerized resident assessment data would be a valuable resource to monitor trends in the nursing home industry. As with data developed for the hospital industry, such as the Uniform Hospital Discharge Data Survey, the national resident assessment database would provide important insights into the structure of the industry and use of resources. When linked with information about long term care facilities collected routinely by States during the annual certification survey and entered into HCFA's OSCAR (Online Survey Certification and Reporting) system, computerized assessment data would be used rigorously to evaluate policy and program options in long-term care delivery and financing. A national data base provides the foundation for national, regional, interstate, and intrastate analyses. The influence of the following organizational and financing factors on resident outcomes can be examined using resident assessment data:

Payment differentials (case-mix payment);
Staffing patterns (especially nurse staffing);
Organizational structures (for example, swing beds, specialized care units, hospital-based versus freestanding nursing facilities, hospital geriatric evaluation units, and preadmission screening programs); and
Physician participation.

Care-related factors as they influence care outcomes (for example, site of admission), duration of prior hospital stay (adjusted for DRG), and resident's social support network, also can be taken into consideration in assessing policy and program options.

• Quality Monitoring. The quality of service provided in long term care facilities can be more effectively monitored through the survey and certification process with profiles of

both individual residents and facilities. Profiles of individual residents provide capability for targeted reviews, increasing the probability of detecting facility-wide problems. The availability of a comprehensive national database of resident characteristics and services permits development of expected norms from a variety of outcome measures. Individual resident outcomes can be compared with these norms. In the aggregate, facilities can be compared for their prevalence of negative outcomes (for example, pressure sores, restraints, falls, catheters), a comparison that is not meaningful when done at the level of the individual resident.

A computerized database also permits development of longitudinal norms. By linking residents' sequential assessments, norms would be developed for diminution of function and resolution of acute problems. With Medicaid payment policies focusing increasingly on case-mix adjustments, longitudinal resident assessment data could be used to calculate norms for transition probabilities (that is, residents changing from one case-mix group to another). Understanding these transitions would allow for the identification of residents who improve or deteriorate more rapidly than like residents; this would allow a unique approach to identify the effects of both good and poor care.

Achieving the full potential of the resident assessment initiative requires that long term care facilities be capable of storing, retrieving, and routinely reporting the information found in the MDS to the States and HCFA in a machine-readable form. In particular, we request comment on the following issues:

- What specific uses would State agencies have for these data? Should States accumulate and maintain their own data sets? This is particularly important when States use MDS information for the survey and certification process, and as the basis for nursing facility case-mix classification payment systems.
- What advantages or disadvantages do States see in collecting and/or reporting to HCFA MDS data for 100 percent of the facilities versus a sample of the facilities?
- Would reports on HCFA national data bases provide useful information to States for making comparisons for management, performance, measurements, and research purposes?
- How should MDS data flow from the facilities to HCFA? To the States? With assessments occurring on a resident-centered schedule (that is, on admission and on anniversaries thereafter, and "on significant change in a resident's status"), on what schedule should facilities be responsible for submitting MDS data?
- What auditing procedures should be developed to ensure accuracy of the information entered into the national data base? For example, facilities would be required to submit data in a State specified format (in States specifying an RAI other than the HCFA designated RAI). How should States certify the format and validity of data from individual facilities? What data verification procedures should be required by facilities before submitting data (for example, double entry)?
- What privacy and confidentiality concerns surround use of the data base? For example, who should have routine access?
- How timely would the data that is to be maintained be?
- If facilities computerize their records, what requirement would remain for a hard copy of the MDS in the residents' records? Once the MDS is completed and entered into the data system, what edits of it should be permitted without requiring the facility to produce a new electronic record or hard copy for the resident? What should be the facility's responsibility to maintain invalidated records (both electronic and hard copies)?
- How and to what extent should we standardize electronic formats? How can we assure that these formats are reviewed on an ongoing basis and revised to be consistent with technological changes?

4. Accuracy of Assessments

- The current § 483.20(c)(3) states that, effective October 1, 1990, an individual who willfully and knowingly certifies (or causes another individual to certify) a material and false statement in a resident assessment is subject to civil money penalties. We would add a sentence to § 483.20(c)(3) to clarify that clinical disagreement does not constitute a material and false statement.

5. Guidelines for Using the Resident Assessment Instrument

Field tests have demonstrated that it is essential that long term care facilities observe and communicate directly with the resident to accurately complete a comprehensive assessment. In the utilization guidelines proposed in the Appendix, we discuss how long term care facilities should use a variety of information sources to complete the assessment including—

- A discussion of resident performance levels with nurse aides and assistants on all shifts;
- A discussion of the resident's status with an attending physician;
- A discussion of the resident's status with family members;
- A discussion of the resident's status with appropriate licensed health professionals who have observed, evaluated, or treated the resident; and
- The resident's records, including the admission record, medical plan of care, resident plan of care, documentation of services provided to the resident, reports of any diagnostic testing, consultation, or other services, medication administration record, copies of any transfer data provided to another health care facility, and summaries of previous discharges.

D. State Requirements for Resident Assessment

Sections 1819(e)(5) and 1919(e)(5) of the Act require each State to specify an RAI for use in the long term care facilities that are located in that State and that participate in the Medicare and Medicaid programs. We would state this in the introductory text at § 483.315 ("Specification of resident assessment instrument") and also would specify that the State has the option of using the RAI designated by HCFA, which is comprised of the proposed MDS at § 483.315(b)(1), the proposed 18 RAPS that appear in the Appendix of this document as well as in II.B. of this preamble, and the requirements for use of the RAI at the proposed § 483.20. We also would propose that, if it chooses, the State may specify an alternate instrument. An alternate instrument must be approved by the Secretary, using the criteria at § 483.315(c).

At § 483.315(a), we would set forth the following State responsibilities in specifying an RAI:

- Within 30 days of notification from HCFA of the HCFA-designated RAI or changes to it, the State would be required to specify the HCFA-designated RAI or notify HCFA of its intent to specify an alternate instrument.
- After specifying an instrument, the State would be required to assure facility implementation by providing the necessary technical direction and training to facilities.
- States would have a 4-month period in which to work with HCFA to secure approval of an alternate instrument. If after 4 months the State has failed to meet the criteria for approval of an alternate instrument, it would be required to specify the HCFA-designated instrument.

• Within 30 days of receiving HCFA approval of an alternate RAI, the State would be required to specify the RAI for use by all Medicare and Medicaid long term care facilities. HCFA approval of an alternate RAI would continue for a period of 2 years, after which it must be renewed.

• A State would be required to request and receive approval from HCFA before modifying its RAI. Amendments requiring HCFA reapproval include adding or reordering core MDS assessment items, adding new RAPs or combining care areas under a single RAP, or adding triggers that would require additional assessment. If a State specifies the HCFA-designated RAI, it must adopt revisions as HCFA issues them.

At § 483.315(b), we would set forth the elements of the HCFA-designated RAI. It would consist of the—

• MDS (§ 483.315(b)(1));

• RAPs (§ 483.315(b)(2)); and

• Requirements for the use of the RAI that appear at § 483.20 (§ 483.315(b)(3)).

At § 483.315(c), we would state that to receive approval, an alternate instrument must contain:

• The MDS at § 483.315(b)(1). All data elements and corresponding coding categories specified in the MDS must be contained in the State's instrument. The State may not alter the MDS definitions or the coding categories used with each MDS element or elements within a section. If proposing to reorder major sections of the MDS or the placement of items within sections, the State must provide a conversion table between its instrument and the MDS, and the data supplied to HCFA from the MDS must be ordered in the same manner as designated in paragraph (b)(1) of this section.

The State may include in its RAI data elements additional to those in the MDS to meet unique operational needs provided there is no conflict with elements included in the MDS.

• Resident Assessment Protocols (RAPS). An alternate RAI must include structured frameworks for organizing MDS elements and additional clinically relevant information about an individual that contributes to care planning. The State is not required to use the term "RAP" in an alternate instrument, and a State's protocols may include all, some, or none of the same RAPs contained in HCFA's RAI.

If the State creates alternative RAPs through combining care areas, it must provide a cross-walk chart from its RAPs to the care areas listed below.

The RAI must include assessment triggers, based on MDS elements or other information requirements, that screen which residents are subject to additional assessment. If States select alternative triggers or information requirements, they must provide supporting documentation for their decisions. This documentation may take the form of citations from the professional medical journals or reports, results of field testing, or the consensus of experts that the State uses to assist in designing these RAPs.

States must also specify a standardized format similar to the RAP summary form that long term care facilities will use to document information derived from RAPs about the nature of problems, complications and risk factors, the need for referral to appropriate health professionals, and the reasons for deciding to proceed or not to proceed with care planning specific to the triggered problems. There must be provision for identification of the location of the assessment results and for certification of completion and accuracy.

An alternate RAI must provide frameworks for comprehensive assessment in the following care areas:

• Cognitive loss/dementia;

• Visual function;

• Communication;

• Activities of daily living functional potential;

• Rehabilitation potential (combined with the activities of daily living in the HCFA-designated RAPs);

• Urinary incontinence and indwelling catheter;

• Psychosocial well-being (There are three distinct HCFA-designated RAPs that bear on psychosocial functioning: mood, behavior, and delirium);

• Activities;

• Falls;

• Nutritional status;

• Feeding tubes;

• Dehydration/fluid maintenance;

• Dental care;

• Pressure ulcers;

• Psychotropic drug use; and

• Physical restraints.

Our approval of a State's RAI covers the core items included on the instrument, the working and sequence of those items, and all definitions and instructions for the RAI. Our approval of the RAI does not include attributes related to formatting, for example, print type, color coding, or changes such as printing triggers on the assessment form.

States may allow facilities some flexibility in form design (for example, print type, color, shading, or integrating triggers) or to use a computer-generated printout of the RAI without our approval. However, the State must assure that any RAI form in the resident's record accurately and completely represents the State's RAI as approved by us in accordance with § 483.20(b). That is, the facility must provide an RAI that includes all and only the items on the State RAI with the exact wording and in the same sequence. This applies to either pre-printed forms or computer generated printouts.

E. Changes to the MDS and the RAPs

Sections 4201(c) and 4211(c) of Pub. L. 100–203 require that the Secretary evaluate implementation of the resident assessment process. These evaluations will inform Congress about the strengths and weaknesses of the MDS and resident assessment information as these data relate to resident care planning for long term care facilities.

Because we recognize that clinical advances in the care of residents in long term care facilities should be taken into account in periodic review and revision of the MDS, we encourage public comment on developing a mechanism for advising HCFA on the need and methods to update the RAPs as well as the core elements and common definitions that make up the MDS.

F. Coordination of the Resident Assessment Process with PASARR and Other Assessment Systems

Sections 1819(b)(3)(E) and 1919(b)(3)(E) of the Act require that the resident assessment be coordinated with any State-required preadmission screening program to the maximum extent practicable to avoid duplicative testing and effort. For example, facilities may permit the State mental health and mental retardation authority to use the annual resident assessment, conducted by the NF, as the basis for their annual PASARR (Preadmission Screening and Annual Resident Review). We are soliciting comments on this and other methods for accomplishing the required coordination. We also invite comment as to how we may ensure that facilities fulfill this requirement and how we can coordinate the annual resident assessment with other assessment protocols, such as home health assessments and hospital discharge assessments.

III. Regulatory Impact Statement

Executive Order 12291 (E.O. 12291) requires us to prepare and publish an initial regulatory impact analysis for any proposed regulation that meets one of the E.O. 12291 criteria for a "major rule"; that is, that would be likely to result in—

• An annual effect on the economy of $100 million or more;

• A major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or,

• Significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

In addition, we generally prepare an initial regulatory flexibility analysis that is consistent with the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 through 612), unless the Secretary certifies that a proposed regulation would not have a significant economic impact on a substantial number of small entities. For purposes of the RFA, we consider all long term care facilities (Medicare Skilled Nursing Facilities and Medicaid Nursing Facilities) and Intermediate Care Facilities to be small entities. Individuals and States are not included in the definition of a small entity.

Also, section 1102(b) of the Act requires the Secretary to prepare a regulatory impact analysis for any proposed rule that may have a significant impact on the operations of a substantial number of small rural hospitals. Such an analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital which is located outside a Metropolitan Statistical Area and has fewer then 50 beds.

We are not preparing a rural impact statement since we have determined, and the Secretary certifies that this proposed rule would not have a significant economic impact on the operations of a substantial number of small rural hospitals.

This proposed rule reflects the requirements of section 4012(d)(1)(A) of Public Law 100–203 regarding IoC and sections 4201(a)(3) and 4211(a)(3) of Public Law 100–203 regarding resident assessments in long term care facilities. Because long term care facilities may perceive these regulations as having greater economic impact than we anticipate, we are preparing the following voluntary analysis which conforms to the requirements of E.O. 12291 and the RFA.

We expect that the net effect of the proposed revisions regarding IoC would be to reduce State agency costs since State agencies would no longer be required to compile and submit quarterly showings for SNFs and ICFs that are not ICF/MRs once the State has specified its RAI. IoC reviews in SNFs and ICFs would then be combined with survey and certification reviews. Although these reviews would be conducted on a sample basis rather than a complete review of all Medicaid residents, the reviews would be more comprehensive. Thus, we estimate that the time required would be nearly the same. Therefore, we believe these provisions regarding IoC will not have a significant economic impact.

The statute requires the Secretary to specify an MDS of common elements and definitions and utilization guidelines for use by long term care facilities in conducting resident assessments of Medicare and Medicaid beneficiaries and to designate one or more RAIs for use by the States.

The MDS and the RAI were developed to comply with the resident assessment provisions of Public Law 100–203. The resident assessment process is used to evaluate needs for care and provides a foundation for the development of the plan of care.

The use of the MDS as the core of the comprehensive assessment requirement will improve the quality of long term care facility services by assuring that the assessment is consistently based on all information that is necessary to evaluate a resident's needs. Accurate and comprehensive resident assessments can improve the accuracy of the care planning process and ultimately, the care provided.

Through a contract with Research Triangle Institute (RTI), the MDS was field tested in over 30 long term care facilities in five States to assure that it is practical and effective. According to a RTI's "Report on the Small Scale Trial of the Minimum Data Set for Resident Assessment and Care Screening (MDS)" dated January 15, 1990, nurses participating in the field test averaged approximately 90 minutes to complete the MDS once they became familiar with it. Most facilities currently perform an assessment of the residents' needs for care-planning purposes and will be required to perform a comprehensive assessment at 42 CFR 483.20, effective October 1, 1990. RTI estimates that, based on limited field tests, the MDS may add 30 minutes to what long term care facilities currently spend for initial assessments of newly admitted residents.

Additionally, it is estimated that requirements to perform assessments on a quarterly basis and on a significant change in the resident's status may add up to a net increase of 10 minutes per assessment. On an average, this may add as much as 60 minutes per year per resident for those residents who are in facilities for a full year. Annual reassessments are estimated to result in no net increase since they should be offset by what facilities are currently doing.

Most of the nurse assessors participating in RTI field tests felt that the MDS definitions were "somewhat similar" to the definitions used in their facilities' current assessment process. They also believed that the "MDS definitions were more comprehensive" as well as "more resident focused". Most nurses felt that the time spent completing the MDS was worthwhile.

The RAPs referred to in Section II.B. of the preamble and identified in the Appendix were piloted in trials involving 400 long term care facility residents. In a May 21, 1990 memorandum, RTI stated that "The RAPs help focus problem identification and structure the review of assessment information—prior to care planning." RIT reported an average of 5 minutes per resident was required to identify which RAPs were triggered by the MDS, with an average of seven RAPs triggered per resident. If the MDS/RAI were computerized, even less time would be required to identify residents whose conditions would trigger RAPs.

It is not possible to estimate the average amount of time required to complete the RAPs because of the diversity in the clinical conditions of residents and differences in the amount of time required to complete various RAPs. Resources required to utilize the RAPs will vary widely depending on the complexity of the resident's status and clinical problems.

Additionally, there is no requirement for facilities to use the RAPs contained in the RAI designated by the Secretary. Rather, facilities are required to use the frameworks for additional assessment contained in the RAI specified by the State. States may choose to use all, some or none of the RAPs proposed in the appendix as long as the State's RAI includes frameworks for additional assessment and meets the criteria used by HCFA to grand approval of an alternate instrument. Because of this lack of uniformity, it is not possible to determine the actual amount of time needed to complete the alternative RAPs developed by the States or estimate the average number of State-developed alternative RAPs that would be triggered by a resident's condition.

We would require long term care facilities to computerize the MDS by October 1, 1994, to support MDS reporting requirements. Computerized resident assessment data would provide a valuable resource for both the clinical staff and administrators of long-term care facilities. Data could be used by

facilities to monitor an individual resident's progress as well as to identify facility-level trends or problems. Information could also be compiled to generate administrative reports to identify management concerns or to assist in meeting other regulatory requirements.

The requirement to report MDS information to a national data base will foster the growth of more sophisticated management information systems in long term care facilities. The information potential that lies in a resident assessment data base can be expected to lead to improvements in clinical and operational management for long term care facilities.

We anticipate that some additional cost will result from computerizing the MDS. (Depending on the policies of HCFA and State Medicaid agencies, these costs could be reimbursed as either operating costs or capital costs or both.)

Many issues surrounding computerization of the MDS, such as facility requirements regarding the frequency and process for transmission of data, have not yet been determined. However, it is possible to estimate the order of magnitude of facility costs by looking at the types of equipment and tasks that would be necessary. They include:

- Hardware: We estimate hardware costs to be under $2000 per facility (based on an IBM-compatible 8086-based microcomputer with 640K memory, 20Mb hard disk, monochrome monitor and dot-matrix printer). Larger facilities (100 or more beds) may desire a faster or more sophisticated machine at approximately $500 more. Facilities may also need a modem for telecommunication of data, at approximately $250.
- Software: Small facilities (under 100 beds) desiring to meet only the requirement for data submission could use a simplistic software package; in theory, even a word processing package (available for less than $100) could be used to meet the requirement. However, it is anticipated that virtually all facilities will choose more capable programs, some of which could be used to meet other clinical or operational needs (that is, care planning, order entry, quality assurance, billing) or other regulatory requirements for reporting of resident information. We estimate that such packages will be available on the market for approximately $200–300 in large volume; in smaller volumes the costs would rise to approximately $500.
- Supplies and maintenance of equipment: We estimate the cost of supplies necessary for collection and transmission of data (that is, diskettes or computer paper) to be less than $200 per year. Some costs would also be associated with the maintenance of computer equipment, such as the replacement of disk drives or memory chips. If hardware is amortized over a relatively short period of time (that is, three years), then the additional costs of maintenance should be low; we estimate no more than $200–300 per year.
- Training: Training of personnel would be required, with approximately four hours of training estimated based on preliminary experiences with the system in Wisconsin. We estimate a one time cost of approximately $60 of paid staff time for training of clinical staff members inputting MDS data; the cost would be less to train clerical staff members. The cost of travel to a training center would need to be added, though we anticipate that training would be provided in multiple sites around a State once the system is implemented. Using the experience of New York in implementing a resident assessment system for case-mix reimbursement, a maximum of two data entry persons would be sufficient for facilities of up to 100 beds. We estimate initial costs for training to be approximately $120 plus travel for a 100 bed facility. Turnover of trained staff would require additional expenditures over time.
- Data entry: Facilities would have flexibility in the method used to input data. Data could be entered directly by a clinical staff member (that is, the nurse responsible for coordinating or completing the assessment), from a hard copy of a completed MDS by a clerical staff member, or by a keypunch operator the facility may contract with to key in the data. With entry of an MDS requiring approximately 347 keystrokes, we estimate that keypunch operators would require approximately 15 minutes to enter each MDS; less skilled personnel (that is, other than keypunch operators) may require approximately one-half hour. Circumstances under which facilities will collect and may be required to transmit MDS data include the admission assessment and annual updates as well as on "significant change" in the resident's status. Additionally, time would be required for data validation and preparation of data for transmission. Based on our previous estimate of 2.3 MDSs per bed (annual plus "significant change") per year, we estimate total operational costs for facility staff to input data for a 100-bed facility to be approximately $3450 per year (based on 230 hours). We estimate the cost of contracting with a commercial service to input data to be approximately $1125 per year, based on an hourly rate of $15. However, this underrepresents actual facility costs, as a substantial amount of facility staff time would be required to prepare the MDS forms for data entry and validate the key punched data.

We have based these estimates on outside ranges (that is, the maximum number of keystrokes needed to input the initial and subsequent assessments as well as to perform data validation). Consequently, we believe the costs to facilities to input data may be lower in actual practice.

Our estimates reflect the costs associated with computerization of the MDS only. No data entry would be required for quarterly reviews of the MDS or completion of the RAPs.

The foregoing preliminary estimates may actually overstate anticipated costs because they do not take into account cost-savings achieved improving long term care facilities' management information systems and data bases. Assessment data may be used by facilities for diverse purposes such as facility monitoring or to project staffing requirements. In addition, in many long term care facilities computers and computer programs already exist that can accommodate the necessary changes with little added cost. Further, long term care facilities will be compensated for a portion of the costs of maintaining and transmitting the MDS through payment mechanisms in accordance with sections 1861(v)(1) and 1902(a)(13) of the Act.

In conclusion, while we believe that long term care facilities would bear some incremental costs associated with this proposal, we believe that the costs would be insignificant when compared to the anticipated increased quality of care for long term care facility residents as well as the potential uses of the mechanized data by the facilities. We expect numerous benefits to result from the RAI. Resident outcomes will improve and potential program savings will be realized. Anecdotal reports from a number of facilities indicate that staff are identifying resident care problems with the RAI of which they had been unaware previously. Examples of these problems include delirium, mood state disorders, dehydration, rehabilitation potential related to incontinence, and risk of falling. Preliminary results from our evaluation indicate the RAI is able to improve the facility's ability to evaluate problems that would have been identified previously only with an indepth specialty evaluation. For example, research nurse assessors using the RAI were able to identify residents with potentially curable causes of

incontinence. These causes of incontinence had been missed earlier by the facility unless the resident underwent an evaluation by a urologist or other specialist dealing with incontinence.

Use of the RAI would also reduce the likelihood of inappropriate decline in a resident's status. Our utilization guidelines require that the resident be examined, using a subset of MDS items, at least quarterly and that a resident who experiences a significant change in status receive a comprehensive assessment within 14 days. Early assessment would allow facilities to identify problems and implement appropriate interventions before the condition of the resident declines precipitously. Early assessment may result in a savings to Medicare Part A in terms of decreased hospitalizations. Additionally, early assessment of the causes of a functional decline would enable facilities to intervene early in the decline cycle, thereby minimizing poor outcomes and the need for extensive diagnostic testing conducted outside the facility.

Comprehensive assessment using the RAI would assist facilities in their efforts to help residents achieve the highest practicable levels of physical, mental and psychosocial well-being. Studies and anecdotal reports indicate that increasing the independence of residents results in decreased demands on staff and material resources. Various RAPs promote the concept of the highest practicable level of well-being by challenging staff to identify resident strengths and implement interventions to assist residents to reach their full potential (for example, increasing a resident's ability to ambulate is inherent in the ADL Rehabilitation, Physical Restraints, and Falls RAPs.) By improving resident outcomes and preventing problems from developing, we believe that the RAI has tremendous potential to decrease costs associated with reversible causes of incontinence, fractures related to falls, and the treatment of pressure ulcers.

In that this discussion of costs is not conclusive, we encourage comments and any applicable data describing Federal, State, and facility costs, as well as benefits to residents and potential program savings. Further, as stated in part II.C. of this preamble, the Secretary of HHS is required to report to Congress by January 1, 1992, for Medicare, and January 1, 1993, for Medicaid, the overall effects of the resident assessment process, including estimated costs of resident assessment on the operation of long term care facilities throughout the country.

IV. Information Collection Requirements

Sections 4204(b) and 4214(d) of Public Law 100–203 provide a waiver of paperwork reduction review, specifying that Chapter 35 of title 44 U.S.C. "shall not apply to information required for purposes of carrying out this part and implementing the amendments made by this part."

V. Response to Comments

Because of the large number of items of correspondence we normally receive on a proposed rule, we are not able to acknowledge or respond to them individually. However, we will consider all comments that we receive by the date and time specified in the "Date" section of this preamble, and, if we proceed with a final rule, we will respond to the comments in the preamble of that rule.

List of Subjects

42 CFR Part 456

Administrative practice and procedure, Grant programs-health, Health facilities, Medicaid, Reporting and recordkeeping requirements.

42 CFR Part 483

Grant programs-health, Health facilities, Health professions, Health records, Medicaid, Nursing homes, Nutrition, Reporting and recordkeeping requirements, Safety.

For the reasons set forth in the preamble, 42 CFR parts 456 and 483 would be amended as follows:

A. Part 456 is amended to read as follows:

PART 456—UTILIZATION CONTROL [AMENDED]

2. The authority citation for part 456 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302), unless otherwise noted.

3. In § 456.1(b), the introductory text is republished and paragraph (b)(5) and Table 1 are revised to read as follows:

§ 456.1 Basis and purpose of part.

* * * * *

(b) The requirements in this part are based on the following sections of the Act. Table 1 shows the relationship between these sections of the Act and the requirements in this part.

* * * * *

(5) *Inspection of care and services in institutions.* Sections 1902(a)(26) (B) and (C) and 1902(a)(31) (B) and (C) require that the plan provide for periodic inspections and reports, by a team of professional persons, of the care being provided to each recipient in mental hospitals, psychiatric facilities, and intermediate care facilities for the mentally retarded (ICFs/MR) participating in Medicaid.

Table 1

[This table relates the regulations in this part to the sections of the Act on which they are based.]

Subpart A—General	1902(a)(30) 1902(a)(33)(A)
Subpart B—Utilization Control: All Medicaid Services	1902(a)(30)
Subpart C—Utilization Control:	
Hospitals—	
Certification of need for care	1903(g)(1)(A)
Plan of care	1903(g)(1)(B)
Utilization review plan (including admission review)	1902(a)(30) 1903(g)(1)(C) 1903(i)(4)
Subpart D—Utilization Control: Mental Hospitals—	
Certification of need for care	1903(g)(1)(A)
Medical evaluation and admission review	1902(a)(26)(A) 1903(g)(1)(C)
Plan of care	1902(a)(26)(A) 1903(g)(1)(B)

Table 1—Continued

[This table relates the regulations in this part to the sections of the Act on which they are based.]

Admission and plan of care requirements for individuals under 21	1902(a)(26)(A) 1903(g)(1) (B), (C)
Utilization review plan	1902(a)(30) 1903(g)(1)(C) 1903(i)(4)
Subpart E—Utilization Control: Skilled Nursing Facilities—	1903(g)(1)(A
Certification of need for care	1902(a)(26)(A)
Medical evaluation and admission review	1903(g)(1)(C)
Plan of care	1902(a)(26)(A) 1903(g)(1)(B)
Utilization review plan	1902(a)(30) 1903(g)(1)(C) 1903(i)(4)
Discharge plan	1902(a)(30)
Subpart F—Utilization Control: Intermediate Care Facilities—	1903(g)(1)(A)
Certification of need for care	1902(a)(31)(A)
Medical evaluation and admission review	1903(g)(1)(C)
Plan of care	1902(a)(31)(A) 1903(g)(1)(B)
Utilization review plan	1902(a)(30) 1903(g)(1)(C) 1903(i)(4)
Subpart G—Inpatient Psychiatric Services for Individuals Under Age 21: Admission and Plan of Care Requirements	1905 (a)(16) and (h)
Subpart H—Utilization Review Plans: FFP, Waivers, and Variances for Hospitals, Mental Hospitals and Skilled Nursing Facilities.	1902(a)(30) 903(i)(4)
Subpart I—Inspections of Care in Intermediate Care Facilities for the Mentally Retarded, Psychiatric Facilities, and Mental Hospitals.	1902(a)(26) (B), (C), (31)(B), (C) 1903(g)(1)

4. The heading of subpart I is revised to read as follows:

Subpart I—Inspections of Care in Intermediate Care Facilities for the Mentally Retarded, Psychiatric Facilities, and Mental Hospitals

5. Section 456.600 is revised to read as follows:

§ 456.600 Purpose.

This subpart prescribes requirements for periodic inspections of care and services in intermediate care facilities for the mentally retarded (ICFs/MR), psychiatric facilities, and mental hospitals.

6. Section 456.601 is revised to read as follows:

§ 456.601 Definitions.

For purposes of this subpart—

Facility means a mental hospital, psychiatric facility, or an intermediate care facility for the mentally retarded.

Intermediate care facility for the mentally retarded means institutions for the mentally retarded or persons with related conditions but excludes Christian Science sanatoria operated, or listed and certified, by the First Church of Christ Scientist, Boston, Mass.

Mental hospital means that it primarily cares for patients with psychiatric diagnoses.

Psychiatric facility includes a facility or program that provides inpatient psychiatric services for individuals under 21, as specified in § 441.151 of this chapter, but does not include psychiatric wards in acute care hospitals.

7. In § 456.602, paragraph (c) is revised, paragraphs (d) and (f) are removed, and paragraphs (e), (g), and (h) are redesignated as paragraphs (d), (e), and (f), respectively, to read as follows:

§ 456.602 Inspection team.

* * * * *

(c) For a mental hospital or psychiatric facility, each team must have a psychiatrist or physician knowledgeable about mental institutions and other appropriate mental health and social service personnel.

* * * * *

8. Section 456.603 is revised to read as follows:

§ 456.603 Financial interests and employment of team members.

A member of a team that reviews care in a mental hospital, psychiatric facility, or an institution for the mentally retarded or persons with related conditions—

(a) May not have a financial interest in any institution of that same type but may have a financial interest in other facilities or institutions; and

(b) May not review care in an institution where he is employed but may review care in any other facility or institution.

9. Section 456.608 is revised to read as follows:

§ 456.608 Personal contact with and observation of recipients and review of records.

(a) For recipients under age 21 in psychiatric facilities and recipients in ICFs/MR, the team's inspection must include—

(1) Personal contact with and observation of each recipient; and

(2) Review of each recipient's medical record.

(b) For recipients age 65 or older in mental hospitals, the team's inspection must include—

(1) Review of each recipient's medical record; and

(2) If the record does not contain complete reports of periodic assessments required by § 441.102 of this chapter or, if such reports are inadequate, personal contact with and observation of each recipient.

10. Section 456.609 is revised to read as follows:

§ 456.609 Determinations by team.

The team must determine in its inspection whether—

(a) The services available in the facility are adequate to—

(1) Meet the health needs of each recipient,

(2) Promote his maximum physical, mental, and psychosocial functioning.

(b) It is necessary and desirable for the recipient to remain in the facility;

(c) It is feasible to meet the recipient's health needs through alternative institutional or noninstitutional services; and

(d) Each recipient under age 21 in a psychiatric facility and each recipient in an institution for the mentally retarded or persons with related conditions is receiving active treatment as defined in § 441.154 of this chapter.

11. In § 456.610, paragraphs (b) and (e) are revised, paragraph (f) is removed, and paragraphs (g) and (h) are redesignated as paragraphs (f) and (g), respectively, to read as follows:

§ 456.610 Basis for determinations.

* * * * *

(b) The attending physician reviews prescribed medications—

(1) At least every 30 days in psychiatric facilities and mental hospitals; and

(2) At least quarterly in ICFs/MR;

* * * * *

(e) The recipient receives adequate services, based on observations such as the following:

(1) Cleanliness.

(2) Absence of bedsores.

(3) Absence of signs of malnutrition or dehydration.

(4) Apparent maintenance of maximum physical, mental, and psychosocial function.

* * * * *

12. Section 456 .612 is revised to read as follows:

§ 456.612 Copies of reports.

The agency must send a copy of each inspection report to—

(a) The facility inspected;

(b) The facility's utilization review committee;

(c) The agency responsible for licensing, certification, or approval of the facility for purposes of Medicare and Medicaid; and

(d) Other State agencies that use the information in the reports to perform their official function, including, if inspection reports concern mental hospitals and psychiatric facilities, the appropriate State mental health authorities.

13. Section 456.651 is revised as follows:

§ 456.651 Definitions.

For purposes of this subpart—

Facility, with respect to inpatient psychiatric services for individuals under 21, includes a psychiatric program as specified in § 441.151 of this chapter.

Level of care means one of the following types of inpatient services: hospital, mental hospital, intermediate care facility for the mentally retarded, or psychiatric services for individuals under 21.

Long-stay services means services provided to a recipient after a total of 60 days of inpatient stay (90 in the case of mental hospital services) during a 12-month period beginning July 1, not counting days of stay paid for wholly or in part by Medicare.

14. In § 456.654, the introductory text in paragraph (a) is republished, and paragraphs (a)(7) and (a)(8) are revised to read as follows:

§ 456.654 Requirements for content of showings and procedures for submittal.

(a) An agency's showing for a quarter must—

* * * * *

(7) For each on-site review in a mental hospital, or intermediate care facility that primarily cares for mental patients, or inpatient psychiatric facility, list the name and qualifications of one team member who is a physician; and

(8) For each on-site review in an intermediate care facility for the mentally retarded that does not primarily care for mental patients, list the name and qualifications of one team member who is either a physician or registered nurse.

* * * * *

B. Part 483 is amended to read as follows:

PART 483—REQUIREMENTS FOR STATES AND LONG TERM CARE FACILITIES

1. The authority citation for part 483 continues to read as follows:

Authority: Secs. 1102, 1819(a)–(f), 1861 (j) and (l), 1863, 1871, 1902(a)(28), 1905 (a), (c) and (d), and 1919(a)–(f) of the Social Security Act (42 U.S.C. 1302, 1395i–3(a)–(f), 1395x (j) and (l), 1395hh, 1395z, 1396a(a)(28), and 1396d (c) and (d), and 1396r(a)–(f)), unless otherwise noted.

2. In § 483.20, the section heading and paragraphs (b) and (c) are revised to read as follows:

§ 483.20 Level A requirement: Resident assessment.

* * * * *

(b) *Comprehensive assessments.*

(1) *Resident assessment instrument.* The facility must make a comprehensive assessment of a resident's needs, using the resident assessment instrument (RAI) specified by the State. The assessment process must include direct observation and communication with the resident, as well as communication with licensed and nonlicensed direct care staff members on all shifts.

(2) *When required.*

Comprehensive assessments must be conducted:

(i) Within 14 days after admission, excluding readmissions in which there is not a significant change in the resident's physical or mental condition (A "readmission" is defined as a return to the facility following a temporary absence for hospitalization or for therapeutic leave.). Assessment information may be amended up to 21 days after admission if—

(A) All information necessary for performing the assessment is not available to staff during the initial 14-day period;

(B) Further resident observation and interaction indicates a need to alter the initial assessment of cognitive patterns, communication patterns, potential for self-care improvement/rehabilitation, psychosocial well-being, mood and behavior patterns, nutritional status, and activity pursuit patterns;

(C) The resident's condition is unstable upon admission.

(ii) No later than October 1, 1991 for residents of a nursing facility admitted prior to October 1, 1991.

(iii) No later than January 1, 1991 for residents of a skilled nursing facility admitted prior to January 1, 1991.

(iv) Within 14 calendar days after the facility determines, or should have determined, that there has been a significant change in the resident's physical or mental condition. A significant change is one or more of the following:

(A) Apparent permanent deterioration or improvement in two or more activities of daily living, communication, and/or cognitive abilities; or any combination of deterioration in two or more areas that appears to be permanent.

(B) Non-reversible loss of ability to freely ambulate or to use hands to grasp small objects to feed or groom oneself.

(C) Deterioration in behavior, mood, or relationships that requires staff intervention.

(D) Deterioration in a resident's health status when this places the resident's life in danger.

(E) A factor associated with a serious clinical complication that has not responded to treatment.

(F) A new diagnosis of a condition that is likely to affect the resident's physical, mental, or psychosocial well-being over a prolonged period of time.

(G) A marked and sudden improvement in the resident's status.

(v) No less often than once every 12 months in any case.

(3) *Quarterly Review.* The minimum data set (MDS) is at § 483.315(b)(1) of this chapter. Facilities must examine residents and review the following core MDS elements quarterly and revise the assessment and plan of care if indicated:

(i) Section B: Cognitive patterns.

(A) Item 2 (Memory); and

(B) Item 4 (Cognitive skills for daily decisionmaking).

(ii) Section C: Communication/hearing patterns.

(A) Item 4 (Making self understood); and

(B) Item 5 (Ability to understand others).

(iii) Section E: Physical functioning and structural problems.

(A) Items 1b–f (activity of daily living self-performance); and

(B) Item 3a (Bathing).

(iv) Section F: Continence in last 14 days. Item 1 (Continence self-control categories).

(v) Section H: Mood and behavior patterns.

(A) Item 2 (Mood persistence); and

(B) Item 3 (Problem behavior).

(vi) Section J: Disease diagnoses. Note only those diseases diagnosed in the last 90 days that have a relationship to current activity of daily living status, behavior status, medical treatments, or risk of death.

(vii) Section L: Oral/nutritional status. Item 2c (Weight loss).

(viii) Section O: Medication use. Item 4 (Days received the following medication).

(ix) Section P: Special treatment and procedures.

(A) Item 3b (Trunk restraint); and

(B) Item 3d (Chair prevents rising).

(4) *Use.* The facility must maintain all resident assessments completed within the previous 2 years in the resident's active record and use the results of the assessments to develop, review, and revise the resident's comprehensive plan of care.

(5) *Coordination.* The facility must coordinate assessments with any State-required preadmission screening program to the maximum extent practicable to avoid duplicative testing and effort.

(6) *ADP requirement:* Effective October 1, 1994, the facility must:

(i) Encode the information contained in the MDS in a machine-readable (that is, computerized) format. The facility must be capable of computerized retrieval of the information contained in the MDS for the initial comprehensive assessment, annual updates, and information entered because of residents experiencing a "significant change" in status.

(ii) Be capable of routinely transmitting the information required in § 483.315(b)(1) of this chapter in a format and in accordance with particular data screens specified by HCFA or the State to a system of records maintained by HCFA.

(c) *Level B requirement: Accuracy of assessments.*

(1) *Coordination.*

(i) Each assessment must be conducted or coordinated, with the appropriate participation of health professionals.

(ii) Each assessment must be conducted or coordinated by a registered nurse who signs and certifies the completion of the assessment.

(2) *Certification.* Each individual who completes a portion of the assessment must sign and certify the accuracy of that portion of the assessment.

(3) *Penalty for falsification.* An individual who willfully and knowingly certifies (or causes another individual to certify) a material and false statement in a resident assessment is subject to civil money penalties. Section 1819(b)(3)(B)(ii)(II) of the Act allows for civil penalties of up to $5,000 in some cases. Clinical disagreement does not constitute a material and false statement.

* * * * *

3. New subpart F, consisting of § 483.315, is added to read as follows:

Subpart F—Requirements That Must Be Met by States and State Agencies: Resident Assessment

§ 483.315 Specification of resident assessment instrument.

Sections 1819(e)(5) and 1919(e)(5) of the Act require the State to specify the resident assessment instrument (RAI) to be used by long term care facilities in the State for their use in complying with § 483.20, which requires long term care facilities to conduct initial and periodic assessment of each resident's functional capacity. The RAI may be either the one designated by the Secretary at paragraph (b) of this section or an alternate instrument specified by the State and approved by the Secretary, using the criteria at paragraph (c) of this section.

(a) The State responsibilities in specifying an RAI are as follows:

(1) Within 30 days of notification from HCFA of the HCFA-designated RAI or changes to it, the State must specify the HCFA-designated RAI or notify HCFA of its intent to specify an alternate instrument.

(2) After specifying an instrument, the State must assure facility implementation by providing the necessary technical direction and training to facilities.

(3) States have a 4-month period in which to work with HCFA to secure approval of an alternate instrument. If after 4 months the State has failed to meet the criteria for approval of an alternate instrument at paragraph (c) of this section, it must specify the HCFA-designated instrument.

(4) Within 30 days of receiving HCFA approval of an alternate RAI, the State must specify the RAI for use by all Medicare and Medicaid long term care facilities. Generally, HCFA approval of an alternate RAI continues for a period of 2 years, after which it must be renewed. However, if in the interim HCFA modifies the HCFA designated RAI, paragraph (a)(1) of this section applies.

(5) A State must request and receive approval from HCFA before modifying its RAI. Amendments requiring HCFA reapproval include adding or reordering core MDS assessment items, adding new RAPs or combining care areas under a single RAP, or adding triggers that would require additional assessment. If a State specifies the HCFA-designated RAI, it must adopt revisions as HCFA issues them.

(b) The HCFA-designated RAI consists of the following:

(1) The following uniform minimum data set (MDS):

BILLING CODE 4120-03-M

MINIMUM DATA SET FOR NURSING HOME RESIDENT ASSESSMENT AND CARE SCREENING (MDS)
BACKGROUND INFORMATION AT INTAKE/ADMISSION

I. IDENTIFICATION INFORMATION

1.	RESIDENT NAME	(First) (Middle Initial) (Last)
2.	DATE OF CURRENT ADMISSION	Month — Day — Year
3.	MEDICARE NO. (SOC. SEC. or Comparable No. if no Medicare No.)	
4.	FACILITY PROVIDER NO.	Federal No.
5.	GENDER	1. Male 2. Female
6.	RACE/ ETHNICITY	1. American Indian/Alaska Native 2. Asian/Pacific Islander 3. Black, not of Hispanic origin 4. Hispanic 5. White, not of Hispanic origin
7.	BIRTHDATE	Month — Day — Year
8.	LIFETIME OCCUPATION	
9.	PRIMARY LANGUAGE	Resident's primary language is a language other than English 0. No 1. Yes _____ (Specify)
10.	RESIDENTIAL HISTORY PAST 5 YEARS	*(Check all settings resident lived in during 5 years prior to admission)* Prior stay at this nursing home — a. Other nursing home/residential facility — b. MH/psychiatric setting — c. MR/DD setting — d. *NONE OF ABOVE* — e.
11.	MENTAL HEALTH HISTORY	Does resident's RECORD indicate any history of mental retardation, mental illness, or any other mental health problem? 0. No 1. Yes
12.	CONDITIONS RELATED TO MR/DD STATUS	*(Check all conditions that are related to MR/DD status, that were manifested before age 22, and are likely to continue indefinitely)* Not applicable—no MR/DD (Skip to Item 13) — a. MR/DD with Organic Condition Cerebral palsy — b. Down's syndrome — c. Autism — d. Epilepsy — e. Other organic condition related to MR/DD — f. MR/DD with no organic condition — g. Unknown — h.
13.	MARITAL STATUS	1. Never Married 2. Married 3. Widowed 4. Separated 5. Divorced
14.	ADMITTED FROM	1. Private home or apt. 2. Nursing home 3. Acute care hospital 4. Other
15.	LIVED ALONE	0. No 1. Yes 2. In other facility
16.	ADMISSION INFORMATION AMENDED	*(Check all that apply)* Accurate information unavailable earlier — a. Observation revealed additional information — b. Resident unstable at admission — c.

II. BACKGROUND INFORMATION AT RETURN/READMISSION

1.	DATE OF CURRENT READMISSION	Month — Day — Year
2	MARITAL STATUS	1. Never Married 2. Married 3. Widowed 4. Separated 5. Divorced
3	ADMITTED FROM	1. Private home or apt. 2. Nursing home 3. Acute care hospital 4. Other
4.	LIVED ALONE	0. No 1. Yes 2. In other facility

III. CUSTOMARY ROUTINE (ONLY AT FIRST ADMISSION)

1. CUSTOMARY ROUTINE (Year prior to first admission to a nursing home)

(Check all that apply. If all information UNKNOWN, check last box only

CYCLE OF DAILY EVENTS
- Stays up late at night (e.g., after 9 pm) — a.
- Naps regularly during day (at least 1 hour) — b.
- Goes out 1+ days a week — c.
- Stays busy with hobbies, reading, or fixed daily routine — d.
- Spends most time alone or watching TV — e.
- Moves independently indoors (with appliances, if used) — f.
- *NONE OF ABOVE* — g.

EATING PATTERNS
- Distinct food preferences — h.
- Eats between meals all or most days — i.
- Use of alcoholic beverage(s) at least weekly — j.
- *NONE OF ABOVE* — k.

ADL PATTERNS
- In bed/clothes much of day — l.
- Wakens to toilet all or most nights — m.
- Has irregular bowel movement pattern — n.
- Prefers showers for bathing — o.
- *NONE OF ABOVE* — p.

INVOLVEMENT PATTERNS
- Daily contact with relatives/close friends — q.
- Usually attends church, temple, synagogue (etc.) — r.
- Finds strength in faith — s.
- Daily animal companion/presence — t.
- Involved in group activities — u.
- *NONE OF ABOVE* — v.

UNKNOWN—Resident/family unable to provide information — w.

MINIMUM DATA SET FOR NURSING HOME RESIDENT ASSESSMENT AND CARE SCREENING (MDS)

(Status in last 7 days, unless other time frame indicated)

SECTION A. IDENTIFICATION AND BACKGROUND INFORMATION

1.	ASSESSMENT DATE	Month — Day — Year
2.	RESIDENT NAME	(First) (Middle Initial) (Last)
3.	SOCIAL SECURITY NO.	
4.	MEDICAID NO. (If applicable)	
5.	MEDICAL RECORD NO.	
6.	REASON FOR ASSESSMENT	1. Initial admission assess. 2. Hosp/Medicare reassess. 3. Readmission assessment 4. Annual assessment 5. Significant change in status 6. Other (e.g., URI)
7.	CURRENT PAYMENT SOURCE(S) FOR N.H. STAY	*(Billing Office to indicate; check all that apply)* Medicaid (a.) VA; Medicare (b.) Self pay/Private insurance; CHAMPUS (c.) Other
8.	RESPONSIBILITY/ LEGAL GUARDIAN	*(Check all that apply)* Legal guardian (a.) Family member responsible; Other legal oversight (b.) Resident responsible; Durable power attny./ health care proxy (c.) *NONE OF ABOVE*
9.	ADVANCED DIRECTIVES	*(For those items with supporting documentation in the medical record, check all that apply)* Living will (a.) Feeding restrictions; Do not resuscitate (b.) Medication restrictions; Do not hospitalize (c.) Other treatment restrictions; Organ donation (d.) *NONE OF ABOVE*; Autopsy request (e.)
10.	DISCHARGE PLANNED WITHIN 3 MOS.	*(Does not include discharge due to death)* 0. No 1. Yes 2. Unknown/uncertain
11.	PARTICIPATE IN ASSESSMENT	a. Resident 0. No 1. Yes; b. Family 0. No 1. Yes 2. No family
12.	SIGNATURES AND SECTIONS COMPLETED	Signature of RN Assessment Coordinator _____ Date: _____ Signatures of Others Who Completed Part of the Assessment and Sections Completed

SECTION B. COGNITIVE PATTERNS

1	COMATOSE	*(Persistent vegetative state/no discernible consciousness)* 0. No 1. Yes *(Skip to SECTION E)*
2.	MEMORY	*(Recall of what was learned or known)* a. Short-term memory OK—seems/appears to recall after 5 minutes 0. Memory OK 1. Memory problem; b. Long-term memory OK—seems/appears to recall long past 0. Memory OK 1. Memory problem
3.	MEMORY/ RECALL ABILITY	*(Check all that resident normally able to recall during last 7 days)* Current season (a.) That he/she is in a nursing home; Location of own room (b.) *NONE OF ABOVE* are recalled; Staff names/faces (c.)
4.	COGNITIVE SKILLS FOR DAILY DECISION-MAKING	*(Made decisions regarding tasks of daily life)* 0. Independent—decisions consistent/reasonable 1. Modified Independence—some difficulty in new situations only 2. Moderately Impaired—decisions poor; cues/supervision required 3. Severely Impaired—never/rarely made decisions
5.	INDICATORS OF DELIRIUM—PERIODIC DISORDERED THINKING/ AWARENESS	*(Check if condition over last 7 days appears different from usual functioning)* Less alert, easily distracted (a.); Changing awareness of environment (b.); Episodes of incoherent speech (c.); Periods of motor restlessness or lethargy (d.); Cognitive ability varies over course of day (e.); *NONE OF ABOVE* (f.)
6.	CHANGE IN COGNITIVE STATUS	Change in resident's cognitive status, skills, or abilities in last 90 days 0. No change 1. Improved 2. Deteriorated

SECTION C. COMMUNICATION/HEARING PATTERNS

1.	HEARING	*(With hearing appliance, if used)* 0. Hears adequately—normal talk, TV, phone 1. Minimal difficulty when not in quiet setting 2. Hears in special situations only—speaker has to adjust tonal quality and speak distinctly 3. Highly impaired/absence of useful hearing
2.	COMMUNICATION DEVICES/ TECHNIQUES	*(Check all that apply during last 7 days)* Hearing aid, present and used (a.); Hearing aid, present and not used (b.); Other receptive comm. techniques used (e.g., lip read) (c.); *NONE OF ABOVE* (d.)
3.	MODES OF EXPRESSION	*(Check all used by resident to make needs known)* Speech (a.) Signs/gestures/sounds; Writing messages to express or clarify needs (b.) Communication board (c.); Other (d.); *NONE OF ABOVE* (e.)
4.	MAKING SELF UNDERSTOOD	*(Express information content—however able)* 0. Understood 1. Usually Understood—difficulty finding words or finishing thoughts 2. Sometimes Understood—ability is limited to making concrete requests 3. Rarely/Never Understood
5.	ABILITY TO UNDERSTAND OTHERS	*(Understanding verbal information content—however able)* 0. Understands 1. Usually Understands—may miss some part/intent of message 2. Sometimes Understands—responds adequately to simple, direct communication 3. Rarely/Never Understands
6.	CHANGE IN COMMUNICATION/ HEARING	Resident's ability to express, understand or hear information has changed over last 90 days 0. No change 1. Improved 2. Deteriorated

SECTION D. VISION PATTERNS

1.	VISION	*(Ability to see in adequate light and with glasses if used)* 0. Adequate—sees fine detail, including regular print in newspapers/books 1. Impaired—sees large print, but not regular print in newspapers/books 2. Highly Impaired—limited vision; not able to see newspaper headlines; appears to follow objects with eyes 3. Severely Impaired—no vision or appears to see only light, colors, or shapes
2.	VISUAL LIMITATIONS/ DIFFICULTIES	Side vision problems—decreased peripheral vision (e.g., leaves food on one side of tray, difficulty traveling, bumps into people and objects, misjudges placement of chair when seating self) (a.); Experiences any of following: sees halos or rings around lights, sees flashes of light, sees "curtains" over eyes (b.); *NONE OF ABOVE* (c.)
3.	VISUAL APPLIANCES	Glasses; contact lenses; lens implant; magnifying glass 0. No 1. Yes

■ = Code the appropriate response ☐ = Check all the responses that apply

December 19, 1990

SECTION E. PHYSICAL FUNCTIONING AND STRUCTURAL PROBLEMS

1. ADL SELF-PERFORMANCE — *(Code for resident's PERFORMANCE OVER ALL SHIFTS during last 7 days—Not including setup)*

0. *INDEPENDENT* — No help or oversight — OR — Help/oversight provided only 1 or 2 times during last 7 days
1. *SUPERVISION* — Oversight, encouragement or cueing provided 3+ times during last 7 days — OR — Supervision plus physical assistance provided only 1 or 2 times during last 7 days
2. *LIMITED ASSISTANCE* — Resident highly involved in activity; received physical help in guided maneuvering of limbs or other nonweight bearing assistance 3+ times — OR — More help provided only 1 or 2 times during last 7 days
3. *EXTENSIVE ASSISTANCE* — While resident performed part of activity, over last 7-day period, help of following type(s) provided 3 or more times:
   — Weight-bearing support
   — Full staff performance during part (but not all) of last 7 days
4. *TOTAL DEPENDENCE* — Full staff performance of activity during entire 7 days

2. ADL SUPPORT PROVIDED — *(Code for MOST SUPPORT PROVIDED OVER ALL SHIFTS during last 7 days; code regardless of resident's self-performance classification)*

0. No setup or physical help from staff
1. Setup help only
2. One-person physical assist
3. Two+ persons physical assist

			(1) SELF-PERF.	(2) SUPPORT
a.	BED MOBILITY	How resident moves to and from lying position, turns side to side, and positions body while in bed		
b.	TRANSFER	How resident moves between surfaces—to/from: bed, chair, wheelchair, standing position (EXCLUDE to/from bath/toilet)		
c.	LOCOMOTION	How resident moves between locations in his/her room and adjacent corridor on same floor (IF in wheelchair, self-sufficiency once in chair)		
d.	DRESSING	How resident puts on, fastens, and takes off all items of street clothing, including donning/removing prostheses		
e.	EATING	How resident eats and drinks (regardless of staff)		
f.	TOILET USE	How resident uses the toilet room (or commode, bedpan, urinal); transfers on/off toilet, cleanses, changes pad, manages ostomy or catheter, adjusts clothes		
g.	PERSONAL HYGIENE	How resident maintains personal hygiene, including combing hair, brushing teeth, shaving, applying makeup, washing/drying face, hands, and perineum (EXCLUDE baths and showers)		
3.	BATHING	How resident takes full-body bath/shower, sponge bath, and transfers in/out of tub/shower (EXCLUDE washing of back and hair. *Code for most dependent in self-performance and support.* Bathing Self-Performance codes appear below)	a.	b.

0. Independent—No help provided
1. Supervision—Oversight help only
2. Physical help limited to transfer only
3. Physical help in part of bathing activity
4. Total dependence

4. BODY CONTROL PROBLEMS — *(Check all that apply during last 7 days)*

- Balance—partial or total loss of ability to balance self while standing — a.
- Bedfast all or most of the time — b.
- Contracture to arms, legs, shoulders, or hands — c.
- Hemiplegia/hemiparesis — d.
- Quadriplegia — e.
- Arm—partial or total loss of voluntary movement — f.
- Hand—lack of dexterity (e.g., problem using toothbrush or adjusting hearing aid) — g.
- Leg—partial or total loss of voluntary movement — h.
- Leg—unsteady gait — i.
- Trunk—partial or total loss of ability to position, balance, or turn body — j.
- Amputation — k.
- *NONE OF ABOVE* — l.

5. MOBILITY APPLIANCES/DEVICES — *(Check all that apply during last 7 days)*

- Cane/walker — a.
- Brace/prosthesis — b.
- Wheeled self — c.
- Other person wheeled — d.
- Lifted (manually/mechanically) — e.
- *NONE OF ABOVE* — f.

6.	TASK SEGMENTATION	Resident requires that some or all of ADL activities be broken into a series of subtasks so that resident can perform them 0. No 1. Yes	
7.	ADL FUNCTIONAL REHABILITATION POTENTIAL	Resident believes he/she capable of increased independence in at least some ADLs	a.
		Direct care staff believe resident capable of increased independence in at least some ADLs	b.
		Resident able to perform tasks/activity but is very slow	c.
		Major difference in ADL Self-Performance or ADL Support in mornings and evenings (at least a one category change in Self-Performance or Support in any ADL)	d.
		NONE OF ABOVE	e.
8.	CHANGE IN ADL FUNCTION	Change in ADL self-performance in last 90 days 0. No change 1. Improved 2. Deteriorated	

SECTION F. CONTINENCE IN LAST 14 DAYS

1. CONTINENCE SELF-CONTROL *(Code for resident's performance over all shifts)*

0. *CONTINENT* — Complete control
1. *USUALLY CONTINENT* — BLADDER, incontinent episodes once a week or less; BOWEL, less than weekly
2. *OCCASIONALLY INCONTINENT* — BLADDER, 2+ times a week but not daily; BOWEL, once a week
3. *FREQUENTLY INCONTINENT* — BLADDER, tended to be incontinent daily, but some control present (e.g., on day shift); BOWEL, 2-3 times a week
4. *INCONTINENT* — Had inadequate control; BLADDER, multiple daily episodes; BOWEL, all (or almost all) of the time

a.	BOWEL CONTINENCE	Control of bowel movement, with appliance or bowel continence programs, if employed	
b.	BLADDER CONTINENCE	Control of urinary bladder function (if dribbles, volume insufficient to soak through underpants), with appliances (e.g., foley) or continence programs, if employed	
2.	INCONTINENCE RELATED TESTING	*(Skip if resident's bladder continence code equals 0 or 1 AND no catheter is used)* Resident has been tested for a urinary tract infection	a.
		Resident has been checked for presence of a fecal impaction, or there is adequate bowel elimination	b.
		NONE OF ABOVE	c.
3.	APPLIANCES AND PROGRAMS	Any scheduled toileting plan	a.
		External (condom) catheter	b.
		Indwelling catheter	c.
		Intermittent catheter	d.
		Did not use toilet room/commode/urinal	e.
		Pads/briefs used	f.
		Enemas/irrigation	g.
		Ostomy	h.
		NONE OF ABOVE	i.
4.	CHANGE IN URINARY CONTINENCE	Change in urinary continence/appliances or programs in last 90 days 0. No change 1. Improved 2. Deteriorated	

IF RESIDENT IS COMATOSE, SKIP TO SECTION J

SECTION G. PSYCHOSOCIAL WELL-BEING

1.	SENSE OF INITIATIVE/INVOLVEMENT	At ease interacting with others	a.
		At ease doing planned or structured activities	b.
		At ease doing self-initiated activities	c.
		Establishes own goals	d.
		Pursues involvement in life of facility (e.g., makes/keeps friends; involved in group activities; responds positively to new activities; assists at religious services)	e.
		Accepts invitations into most group activities	f.
		NONE OF ABOVE	g.
2.	UNSETTLED RELATIONSHIPS	Covert/open conflict with or repeated criticism of staff	a.
		Unhappy with roommate	b.
		Unhappy with residents other than roommate	c.
		Openly expresses conflict/anger with family or friends	d.
		Absence of personal contact with family/friends	e.
		Recent loss of close family member/friend	f.
		NONE OF ABOVE	g.
3.	PAST ROLES	Strong identification with past roles and life status	a.
		Expresses sadness/anger/empty feeling over lost roles/status	b.
		NONE OF ABOVE	c.

SECTION H. MOOD AND BEHAVIOR PATTERNS

1.	SAD OR ANXIOUS MOOD	*(Check all that apply during last 30 days)* VERBAL EXPRESSIONS of DISTRESS by resident (sadness, sense that nothing matters, hopelessness, worthlessness, unrealistic fears, vocal expressions of anxiety or grief)	a.
		DEMONSTRATED (OBSERVABLE) SIGNS of mental DISTRESS — Tearfulness, emotional grooming, sighing, breathlessness	b.
		— Motor agitation such as pacing, handwringing or picking	c.
		— Failure to eat or take medications, withdrawal from self-care or leisure activities	d.
		— Pervasive concern with health	e.
		— Recurrent thoughts of death—e.g., believes he/she about to die, have a heart attack	f.
		— Suicidal thoughts/actions	g.
		NONE OF ABOVE	h.
2.	MOOD PERSISTENCE	Sad or anxious mood intrudes on daily life over last 7 days — not easily altered, doesn't "cheer up" 0. No 1. Yes	
3.	PROBLEM BEHAVIOR	*(Code for behavior in last 7 days)* 0. Behavior not exhibited in last 7 days 1. Behavior of this type occurred less than daily 2. Behavior of this type occurred daily or more frequently	
		WANDERING (moved with no rational purpose, seemingly oblivious to needs or safety)	a.
		VERBALLY ABUSIVE (others were threatened, screamed at, cursed at)	b.
		PHYSICALLY ABUSIVE (others were hit, shoved, scratched, sexually abused)	c.
		SOCIALLY INAPPROPRIATE/DISRUPTIVE BEHAVIOR (made disruptive sounds, noisy, screams, self-abusive acts, sexual behavior or disrobing in public, smeared/threw food/feces, hoarding, rummaged through others' belongings)	d.
4.	RESIDENT RESISTS CARE	*(Check all types of resistance that occurred in the last 7 days)* Resisted taking medications/injection	a.
		Resisted ADL assistance	b.
		NONE OF ABOVE	c.
5.	BEHAVIOR MANAGEMENT PROGRAM	Behavior problem has been addressed by clinically developed behavior management program. (Note: Do not include programs that involve only physical restraints or psychotropic medications in this category) 0. No behavior problem 1. Yes, addressed 2. No, not addressed	
6.	CHANGE IN MOOD	Change in mood in last 90 days 0. No change 1. Improved 2. Deteriorated	
7.	CHANGE IN PROBLEM BEHAVIOR	Change in problem behavioral signs in last 90 days 0. No change 1. Improved 2. Deteriorated	

4.	GENERAL ACTIVITY PREFERENCES (adapted to resident's current abilities)	*(Check all PREFERENCES whether or not activity is currently available to resident)*			
		Cards/other games	a.	Spiritual/religious activities	f.
		Crafts/arts	b.	Trips/shopping	g.
		Exercise/sports	c.	Walking/wheeling outdoors	h.
		Music	d.	Watch TV	i.
		Read/write	e.	*NONE OF ABOVE*	j.
5.	PREFERS MORE OR DIFFERENT ACTIVITIES	Resident expresses/indicates preference for other activities/choices 0. No 1. Yes			

SECTION J. DISEASE DIAGNOSES

Check only those diseases present that have a relationship to current ADL status, cognitive status, behavior status, medical treatments, or risk of death. (Do not list old/inactive diagnoses.)

1.	DISEASES	*(If none apply, CHECK the NONE OF ABOVE box)*			
		HEART/CIRCULATION		PSYCHIATRIC/MOOD	
		Arteriosclerotic heart disease (ASHD)	a.	Anxiety disorder	p.
		Cardiac dysrhythmias	b.	Depression	q.
		Congestive heart failure	c.	Manic depressive (bipolar disease)	r.
		Hypertension	d.	SENSORY	
		Hypotension	e.	Cataracts	s.
		Peripheral vascular disease	f.	Glaucoma	t.
		Other cardiovascular disease	g.	OTHER	
		NEUROLOGICAL		Allergies	u.
		Alzheimer's	h.	Anemia	v.
		Dementia other than Alzheimer's	i.	Arthritis	w.
		Aphasia	j.	Cancer	x.
		Cerebrovascular accident (stroke)	k.	Diabetes mellitus	y.
		Multiple sclerosis	l.	Explicit terminal prognosis	z.
		Parkinson's disease	m.	Hypothyroidism	aa.
		PULMONARY		Osteoporosis	bb.
		Emphysema/Asthma/COPD	n.	Seizure disorder	cc.
		Pneumonia	o.	Septicemia	dd.
				Urinary tract infection—in last 30 days	ee.
				NONE OF ABOVE	ff.
2.	OTHER CURRENT DIAGNOSES AND ICD-9-CM CODES	a. _____ b. _____ c. _____ d. _____ e. _____ f. _____			

SECTION I. ACTIVITY PURSUIT PATTERNS

1.	TIME AWAKE	*(Check appropriate time periods over last 7 days)* Resident awake all or most of time (i.e., naps no more than one hour per time period) in the:			
		Morning	a.	Evening	c.
		Afternoon	b.	*NONE OF ABOVE*	d.
2.	AVERAGE TIME INVOLVED IN ACTIVITIES	0. Most—more than 2/3 of time 2. Little—less than 1/3 of time 1. Some—1/3 to 2/3 of time 3. None			
3.	PREFERRED ACTIVITY SETTINGS	*(Check all settings in which activities are preferred)*			
		Own room	a.	Outside facility	d.
		Day/activity room	b.	*NONE OF ABOVE*	e.
		Inside NH/unit	c.		

SECTION K. HEALTH CONDITIONS

1.	PROBLEM CONDITIONS	*(Check all problems that are present in last 7 days unless other time frame indicated)*			
		Constipation	a.	Pain—resident complains or shows evidence of pain daily or almost daily	j.
		Diarrhea	b.	Recurrent lung aspirations in last 90 days	k.
		Dizziness/vertigo	c.	Shortness of breath	l.
		Edema	d.	Syncope (fainting)	m.
		Facial impaction	e.	Vomiting	n.
		Fever	f.	*NONE OF ABOVE*	o.
		Hallucinations/delusions	g.		
		Internal bleeding	h.		
		Joint pain	i.		
2.	ACCIDENTS	Fell in past 30 days	a.	Hip fracture in last 180 days	c.
		Fell in past 31-180 days	b.	*NONE OF ABOVE*	d.

J.	STABILITY OF CONDITIONS	Conditions/diseases make resident's cognitive, ADL, or behavior status unstable—fluctuating, precarious, or deteriorating	a.
		Resident experiencing an acute episode or a flare-up of a recurrent/chronic problem	b.
		NONE OF ABOVE	c.

SECTION L. ORAL/NUTRITIONAL STATUS

1.	ORAL PROBLEMS	Chewing problem	a.
		Swallowing problem	b.
		Mouth pain	c.
		NONE OF ABOVE	d.
2.	HEIGHT AND WEIGHT	*Record height (a.) in inches and weight (b.) in pounds. Weight based on most recent status in last 30 days; measure weight consistently in accord with standard facility practice—e.g., in a.m. after voiding, before meal, with shoes off, and in nightclothes.* HT (in.) a. WT (lb.) b.	
		c. Weight loss (i.e., 5%+ in last 30 days; or 10%+ in last 180 days) 0. No 1. Yes	c.
3.	NUTRITIONAL PROBLEMS	Complains about the taste of many foods a.	
		Insufficient fluid; dehydrated b.	
		Did NOT consume all/almost all liquids provided during last 3 days c.	
		Regular complaint of hunger	d.
		Leaves 25%+ food uneaten at most meals	e.
		NONE OF ABOVE	f.
4.	NUTRITIONAL APPROACHES	Parenteral/IV a.	
		Feeding tube b.	
		Mechanically altered diet c.	
		Syringe (oral feeding) d.	
		Therapeutic diet e.	
		Dietary supplement between meals	f.
		Plate guard, stabilized built-up utensil, etc.	g.
		NONE OF ABOVE	h.

SECTION M. ORAL/DENTAL STATUS

1.	ORAL STATUS AND DISEASE PREVENTION	Debris (soft, easily movable substances) present in mouth prior to going to bed at night	a.
		Has dentures or removable bridge	b.
		Some/all natural teeth lost—does not have or does not use dentures (or partial plates)	c.
		Broken, loose, or carious teeth	d.
		Inflamed gums (gingivis); swollen or bleeding gums; oral abscesses, ulcers or rashes	e.
		Daily cleaning of teeth/dentures	f.
		NONE OF ABOVE	g.

SECTION N. SKIN CONDITION

1.	STASIS ULCER	(open lesion caused by poor venous circulation to lower extremities) 0. No 1. Yes	
2.	PRESSURE ULCERS	*(Code for highest stage of pressure ulcer)* 0. No pressure ulcers 1. Stage 1 A persistent area of skin redness (without a break in the skin) that does not disappear when pressure is relieved 2. Stage 2 A partial thickness loss of skin layers that presents clinically as an abrasion, blister, or shallow crater 3. Stage 3 A full thickness of skin is lost, exposing the subcutaneous tissues—presents as a deep crater with or without undermining adjacent tissue 4. Stage 4 A full thickness of skin and subcutaneous tissue is lost, exposing muscle and/or bone	
3.	HISTORY OF RESOLVED/ CURED PRESSURE ULCERS	Resident has had a pressure ulcer that was resolved/cured in last 90 days 0. No 1. Yes	

4.	SKIN PROBLEMS/ CARE	Open lesions other than stasis or pressure ulcers (e.g., cuts)	a.
		Skin desensitized to pain, pressure, discomfort	b.
		Protective/preventive skin care	c.
		Turning/repositioning program	d.
		Pressure relieving beds, bed/chair pads (e.g., egg crate pads)	e.
		Wound care/treatment (e.g., pressure ulcer care, surgical wound)	f.
		Other skin care/treatment	g.
		NONE OF ABOVE	h.

SECTION O. MEDICATION USE

1.	NUMBER OF MEDICATIONS	*(Record the number of different medications used in the last 7 days; enter "0" if none used)*	
2.	NEW MEDICATIONS	Resident has received new medications during the last 90 days 0. No 1. Yes	
3.	INJECTIONS	*(Record the number of days injections of any type received during the last 7 days)*	
4.	DAYS RECEIVED THE FOLLOWING MEDICATION	*(Record the number of days during last 7 days, enter "0" if not used; enter "1" if long-acting meds. used less than weekly)* Antipsychotics	a.
		Antianxiety/hypnotics	b.
		Antidepressants	c.
5.	PREVIOUS MEDICATION RESULTS	*(SKIP this question if resident currently receiving antipsychotics, antidepressants, or antianxiety/hypnotics—otherwise code correct response for last 90 days)* Resident has previously received psychoactive medications for a mood or behavior problem, and these medications were effective (without undue adverse consequences) 0. No, drugs not used 1. Drugs were effective 2. Drugs were not effective 3. Drug effectiveness unknown	

SECTION P. SPECIAL TREATMENTS AND PROCEDURES

1.	SPECIAL TREATMENTS AND PROCEDURES	SPECIAL CARE—*Check treatments received during the last 14 days*	
		Chemotherapy a.	IV meds i.
		Radiation b.	Transfusions j.
		Dialysis c.	O_2 k.
		Suctioning d.	Other _____ l.
		Trach. care e.	*NONE OF ABOVE* l.
		THERAPIES—*Record the number of days each of the following therapies was administered (for at least 10 minutes during a day) in the last 7 days:*	
		Speech—language pathology and audiology services	a.
		Occupational therapy	b.
		Physical therapy	c.
		Psychological therapy (any licensed professional)	d.
		Respiratory therapy	e.
2.	ABNORMAL LAB VALUES	Has the resident had any abnormal lab values during the last 90-days? 0. No 1. Yes 2. No tests performed	
3.	DEVICES AND RESTRAINTS	*Use the following codes for last 7 days:* 0. Not used 1. Used less than daily 2. Used daily	
		Bed rails	a.
		Trunk restraint	b.
		Limb restraint	c.
		Chair prevents rising	d.

BILLING CODE 4120-03-C

(2) The Resident Assessment Protocols (RAPs) and triggers that are established by HCFA. HCFA issues the RAPs, and any changes, in the State Operations Manual (HCFA Pub. 7). The RAPs are available from HCFA upon request.

(3) The requirements for use of the RAI that appear at § 483.20.

(c) To receive Secretarial approval, a State's alternate instrument must contain—

(1) The MDS at paragraph (b)(1) of this section. All data elements and corresponding coding categories specified in the MDS must be contained in the State's instrument. The State may not alter the MDS definitions or the coding categories used with each MDS element or elements within a section. If proposing to reorder major sections of the MDS, the State must provide a conversion table between its instrument and the MDS, and the data supplies to HCFA from the MDS must be ordered in the same manner as designated in paragraph (b)(1) of this section. The State may include in its RAI data elements additional to those in the MDS to meet unique operational needs provided there is no conflict with elements included in the MDS.

(2) Resident Assessment Protocols (RAPs). An alternate RAI must include structured frameworks for organizing MDS elements and additional clinically relevant information about an individual that contributes to care planning. The State is not required to use the term "RAP" in an alternate instrument, and a State's protocols may include all, some, or none of the same RAPs contained in HCFA's RAI.

(i) Crosswalk. If the State creates alternative RAPs through combining care areas, it must provide a cross-walk chart from its RAPs to the care areas listed below in paragraph (b)(2)(iv) of this section.

(ii) Triggers. Each RAP must include assessment triggers, based on MDS elements or other information requirements, that screen which residents are subject to additional assessment. If States select alternative triggers or information requirements, they must provide supporting documentation for their decisions. This documentation may take the form of citations from professional medical journals and reports, results of field testing, or the consensus of experts that the State uses to assist in designing these RAPs.

(iii) Format. States must also specify a standardized format that long term care facilities will use to document information derived from RAPs about the nature of problems, complications and risk factors, the need for referral to appropriate health professionals, and the reasons for deciding to proceed or not to proceed with care planning specific to the triggered problems. There must be provision for identification of the location of the assessment results and for certification of completion and accuracy.

(iv) Frameworks for care areas. An alternate RAI must provide frameworks for comprehensive assessment in the following care areas:

(A) Cognitive loss/dementia.
(B) Visual function.
(C) Communication.
(D) Activities of daily living functional potential.
(E) Rehabilitation potential (In the RAPs designated by HCFA, the rehabilitation RAP is combined with the activities of daily living RAP.)
(F) Urinary incontinence and indwelling catheter.
(G) Psychosocial well-being. (In the RAPs designated by HCFA, there are three distinct RAPs that bear on psychosocial functioning: mood, behavior, and delirium.)
(H) Activities.
(I) Falls.
(J) Nutritional status.
(K) Feeding tubes.
(L) Dehydration/fluid maintenance.
(M) Dental care.
(N) Pressure ulcers.
(O) Psychotropic drug use.
(P) Physical restraints.

A. Utilization Guidelines
B. Minimum Data Set and Common Definitions
C. Resident Assessment Protocols
D. Criteria for Evaluation of Alternative Instruments

Resident Assessment System

Definitions

- *Minimum Data Set (MDS)*—minimum set of screening and assessment elements, including common definitions and coding categories, needed to assess comprehensively an individual nursing home resident. The items in the MDS standardize communication within facilities, between other facilities, and between facilities and outside agencies about resident problems and conditions.
- *Common Definitions*—standardized explanations of each element specified in the MDS.
- *Coding Categories*—the levels of measurement for each element included in the MDS.
- *Triggers*—levels of measurement (coding categories) of MDS elements that serve to identify residents who may require further evaluation using resident assessment protocols designated by the State.
- *Resident Assessment Protocols (RAPs)*—structured frameworks for organizing MDS elements, and additional clinically relevant information about an individual that contribute to care planning. (The State is not required to use the term "resident assessment protocol" in defining structured frameworks.)
- *Resident Assessment Instrument*—a standardized system comprised of the Minimum Data Set and Resident Assessment Protocol, including triggers, that result in a comprehensive, accurate, standardized, reproducible assessment of each long term care facility resident's functional capabilities.
- *Utilization Guidelines*—Instructions concerning when and how to use the resident assessment instrument.

Resident Assessment Instrument Specified by HCFA

HCFA is responsible for specifying the minimum data set and its common definitions, utilization guidelines, and for designating one or more resident assessment instruments. A State may specify HCFA's resident assessment instrument for use by long term care facilities in the State for conducting assessments.

HCFA's proposed resident assessment instrument follows. The resident assessment instrument is comprised of:

- The utilization guidelines (attachment A);
- The MDS of core elements and common definitions (attachment B); and
- And the resident assessment protocols, triggers and instructions for use (attachment C).

State Specified Resident Assessment Instrument

States may specify a resident assessment instrument designated by HCFA or specify its own instrument

provided it includes the utilization guidelines (attachment A), the minimum data set of core elements and common definitions (attachment B), and is approved by HCFA. The proposed criteria that HCFA will use to evaluate alternate assessment instruments is in attachment D.

Attachment A—Utilization Guidelines

Utilization Guidelines for Resident Assessment Instruments

A. General Guidelines

Use the resident assessment instrument for conducting comprehensive assessments of your residents. The resident assessment instrument provides information on the resident's condition, helps develop a plan of care and is a means by which a long term care facility can track changes in resident status.

Assess all residents in long term care facilities that participate in Medicare or Medicaid regardless of payor source.

Adhere to the MDS definitions specified within the sections of the MDS and detailed in the definition supplement. In addition to direct observation and communication with the resident, use a variety of information sources to complete the assessment. These information sources may include, but are not limited to:

- Discussion of resident performance levels with nurse aides and assistants on all shifts;
- Discussion of the resident's status with an attending physician;
- Discussion of the resident's status with family members;
- Discussion of the resident's status with appropriate licensed health professionals who have observed, evaluated, and/or treated the resident; and/or
- The resident's record, including the admission record, medical plan of care, resident plan of care, documentation of services provided to the resident, reports of any diagnostic testing, consultation, or other services, medications administration record, copies of any transfer data provided to another health care facility, and summaries of previous discharges.

A registered nurse is responsible for conducting or coordinating each resident assessment. This person may:

- Use instructional material prepared by HCFA to train other facility staff to gather MDS information and to inform them of the circumstances requiring completion of the MDS;
- Delegate responsibility for completing sections of the MDS to staff who have clinical knowledge about the resident, such as staff nurses, social workers, activities specialists, physical, occupational, or speech therapists, attending physicians, dietitians, and pharmacists;
- Establish facility policies and procedures to assure that key clinical personnel on all shifts are knowledgeable about the information found in the resident's most current MDS and report changes in resident's status that may affect the accuracy of this information; or
- Establish facility policies and procedures that instruct staff how to integrate MDS information with existing facility resident assessment and care planning practices.

Have the registered nurse coordinating the assessment sign and certify the completion of the assessment. Each individual who completes a portion of the assessment must certify the accuracy of that portion of the assessment. An individual who willfully and knowingly certifies (or causes another individual to certify) a material and false statement is subject to civil money penalties. Clinical disagreement does not constitute a material and false statement.

Place *all* completed resident assessments in the resident's record. All resident assessments completed within the last two years must be easily retrievable from the record if requested by representatives of State or Federal survey and certification agencies.

B. Frequency of Assessment

Federal requirements mandate that long term care facilities assess residents using the resident assessment instrument specified by the State:

- Within 14 days of admission to the facility;
- Promptly after a significant change in the resident's physical or mental condition; and
- In no case, less often than once every 12 months.

The facility must examine each resident no less frequently than once every 3 months and, as appropriate, revise the resident's assessment to assure the continuing accuracy of the assessment.

Specific utilization guidelines for conducting these assessments and quarterly reviews are as follows:

At Admission

Conduct an assessment within 14 days, if this is the resident's first stay or return stay (not a readmission) in the facility. A readmission is a return to the facility following a temporary absence for hospitalization or for therapeutic leave. Do not conduct an assessment if the resident is readmitted unless the resident has experienced a significant change in status. If a significant change in status has occurred, apply the procedures for conducting an assessment after a significant change in status (see below).

Do not complete Section I. *Identification Information* of the MDS if this information has previously been collected and posted to the resident's record.

To initiate care planning, collect as much information as possible for MDS elements and any additional data elements found in an approved State resident assessment instrument within 14 days post-admission.

If any of the following three circumstances occurs, you may amend MDS information collected during the 14 day post-admission period up until the 21st day after admission:

- Staff have no way to complete an item by the fourteenth day because information to complete the assessment is not available. For example, staff wish to interview a family member of a severely cognitively impaired resident because the family member is the most knowledgeable person about the resident's prior customary routines, accident history, recent changes in cognitive and functional status, and activity preferences. However, the resident is admitted on a Monday and the family member cannot visit the facility until sixteen days after admission.
- Further observation and interaction with the resident reveals the need to alter the initial assessments in any of the following MDS domains: cognitive patterns; communication patterns; potential for self-care improvement/rehabilitation; psychosocial well-being; mood and behavior patterns; and activity pursuit patterns. If any of the core items in these domains is altered by the 21st day, the assessor shall show these changes on the admission assessment, and shall initial and date such amendments.
- Upon admission, the resident's condition is unstable because he/she is experiencing an acute illness or flare-up of a chronic problem and the acute illness or chronic problem is controlled by the 21st day. If any of the MDS core items is altered by the 21st day, the assessor should show the change on the admission assessment, and should initial and date the amendments. If the acute episode or chronic problem has not stabilized by the 21st day after admission, and the resident's physical, mental, or psychosocial status has declined, the facility must complete a new MDS (see "Significant Change in Status").

At a Significant Change in a Resident's Status

A "significant change" means any of the following:

- Deterioration in two or more activities of daily living, communication, and/or cognitive abilities that appears permanent. For example, simultaneous functional *and* cognitive decline is often experienced by residents with chronic, degenerative illness such as Alzheimer's Disease or pronounced functional changes following a stroke.
- Loss of ability to freely ambulate or to use hands to grasp small objects to feed or groom oneself, such as, spoon, toothbrush, or comb. Such losses must be permanent and not attributable to identifiable, reversible causes such as drug toxicity from introducing a new medication, or an episode of acute illness such as influenza.
- Deterioration in behavior, mood, and/or relationships where staff conclude that these changes in the resident's psychosocial status are not likely to improve without staff intervention.
- Deterioration in a resident's health status, where this change: places the resident's life in danger, e.g., stroke, heart condition, or diagnosis of metastatic cancer; is associated with a serious clinical complication, e.g., initial development of a stage III or stage IV pressure ulcer, the initial onset of nonrelieved delirium, or recurrent loss of consciousness; or is associated with an initial new diagnosis of a condition that is likely to affect the resident's physical, mental, or psychosocial well-being over a prolonged period of time, e.g., Alzheimer's Disease or diabetes.
- A serious clinical complication.
- A new diagnosis of a condition that is likely to affect the resident's physical, mental, or psychosocial well-being over a prolonged period of time.
- Onset of a significant weight loss (5% in last 30 days or 10% in last 180 days).
- A marked and sudden improvement in the resident's status, for example, a comatose resident regaining consciousness.

Document in progress notes the initial identification of a significant change in status.

Once you determine that the resident's change in status is likely to be permanent, complete a full comprehensive assessment within 14 days of this determination.

Do *not* assess the resident if declines in a resident's physical, mental, or psychosocial well-being are attributable to:

- Discrete and easily reversible cause(s) documented in the resident's record and for which facility staff can initiate corrective action. For example, an anticipated side effect of introducing a psychotropic medication while attempting to establish a clinically effective dose level.
- Short-term acute illness such as a mild fever secondary to a cold from which facility staff expect full recovery of the resident's pre-morbid functional abilities and health status.
- Well established, predictive cyclical patterns of clinical signs and symptoms associated with previously diagnosed conditions. For example, depressive symptoms in a resident previously diagnosed with bipolar disease.

At Least Annually

Each resident must have a full, comprehensive assessment no later than 12 months following the last full assessment.

Quarterly Reviews

To track resident status between assessments, and to ensure monitoring critical indicators of the gradual onset of significant declines in resident status, examine the resident and review the following MDS core elements for all residents quarterly. Document the results of the assessment and revise the plan of care if indicated:

- Section B: Cognitive Patterns

—Item 2 (Memory); and
—Item 4 (Cognitive Skills for Daily Decisionmaking).

- Section C: Communication/Hearing Patterns

—Item 4 (Ability to Make Self Understood); and
—Item 5 (Ability to Understand Others).

- Section E: Physical Functioning and Structural Problems

—Items 1b-f (ADL Self-Performance); and
—Item 3a (Bathing).

- Section F: Continence in Last 14 Days

—Item 1 (Continence Self-Control Categories).

- Section H: Mood and Behavior Patterns

—Item 2 (Mood Persistence); and
—Item 3 (Problem Behavior).

- Section J: Disease Diagnoses

—Note only those diseases diagnosed in the last 90 days that have a relationship to current ADL status, behavior status, medical treatments, or risk of death.

- Section L: Oral/Nutritional Status

—Item 2b (Weight loss (i.e., 5% on last 30 days; or 10% in last 180 days)).

- Section O: Medication Use

—Item 4 (Days Received The Following Medication).

- Section P: Special Treatment and Procedures

—Item 3b (Devices and Restraints—Trunk restraint); and
—Item 3d (Devices and Restraints—Chair prevents rising).

Attachment B—Minimum Data Set and Common Definitions

Minimum Data Set

In addition to the form for background information, there are 16 sections that make up the MDS, lettered from A to P. Each section contains one or more items labelled sequentially with corresponding definitions. For instance, the third item in section B is labelled "B3", the second item in section P is "P2".

The MDS has been formatted to assist the assessor determine the appropriate type of response for each item. The appropriate response for unshaded answer boxes is a check mark [√]. Items with a lightly shaded box require a numeric response, either a number, such as height or weight, or a preassigned code. Darkly shaded boxes do not require an answer and should be left blank. Complete all items unless the instructions tell you to "skip" over the next item (or several items) and go on to another. In cases where information is unavailable despite exhaustive probing, enter "NA" for "not available" or the approved "no information available" code, a circled dash.

The Minimum Data Set of common elements follows. Supplemental coding instructions and common definitions follow the MDS.

BILLING CODE 4120-03-M

MINIMUM DATA SET FOR NURSING HOME RESIDENT ASSESSMENT AND CARE SCREENING (MDS)
BACKGROUND INFORMATION AT INTAKE/ADMISSION

I. IDENTIFICATION INFORMATION

1.	RESIDENT NAME	(First) (Middle Initial) (Last)
2.	DATE OF CURRENT ADMISSION	Month Day Year
3.	MEDICARE NO. (SOC. SEC. or Comparable No. if no Medicare No.)	
4.	FACILITY PROVIDER NO.	Federal No.
5.	GENDER	1. Male 2. Female
6.	RACE/ ETHNICITY	1. American Indian/Alaska Native 2. Asian/Pacific Islander 3. Black, not of Hispanic origin 4. Hispanic 5. White, not of Hispanic origin
7.	BIRTHDATE	Month Day Year
8.	LIFETIME OCCUPATION	
9.	PRIMARY LANGUAGE	Resident's primary language is a language other than English 0. No 1. Yes _____ (Specify)
10.	RESIDENTIAL HISTORY PAST 5 YEARS	(Check all settings resident lived in during 5 years prior to admission) Prior stay at this nursing home a. Other nursing home/residential facility b. MH/psychiatric setting c. MR/DD setting d. NONE OF ABOVE e.
11.	MENTAL HEALTH HISTORY	Does resident's RECORD indicate any history of mental retardation, mental illness, or any other mental health problem? 0. No 1. Yes
12.	CONDITIONS RELATED TO MR/DD STATUS	(Check all conditions that are related to MR/DD status, that were manifested before age 22, and are likely to continue indefinitely) Not applicable—no MR/DD (Skip to Item 13) a. MR/DD with Organic Condition Cerebral palsy b. Down's syndrome c. Autism d. Epilepsy e. Other organic condition related to MR/DD f. MR/DD with no organic condition g. Unknown h.
13.	MARITAL STATUS	1. Never Married 2. Married 3. Widowed 4. Separated 5. Divorced
14.	ADMITTED FROM	1. Private home or apt. 2. Nursing home 3. Acute care hospital 4. Other
15.	LIVED ALONE	0. No 1. Yes 2. In other facility
16.	ADMISSION INFORMATION AMENDED	(Check all that apply) Accurate information unavailable earlier a. Observation revealed additional information b. Resident unstable at admission c.

II. BACKGROUND INFORMATION AT RETURN/READMISSION

1.	DATE OF CURRENT READMISSION	Month Day Year
2.	MARITAL STATUS	1. Never Married 2. Married 3. Widowed 4. Separated 5. Divorced
3.	ADMITTED FROM	1. Private home or apt. 2. Nursing home 3. Acute care hospital 4. Other
4.	LIVED ALONE	0. No 1. Yes 2. In other facility

III. CUSTOMARY ROUTINE (ONLY AT FIRST ADMISSION)

1. CUSTOMARY ROUTINE (Near prior to first admission to a nursing home)

(Check all that apply. If all information UNKNOWN, check last box only.)

CYCLE OF DAILY EVENTS	
Stays up late at night (e.g., after 9 pm)	a.
Naps regularly during day (at least 1 hour)	b.
Goes out 1+ days a week	c.
Stays busy with hobbies, reading, or fixed daily routine	d.
Spends most time alone or watching TV	e.
Moves independently indoors (with appliances, if used)	f.
NONE OF ABOVE	g.
EATING PATTERNS	
Distinct food preferences	h.
Eats between meals all or most days	i.
Use of alcoholic beverage(s) at least weekly	j.
NONE OF ABOVE	k.
ADL PATTERNS	
In bed/clothes much of day	l.
Wakens to toilet all or most nights	m.
Has irregular bowel movement pattern	n.
Prefers showers for bathing	o.
NONE OF ABOVE	p.
INVOLVEMENT PATTERNS	
Daily contact with relatives/close friends	q.
Usually attends church, temple, synagogue (etc.)	r.
Finds strength in faith	s.
Daily animal companion/presence	t.
Involved in group activities	u.
NONE OF ABOVE	v.
UNKNOWN—Resident/family unable to provide information	w.

END

Signature of RN Assessment Coordinator: _____ Date: _____

Signatures of Others Who Completed Part of the Assessment:

_____ _____ _____

MINIMUM DATA SET FOR NURSING HOME RESIDENT ASSESSMENT AND CARE SCREENING (MDS)

(Status in last 7 days, unless other time frame indicated)

SECTION A. IDENTIFICATION AND BACKGROUND INFORMATION

1.	ASSESSMENT DATE	Month — Day — Year
2.	RESIDENT NAME	(First) (Middle Initial) (Last)
3.	SOCIAL SECURITY NO.	
4.	MEDICAID NO. (If applicable)	
5.	MEDICAL RECORD NO.	
6.	REASON FOR ASSESSMENT	1. Initial admission assess. 2. Hosp/Medicare reassess. 3. Readmission assessment 4. Annual assessment 5. Significant change in status 6. Other (e.g., UR)
7.	CURRENT PAYMENT SOURCE(S) FOR N.H. STAY	*(Billing Office to indicate; check all that apply)* Medicaid (a.) Medicare (b.) CHAMPUS (c.) VA (d.) Self pay/Private insurance (e.) Other (f.)
8.	RESPONSIBILITY/ LEGAL GUARDIAN	*(Check all that apply)* Legal guardian (a.) Other legal oversight (b.) Durable power attny./ health care proxy (c.) Family member responsible (d.) Resident responsible (e.) *NONE OF ABOVE* (f.)
9.	ADVANCED DIRECTIVES	*(For those items with supporting documentation in the medical record, check all that apply)* Living will (a.) Do not resuscitate (b.) Do not hospitalize (c.) Organ donation (d.) Autopsy request (e.) Feeding restrictions (f.) Medication restrictions (g.) Other treatment restrictions (h.) *NONE OF ABOVE* (i.)
10.	DISCHARGE PLANNED WITHIN 3 MOS.	*(Does not include discharge due to death)* 0. No 1. Yes 2. Unknown/uncertain
11.	PARTICIPATE IN ASSESSMENT	a. Resident 0. No 1. Yes (a.) b. Family 0. No 1. Yes 2. No family (b.)
12.	SIGNATURES AND SECTIONS COMPLETED	Signature of RN Assessment Coordinator ____ Date: ____ Signatures of Others Who Completed Part of the Assessment and Sections Completed

SECTION B. COGNITIVE PATTERNS

1.	COMATOSE	*(Persistent vegetative state/no discernible consciousness)* 0. No 1. Yes *(Skip to SECTION E)*
2.	MEMORY	*(Recall of what was learned or known)* a. Short-term memory OK—seems/appears to recall after 5 minutes 0. Memory OK 1. Memory problem (a.) b. Long-term memory OK—seems/appears to recall long past 0. Memory OK 1. Memory problem (b.)
3.	MEMORY/ RECALL ABILITY	*(Check all that resident normally able to recall during last 7 days)* Current season (a.) Location of own room (b.) Staff names/faces (c.) That he/she is in a nursing home (d.) *NONE OF ABOVE* are recalled (e.)
4.	COGNITIVE SKILLS FOR DAILY DECISION-MAKING	*(Made decisions regarding tasks of daily life)* 0. Independent—decisions consistent/reasonable 1. Modified Independence—some difficulty in new situations only 2. Moderately Impaired—decisions poor; cues/supervision required 3. Severely Impaired—never/rarely made decisions
5.	INDICATORS OF DELIRIUM —PERIODIC DISORDERED THINKING/ AWARENESS	*(Check if condition over last 7 days appears different from usual functioning)* Less alert, easily distracted (a.) Changing awareness of environment (b.) Episodes of incoherent speech (c.) Periods of motor restlessness or lethargy (d.) Cognitive ability varies over course of day (e.) *NONE OF ABOVE* (f.)
6.	CHANGE IN COGNITIVE STATUS	Change in resident's cognitive status, skills, or abilities in last 90 days 0. No change 1. Improved 2. Deteriorated

SECTION C. COMMUNICATION/HEARING PATTERNS

1.	HEARING	*(With hearing appliance, if used)* 0. Hears adequately—normal talk, TV, phone 1. Minimal difficulty when not in quiet setting 2. Hears in special situations only—speaker has to adjust tonal quality and speak distinctly 3. Highly impaired/absence of useful hearing
2.	COMMUNICATION DEVICES/ TECHNIQUES	*(Check all that apply during last 7 days)* Hearing aid, present and used (a.) Hearing aid, present and not used (b.) Other receptive comm. techniques used (e.g., lip read) (c.) *NONE OF ABOVE* (d.)
3.	MODES OF EXPRESSION	*(Check all used by resident to make needs known)* Speech (a.) Writing messages to express or clarify needs (b.) Signs/gestures/sounds (c.) Communication board (d.) Other (e.) *NONE OF ABOVE* (f.)
4.	MAKING SELF UNDERSTOOD	*(Express information content—however able)* 0. Understood 1. Usually Understood—difficulty finding words or finishing thoughts 2. Sometimes Understood—ability is limited to making concrete requests 3. Rarely/Never Understood
5.	ABILITY TO UNDERSTAND OTHERS	*(Understanding verbal information content—however able)* 0. Understands 1. Usually Understands—may miss some part/intent of message 2. Sometimes Understands—responds adequately to simple, direct communication 3. Rarely/Never Understands
6.	CHANGE IN COMMUNICATION/ HEARING	Resident's ability to express, understand or hear information has changed over last 90 days 0. No change 1. Improved 2. Deteriorated

SECTION D. VISION PATTERNS

1.	VISION	*(Ability to see in adequate light and with glasses if used)* 0. Adequate—sees fine detail, including regular print in newspapers/books 1. Impaired—sees large print, but not regular print in newspapers/books 2. Highly Impaired—limited vision; not able to see newspaper headlines; appears to follow objects with eyes 3. Severely Impaired—no vision or appears to see only light, colors, or shapes
2.	VISUAL LIMITATIONS/ DIFFICULTIES	Side vision problems—decreased peripheral vision (e.g., leaves food on one side of tray, difficulty traveling, bumps into people and objects, misjudges placement of chair when seating self) (a.) Experiences any of following: sees halos or rings around lights; sees flashes of light; sees "curtains" over eyes (b.) *NONE OF ABOVE* (c.)
3.	VISUAL APPLIANCES	Glasses; contact lenses; lens implant; magnifying glass 0. No 1. Yes

■ = Code the appropriate response ☐ = Check all the responses that apply

December 19, 1990

SECTION E. PHYSICAL FUNCTIONING AND STRUCTURAL PROBLEMS

1. ADL SELF-PERFORMANCE — *(Code for resident's PERFORMANCE OVER ALL SHIFTS during last 7 days—Not including setup)*

0. *INDEPENDENT* — No help or oversight — OR — Help/oversight provided only 1 or 2 times during last 7 days
1. *SUPERVISION* — Oversight, encouragement or cueing provided 3+ times during last 7 days — OR — Supervision plus physical assistance provided only 1 or 2 times during last 7 days
2. *LIMITED ASSISTANCE* — Resident highly involved in activity; received physical help in guided maneuvering of limbs or other nonweight bearing assistance 3+ times — OR — More help provided only 1 or 2 times during last 7 days
3. *EXTENSIVE ASSISTANCE* — While resident performed part of activity, over last 7-day period, help of following type(s) provided 3 or more times:
   — Weight-bearing support
   — Full staff performance during part (but not all) of last 7 days
4. *TOTAL DEPENDENCE* — Full staff performance of activity during entire 7 days

2. ADL SUPPORT PROVIDED — *(Code for MOST SUPPORT PROVIDED OVER ALL SHIFTS during last 7 days; code regardless of resident's self-performance classification)*

0. No setup or physical help from staff
1. Setup help only
2. One-person physical assist
3. Two+ persons physical assist

			(1) SELF-PERF.	(2) SUPPORT
a.	BED MOBILITY	How resident moves to and from lying position, turns side to side, and positions body while in bed		
b.	TRANSFER	How resident moves between surfaces—to/from: bed, chair, wheelchair, standing position (EXCLUDE to/from bath/toilet)		
c.	LOCOMOTION	How resident moves between locations in his/her room and adjacent corridor on same floor (IF in wheelchair, self-sufficiency once in chair)		
d.	DRESSING	How resident puts on, fastens, and takes off all items of street clothing, including donning/removing prostheses		
e.	EATING	How resident eats and drinks (regardless of skill)		
f.	TOILET USE	How resident uses the toilet room (or commode, bedpan, urinal); transfers on/off toilet, cleanses, changes pad, manages ostomy or catheter, adjusts clothes		
g.	PERSONAL HYGIENE	How resident maintains personal hygiene, including combing hair, brushing teeth, shaving, applying makeup, washing/drying face, hands, and perineum (EXCLUDE baths and showers)		
3.	BATHING	How resident takes full-body bath/shower, sponge bath, and transfers in/out of tub/shower (EXCLUDE washing of back and hair. *Code for most dependent in self-performance and support.* Bathing Self-Performance codes appear below)	a.	b.

0. Independent—No help provided
1. Supervision—Oversight help only
2. Physical help limited to transfer only
3. Physical help in part of bathing activity
4. Total dependence

4. BODY CONTROL PROBLEMS — *(Check all that apply during last 7 days)*

- Balance—partial or total loss of ability to balance self while standing — a.
- Bedfast all or most of the time — b.
- Contracture to arms, legs, shoulders, or hands — c.
- Hemiplegia/hemiparesis — d.
- Quadriplegia — e.
- Arm—partial or total loss of voluntary movement — f.
- Hd—lack of dexterity (e.g., problem using toothbrush or adjusting hearing aid) — g.
- hg—partial or total loss of voluntary movement — h.
- ug—unsteady gait — i.
- unb—partial or total loss of ability to position, balance, or turn body — j.
- Amputation — k.
- NONE OF ABOVE — l.

5. MOBILITY APPLIANCES/DEVICES — *(Check all that apply during last 7 days)*

- Cane/walker — a.
- Brace/prosthesis — b.
- Wheeled self — c.
- Other person wheeled — d.
- Lifted (manually/mechanically) — e.
- NONE OF ABOVE — f.

6.	TASK SEGMENTATION	Resident requires that some or all of ADL activities be broken into a series of subtasks so that resident can perform them 0. No 1. Yes	
7.	ADL FUNCTIONAL REHABILITATION POTENTIAL	Resident believes he/she capable of increased independence in at least some ADLs	a.
		Direct care staff believe resident capable of increased independence in at least some ADLs	b.
		Resident able to perform tasks/activity but is very slow	c.
		Major difference in ADL Self-Performance or ADL Support in mornings and evenings (at least a one category change in Self-Performance or Support in any ADL)	d.
		NONE OF ABOVE	e.
8.	CHANGE IN ADL FUNCTION	Change in ADL self-performance in last 90 days 0. No change 1. Improved 2. Deteriorated	

SECTION F. CONTINENCE IN LAST 14 DAYS

1. CONTINENCE SELF-CONTROL *(Code for resident's performance over all shifts)*

0. *CONTINENT* — Complete control
1. *USUALLY CONTINENT* — BLADDER, incontinent episodes once a week or less. BOWEL, less than weekly
2. *OCCASIONALLY INCONTINENT* — BLADDER, 2+ times a week but not daily. BOWEL, once a week
3. *FREQUENTLY INCONTINENT* — BLADDER, tended to be incontinent daily, but some control present (e.g., on day shift). BOWEL, 2-3 times a week
4. *INCONTINENT* — Had inadequate control. BLADDER, multiple daily episodes. BOWEL, all (or almost all) of the time

a.	BOWEL CONTINENCE	Control of bowel movement, with appliance or bowel continence programs, if employed	
b.	BLADDER CONTINENCE	Control of urinary bladder function (if dribbles, volume insufficient to soak through underpants), with appliances (e.g., foley) or continence programs, if employed	
2.	INCONTINENCE RELATED TESTING	*(Skip if resident's bladder continence code equals 0 or 1 AND no catheter is used)* Resident has been tested for a urinary tract infection	a.
		Resident has been checked for presence of a fecal impaction, or there is adequate bowel elimination	b.
		NONE OF ABOVE	c.
3.	APPLIANCES AND PROGRAMS	Any scheduled toileting plan — a.	
		External (condom) catheter — b.	
		Indwelling catheter — c.	
		Intermittent catheter — d.	
		Did not use toilet room/commode/urinal — e.	
		Pads/briefs used	f.
		Enemas/irrigation	g.
		Ostomy	h.
		NONE OF ABOVE	i.
4.	CHANGE IN URINARY CONTINENCE	Change in urinary continence/appliances or programs in last 90 days 0. No change 1. Improved 2. Deteriorated	

IF RESIDENT IS COMATOSE, SKIP TO SECTION J

SECTION G. PSYCHOSOCIAL WELL-BEING

1.	SENSE OF INITIATIVE/INVOLVEMENT	At ease interacting with others	a.
		At ease doing planned or structured activities	b.
		At ease doing self-initiated activities	c.
		Establishes own goals	d.
		Pursues involvement in life of facility (e.g., makes/keeps friends involved in group activities; responds positively to new activities; assists at religious services)	e.
		Accepts invitations into most group activities	f.
		NONE OF ABOVE	g.
2.	UNSETTLED RELATIONSHIPS	Overt/open conflict with or repeated criticism of staff	a.
		Unhappy with roommate	b.
		Unhappy with residents other than roommate	c.
		Openly expresses conflict/anger with family or friends	d.
		Absence of personal contact with family/friends	e.
		Recent loss of close family member/friend	f.
		NONE OF ABOVE	g.
3.	PAST ROLES	Strong identification with past roles and life status	a.
		Expresses sadness/anger/empty feeling over lost roles/status	b.
		NONE OF ABOVE	c.

SECTION H. MOOD AND BEHAVIOR PATTERNS

1.	SAD OR ANXIOUS MOOD	*(Check all that apply during last 30 days)* VERBAL EXPRESSIONS of DISTRESS by resident (sadness, sense that nothing matters, hopelessness, worthlessness, unrealistic fears, vocal expressions of anxiety or grief)	a.
		DEMONSTRATED (OBSERVABLE) SIGNS of mental DISTRESS — Tearfulness, emotional groaning, sighing, breathlessness	b.
		— Motor agitation such as pacing, handwringing or picking	c.
		— Failure to eat or take medications, withdrawal from self-care or leisure activities	d.
		— Pervasive concern with health	e.
		— Recurrent thoughts of death—e.g., believes he/she about to die, have a heart attack	f.
		— Suicidal thoughts/actions	g.
		NONE OF ABOVE	h.
2.	MOOD PERSISTENCE	Sad or anxious mood intrudes on daily life over last 7 days — not easily altered, doesn't "cheer up" 0. No 1. Yes	
3.	PROBLEM BEHAVIOR	*(Code for behavior in last 7 days)* 0. Behavior not exhibited in last 7 days 1. Behavior of this type occurred less than daily 2. Behavior of this type occurred daily or more frequently	
		WANDERING (moved with no rational purpose, seemingly oblivious to needs or safety)	a.
		VERBALLY ABUSIVE (others were threatened, screamed at, cursed at)	b.
		PHYSICALLY ABUSIVE (others were hit, shoved, scratched, sexually abused)	c.
		SOCIALLY INAPPROPRIATE/DISRUPTIVE BEHAVIOR (made disrupting sounds, noisy, screams, self-abusive acts, sexual behavior or disrobing in public, smeared/threw food/feces, hoarding, rummaged through others' belongings)	d.
4.	RESIDENT RESISTS CARE	*(Check all types of resistance that occurred in the last 7 days)* Resisted taking medications/injection	a.
		Resisted ADL assistance	b.
		NONE OF ABOVE	c.
5.	BEHAVIOR MANAGEMENT PROGRAM	Behavior problem has been addressed by clinically developed behavior management program. (Note: Do not include programs that involve only physical restraints or psychotropic medications in this category) 0. No behavior problem 1. Yes, addressed 2. No, not addressed	
6.	CHANGE IN MOOD	Change in mood in last 90 days 0. No change 1. Improved 2. Deteriorated	
7.	CHANGE IN PROBLEM BEHAVIOR	Change in problem behavioral signs in last 90 days 0. No change 1. Improved 2. Deteriorated	

4.	GENERAL ACTIVITY PREFERENCES (adapted to resident's current abilities)	*(Check all PREFERENCES whether or not activity is currently available to resident)*	
		Cards/other games a.	Spiritual/religious activities f.
		Crafts/arts b.	Trips/shopping g.
		Exercises/sports c.	Walking/wheeling outdoors h.
		Music d.	Watch TV i.
		Read/write e.	*NONE OF ABOVE* j.
5.	PREFERS MORE OR DIFFERENT ACTIVITIES	Resident expresses/indicates preference for other activities/choices 0. No 1. Yes	

SECTION J. DISEASE DIAGNOSES

Check only those diseases present that have a relationship to current ADL status, cognitive status, behavior status, medical treatments, or risk of death. (Do not list old/inactive diagnoses.)

1.	DISEASES	*(If none apply, CHECK the NONE OF ABOVE box)*			
		HEART/CIRCULATION		PSYCHIATRIC/MOOD	
		Arteriosclerotic heart disease (ASHD)	a.	Anxiety disorder	p.
		Cardiac dysrhythmias	b.	Depression	q.
		Congestive heart failure	c.	Manic depressive (bipolar disease)	r.
		Hypertension	d.	SENSORY	
		Hypotension	e.	Cataracts	s.
		Peripheral vascular disease	f.	Glaucoma	t.
		Other cardiovascular disease	g.	OTHER	
		NEUROLOGICAL		Allergies	u.
		Alzheimer's	h.	Anemia	v.
		Dementia other than Alzheimer's	i.	Arthritis	w.
		Aphasia	j.	Cancer	x.
		Cerebrovascular accident (stroke)	k.	Diabetes mellitus	y.
		Multiple sclerosis	l.	Explicit terminal prognosis	z.
		Parkinson's disease	m.	Hypothyroidism	aa.
		PULMONARY		Osteoporosis	bb.
		Emphysema/Asthma/COPD	n.	Seizure disorder	cc.
		Pneumonia	o.	Septicemia	dd.
				Urinary tract infection—in last 30 days	ee.
				NONE OF ABOVE	ff.
2.	OTHER CURRENT DIAGNOSES AND ICD-9-CM CODES	a. _____ b. _____ c. _____ d. _____ e. _____ f. _____			

SECTION I. ACTIVITY PURSUIT PATTERNS

1.	TIME AWAKE	*(Check appropriate time periods over last 7 days)* Resident awake all or most of time (i.e., naps no more than one hour per time period) in the:			
		Morning	a.	Evening	c.
		Afternoon	b.	*NONE OF ABOVE*	d.
2.	AVERAGE TIME INVOLVED IN ACTIVITIES	0. Most—more than 2/3 of time 2. Little—less than 1/3 of time 1. Some—1/3 to 2/3 of time 3. None			
3.	PREFERRED ACTIVITY SETTINGS	*(Check all settings in which activities are preferred)*			
		Own room	a.	Outside facility	d.
		Day/activity room	b.	*NONE OF ABOVE*	e.
		Inside NH/off unit	c.		

SECTION K. HEALTH CONDITIONS

1.	PROBLEM CONDITIONS	*(Check all problems that are present in last 7 days unless other time frame indicated)*			
		Constipation	a.	Pain—resident complains or shows evidence of pain daily or almost daily	j.
		Diarrhea	b.	Recurrent lung aspirations in last 90 days	k.
		Dizziness/vertigo	c.	Shortness of breath	l.
		Edema	d.	Syncope (fainting)	m.
		Fecal impaction	e.	Vomiting	n.
		Fever	f.	*NONE OF ABOVE*	o.
		Hallucinations/delusions	g.		
		Internal bleeding	h.		
		Joint pain	i.		
2.	ACCIDENTS	Fall in past 30 days	a.	Hip fracture in last 180 days	c.
		Fall in past 31-180 days	b.	*NONE OF ABOVE*	d.

J.	STABILITY OF CONDITIONS	Conditions/diseases make resident's cognitive, ADL, or behavior status unstable—fluctuating, precarious, or deteriorating	a.
		Resident experiencing an acute episode or a flare-up of a recurrent/chronic problem	b.
		NONE OF ABOVE	c.

SECTION L. ORAL/NUTRITIONAL STATUS

1.	ORAL PROBLEMS	Chewing problem	a.
		Swallowing problem	b.
		Mouth pain	c.
		NONE OF ABOVE	d.
2.	HEIGHT AND WEIGHT	*Record height (in.) in inches and weight (lb.) in pounds. Weight based on most recent status in last 30 days; measure weight consistently in accord with standard facility practice—e.g., in a.m. after voiding, before meal, with shoes off, and in nightclothes.* HT (in.) ___ WT (lb.) ___	a. b.
		c. Weight loss (i.e., 5%+ in last 30 days, or 10%+ in last 180 days) 0. No 1. Yes	c.
3.	NUTRITIONAL PROBLEMS	Complains about the taste of many foods	a.
		Insufficient fluid; dehydrated	b.
		Did NOT consume all/almost all liquids provided during last 3 days	c.
		Regular complaint of hunger	d.
		Leaves 25%+ food uneaten at most meals	e.
		NONE OF ABOVE	f.
4.	NUTRITIONAL APPROACHES	Parenteral/IV	a.
		Feeding tube	b.
		Mechanically altered diet	c.
		Syringe (oral feeding)	d.
		Therapeutic diet	e.
		Dietary supplement between meals	f.
		Plate guard, stabilized built-up utensil, etc.	g.
		NONE OF ABOVE	h.

SECTION M. ORAL/DENTAL STATUS

1.	ORAL STATUS AND DISEASE PREVENTION	Debris (soft, easily movable substances) present in mouth prior to going to bed at night	a.
		Has dentures or removable bridge	b.
		Some/all natural teeth lost—does not have or does not use dentures (or partial plates)	c.
		Broken, loose, or carious teeth	d.
		Inflamed gums (gingivia); swollen or bleeding gums; oral abscesses, ulcers or rashes	e.
		Daily cleaning of teeth/dentures	f.
		NONE OF ABOVE	g.

SECTION N. SKIN CONDITION

1.	STASIS ULCER	(open lesion caused by poor venous circulation to lower extremities) 0. No 1. Yes	
2.	PRESSURE ULCERS	*(Code for highest stage of pressure ulcer)* 0. No pressure ulcers 1. Stage 1 A persistent area of skin redness (without a break in the skin) that does not disappear when pressure is relieved 2. Stage 2 A partial thickness loss of skin layers that presents clinically as an abrasion, blister, or shallow crater 3. Stage 3 A full thickness of skin is lost, exposing the subcutaneous tissues—presents as a deep crater with or without undermining adjacent tissue 4. Stage 4 A full thickness of skin and subcutaneous tissue is lost, exposing muscle and/or bone	
3.	HISTORY OF RESOLVED/ CURED PRESSURE ULCERS	Resident has had a pressure ulcer that was resolved/cured in last 90 days 0. No 1. Yes	

4.	SKIN PROBLEMS/ CARE	Open lesions other than stasis or pressure ulcers (e.g., cuts)	a.
		Skin deneralized to pain, pressure, discomfort	b.
		Protective/preventive skin care	c.
		Turning/repositioning program	d.
		Pressure relieving beds, bed/chair pads (e.g., egg crate pads)	e.
		Wound care/treatment (e.g., pressure ulcer care, surgical wound)	f.
		Other skin care/treatment	g.
		NONE OF ABOVE	h.

SECTION O. MEDICATION USE

1.	NUMBER OF MEDICATIONS	*(Record the number of different medications used in the last 7 days; enter "0" if none used)*	
2.	NEW MEDICATIONS	Resident has received new medications during the last 90 days 0. No 1. Yes	
3.	INJECTIONS	*(Record the number of days injections of any type received during the last 7 days)*	
4.	DAYS RECEIVED THE FOLLOWING MEDICATION	*(Record the number of days during last 7 days, enter "0" if not used; enter "1" if long-acting meds. used less than weekly)* Antipsychotics	a.
		Antianxiety/hypnotics	b.
		Antidepressants	c.
5.	PREVIOUS MEDICATION RESULTS	*(SKIP this question if resident currently receiving antipsychotics, antidepressants, or antianxiety/hypnotics—otherwise code correct response for last 90 days)* Resident has previously received psychoactive medications for a mood or behavior problem, and these medications were effective (without undue adverse consequences) 0. No, drugs not used 1. Drugs were effective 2. Drugs were not effective 3. Drug effectiveness unknown	

SECTION P. SPECIAL TREATMENTS AND PROCEDURES

1.	SPECIAL TREATMENTS AND PROCEDURES	SPECIAL CARE—*Check treatments received during the last 14 days*			
		Chemotherapy	a.	IV meds	i.
		Radiation	b.	Transfusions	j.
		Dialysis	c.	O_2	k.
		Suctioning	d.	Other _____	l.
		Trach. care	e.	*NONE OF ABOVE*	l.
		THERAPIES—*Record the number of days each of the following therapies was administered (for at least 10 minutes during a day) in the last 7 days:*			
		Speech—language pathology and audiology services			a.
		Occupational therapy			b.
		Physical therapy			c.
		Psychological therapy (any licensed professional)			d.
		Respiratory therapy			e.
2.	ABNORMAL LAB VALUES	Has the resident had any abnormal lab values during the last 90-days? 0. No 1. Yes 2. No tests performed			
3.	DEVICES AND RESTRAINTS	*Use the following codes for last 7 days:* 0. Not used 1. Used less than daily 2. Used daily			
		Bed rails			a.
		Trunk restraint			b.
		Limb restraint			c.
		Chair prevents rising			d.

BILLING CODE 4120-03-C

Supplemental Coding Instructions and Common Definitions

Below are instructions to supplement the instructions and definitions found on the MDS itself. Some MDS items are not defined in this section as they are self-explanatory. The numbering and lettering correspond to the elements of the MDS.

Sections—Form 1

Minimum Data Set Nursing Facility Resident Assessment and Care Screening (MDS) Background Information at Intake/Admission

This assessment is to be completed upon initial admission or return stay (not a readmission following temporary hospitalization or for therapeutic leave). It is designed to give insight into the resident's life prior to admission (for initial admissions) and to document any significant change in the resident's status since his/her last admission (for readmissions).

I. Identification Information

1. *Resident Name:* Please print. Use the following format: First Name, Middle Initial, Last Name.

2. *Date of Current Admission:* The most recent date the resident was admitted to this facility. If the resident left the facility for any reason (e.g., transfer to another nursing home, discharge home) and was *officially* discharged by the nursing facility, record the *most recent* admission date.

Example: Resident was first admitted to the facility on 10/10/87. He was treated at a local hospital for several days on three occasions since admission, but was never officially discharged from the nursing facility. Therefore, 10/10/87 is considered the resident's current date of admission.

3. *Medicare No. (Soc. Sec. or Comparable No. if no Medicare No.):* Enter the resident's Medicare Number. If the resident does not have a Medicare number, enter the resident's social security number.

4. *Facility Provider Number:* The identification number assigned to the nursing home by the Medicare/Medicaid program(s). Some homes may have only a Federal identification number and space is provided for this.

5. *Gender:* Code 1 for male, 2 for female.

6. *Race/Ethnicity:* Choose only one answer.

7. *Birthdate:* Use all boxes to record date. For months and days with only one digit, place a zero in the first box (e.g., for Janaury 2, 1918 should be recorded:

Month		Day		Year			
0	0	0	2	1	9	1	2

8. *Lifetime Occupation:* Record job title or describe the profession in which the resident was mainly engaged before retiring or entering the facility. A woman whose primary work was within her own home should be recorded as a "homemaker."

9. *Primary Language:* The language the resident primarily speaks and/or understands.

10. *Residential History Past 5 Years:* Check all settings the resident lived in during the five years prior to this admission. Exclude short-term stays for treatment or rehabilitation where the resident was expected to return home. The setting must designate the resident's primary residence (i.e., the place the resident would have called "home" during this time).

MH/psychiatric setting—mental health facility, psychiatric hospital, psychiatric ward of a general hospital, psychiatric group home.

MR/DD setting—mental retardation or developmental disabilities facility, including MR/DD institutions, intermediate care facilities for the mentally retarded (ICF/MRs), and group homes.

None of Above—If the resident has not lived in any of these settings in the past 5 years, check the box NONE OF ABOVE.

11. *Mental Health History:* Includes a primary or secondary diagnosis of psychiatric illness or developmental disability; EXCLUDE organic brain syndrome, Alzheimer's Disease and related dementia.

12. *Conditions Related to MR/DD Status:* Record all conditions that are:

- Related to MR/DD status;
- Were manifested before age 22; and
- Are likely to continue indefinitely.

If the resident does not have mental retardation/developmental disabilities (MR/DD), check the first box, "Not Applicable—No MR/DD" and move to item 13. If the resident does exhibit MR/DD, but his/her status is not manifested in any of the conditions listed, check "MR/DD with no organic condition". If information about MR/DD condition is not available, check "Unknown."

13. *Marital Status:* Code the resident's current marital status.

14. *Admitted from:* Indicate where the resident was staying immediately prior to the current date of admission to the facility. Code only one answer.

15. *Lived Alone:* To determine the resident's living situation and availability of formal and/or informal social supports prior to the current date of admission to the facility.

If the resident was living in another facility (i.e., nursing facility, group home, sheltered care, board and care home), code "2" in the answer box. If the resident was NOT living in another facility, record either code "0" or "1".

Examples:

A woman living on her own whose daughters take turns sleeping at her home so she'll never be alone at night should be coded "0" (No).

A person living in his own apartment on the second floor of a two-family home with constant input from his family living on the first floor would be coded "0" (No).

16. *Admission Information Amended:* Denotes that MDS admission information has been changed/updated for the following reason(s): accurate information unavailable earlier, observation revealed additional information or resident unstable at admission. These changes/updates can be made up to the 21st day of residency only.

II. Background Information at Return/Readmission

Complete this section whenever a resident returns to the facility following an external discharge.

III. Customary Routine (Only at First Admission)

1. *Customary Routine:* This element gives insight into the resident's usual life style and daily routine *in the year prior to his/her first admission to a nursing facility.* Code the resident's routine rather than his/her goals (e.g., if resident would have liked to have had daily contact with relatives but didn't, do not check "Daily contact with relatives/close friends").

If the form is being completed for an admission from another facility or institutional setting, answer for the resident's routine prior to the resident's first nursing facility or other institutional admission.

Note that under each major category (Cycle of Daily Events, Eating Patterns, ADL Patterns, and Involvement Patterns) a "NONE OF ABOVE" category is available. This response pertains ONLY to the choices in the category above it. For example, if the person does not engage in any of the items listed under CYCLE OF DAILY EVENTS, indicate this by checking the "NONE OF ABOVE" box.

If *no* information is available about any customary routine, check the final box entitled "UNKNOWN". If, however, an individual item is unknown, write "NA" for "not available" or use the approved "no information available"

code, a circled dash, in the corresponding box.

Goes out 1+ days a week—Resident goes out of home for whatever reason (e.g., socialization, fresh air, clinic visit).

Distinct food preferences—(e.g., vegetarian; kosher; hates brussels sprouts).

Use of alcoholic beverage(s) at least weekly—Drank more than one alcoholic beverage per week.

Wakens to toilet all or most nights—Resident awakens to use the toilet at least once during the night all or most of the time.

Has irregular bowel movement pattern—"Irregular" means an unpredictable or variable pattern of bowel elimination regardless of whether or not the resident would prefer the pattern to be different.

Daily contact with relatives/close friends—Includes visits and telephone calls; does not include *only* exchange of letters.

Usually attends church, temple, synagogue (etc.)—Refers to religious involvement regardless of type (e.g., regular churchgoer; watches T.V. evangelist, involvement in church/temple committees/groups).

Daily animal companion/presence—Companion/presence refers to involvement with animals (e.g., house pet; seeing-eye dog; daily feeding birds in yard/park).

Unknown—If the resident/family cannot provide any information and the record does not contain the information, check the final box entitled "UNKNOWN".

Signature of RN Assessment Coordinator: The RN Assessment Coordinator should sign her/his name and date of completion of this form.

Signature of Others Who Completed Part of the Assessment: Signature of others who participated in the completion of this form and date of entry.

Sections—Form 2

Minimum Data Set for Nursing Facility Resident Assessment and Care Screening (MDS) (Status in Last 7 Days, Unless Otherwise Indicated)

Section A. Identification and Background Information

1. *Assessment Date:* Sets the designated endpoint of the common observation period for specific MDS items. Used as a reference point from which all periods of observation are timed by counting back the appropriate length of time (7 days, 14 days, etc.). Various staff members may document the resident's response for MDS items at different times but should use the established time period as their period of observation.

The month and day of the assessment should be two digits each (use "0" (zero), as a filler) and the year should be four digits.

2. *Resident Name:* Enter the resident's name in the following order: First Name, Middle Initial, Last Name.

3. *Social Security No.:* Fill in the resident's social security number.

4. *Medicaid No. (if applicable):* Enter the resident's Medicaid Number.

5. *Medical Record No.:* The unique identifier for the resident assigned by the facility.

6. *Reason for Assessment:* Code the one most appropriate response. See MDS utilization guidelines.

7. *Current Payment Source(s) for N.H. Care:* Payment source(s) for nursing facility care actually billed during the most recent month, according to the billing office—not the medical record. Code multiple payment sources if applicable. Exclude sources of payment for services other than for the nursing facility stay (e.g., exclude physician visit; prescriptions, durable medical equipment).

8. *Responsibility/Legal Guardian:* Person(s) responsible for participating in decisions about the resident's health care and treatment. Check all that apply.

Legal guardian—A legal guardian must be court-appointed.

Durable Power Attorney/Health Care Proxy—Designates a person who is legally responsible for the resident's legal affairs or a person is responsible for making health care decisions for the resident if the resident becomes unable to make decisions for him/herself. Durable power of attorney/health care proxy can be revoked if the resident later becomes able to make his/her own decisions.

9. *Advanced Directives:* The resident's (or proxy) preferences regarding treatment options. There must be supporting documentation in the resident's medical record to code these elements. Check all that apply.

Living Will—A document that specifies a resident's preferences about measures used to prolong life when there is a terminal prognosis.

Do not resuscitate—Indicates that, in case of respiratory or cardiac failure, the resident/family/legal guardian have directed that no cardiopulmonary resuscitation (CPR) or other life-saving methods are to be used.

Do not hospitalize—Indicates that the resident is not to be hospitalized, even if he/she has a medical condition that would usually require hospitalization.

Organ donation—Indicates that the resident wishes his/her organs to be available for transplantation upon his/her death.

Autopsy request—Indicates that the resident/family/legal guardian has requested an autopsy be performed upon the death of the resident. (Note: Family/legal guardian must still be contacted for permission prior to performance of procedure.)

Feeding restrictions—Indicates that the resident/family/legal guardian does not wish for the resident to be fed by artificial means (e.g., tube, intravenous nutrition) if he/she is not able to be nourished by oral means.

Medication restrictions—Indicates that the resident/family/legal guardian does not wish for the resident to receive life-sustaining medications (e.g., antibiotics, chemotherapy).

Other treatment restrictions—Indicates that the resident/family/legal guardian does not wish for the resident to receive certain medical treatments. Examples include, but are not restricted to, blood transfusions, tracheostomy, respiratory intubation, etc.

10. *Discharge Planned Within 3 Months:* The facility expects the resident will be discharged within three months. Planned discharge can be to another care setting or to a residential setting. A prognosis of death *is not* to be recorded as a planned discharge.

12. *Signatures:* The RN Assessment Coordinator should sign and date the MDS to certify its completion. Other staff members that complete part of the assessment should sign their name, professional credentials and date as well as indicate the sections they completed.

Section B. Cognitive Patterns

The resident's ability to remember, think coherently and organize daily self-care activities.

1. *Comatose:* The resident must have a recorded neurological diagnosis of "coma" or "persistent vegetative state". If the resident is comatose, skip the remainder of Section B as well as Sections C (Communication/Hearing Patterns), D (Vision Patterns), G (Psychosocial Well-Being), H (Mood and Behavior Patterns), and I (Activity Pursuit Patterns).

2. *Memory:* The resident's capacity to remember both recent and long-past events.

3. *Memory/Recall Ability:* The resident's capabilities related to memory and orientation ability.

Current season—Resident is able to correctly name the current season.

Location of own room—Resident is able to locate and recognize own room. Resident does not need to know the number of his/her room but can find his/her way to room.

Staff names/faces—Resident is able to distinguish staff from family members, strangers, visitors and other residents (resident does not have to know staff member's name; only recognize the fact that he/she is a staff member).

4. *Cognitive Skills for Daily Decision-Making:* The resident's ability to make everyday decisions about the tasks or activities of daily living. Examples of daily decisions may be choosing items of clothing; determining mealtimes; using environmental cues to organize and plan (e.g., clocks, calendars, posted listings of upcoming events); using awareness of one's own strengths and limitations in regulating the day's events (e.g., asks for help when necessary).

Independent—Resident organizes daily routine and makes decisions in a consistent and reasonable fashion.

Modified Independence—Resident organizes daily routine and makes safe decisions in familiar situations, but experiences some difficulty in decision-making when faced with new tasks or situations.

Moderately Impaired—Resident's decisions are poor; resident requires reminders, cues and supervision in planning, organizing, and correcting daily routines.

Severely Impaired—Resident's decision-making is severely impaired; resident never (or rarely) made decisions.

5. *Indicators of Delirium—Periodic Disordered Thinking/Awareness:* Many illnesses in nursing home residents are manifested as acute confusional states. Delirium may be characterized by changes in mental status or behavior that deviates from the resident's usual state. For example, some residents who are usually alert and noisy may become very quiet; those who are considered quiet and cooperative may suddenly become belligerent; or those who are usually able to find their way about the unit may get "lost." Check all that apply.

6. *Change in Cognitive Status:* Change in the resident's cognitive status, skills or abilities over the last 90 days. Changes include, but are not limited to, changes in level of consciousness, cognitive skills for daily decision making, short- or long-term memory, thinking/awareness or recall.

Section C. Communication/Hearing Patterns

The resident's ability to hear, understand and communicate with others.

1. *Hearing:* The resident's ability to hear (with environmental adjustments, if necessary) for the past seven-day period. Evaluate hearing ability with appliance, if used.

Heard adequately—Hears all normal conversational speech; including when using the telephone, watching television or while engaged in other group activities.

Minimal difficulty—Hears speech at conversational levels but has difficulty hearing when not in quiet listening conditions or when not in one-on-one situations.

Special situation only—Hearing deficient, but resident compensates when speaker adjusts tonal quality and speaks distinctly, or resident can hear only when speaker's face is clearly visible.

Highly impaired—Hears only some sounds; frequently fails to respond even when speaker adjusts tonal quality, speaks distinctly, or faces resident; absence of useful hearing (e.g., no comprehension of conversational speech even when speaker makes maximum adjustments).

2. *Communication Devices/ Techniques:*

Hearing aid, present and used—Hearing aid is available to resident and *regularly* used.

Hearing aid, present and not used—Hearing aid is available to resident but is *not regularly* used (e.g., owns hearing aid which is broken or used episodically).

Other receptive communication technique—Something the resident uses to enhance interaction with others (e.g., reading lips).

3. *Modes of Expression:* The types of communication the resident uses to make needs and wishes known. Check all that apply.

4. *Making Self Understood:* The resident's ability to express/ communicate requests, needs, opinions, urgent problems, and converse socially (whether in speech, writing, sign language, or a combination of these).

Understood—Resident expresses ideas clearly.

Usually Understood—Resident has difficulty finding right words or finishing thoughts, resulting in response delays; resident requires some prompting to make self understood.

Sometimes Understood—Resident has limited ability but is able to express concrete requests regarding basic needs (e.g., regarding food, drink, sleep, toilet).

Rare/Never Understood—At best, understanding is limited to staff interpretation of highly individual, resident-specific body language (e.g., indicated presence of pain or need to toilet).

5. *Ability to Understand Others:* The resident's ability to comprehend verbal information. The intent is to describe comprehension rather than hearing.

Understands—Resident clearly comprehends the speaker's message(s); resident demonstrates through words or actions/behaviors that he/she comprehends.

Usually Understands—Resident may miss some part or intent of the message but comprehends most of it; resident may have periodic difficulties in integrating information but generally demonstrates comprehension by responding (words or actions).

Sometimes Understands—Resident demonstrates frequent difficulties in integrating information; responds only to simple and direct questions and directions; comprehension is enhanced when the speaker rephrases or simplifies the message(s) and/or uses gestures.

Rare/Never Understands—Resident demonstrates very limited ability to understand communication; difficult to determine if the resident comprehends messages based on his/her verbal and nonverbal responses; or resident can hear sounds but does not understand messages.

6. *Change in Communication/ Hearing:* Any change in the resident's ability to express, understand, or hear information over the last 90 days.

Section D. Vision Patterns

Resident's visual abilities/limitations in adequate lighting and with the assistance of visual appliance, if used.

1. *Vision:* The resident's ability, over the past 7 days, to see close objects in adequate lighting using whatever visual appliance he/she usually uses for close vision (e.g., glasses, magnifying glass). "Adequate" light is defined as that which is sufficient or comfortable for a person with normal vision.

2. *Visual Limitations/Difficulties:* Visual limitations/difficulties related to diseases that commonly occur in the aged (e.g., cataracts, glaucoma, macular degeneration, diabetic retinopathy, neurologic diseases).

a. *Side Vision Problems:* Decreased awareness of the objects in peripheral vision (e.g., leaves food on side of tray, has difficulty traveling, bumps into people and objects, misjudges placement of chair when seating self.)

b. *Resident experiences:* Resident complains about seeing halos or rings around lights, seeing flashes of light or seeing "curtains" over eyes. These conditions may be symptomatic of treatable eye problems.

3. *Visual Appliances:* Includes any type of eyeglasses, contact lenses (removable or implanted) or magnifying glass.

Section E. Physical Functioning and Structural Problems

1. *ADL Self-Performance:* Resident's self-care performance in each activity of daily living (e.g., what the resident actually did for him/herself and/or what type of assistance staff actually provided for each activity) during the last 7 days. In coding self-performance select the appropriate performance description (0. Independent—4. Total Dependence) for each ADL category. *Do not consider set-up help* when coding self-performance. Set-up help will be coded in Item 2, "ADL Support," if it was provided. *Example:* A resident who performs personal hygiene independently once hygienic items are set-up for him should receive a self-performance code of "0", independent in personal hygiene. *Note:* Consider the resident's performance during all shifts as function may vary from time to time.

2. *ADL Support Provided:* The maximum amount of support provided to the resident for each ADL category during the last 7 days. (Code regardless of resident's self-performance classification). *Note:* Consider the amount of support provided during all shifts as function and type of staff support may vary.

Set-up help—Providing resident with the materials/devices necessary to perform an activity independently (e.g., for personal hygiene—setting up wash basin and grooming articles; for locomotion—handing resident a walker; for eating—cutting meat and opening containers at meals).

Examples

If a resident can perform personal hygiene with set-up of appropriate materials but receives one person's physical assistance for perineal care, code "2" (one-person physical assist).

If a hoyer lift is used in transferring, code for the maximum amount of persons needed to be present. Code "3," two+ persons physical assist, if the lift requires two.

If a resident receives one-person physical assistance to transfer out of bed in the a.m. and two-person physical assistance to transfer back into bed later in the day, code "3," two+ persons physical assist, in the ADL support column for transfer.

3. *Bathing:* How resident takes full-body bath, sponge bath/shower, and transfers in/out of tub/shower (Exclude washing of back and hair). Code for *most dependent* using the bathing self-performance codes provided (0. Independent—no help provided to 4. Total dependence).

4. *Body Control Problems:* Physical impairments that may affect the resident's self-performance in activities of daily living.

Bedfast—In bed or recliner in room 22 hours or more per day. Includes bedfast with bathroom privileges.

Contracture to arms, legs, shoulders, or hands—Restriction of full range of motion of any joint due to deformity, disuse, pain, etc. Includes loss of range of motion in fingers, wrists, elbows, shoulders, hips, knees and ankles.

Partial or total loss of voluntary leg or arm movement—Includes motion lost because of contractures (whether muscle shortening only or bony deformity); decreased range of motion; spasticity; uncontrollable leg or arm movement. Includes being in a cast.

Hemiplegia/hemiparesis—Paralysis of only one half of the body.

Amputation—Loss of part or all of any limb.

5. *Mobility Appliances/Devices:* Appliances, devices or personal assistance protocols used or followed when resident performs routine daily activities. Do not include aids or protocols used only under special circumstances.

Cane/walker—Includes residents who walk by pushing a wheelchair for support.

Wheeled self—Includes hand-propelled and motorized wheelchair as long as resident takes some responsibility for his/her own mobility.

6. *Task Segmentation:* Residents who are more independent in personal care tasks (such as eating, bathing, grooming, dressing) when the associated activities are broken into small steps. These residents usually have some problem with memory, thinking or paying attention to the task, due to such problems as dementia, head injury, CVA, or depression. Some residents will receive this care because of body control problems only.

Examples

Resident is able to wash his/her face when handed a facecloth and asked to "wash your face" (vs. setting a wash basin in front of him/her with various grooming supplies with the expectation he/she will bathe).

Resident is more independent in eating when just one food item and one utensil are presented to him/her at a time (vs. placing a tray with the entire meal and several utensils before him/her.)

7. *ADL Functional Rehabilitation Potential:* Describe beliefs and characteristics related to the resident's function during the last 7 days that may indicate that the resident has the capacity for greater independence.

8. *Change in ADL Function:* Changes in the resident's ADL status, skills or abilities in the last 90 days. Changes include but are not limited to changes in self-performance, amount of support, body control problems and ADL potential.

Section F. Continence in Last 14 Days

The resident's pattern of bladder and bowel continence/control in the previous 14 Day Period.

1. (a and b) *Bladder and Bowel Continence:* Control of urinary bladder function and/or bowel movement. Describes the resident's pattern of bladder/bowel control, with toileting schedules, bladder/bowel training programs or appliances, if used. This category does not refer to the resident's ability to toilet him/herself. For bladder incontinence, the difference between a code of "3" frequently incontinent and "4" incontinent is determined by the presence (3) or absence (4) of any bladder control.

Examples

A resident who is taken to the toilet after every meal, before bed, and once during the night and is never wet or soiled, is considered to be continent.

A resident who uses appliances without leakage (e.g., catheter or ostomy) is considered to be continent.

2. *If Incontinent of Bladder:* Complete This Item Only if The Resident's Bladder Continence Equals 2, 3 or 4. Skip to Section F3 if bladder continence code equals 0 or 1 AND no catheter is employed. Identifies whether or not incontinent residents have been tested for urinary tract infection or checked for fecal impaction during the prior 14 days.

3. *Appliances and Programs:*

Any scheduled toileting plan—Staff take the resident to the toilet or remind him/her to go to the toilet at scheduled times of the day.

Indwelling catheter—Catheter that is held in position in the bladder.

Intermittent catheter—Catheter that is used to obtain urine from the bladder but does not remain in place.

Did not use toilet room/commode/urinal—Resident never used any of these items during the last 7 days.

Pads/briefs used—This category includes any type of absorbent devices whether worn by the resident or placed on the bed or chair for protection. This category does *not* include the routine use of pads on beds when a resident is never or rarely incontinent.

Enemas/irrigation—Any type of enema or bowel irrigation. Includes ostomy irrigations.

Ostomy—Any type of ostomy of the gastrointestinal or genitourinary tract.

4. *Change in Urinary Continence:* Change in resident's urinary continence status in the last 90 days. Includes changes in self-control categories, appliances or programs.

Section G. Psychosocial Well-Being

A non-comatose resident's overall level of emotional adjustment to the nursing facility environment, including his/her general attitude, evidence of adaptation to surroundings and change in relationship patterns. Section G is comprised of three parts, each having multiple responses. The responses selected in each area—Sense of Initiative/Involvement, Unsettled Relationships, and Past Roles—should be confirmed by the resident's behavior (either verbal or non-verbal) in the past 7 days.

1. *Sense of Initiative/Involvement:* The degree to which the resident is involved in the nursing home community and takes initiative in activities. The primary source of information for these items is the resident. Staff who have regular contact with the resident may also be consulted.

To determine if the resident is *at ease interacting with others,* think about how the resident behaves during the time you spend with him/her. How does the resident behave with other residents, staff, visitors?

To determine if the resident is *at ease doing planned or structured activities,* think about how he/she responds to such activities. Does he/she feel comfortable with the structure or restricted by it?

Is the resident *at ease doing self-initiated activities:* (e.g., leisure activities such as reading, watching TV, talking with friends; work activities such as folding personal laundry, organizing belongings). Does he/she spend most of his/her time alone? Or is the resident always looking for someone to find something for him/her to do?

To determine if someone *establishes own goals,* think about whether or not the resident makes statements like "I hope I am able to walk again" or "I would like to get up early and visit the beauty parlor." Resident goals can be as traditional as wanting to learn how to walk again following a hip replacement or wanting to live to say goodbye to a loved one. In addition, some things may not be stated verbally. If a resident has her/his own way of living at the facility (e.g., organizing own activities or setting own pace), this person could be seen as establishing his/her own goals.

Does the resident pursue involvement in life of facility? Does the resident partake of facility events, socialize with peers, discuss activities?

Is the resident willing to try group activities? Does the resident accept *invitations into most group activities* even if he/she decides the activity is not for him/her and leaves. Or does the resident regularly refuse to attend group programs?

2. *Unsettled Relationships:* The quality and nature of the resident's interpersonal contacts (i.e., how the resident interacts with staff and with other residents). Do you see signs of conflict or generally harmonious interpersonal relationships? These items refer to conflict or disagreement outside the range of *normal* criticisms or requests—i.e., beyond a reasonable level.

Examples of *conflict with staff* include: resident chronically complains about some staff members to other staff; verbal criticisms of staff in therapeutic group situations that cause disruption within group; or a pattern of constant disagreement over routines of daily living.

Examples of *unhappiness with roommate* include frequent requests for roommate changes, grumbling about the roommate spending too long in the bathroom or complaining about the roommate rummaging in their things.

Examples of *unhappiness with residents other than roommate* include chronic complaints about the behaviors of others, poor quality of interaction with other residents, lack of peers for socialization.

An *absence of contact with family/close friends,* as indicated by the resident not having visitors or telephone calls from significant others in the last 7 days.

Resident *openly expresses conflict/anger with family or friends,* as indicated by expressing feelings of abandonment, ungratefulness, lack of understanding, hostility regarding relationships with family/friends.

Recent loss of close family member/friend—includes family member/friend moving to a more distant location, even temporarily (e.g., for the winter months); death or incapacitation; recent severing of a significant relationship.

Resident openly expresses conflict/anger with family or close friends. Listen for expressions of feelings of abandonment, ungratefulness, lack of understanding, hostility regarding relationships with family/friends.

3. *Past Roles:* The resident's recognition and/or acceptance of his/her feelings regarding his/her new role/status, as a function of entering the nursing home.

Strong identification with past roles and life status—as indicated by the resident enjoying telling stories about his/her past; taking pride in past accomplishments or family life; overt connections with previous lifestyle (e.g., commemorating family events, celebrating lifelong traditions).

Expresses sadness/anger/empty feelings over lost roles/status—as indicated by expressing feelings with statements such as "I'm not the man I used to be"; "I wish I had been a better mother to my children"; "I'm not capable of doing the things I always liked to do." May also cry when reminiscing about past accomplishments.

Section H. Mood and Behavior Patterns

1. *Sad or Anxious Mood:* The presence of behaviors that may be interpreted as physical or verbal expressions of sadness or anxiety. A type of painful mood characterized by explicit verbal or gestural expressions of feeling "depressed," or one of its synonyms such as feeling sad, miserable, blue, hopeless, empty or tearful. It can be a disorder of mood which is usually, but not always, accompanied by a "painful mood" and calling for relief on the grounds that it is severely, or unnecessarily, distressing and/or threatening to physical health and life, and/or interfering with functional performance and adaptation. These symptoms may be preceded by anger or withdrawal. Code all verbal and demonstrated signs that apply.

2. *Mood Persistence:* Sad or anxious mood intrudes on daily life over last 7 days—not easily altered by attempts to "cheer resident up."

3. *Problem Behavior:* The presence of problem behaviors which cause disruption to facility residents or staff, including those which are potentially disruptive even though staff and residents have appeared to adjust to their occurrence. Problem behaviors include:

- Wandering—moves with no rational purpose, seemingly oblivious to needs or safety.
- Verbally abusive—others are threatened, screamed at, or cursed at.
- Physically abusive—others are hit, shoved, scratched, or sexually abused.
- Socially inappropriate/disruptive behavior—resident makes disruptive sounds, is noisy, screams, self-abusive acts, sexual behavior or disrobing in public, smears/throws food/feces, hoarding, rummaging through others' belongings.

4. *Resident Resists Care:* Problem behaviors related to delivery of nursing care/treatment to the resident that should prompt further causal evaluation (e.g., fear of pain, fear of falling, poor

comprehension, anger, poor relationships). Signs of resistance may be verbal and/or physical.

5. *Behavior Management Program:* Management of problem behaviors through clinical intervention in which staff have made attempts to understand the resident's "agenda" behavior (i.e., the meaning underlying the problem behavior) and have developed evidence of structure and continuity of care in the program. This category does not include behavioral management by physical restraints or psychotropic drugs if these are the only interventions.

Examples:

A. Mrs. S has been observed on numerous occasions to hit, shove, and curse the woman seated next to her at each meal. After observing the pattern of Mrs. S' behavior for several days, staff noticed that her tablemate was in the habit of moving in close to Mrs. S to take her food from her tray. As a result of their observations, the primary nurse made a change in seating arrangements. All staff have been made aware that Mrs. S must be seated for each meal at a small table of two.

B. Provisions for safely monitored wandering (may include the use of "secure bands" or any electronic device that activates an alarm when the resident wanders away from a designated area).

6. *Change in Mood:* Change in any aspect of sad or anxious mood that has been expressed verbally or demonstrated physically in the last 90 days. Changes include increased/decreased number of signs/symptoms or change in the frequency or intensity of behaviors associated with sad or anxious mood.

7. *Change in Problem Behavior:* Change in any problem behavior including but not limited to wandering, verbally abusive, physically abusive, and socially inappropriate behavior in the last 90 days. Includes increased/decreased number of signs/symptoms or change in the frequency or intensity of the behavior(s).

Section I. Activity Pursuit Patterns

The amount and types of interests and activities that the resident currently pursues, as well as those activities the resident would like to pursue.

1. *Time Awake:* The periods of a typical day (over the last 7 days) when the resident is awake all or most of the time (i.e., naps no more than one hour in the period).

2. *Average Time Involvement in Activities:* The proportion of available free time that the resident spends involved in activities, which is an indicator of the resident's overall activity level. Includes time spent in solitary activities (such as reading, letter writing), as well as group activities. Exclude time the resident spent in receiving treatments or completing ADLs in scoring this item.

Most—More than ⅔ of the resident's available time is spent in activities.

Some—⅓ to ⅔ of the resident's available time is spent in activities.

Little—Less than ⅓ of the resident's available time is spent in activities.

None—None of the resident's available time is spent in activities.

3. *Preferred Activity Settings:* The activities, circumstances or settings that the resident prefers, including though not limited to, those in which the resident appears to be at ease.

4. *General Activity Preferences:* Activities in which the resident prefers to participate, regardless of whether that activity is currently available to the resident or the resident currently engages in the activity. Check for each activity preferred. If none are preferred, check "NONE OF ABOVE".

Exercise/sports—Includes any type of physical activity (e.g., dancing, sports).

Spiritual/Religious Activities—Includes participation in religious services as well as watching them on television.

5. *Prefers More or Different Activities:* The resident has expressed an interest in pursuing other activities that are NOT offered at the facility. Residents who resist attendance/involvement in activities offered at the facility should also be included in this category. Also include instances where the activity is provided, but the resident would like to have other choices in carrying out the activity.

Section J. Disease Diagnoses

Diseases that are associated with the resident's current ADL status, cognition, behavior, medical treatments and/or risk of death. These conditions drive the current care plan. Identify current conditions affecting the resident, not those that have been resolved or no longer affect the resident's functioning.

1. *Diseases:*

Cardiac dysrhythmias—Disorder of heart rate or rhythm.

Cerebrovascular Accident (CVA/Stroke)—Includes intracranial bleeds, cerebral thromboses, infarcts, emboli; also includes TIAs (transient ischemic attacks).

Peripheral vascular disease—Venous or arterial.

Dementia—Other than Alzheimer's—Includes Organic Brain Syndrome (OBS) or Chronic Brain Syndrome (CBS), senility, Senile Dementia, Multi-infarct Dementia, dementia related to neurologic diseases other than Alzheimer's.

Aphasia—Communication disorder, often found in stroke patients in which the person has difficulty using speech, writing, or signs; or trouble understanding spoken or written language.

Emphysema/Asthma/COPD—Includes COPD (Chronic Obstructive Pulmonary Disease) or COLD (Chronic Obstructive Lung Disease); chronic restrictive lung diseases such as Asbestosis; chronic bronchitis.

Manic depressive (bipolar disease)—Bipolar is the current terminology for manic depressive disease.

Anemia—Includes anemia of any etiology.

Arthritis—Includes degenerative join disease (DJD), osteoarthritis (OA), rheumatoid arthritis (RA).

Diabetes Mellitus—Includes insulin dependent diabetes mellitus (IDDM) and diet controlled diabetes mellitus (NIDDM or AODM).

Explicit terminal prognosis—The resident is expected to die from primary diagnosis within 6 months. This should be supported by physician documentation.

Allergies—Includes all drug and food allergies; contact dermatitis and allergies that cause itchy eyes, runny nose or sneezing. Includes all allergies, not just those that are currently reactive.

Septicemia—Morbid condition associated with bacterial growth in the blood.

Urinary tract infection—Includes chronic and acute symptomatic infection in last 30 days.

2. *Other Current Diagnoses and ICD–9 Diagnoses:* Identify conditions OTHER THAN those listed in Item J1 that affect the resident's functioning or plan of care. These conditions drive the current care plan. Identify current conditions, not those that have been resolved or no longer affect the resident's functioning.

ICD–9 codes must be entered for every diagnosis listed under Item J2. If this information is not available in the medical record, check the list of common ICD–9–CM codes in Appendix A. If the code is not available from either of these sources, consult *ICD–9–CM*: The International Classification of Diseases.

Section K. Health Conditions

Identify specific problems or symptoms that affect or could affect the resident's health or functional status, or are risk factors for functional decline. Check all signs or symptoms occurring or present within the past 7 days, unless

indicated (e.g., lung aspirations—last 90 days).

1. *Problem Conditions*:

Dizziness/vertigo—The resident feels the sensation that he/she is turning or his surroundings are whirling around him.

Edema—Excessive accumulation of fluid in tissues, either localized or generalized.

Internal bleeding—Bleeding may be frank, such as bright red blood, or occult, such as guiac positive/hemoccult positive stools. Indicator may be black, tarry stools.

Syncope—Transient loss of consciousness, characterized by unresponsiveness and loss of postural tone with spontaneous recovery (i.e., fainting).

2. *Accidents*:

Fell—Note timeframes in both items.

Hip Fracture—Note timeframe.

3. *Stability of Conditions*: Denotes whether the resident is experiencing an unstable or acute condition.

Section L. Oral/Nutritional Status

1. *Oral Problems*:

Chewing Problem—Inability to chew food easily and without pain or difficulties, regardless of cause (e.g., residents with ill-fitting dentures or with neurologic impairments related to chewing).

Swallowing Problem—Symptoms may include frequent choking and coughing when eating or drinking, holding food in mouth for prolonged periods of time or excessive drooling.

2. *Height and Weight*:

a. *Height*: Round height to the nearest whole inch.

b. *Weight*: If the resident's weight is taken more than once a month, record the most recent weight. Round weight to the nearest whole pound.

c. *Weight Loss*: Weight loss of 5%+ in last 30 days; or 10% in last 180 days.

3. *Nutritional Problems*:

Insufficient fluids; dehydrated—Condition that occurs when output of water exceeds water intake.

Examples:

- Resident usually takes in less than six 8 oz. glasses of fluid daily (fluid to include beverages, soup, gelatin, ice cream, etc.).
- Resident has clinical signs of dehydration.
- Resident's fluid loss exceeds the amount of fluids he/she takes in (i.e., loss from vomiting, diarrhea, sweating exceeds fluid replacement).

Did not consume all/almost all liquids provided during last 3 days—Liquids include water, juices, gelatin, soup, ice cream/sherbet, coffee, etc.

4. *Nutritional Approaches*:

Parenteral/IV—Intravenous fluids or hyperalimentation given continuously or intermittently. This category does NOT include IV medication (See item P1).

Feeding tube—Any type of tube which delivers food/nutritional substances directly into the gastrointestinal (GI) system.

Syringe feeding—Use of syringe to deliver oral nourishment.

Mechanically altered diet—A diet ordered to be prepared so that its consistency is altered to facilitate oral intake (e.g., soft, pureed, ground).

Therapeutic diet—A diet ordered to treat problem conditions (e.g., calorie specific, low salt, lactose free).

Supplement between meals: Any type of dietary supplement (e.g., high protein/calorie shake, 3 p.m. snack for insulin dependent diabetic).

Plate guard, stabilized built-up utensils—Any type of specialized or altered equipment to facilitate resident participation in the eating process.

Section M. Oral/Dental Status

1. *Oral Status and Disease Prevention*: Check all that apply.

Carious—Pertains to tooth decay and disintegration (cavities).

Section N. Skin Condition

The condition of the resident's skin as well as skin treatments received by the resident in the last 7 days.

1. *Stasis Ulcer*: An open lesion, usually in the lower extremities, caused by decreased blood flow from chronic venous insufficiency. May also be referred to as a venous ulcer or ulcer related to Peripheral Vascular Disease (PVD).

2. *Pressure Ulcers*: Ischemic ulceration or necrosis of tissues overlying a bony prominence that has been subjected to pressure or friction. Other terms used to describe this condition include bed sores and decubitus ulcers. Record the stage of development corresponding to the most severe pressure ulcer on the resident's body.

3. *History of Resolved/Cured Pressure Ulcers*: Pressure ulcers that were resolved/cured during the last 90 days. Identification of this condition is important because it is a risk factor for development of subsequent pressure ulcers.

4. *Skin Problems/Care:* Includes skin conditions that may present risk factors for more serious problems as well as the type of skin care the resident has received during the prior 7 days.

Protective/preventive skin care—Includes any care given for preventive or protective purposes (e.g., diabetic foot care, moisturizing lotions, elbow protectors, booties).

Wound care/treatment—Care or treatments to any type of wound (e.g., pressure ulcer, surgical wound, skin tear). May include, but is not limited to, debridement, dressings, irrigations, etc

Section N. Medication Use

Determine the resident's pattern of medication use over the past 7 days.

1. *Number of medications:* The number of different medications (over-the-counter and prescription) the resident has used in the past 7 days. Count only those medications actually administered and received by the resident over the last 7 days.

Count the number of different medications (not the doses or different dosages). For example, Digoxin 0.25 mg po given on Tuesday and Thursday and Digoxin 0.125 mg po given on Monday, Wednesday and Friday is one medication. Also, if both the generic and brand name of a single drug are administered, consider them as one medication.

2. *New Medications:* Code "1" if the resident has received new medications in last 90 days; code "0" if the resident has not received any new medications in the last 90 days.

3. *Injections:* The number of days, during the past 7 days, that the resident received any type of injection.

4. *Days Received the Following Medication:* The number of days that the resident has taken each type of medication, in the past 7 days.

Write the appropriate number of days, out of the prior 7 days, in the answer box. If the resident has not used any medications from a drug category record "0" (zero). If the resident uses long-lasting drugs that are taken less often than weekly (e.g., Prolixin (decanoate) given every couple of weeks or monthly), record "1".

Example of Medication Sheet Recording:

Haldol 0.5 mg po BID prn—given once a day on Monday, Wednesday, and Thursday.

Ativan 1 mg po QAM—given every day.

Restoril 15 mg po QHS prn—given Tuesday and Wednesday.

Coding of Example:

Antipsychotics—3 days

Antianxiety/hypnotics—7 days

Antidepressants—0 days

5. *Previous Medication Results:* Skip This Question If The Resident Is Currently Receiving Antipsychotics, Antidepressants, or Antianxiety/Hypnotics. Psychoactive drugs are considered to have been effective if they

reduced the intensity or frequency of a behavior problem or reduced the presence or intensity of a mood problem as long as the resident is free of significant side effects (e.g., excess sedation).

Section P. Special Treatments and Procedures

1. *Special Treatments and Procedures:*

a. *Special Care:* All treatments received by the resident in the last 14 days.

Chemotherapy—Given by any route. Includes any type of chemotherapy (antineoplastic drug) given by any route the resident is currently taking whether it is received at the nursing facility or other facility.

Radiation—Includes radiation therapy or radiation implant. May occur at nursing facility or other facility.

Dialysis—Includes dialysis which occurs at nursing facility or other facility.

Suctioning—Includes nasopharyngeal or tracheal aspiration.

IV meds—Includes any medication given by intravenous push or drip.

Transfusions—Includes transfusions of blood or ANY blood products (e.g., platelets).

O_2—Includes continuous or intermittent oxygen via mask, cannula, etc.

b. *Therapies*: The number of days particular therapy services were received by the resident for at least 10 minutes each day during the last 7 days.

Psychological therapy—Therapy given by psychiatrist, psychologist, psychiatric nurse or psychiatric social worker.

2. *Abnormal Lab Values:* Any abnormal lab values during the prior 3 month period. This item refers to lab values that are abnormal when compared to standard values, not abnormal for the specific resident.

3. *Devices and Restraints:* The frequency with which the resident was restrained by any of the four devices listed, over the past 7 days.

For each restraint type, record:

"0" if not used in past 7 days
"1" if used, but used less than daily, in past 7 days
"2" if used on a daily basis in past 7 days

Attachment C—Resident Assessment Protocols and Instructions

Instructions for Using HCFA's Resident Assessment Protocols

Each of the 18 resident assessment protocols (RAPs) organizes comprehensively clinical information to assist long term care facility staff in thinking about care planning and treatment decisions. A RAP has two parts: (1) a RAP KEY that summarizes all MDS elements applicable to thinking about assessment and care planning in that particular clinical area; and (2) instructions, including clinical background information and suggested approaches to additional assessment. Upon completing a RAP, staff will have:

- Identified the unique problems the resident has that may affect adversely his/her highest practicable physical, mental, and psychosocial functioning.
- Identified factors that place the resident's highest practicable physical, mental, and psychosocial functioning at risk.
- Considered whether the identified problems and risk factors could be prevented or reversed, and evaluated the extent to which the resident is able to attain a higher level of well-being and functional independence.
- Evaluated ongoing care practices for that resident by, for example, considering alternative therapies and the need for medical consultation, or consultation(s) by other health professionals such as occupational or physical therapists.

To use RAPs, long term care facility staff shall follow these steps:

- As specified in the utilization guidelines, complete MDS elements, using common definitions.
- Review MDS information. Use the Resident Assessment Protocol Trigger Legend Worksheet that shows which MDS elements serve as triggers for each RAP.
- If MDS item(s) and code(s) trigger a RAP(s), circle those RAP(s) that have been triggered.
- Complete triggered RAPs following instructions for each RAP. Delegate completion of a particular RAP to the facility staff who can address that care area most knowledgeably, whether it be nursing personnel, therapists, social workers, activity specialists, or physicians. Whenever possible, get the person(s) who completed the MDS trigger(s) for that RAP to apply the full RAP.
- After completing a RAP, use the Resident Assessment Protocol Summary to document decisions about care planning and to specify where in the resident's record summary information gained from the assessment has been noted, for example, progress note or care plan.

This summary information must include, as appropriate to the individual resident, documentation of problems, complications, and risk factors, the need for referral to appropriate health professionals, and the reasons for deciding to proceed or not to proceed to care planning for the specific problems identified.

- The registered nurse coordinating the assessment must sign and date the Resident Assessment Protocol Summary verifying that the triggered RAPs have been applied.

BILLING CODE 4120-03-M

Resident's Name:	Medical Record No.:

Signature of RN Assessment Coordinator: _____

RESIDENT ASSESSMENT PROTOCOL SUMMARY

1. For each RAP area triggered, show whether you are proceeding with a care plan intervention.
2. Document problems, complications, and risk factors; the need for referral to appropriate health professionals; and the reasons for deciding to proceed or not to proceed to care planning. Documentation may appear anywhere the facility routinely keeps such information, such as problem sheets or nurses' progress notes.
3. Show location of this information.

RESIDENT ASSESSMENT PROTOCOL: DELIRIUM

I. PROBLEM

Delirium (acute confusional state) is a common indicator or nonspecific symptom of a variety of acute, treatable illnesses. It is a serious problem, with high rates of morbidity and mortality, unless it is recognized and treated appropriately. Delirium is never a part of normal aging. Some of the classic signs of delirium may be difficult to recognize and may be mistaken for the natural progression of dementia, particularly in the late stages of dementia when delirium has high mortality. Thus careful observation of the resident and review of potential causes are essential.

Delirium is characterized by fluctuating states of consciousness, disorientation, decreased environmental awareness, and behavioral changes. The onset of delirium may vary, depending on the severity of the cause(s) and the resident's health status; however, it usually develops rapidly, over a few days or even hours. Even with successful treatment of cause(s) and associated symptoms, it may take several weeks before cognitive abilities return to pre-delirium status.

Successful management depends on accurate identification of the clinical picture, correct diagnosis of specific cause(s), and prompt nursing and medical intervention. Delirium is often caused and aggravated by multiple factors. Thus, if you identify and address one cause, but delirium continues, you should continue to review the other major causes of delirium and treat any that are found.

II. TRIGGERS

Delirium problem suggested if:

1. ANY Indicator of Disordered Thinking **[B5a, B5b, B5c, B5d, B5e = any checked]**
2. Cognitive/Communication/Behavior Decline **[B6 = 2 or C6 = 2 or H7 = 2]**
3. Mood Decline **[H6=2]** AND ANY of following:
   - Motor Agitation **[H1c = checked]**
   - Withdrawal **[H1d = checked]**
   - Hallucinations/Delusions **[K1g = checked]**
4. Alcohol Withdrawal, Drug-induced, Acute or Subacute Delirium **[J2 = 291.0, 292.81, 293.0, or 293.1]**

III. GUIDELINES

Detecting signs and symptoms of delirium requires careful observation. Knowledge of a person's baseline cognitive abilities facilitates evaluation.

- Staff should become familiar with residents' cognitive function by regularly observing the resident in a variety of situations so that even subtle but important changes can be recognized.

When observed in this manner, the presence of any trigger signs/symptoms may be seen as a potential marker for acute, treatable illness.

An approach to detection and treatment of the problem can be selected by reviewing the items that follow in the order presented. Also refer to the RAP KEY for guidance on the MDS items that are relevant.

DIAGNOSES AND CONDITIONS

By correctly identifying the underlying cause(s) of delirium, you may prevent a cycle of worsening symptoms (e.g., an infection-fever-dehydration-confusion syndrome) or a drug regimen for a suspected cause that worsens the condition. The most common causes of delirium are associated with circulatory, respiratory, infectious, and metabolic disorders. However, finding one cause or disorder does not rule out the possibility of additional contributing causes and/or multiple interrelated factors.

MEDICATIONS

Many medications given alone or in combination can cause delirium.

- If necessary, check doctor's order against med sheet and drug labels to avoid the common problem of medication error.
- Review the resident's drug profile with a physician.
- Review all medications (regularly prescribed, PRN, and "over-the-counter" drugs).

Number of medications. The greater the number, the greater the possibility of adverse drug reaction/toxicity.

- Review meds to determine need and benefit (ask if resident is receiving more than one drug class of drug to treat a condition).
- Check to determine whether nonpharmacological interventions have been considered (e.g., a a behavior management program rather than antipsychotics to address the needs of a resident who is physically or verbally abusive).

New medications.

- Review to determine whether there is a temporal relationship between onset or worsening of delirium and start of new medication.

Drugs that cause delirium.

1. PSYCHOTROPIC
   Antipsychotics
   Antianxiety/hypnotics
   Antidepressants
2. CARDIAC
   Digitalis glycosides (Digoxin),
   Antiarrhythmics, such as quinidine, procainamide (Pronestyl), disoprymide (Norpace)
   Calcium channel blockers, such as verapamil (Isoptin), nifedipine (Procardia), and diltiazem (Cardizem)
   Antihypertensives, such as methyldopa (Aldomet), propanolol (Inderal)
3. GASTROINTESTINAL
   H2 antagonists such as cimetidine (Tagamet) and ranitidine (Zantac)
4. ANALGESICS such as Darvon, narcotics (e.g., morphine, dilaudid)
5. ANTI-INFLAMMATORY
   Corticosteroids such as prednisone
   Nonsteroidal anti-inflammatory agents such as ibuprofin (Motrin)
6. OVER-THE-COUNTER DRUGS, especially those with anticholinergic properties
   Cold remedies (antihistamines, pseudoephedrine)
   Sedatives (antihistamines, e.g., Benadryl)
   Stay-awakes (caffeine)
   Antinauseants
   Alcohol

PSYCHOSOCIAL

After serious illness and drug toxicity are ruled out as causes of delirium, consider the possibility that the resident is experiencing psychosocial distress that may produce signs of delirium.

Isolation.

- Has the resident been away from people, objects and situations?
- Is resident confused about time, place and meaning?
- Has the resident been in bed or in an isolated area while recuperating from an illness or receiving a treatment?

Recent loss of family/friend. Loss of someone close can precipitate a grief reaction that presents as acute confusion, especially if the person provided safety and structure for a demented resident.

- Review the MDS to determine whether the resident has experienced a recent loss of a close family member/friend.

Depression/sad or anxious mood. Mood states can lead to confusional states that resolve with appropriate treatment.

- Review the MDS to determine whether the resident exhibits any signs or symptoms of sad or anxious mood or has a diagnosis of a psychiatric illness.

Restraints. Restraints often aggravate the conditions staff are trying to treat (e.g., confusion, agitation, wandering).

- Did the resident become more agitated and confused with their use?

Recent relocation.

- Has the resident recently been admitted to a new environment (new room, unit, facility)?
- Was there an orientation program that provided a calm, gentle approach with reminders and structure to help the new resident settle into the environment?

SENSORY LOSSES

Sensory impairments often produce signs of confusion and disorientation, as well as behavior changes. This is especially true of residents with early signs of dementia. They can also aggravate a confusional state by impairing the resident's ability to accurately perceive or cope with environmental stimuli (e.g., loud noises; onset of evening). This can lead to the resident experiencing hallucinations/delusions and misinterpreting noises and images.

Hearing.

- Is hearing deficit related to easily remedied situations — impacted ear wax or hearing aid dysfunction?
- Has sensory deprivation led to confusion?
- Has physician input been sought?

Vision.

- Has vision loss created sensory deprivation resulting in confusion?
- Have major changes occurred in visual function without the resident's being referred to a physician?

DELIRIUM RAP KEY

TRIGGERS

Delirium problem suggested if:

1. **ANY** indicator of Disordered Thinking **[B5a, B5b, B5c, B5d, B5e = any checked]**

2. Cognitive/Communication/Behavior Decline **[B6 = 2 or C6 = 2 or H7 = 2]**

3. Mood Decline **[H6 = 2]** AND ANY of following:

   - Motor Agitation **[H1c = checked]**
   - Withdrawal **[H1d = checked]**
   - Hallucinations/Delusions **[K1g = checked]**

4. Alcohol Withdrawal, Drug-induced, Acute or Subacute Delirium **[J2=291.0, 292.81, 293.0, or 293.1]**

GUIDELINES

Factors that may be associated with signs and symptoms of delirium:

1. **Diagnoses and Conditions.** Cardiac dysrhythmias **[J1b]**, CHF **[J1c]**, CVA **[J1k]**, Emphysema/Asthma/COPD **[J1n]**, Pneumonia **[J1o]**, Anemia **[J1v]**, Cancer **[J1x]**, Diabetes **[J1y]**, Hypothyroidism **[J1aa]**, Septicemia **[J1dd]**, Urinary tract infection **[J1ee]**, Fecal impaction **[K1e]**, Fever **[K1f]**, or Dehydration **[L3b]**. Myocardial infarction, any viral or bacterial infection (e.g., meningitis, infectious diarrhea), Surgical abdomen, Head trauma, Hypothermia, Hypoglycemia, Hyperthyroidism, or Transient Ischemic Attack (TIA) **[J2 and medical record]**.

2. **Medications.** No. of meds **[O1]**, New meds **[O2]**, Antipsychotics **[O4a]**, or Antianxiety/hypnotics **[O4b]**, Cardiac meds, GI meds, Analgesics, Antinflammatory, Anticholinergics **[from med charts]**.

3. **Psychosocial.** Isolation **[G2e; from record]**, Recent loss **[G2f]**, Sad or anxious mood **[H1]**, Restraints **[P3b, P3c, P3d]**, or Recent relocation **[Intake I2]**.

4. **Sensory impairment.** Hearing **[C1]** or Vision **[D1]**.

Clarifying information to be considered in establishing a diagnosis: Alzheimer's **[J1h]**, Time of onset within hours to days **[from record or observation]**; Sleep disturbance **[from record or observation]**

Environment conducive to reducing symptoms: Quiet, well-lit, calm, familiar objects **[from observation]**; Task segmentation **[E6]**

RESIDENT ASSESSMENT PROTOCOL: COGNITIVE LOSS/DEMENTIA

I. PROBLEM

Approximately 60% of residents in nursing facilities exhibit signs and symptoms of decline in intellectual functioning. Recovery will be possible for less than 10% of these residents — those with a reversible condition such as an acute confusional state (delirium). For most residents, however, the syndrome of cognitive loss or dementia is chronic and progressive, and appropriate care focuses on enhancing quality of life, sustaining functional capacities, minimizing decline, and preserving dignity.

Confusion and/or behavioral disturbances present the primary complicating care factors. Identifying and treating acute confusion and behavior problems can facilitate assessment of how chronic cognitive deficits affect the life of the resident.

For residents with chronic cognitive deficits, a therapeutic environment is supportive rather than curative and is an environment in which licensed and nonlicensed care staff are encouraged (and trained) to comprehend a resident's experience of cognitive loss. With this insight, staff can develop care plans focused on three main goals: (1) to provide positive experiences for the resident (e.g., enjoyable activities) that do not involve overly demanding tasks and stress; (2) to define appropriate support roles for each staff member involved in a resident's care; and (3) to lay the foundation for reasonable staff and family expectations concerning a resident's capacities and needs.

II. TRIGGERS

A cognitive loss/dementia problem is suggested if two or more of the following deficits are present:

- **Short-term Memory Problem [B2a = 1]**
- **Long-term Memory Problem [B2b = 1]**
- **Two or More Memory Recall Problems [B3a, B3b, B3c, B3d = fewer than three checked]**
- Some Decision-making Problem [B4 = 1, 2 or 3]
- Problem Understanding Others [C5 = 1, 2 or 3]
- Diagnosis of Alzheimer's Disease [J1h = checked]; Dementia other than Alzheimer's [J1i = checked]; Mental Retardation [INTAKE I12 b-f = any checked]; Parkinson's Disease [J1m = checked]; or Aphasia [J1j = checked]

III. GUIDELINES

Review the following MDS items to investigate possible links between these factors and the resident's cognitive loss and quality of life. The three triggers identify residents with differing levels of cognitive loss. Even for those who are most highly impaired, the RAP seeks to help identify areas in which staff intervention might be useful. Refer to the RAP KEY for specific MDS items and other specific issues to consider.

NEUROLOGICAL

Fluctuating Cognitive Signs and Symptoms/Neurological Status. Co-existing delirium and progressive cognitive loss can result in erroneous impressions concerning the nature of the resident's chronic limitations. Only when acute confusion and behavioral disturbances are treated, or when the treatment effort is judged to be as effective as possible, can a true measure of chronic cognitive deficits be obtained.

Recent Changes in the Signs/Symptoms of the Dementia Process. Identifying these changes can heighten staff awareness of the nature of the resident's cognitive and functional limitations. This knowledge can assist staff in developing reasonable expectations of the resident's capabilities and in designing programs to enhance the resident's quality of life. This knowledge can also challenge staff to identify potentially reversible causes for recent losses in cognitive status.

Mental Retardation, Alzheimer's Disease, and Other Adult-Onset Dementias. The most prevalent neurological diagnoses for cognitively impaired residents are Alzheimer's disease and multi-infarct dementia. But increasing numbers of mentally retarded residents are in nursing facilities, and many adults suffering from Down's syndrome appear to develop dementia as they age. The diagnostic distinctions among these groups can be useful in reminding staff of the types of long-term intellectual reserves that are available to these residents.

MOOD/BEHAVIOR

Specific treatments for behavioral distress, as well as treatments for delirium, can lessen and even cure the behavioral problem. At the same time, however, some behavior problems will not be reversible, and staff should be prepared (and encouraged) to learn to live with their manifestations. In some situations where problem/distressed behavior continues, staff may feel that the behavior poses no threat to the resident's safety, health, or activity pattern and is not disruptive to other residents. For the resident with declining cognitive functions and a behavioral problem, you may wish to consider the following issues:

- Have cognitive skills declined subsequent to initiation of a behavior control program (e.g., psychotropic drugs or physical restraints)?
- Is decline due to the treatment program (e.g., drug toxicity or negative reaction to physical restraints)?
- Have cognitive skills improved subsequent to initiation of a behavior control program?
- Has staff assistance enhanced resident self-performance patterns?

CONCURRENT MEDICAL PROBLEMS

Major Concurrent Medical Problems. Identifying and treating health problems can positively affect cognitive functioning and the resident's quality of life. Effective therapy for congestive heart failure, chronic obstructive pulmonary disease, and constipation can lead, for example, to functional and cognitive improvement. Comfort (pain avoidance) is a paramount goal in controlling both acute and chronic conditions for cognitively impaired residents. Verbal reports from residents should be one (but not the only) source of information. Some residents will be unable to communicate sufficiently to pinpoint their pain.

FUNCTIONAL LIMITATIONS

Extent and Rate of Change of Resident Functional Abilities. Functional changes are often the first concrete indicators of cognitive decline and suggest the need to identify reversible causes. You may find it helpful to determine the following:

- To what extent is resident dependent for locomotion, dressing and eating?
- Could the resident be more independent?
- Is resident going downhill (e.g., experiencing declines in bladder continence, locomotion, dressing, vision, time involved in activities)?

SENSORY IMPAIRMENTS

Perceptual Difficulties. Many cognitively impaired residents have difficulty identifying small objects, positioning a plate to eat, or positioning the body to sit in a chair. Such difficulties can cause a resident to become cautious and ultimately cease to carry out everyday activities. If problems are vision-based, corrective programs may be effective. Unfortunately, many residents have difficulty indicating that the source of their problem is visual. Thus, the cognitively impaired can often benefit if tested for possible visual deficits.

Ability to Communicate. Many individuals suffering from cognitive deficits seem incapable of meaningful communication. However, many of the seemingly incomprehensible behaviors (e.g., screaming, aggressive behavior) in which these individuals engage may constitute their only form of communication. By observing the behavior and the pattern of its occurrence, one can frequently come to some understanding of the needs of individuals with dementia. For example, residents who are restrained for their own safety may become noisy due to bladder or bowel urgency.

- Is resident willing/able to engage in meaningful communication?
- Does staff use non-verbal communication techniques (e.g., touch, gesture) to encourage resident to respond?

MEDICATIONS

Psychoactive medications can be a factor in cognitive decline. If necessary, review Psychotropic Drug Use RAP.

INVOLVEMENT FACTORS

Opportunities for Independent Activity. Staff can encourage residents to participate in the many available activities, and staff can guard against assuming an overly protective attitude toward residents. Decline in one functional area does not indicate the need for staff to assume full responsibility in that area nor should it be interpreted as an indication of inevitable decline in other areas. Review information in the MDS when considering the following issues:

- Are there factors that suggest that the resident can be more involved in his/her care (e.g., instances of greater self-performance; desire to do more independently; retained ability to learn; retained control over trunk, limbs, and/or hands)?
- Can resident participate more extensively in decisions about daily life?
- Does resident retain any cognitive ability that permits some decision making?
- Is resident passive?
- Does resident resist care?
- Are activities broken into manageable subtasks?

Extent of Involvement in Activities of Daily Life. Programs focused on physical aspects of the resident's life can lessen the disruptive symptoms of cognitive decline for some residents. Consider the following:

- Are residents with some cognitive skills and without major behavioral problems involved in the life of the facility and the world around them?
- Can modifying task demands, or the environmental circumstances under which tasks are carried out, be beneficial?
- Are small group programs encouraged?
- Are special environmental stimuli present (e.g., directional markers, special lighting)?
- Do staff regularly assist residents in ways that permit them to maintain or attain their highest predictable level of functioning (e.g., verbal reminders, physical cues and supervision regularly provided to aid in carrying out ADLs; ADL tasks presented in segments to give residents enough time to respond to cues; pleasant, supportive interaction)?
- Has the resident experienced a recent loss of someone close (e.g., death of spouse, change in key direct care staff, recent move to the nursing facility, decreased visiting by family and friends)?

FAILURE TO THRIVE

Cognitively impaired residents can reach the point where their accumulated health/neurological problems place them at risk of clinical complications (e.g., pressure ulcers) and death. As this level of disability approaches, staff can review the following:

- Do emotional, social, and/or environmental factors play a key role?
- If a resident is not eating, is this due to a reversible mood problem, a basic personality problem, a negative reaction to the physical and interactive environment in which eating activity occurs, or a neurological deficit such as deficiency in swallowing or loss of hand coordination?
- Could an identified problem be remedied through improved staff education — trying an antidepressant medication, referral to OT for training or an innovative counseling program?
- If causes cannot be identified, what reversible clinical complications can be expected as death approaches (e.g., fecal impaction, UTI, diarrhea, fever, pain, pressure ulcers)?
- What interventions are or could be in place to decrease complications?

COGNITIVE LOSS/DEMENTIA RAP KEY

TRIGGERS

A cognitive loss/dementia problem deficit and retained abilities suggested if two or more of the following deficits are present:

- Short-term Memory Problem **[B2a = 1]**
- Long-term Memory Problem **[B2b = 1]**
- Two or More Memory Recall Problems **[B3a, B3b, B3c, B3d = less than 3 checked]**
- Some Decision-making Problem **[B4 = 1, 2, or 3]**
- Problem Understanding Others **[C5 = 1, 2 or 3]**
- Diagnosis of Alzheimer's **[J1h = checked]**; Dementia other than Alzheimer's **[J1i= checked]**; Mental Retardation **[INTAKE I12b-f = any checked]**; Parkinson's **[J1m = checked]**; or Aphasia **[Jlj = checked]**

GUIDELINES

Factors to review for relationship to cognitive loss:

1. **Neurological.** Delirium **[B5]**, Cognitive decline **[B6]**, Alzheimer's and other dementias **[J1h, J1i]**, MR/DD status **[INTAKE I12]**.

Confounding Problems that may require resolution or suggest reversible causes:

2. **Mood/behavior.** Sad mood or Mood decline **[H1, H6]**, Behavior problem or behavior decline **[H3, H7]**, Anxiety disorder **[J1p]**, Depression **[J1q]**, Manic depressive disorder **[J1r]**, Other psychiatric disorders **[J2]**.

3. **Concurrent medical problems.** CHF **[J1c]**, Other cardiovascular disease **[J1g]**, CVA **[J1k]**, Emphysema/Asthma/COPD **[J1n]**, Cancer **[J1x]**, Diabetes **[J1y]**, Hypothyroidism **[J1aa]**.

4. **Functional limitations.** ADL task segmentation **[E6]**, Decline in ADL or continence **[E8; F4]**.

5. **Sensory impairment.** Hearing/visual problems **[C1; D1]**, Rarely/never understands **[C5]**, Impaired tactile sense **[N4b]**.

6. **Medications.** Antipsychotics, Antianxiety/hypnotics, Antidepressants **[O4]**.

7. **Involvement factors.** New admission **[INTAKE I2]**, Trunk or chair restraint **[P3]**, Withdrawal from activities **[H1d]**, Encouragement of small group programs **[from record]**.

8. **Failure to thrive.** Terminal prognosis **[J1z]**, Clinical complications **[K1; L3; N2]**.

RESIDENT ASSESSMENT PROTOCOL: VISUAL FUNCTION

I. PROBLEM

The aging process leads to a gradual decline in visual acuity: a decreased ability to focus on close objects or to see small print, a reduced capacity to adjust to changes in light and dark, and diminished ability to discriminate color. The aged eye requires about 3-4 times more light in order to see well than the young eye.

The leading causes of visual impairment in the elderly are macular degeneration, cataracts, glaucoma, and diabetic retinopathy. In addition, visual perceptual deficits (impaired perceptions of the relationship of objects in the environment) are common in the nursing home population. Such deficits are a common consequence of cerebrovascular events and are often seen in the late stages of Alzheimer's disease and other dementias. The incidence of all these problems increases with age.

In 1974, 49% of all nursing home residents were described as being unable to see well enough to read a newspaper with or without glasses. In 1985, over 100,000 nursing home residents were estimated to have severe visual impairment or no vision at all. Thus vision loss is one of the most prevalent losses of residents in nursing facilities. A significant number of residents in any facility may be expected to have difficulty performing tasks dependent on vision as well as problems adjusting to vision loss.

The consequences of vision loss are wide-ranging and can seriously affect physical safety, self-image, and participation in social, personal, self-care, and rehabilitation activities. This RAP is primarily concerned with identifying two types of residents: 1) Those who have treatable conditions that place them at risk of permanent blindness (e.g., Glaucoma; Diabetes, retinal hemorrhage); and 2) those who have impaired vision whose quality of life could be improved through use of appropriate visual appliances. Further, the assumption is made that residents with new acute conditions will have been referred to followup as the conditions were identified (e.g., sudden loss of vision; recent red eye; shingles; etc). To the extent that this did not occur, the RAP KEY followup questions will cause staff to ask whether such a referral should be considered.

II. TRIGGERS

The Visual Function RAP triggers three types of residents:

1. Residents with treatable conditions that place them at risk of permanent blindness (e.g., Glaucoma; Diabetes, retinal hemorrhage). For glaucoma, the issue to be considered will revolve around proper use of eye medications; for diabetes, the issue centers on the possible referral for laser treatment to arrest retinal hemorrhage.

   Some Vision Impairment but not functionally blind **[D1=1 or 2]** AND presence of Glaucoma OR Diabetes **[J1t, J1y = any checked]**.

2. Residents with visual problems who are able to understand others AND make themselves understood. In most instances, these residents are able to participate in a thorough eye exam, including testing of visual acuity. The key question for these residents centers on whether current daily functioning is seriously limited by visual acuity problems.

   Vision impairment OR Side Vision problems **[D1 = 1, 2 or 3 or D2a = checked]** AND Can Both Make Self Understood AND Understand Others **[C4 = 0, 1 or 2 and C5 = 0, 1 or 2]**

3. Residents with visual problems who are not able to understand others OR make themselves understood. In most instances these residents are unable to cooperate in a thorough eye exam, including testing of visual acuity. They are triggered to ensure screening for disease that might put them at risk of blindness, as well as to determine whether the resident or family have concerns about how the visual deficit is restricting the resident.

Vision impairment OR Side Vision problems [D1=1, 2 or 3 or D2a = checked] AND Cannot Make Self Understood OR Understand Others [C4=3 or C5=3]

III. GUIDELINES

Visual impairment may be related to many causes, and one purpose of this section is to screen for the presence of major risk factors and to review the resident's recent treatment history. This section also includes items that ask whether the visually impaired resident desires or has a need for increased functional use of eyes.

Eye medications: Of greatest importance is the review of medications related to glaucoma (phospholine iodide, pilorarpine, propine, epineprin, Timoptic or other Beta-Blockers, diamox, or Neptazane).

- Is the resident receiving his/her eye medication as ordered?
- Does the resident experience any side effects?

Diabetes Cataracts, Glaucoma, or Macular Degeneration: Diabetes may affect the eye by causing blood vessels in the retina to hemorrhage (retinopathy). All these conditions are associated with decreased visual acuity and visual field deficits. If resident is able to cooperate it is very possible to test for glaucoma and retinal problems.

Exam by ophthalmologist or optometrist since problem noted:

- Has the resident been seen a consultant?
- Have the recommendations been followed (e.g. medications, refraction [new glasses], surgery)?
- Is the recommendation compatible with the resident's wishes (e.g., medical rehab. vs. surgery)?

If neurological diagnosis or dementia exam by physician since problem noted. Check the medical record to see if a physician has examined the resident for visual/perceptual difficulties. Some residents with diseases such as myethenia gravis, stroke, and dementia will have such difficulties associated with central nervous system in the absence of diseases of the eye.

Sad or anxious mood: Some residents, especially those in a new environment, will complain of visual difficulties. Visual disorganization may improve with treatment of the sad or anxious mood.

Appropriate use of visual appliances: Residents may have more severe visual impairment when they do not use their eyeglasses. Residents who wear reading glasses for walking, for example, may misperceive their environment and bump into objects or fall.

- Are glasses labelled or color coded in a fashion that enables the resident/staff to determine when they should be used?
- Are the lenses of glasses clean and free of scratches?
- Were glasses recently lost? Were they being recently used, and now they are missing?

Functional need for eye exam/new glasses: Many residents with limited vision will be able to use the environment with little or no difficulty, and neither the resident nor staff will perceive the need for new visual appliances. In other circumstances, needs will be identified, and for residents who are capable of participating in a visual exam, new appliances, surgery to remove cataracts, etc. can be considered.

- Does resident have peripheral vision or other visual problem that impedes his/her ability to eat food, walk on the unit, or interact with others?
- Is resident's ability to recognize staff limited by a visual problem?
- If resident is having difficulty negotiating his environment or participating in self-care activities because of visual impairment has he/she been referred to low vision services?
- Does resident report difficulty seeing TV/reading material of interest?
- Does resident express interest in improved vision?
- Has resident refused to have eyes examined? How long ago did this occur? Has it occurred more than once?

Environmental modifications: Residents whose vision cannot be improved by refraction, or medical and/or surgical intervention may benefit from environmental modifications.

- Does the resident's environment enable maximum visual function (e.g. low-glare floors and table surfaces, night lights)?
- Has the environment been adapted to resident's individual needs (e.g. large print signs marking room, color coded tape on dresser drawers, large numbers on telephone, reading lamp with 300 watt bulb)? Could the resident be more independent with different visual cues (e.g., labeling items, task segmentation) or other sensory cues (e.g., cane for recognizing there are objects in path)?

Acute Problems that may have been missed: Eye pain, blurry vision, double vision, sudden loss of vision: These symptoms are usually associated with acute eye problems.

- Has resident been evaluated by a physician or ophthalmologist?

Residents with communication impairments may be very difficult to assess. Residents who are unable to understand others may have problems following the directions necessary to test visual acuity.

VISUAL FUNCTION RAP KEY

TRIGGERS

Potential for acute, reversible visual function problems suggested if:

1. Some Vision Impairment but not functionally blind [D1 = 1 or 2] AND Glaucoma OR Diabetes [J1t, J1y = any checked]

Potential for improved visual function suggested if:

2. Vision Impairment OR Side Vision problems [D1 = 1, 2 or 3 or D2a = checked] AND Can Make Self Understood AND Can Understand Others [C4 = 0, 1 or 2 and C5 = 0, 1 or 2]

3. Vision Impairment OR Side Vision problems [D1 = 1, 2 or 3 or D2a = checked] AND Cannot Make Self Understood OR Understand Others [C4 = 3 or C5 = 3]

GUIDELINES

Issues and problems to be reviewed that may suggest need for intervention:

1. Eye medications [from record]
2. Diabetes [J1y], Cataracts, Glaucoma or Macular Degeneration [J1s, J1t; J2]
3. Exam by ophthalmologist since problem noted [from record]
4. Neurological diagnosis or dementia [J1b, J1i, J1j, J1k, J1m; J2]
5. Sad or Anxious Mood [H1]
6. Appropriate use of visual appliances [D3; from record, observation]
7. Functional need for eye exam/new glasses [from observation]
8. Environmental modifications [from record, observation]
9. Other acute problems: Eye pain, blurry vision, double vision, sudden loss of vision [from record, observation]

RESIDENT ASSESSMENT PROTOCOL: COMMUNICATION

I. PROBLEM

Good communication enables residents to express emotion, listen to others, and share information. It also eases adjustment to a strange environment and lessens social isolation and depression.

EXPRESSIVE communication problems include changes/difficulties in: speech and voice production, finding appropriate words, transmitting coherent statements, describing objects and events, using nonverbal symbols (e.g., gestures), and writing. RECEPTIVE communication problems include changes/difficulties in: hearing, speech discrimination in quiet and noisy situations, vocabulary comprehension, vision, reading, and interpreting facial expressions.

When communication is limited, assessment focuses on reviewing several factors: underlying causes of the deficit, the success of attempted remedial actions, the resident's ability to compensate with nonverbal strategies (e.g., ability to visually observe nonverbal signs and signals), and the willingness and ability of staff to engage with residents to ensure effective communication. As language use recedes with dementia, both the staff and the resident must expand their nonverbal communication skills — one of the most basic and automatic of human abilities. Touch, facial expression, eye contact, tone of voice, and posture all are powerful means of communicating with the demented resident, and recognizing and using all practical means is the key to effective communication.

II. TRIGGERS

The resident has the potential for improved communication and the RAP should be completed when the following problems are present.

Potential for improved communication is suggested if:

1. Poor Expression or Understanding [C4 = 2 or 3 or C5 = 2 or 3] AND
   Some Decision-Making Ability [B4 = 0, 1 or 2]

2. Poor Expression or Understanding [C4 = 2 or 3 or C5 = 2 or 3] AND
   No Decision-Making Ability [B4 = 3] AND
   No CVA or Neurological Problems [J1h, J1i, J1j, J1k, J1m = none checked]

Potential for improved hearing is suggested if:

3. Some Decision-Making Ability [B4 = 0, 1 or 2] AND ANY Hearing Problem [C1 = 1, 2 or 3]

III. GUIDELINES

The communication trigger suggests residents for whom a corrective communication treatment program may be beneficial. Specify those residents with potentially correctable problems. An effective review requires a special effort by staff to overcome any preconceived notions or fixed perceptions they may have about the resident's probable responsiveness to treatment. These perceptions may be based on the failure of prior treatment programs, as well as on assumptions that may not have been recently tested about the resident's unwillingness to begin a corrective program.

The triggers identify three types of residents:

1. Those with serious communication deficits who have retained some ability to make decisions. Such residents should have some ability to participate in a restorative communication treatment program.

2. Those with serious communication deficits in addition to no apparent ability to make decisions but no underlying CVA or neurological problems. These residents may have behavioral, mood, or environmental limitations that complicate their communication problem.

3. Those with hearing deficits and some ability to make decisions. These residents should have the intellectual ability to be considered for participation in a restorative hearing program

Review items listed on the RAP KEY as follows:

Confounding Problems.

As these confounding problems lessen or further decline is prevented, the resident's communication abilities should be reviewed.

Components of Communication.

Details of resident strengths and weaknesses in understanding, hearing and expression are the direct or indirect focus of any treatment program.

Possible Links with Causes of Communication Deficits.

- For chronic conditions that are unlikely to improve, consider communication treatments or interventions that might compensate for losses (e.g., for moderately impaired residents with Alzheimer's, the use of short, direct phrases and tactile approaches to communication can be effective).
- Are there acute or transitory conditions which if successfully resolved may result in improved ability to communicate?
- Are medications in use that could cause or complicate communication deficits, where titration or substitution may result in improved ability to communicate?
- Are opportunities to communicate limited in ways that could be remedied — e.g., availability of partners?

Treatment/Evaluation History.

- Has resident received an evaluation by an audiologist or speech-language pathologist? How recently?
- Has the resident's condition deteriorated since the most recent evaluation?
- If such an evaluation resulted in a plan of care, has it been followed as specified?

COMMUNICATION RAP KEY

TRIGGERS

Potential for improved communication suggested if:

1. Poor Expression or Understanding [C4 = 2 or 3 or C5 = 2 or 3] AND Some Decision-Making Ability [B4 = 0, 1 or 2]

2. Poor Expression or Understanding [C4 = 2 or 3 or C5 = 2 or 3] AND No Ability to Make Decisions [B4 = 3] AND No CVA/Neurological Problems [J1h, J1i, J1j, J1k, J1m = none checked]

Potential for improved hearing suggested if:

3. Some Decision-Making Ability [B4 = 0, 1 or 2] AND ANY Hearing Problem [C1 = 1, 2 or 3]

GUIDELINES

Confounding problems that may require resolution:

1. Decline in cognitive status [B6]
2. Decline in ADL status [E8]
3. Increased mood problems [H6]

Components of communication to be considered:

1. Hearing/Vision [C1; D1]
2. Comm. devices/Modes of expression [C2, C3]
3. Decline in communication/hearing [C6]
4. Medical status of ear — discharges, cerumen accumulation, hearing changes [from record or exam]

Factors to be reviewed for possible relationship to communication problems:

1. **Chronic Conditions.** Alzheimer's/Other dementia [J1h, J1i], Aphasia [J1j], CVA [J1k], Parkinson's [J1m], Emphysema/Asthma/COPD [J1n], Cancer [J1x], Psychiatric disorders [J2]
2. **Transitory Conditions.** Delirium [B5], Depression [J1q], Infections [J1o, J1dd, J1ee; K1f], Acute episode [K3b]
3. **Medications.** Psychotropics [O4], Narcotics, Parkinson's meds, Gentamycin, Tobramycin, Aspirin toxicity [from record]
4. **Opportunities to Communicate.** Quality/quantity of communication is (or is not) commensurate with apparent ability to communicate [staff judgement]

Clarifying issues to be considered:

1. Memory [B2; B3]
2. Recent audiology/language pathology evaluation [P1k; from record]

RESIDENT ASSESSMENT PROTOCOL: ACTIVITIES OF DAILY LIVING—FUNCTIONAL REHABILITATION POTENTIAL

I. PROBLEM

Personal mastery of ADL and mobility are as crucial to human existence in the nursing home as they are in the community. The nursing home is unique only in that most residents require help with self-care functions. ADL dependence can lead to intense personal distress — invalidism, isolation, diminished self-worth, and a loss of control over one's destiny. As inactivity increases, complications such as pressure ulcers, falls, contractures, and muscle-wasting can be expected.

The ADL RAP assists staff in setting positive and realistic goals, weighing the advantages of independence against risks to safety and self-identity. In promoting independence staff must be willing to accept a reasonable degree of risk and active resident participation in setting treatment objectives.

Rehabilitative goals of several types can be considered:

- To restore function to maximum self-sufficiency in the area indicated;
- To replace hands-on assistance with a program of task segmentation and verbal cueing;
- To restore abilities to a level that allows the resident to function with fewer supports;
- To shorten the time required for providing assistance;
- To expand the amount of space in which self-sufficiency can be practiced;
- To avoid or delay additional loss of independence; and
- To support the resident who is certain to decline in order to lessen the likelihood of complications (e.g., pressure ulcers and contractures).

II. TRIGGERS

The three MDS triggers suggest the types of residents for whom special care interventions may be most important. Such residents may have either the need and potential to improve or the need for services to prevent decline.

The two rehabilitation triggers will select all residents:

(1) Who have some ability to make decisions and who have more substantial ADL problems; or
(2) Who are more self-sufficient but who are thought to have potential for increased ADL self-sufficiency.

The maintenance trigger selects residents who lack cognitive skills. These individuals depend totally on others to ensure that their ADL status does not decline precipitously and that they do not develop complications. If a resident falls into one of these groups, the RAP should be completed.

Rehabilitative/Restorative plans suggested if resident has:

1. Some Ability to Make Decisions **[B4 = 0, 1 or 2]** AND Extensive Assistance/Total Dependence in 1 or more ADL areas **[E1a, E1b, E1c, E1d, E1e or E1f = 3 or 4 OR E3a = 3 or 4]**

2. Some Ability to Make Decisions **[B4 = 0, 1 or 2]** AND Needs no more than Limited Assistance in All ADL areas **[E1a, E1b, E1c, E1d, E1e and E1f = 0, 1 or 2 AND E3a = 0, 1 or 2]** AND Potential for More Self-Sufficiency Noted **[E7a, E7b = any checked]**

Maintenance/Complication Avoidance plans suggested if resident has:

3. No Ability to Make Decisions **[B4 = 3]** AND No Memory **[B2a = 1 AND B2b =1]** AND Some or Rare/No Understanding **[C5 = 2 or 3]**

III. GUIDELINES

Base an approach to a resident's ADL difficulty on clinical knowledge of:

- The causes of dependence;
- The expected course of the problem(s); and
- Which services work or do not work.

The MDS goal is to assist the clinician in identifying residents for whom rehabilitative/restorative goals can be reasonably established. Many ADL-restricted residents can regain partial ability for self-care. Certain types of disease-generated losses will respond to therapy. In addition, the removal of inappropriate restraints and the close monitoring of potentially toxic medications can often result in increased functioning.

Use the items in the ADL RAP KEY to consider the resident's risk of decline and chance of rehabilitation. Responses to these items permit a focused approach to specific ADL deficits (i.e., selecting and describing the specific ADL areas where decline has been observed or improvement is possible). The first thing that needs to be considered is the possible presence of confounding problems that may require resolution before rehabilitation goals can be reasonably attempted.

The second task is to clarify the resident's potential for improved functioning. The clinician might find the following sequence of questions useful in initiating an evaluation:

- Does the resident have the ability to learn? To what extent can the resident call on past memory to assist in current problem-solving situations?
- What is the resident's general functional status? How disabled is the resident, and does status vary?
- Is mobility severely impaired?
- Is trunk, leg, arm and/or hand use severely impaired?
- Are there distinct behavioral problems?
- Are there distinct mood problems?
- Is the resident motivated to work at a rehabilitative program?

Where rehabilitation goals are envisioned, use of the ADL Supplement will help care planners to focus on those areas that might be improved, allowing them to choose from among a number of basic tasks in designated areas. Part 1 of the Supplement can assist in the evaluation of all those triggered into the RAP. Part 2 of the Supplement can be helpful when a treatment program is under consideration.

ADL SUPPLEMENT
(Attaining maximum possible independence)

PART 1: ADL Problem Evaluation INSTRUCTIONS: For those triggered— In areas physical help provided, indicate reason(s) for this help.	DRESSING	BATHING	TOILETING	LOCOMOTION	TRANSFER	EATING
Mental Errors: Sequencing problems, incomplete performance, anxiety limitations, etc. **Physical Limitations:** Weakness, limited range of motion, poor coordination, visual impairment, pain, etc. **Facility Conditions:** Policies, rules, physical layout, etc.						

PART 2: Possible ADL goals INSTRUCTIONS: For those considered for rehabilitation or decline prevention treatment— Indicate specific type of ADL activity that might require: 1. Maintenance to prevent decline. 2. Treatment to achieve highest practical self sufficiency (selecting ADL abilities that are just above those the resident can now perform or participate in).				If wheelchair, check: ☐		
	Locates/ selects/ obtains clothes	Goes to tub/shower	Goes to toilet (include commode/ urinal at night)	Walks in room/ nearby ☐	Positions self in preparation	Opens/pours/ unwraps/cuts etc.
	Grasps/puts on upper/ lower body	Turns on water/adjusts temp.	Removes/ opens clothes in preparation	Walks on unit ☐	Approaches chair/bed	Grasps utensils and cups
	Manages snaps, zippers, etc.	Lathers body (except back)	Transfers/ positions self	Walks throughout building ☐ (uses elevator)	Prepares chair/bed (locks pads, moves covers)	Scoops/spears food (uses fingers when necessary)
	Puts on in correct order	Rinses body	Eliminates into toilet	Walks outdoors ☐	Transfers (stands/sits/ lifts/turns)	Chews, drinks, swallows
	Grasps, removes each item	Dries with towel	Tears/uses paper to clean self	Walks on uneven surfaces ☐	Repositions/ arranges self	Repeats until food consumed
	Replaces clothes properly	Other	Flushes	Other ☐	Other	Uses napkins, cleans self
	Other		Adjusts clothes, washes hands			Other
			Other			

ADL FUNCTIONAL/REHABILITATION POTENTIAL RAP KEY

TRIGGERS

REHABILITATION/RESTORATIVE plans suggested if:

1. Some Ability to Make Decisions **[B4=0, 1 or 2]** AND Extensive Assistance/Total Dependence in 1 or more ADL areas **[E1a, E1b, E1c, E1d, E1e or E1f = 3 or 4 OR E3a = 3 or 4]**

2. Some Ability to Make Decisions **[B4=0, 1 or 2]** AND Needs no more than limited assistance in ALL ADL areas **[E1a, E1b, E1c, E1d, E1e, and E1f = 0, 1 or 2 AND E3a = 0, 1 or 2]** AND Potential for More Self-Sufficiency noted **[E7a, E7b = any checked]**

MAINTENANCE/COMPLICATION AVOIDANCE plans suggested if:

3. No Ability to Make Decisions **[B4 = 3]** AND No Memory **[B2a = 1 AND B2b = 1]** AND Some or Rare/No Understanding **[C5 = 2 or 3]**

GUIDELINES

Confounding problems that may require resolution:

1. Delirium **[B5]**
2. Persistent mood problem **[H2]**
3. Daily behavior problem **[H3]**
4. Decline in mood/behavior **[H6, H7]**
5. Unstable/acute health problem **[K3]**
6. Use of Psychoactive medications **[O4]**

Clarifying issues to be considered:

1. Prior improvement in cognition, ADLs, mood, or behavior **[B6; E8; H6; H7]**
2. Communication and vision **[C; D]**
3. Explicit terminal prognosis **[J1z]**
4. Trunk/limb control and ability to stand **[E4]**
5. Complete ADL Supplement Part 1 for all triggered residents; for a resident with rehabilitation potential, complete ADL Supplement Part 2

RESIDENT ASSESSMENT PROTOCOL: URINARY INCONTINENCE AND INDWELLING CATHETER

I PROBLEM

Urinary incontinence is the inability to control urination in a socially appropriate manner. Nationally, 50% of nursing home residents are incontinent. Incontinence causes many problems, including skin rashes, falls, isolation, and pressure ulcers, and the potentially troubling use of indwelling catheters. In addition, continence is often an important goal to many residents, and incontinence may affect residents' psychological well-being and social interactions. Urinary incontinence is curable in many elderly residents but realistically not all will benefit from an evaluation. Catheter use increases the risk of life-threatening infections, bladder stones and cancer. Use of catheters also contributes to patient discomfort and the needless use of toxic medications often required to treat the associated bladder spasms. For many (but not all) residents, urinary incontinence is curable, and safer and more comfortable approaches are often practical for residents with indwelling catheters.

This RAP, the purpose of which is to improve incontinence, goes far beyond bladder training. Even if a patient is not believed to be a candidate for bladder training, the assessment should still be done since many other treatable conditions may be found, the treatment of which will not only improve incontinence, but the overall quality of life for the patient.

The goal of this assessment is to detect reversible causes of incontinence, such as infections and medications, and situationally induced incontinence; to identify individuals whose incontinence is caused by harmful conditions such as bladder tumors or spinal cord diseases; and to consider the appropriateness of catheter use. Staff judgment is clearly required to realize these aims. Detailed instructions are provided to facilitate this clinical process.

Continence depends on many factors. Urinary tract factors include a bladder that can store and expel urine and a urethra that can close and open appropriately. Other factors include the resident's ability (with or without staff assistance) to reach the toilet on time (locomotion), his/her ability to adjust clothing so as to toilet (dexterity), cognitive function and social awareness (e.g., recognizing the need to void in time and in an appropriate place), and the resident's motivation. Fluid balance and the integrity of the spinal cord and peripheral nerves will also have an effect on continence. Change in any one of these factors can result in incontinence, although alterations in several factors are common before incontinence develops.

II. TRIGGERS

A urinary continence or indwelling catheter problem is suggested if:

1. Occasional, Frequent, or Frank Urinary Incontinence **[F1b = 2, 3 or 4]**

2. Use of Catheter or Pads **[F3b, F3c, F3d, F3f = any checked]**

Exclusions for Triggers: Comatose **[B1]** or Explicit terminal prognosis **[J1z]**. Other exclusions may apply especially after the reversible problems have been addressed. These are noted at the beginning of each section.

III. GUIDELINES

For residents with incontinence (including those with condom catheters), all MDS items described in Section A should be addressed, unless exclusionary criteria have been met. If incontinence persists, complete Section B and, if necessary, Section C For residents with indwelling catheters, first complete Sections A and B and then complete Section D.

A. ITEMS NECESSARY TO EVALUATE INCONTINENCE OR NEED FOR CATHETER

Review the reversible problems listed on the RAP KEY. Virtually all are easily diagnosed, and their treatment will improve not only incontinence but functional status as well. Also, most of these factors can be identified by a nurse, but some will take a physician's order to carry out.

UTI.

Urinary tract infections are common causes of incontinence, especially new incontinence. Therefore, they should be looked for in all residents. If a clean catch urine is not feasible and the resident both has no memory recall and requires at least extensive assistance in self-transfer [**E1b = 3 or 4**] you may choose to forego catheterization to obtain a specimen, since identification and treatment of UTIs in this population has not been shown to make a difference.

- Send a clean catch or sterile urine specimen for microscopic analysis. If >5 WBC are found, send a fresh and sterilely obtained specimen for urine culture. If UTI is found, consider treatment.
- For residents with an indwelling catheter, a new catheter should be sterilely inserted to obtain the specimen.

Fecal Impaction.

Impaction is very common and can cause incontinence by preventing the bladder from emptying well. Thus, check for impaction in all residents who are incontinent.

- To find bowel impaction, insert a gloved finger into resident's rectum.
- The finding of no stool or small amount of soft stool indicates that impaction is unlikely to be the cause of incontinence. A record demonstrating that the resident has recently passed stool is not sufficient to rule out bowel impaction.

Delirium.

If present, this is the most important problem. Often when delirium is treated, incontinence will resolve. In the meantime, regular toileting will help.

Lack of toilet access.

Daily use of restraints can result in a resident's inability to get to the toilet; quick staff response is necessary. The toilet may also be too far away for a resident who does not get adequate warning (e.g., there may not be a toilet room near the activities room). Environmental modifications such as a bedside commode, urinal, or a room closer to the toilet can be useful. To remain continent, residents may also require more staff support, such as more timely responses to requests for assistance.

Immobility.

Immobility correlates highly with incontinence in many nursing home residents. Improving the resident's ability in transferring, locomotion and toileting will often reduce incontinence, as will providing timely staff assistance when needed.

Depression

Severe depression can result in loss of the motivation to stay dry. Prompted toileting is often helpful as a means of positive reinforcement.

Congestive Heart Failure (CHF) or Pedal Edema

CHF and pedal edema are especially troublesome when the resident is lying down: diuresis overwhelms the bladder. Treatment of these conditions is not difficult and will improve both incontinence and functional status.

Recent Stroke

Once the resident is stable, delirium has cleared, and locomotion has improved, continue workup if incontinence persists. Most stroke patients are continent at this point.

Diabetes Mellitus

Diabetes with persistently high blood sugar causes fluid loss that can cause or worsen incontinence. Treatment will improve incontinence and functional status.

Medications

Many medications can affect the bladder or urethra and result in incontinence. Physicians would usually discontinue suspect medication if possible, weighing the risks and benefits of doing so. For instance, where a calcium channel blocker is used for mild hypertension, another medication might be easily substituted; a medication for arrhythmia, however, might not have an appropriate substitute.

- Review all medications — regularly prescribed, occasional or "PRN", and any nonprescribed ("over-the-counter") medications

Medications that can affect continence include the following classes and types of drugs:

1. Diuretics, especially those that act quickly, such as furosemide (Lasix), bumetanide (Bumex), and metolozone (Zaroxylyn), and, less frequently, thiazide agents such as hydrochlorothiazide.

2. Sedative hypnotics, i.e., sleeping pills and antianxiety drugs such as diazepam (Valium), lorazepam, Xanax, Halcion, and Dalmane.

3. Any drug with anticholinergic properties:

   - Antipsychotics (e.g., Haldol, Mellaril)
   - Antidepressants (e.g., Elavil, Triavil)
   - Narcotics (e.g., Morphine, Dilaudid, Darvon)
   - Medication for Parkinson's disease (except Sinemet and Deprenyl)
   - Disopyramide
   - Antispasmodics (e.g., Donnatal, Bentyl)
   - Antihistamines (e.g., medications for colds)

4. Calcium channel blockers (e.g., verapamil, nimodipine, nicardipine, nifedipine, and diltiazem).

5. Drugs that affect the sympathetic nervous system:

   - Alpha blockers (e.g., prazosin and phenoxybenzamine)
   - Alpha stimulants (e.g., ephedrine, pseudoephedrine, phenylpropanolamine, and nosedrops)

B. OTHER POTENTIAL CAUSES OR FACTORS CONTRIBUTING TO INCONTINENCE OR USE OF CATHETERS

Much of the information asked for above will appear in a completed MDS. However, other items of information should be obtained and reviewed if incontinence persists. Identification and treatment of these factors will frequently not only improve incontinence, but may prevent further deterioration such as paralysis. However, in the resident who both has no memory recall [**B3e = checked**], requires at least extensive assistance in self-transfer [**E1b = 3 or 4**], and is free of related pain, there is, as of yet, no evidence that identification and treament of such factors would benefit the resident.

Pain

Pain in the bladder, or related to urination, is a distinctly rare and abnormal symptom in the incontinent patient, and often indicates another pathological process, which may be treatable. Physician evaluation is recommended.

Excessive or Inadequate Urine Output.

If daily urine output is less than 1 liter, incontinence may worsen because of very strong, concentrated urine. A daily output over 1.5 liters can overwhelm the bladder. If present, the identification of the underlying cause of the high urine output (e.g., diabetes, high calcium, or excessive fluid intake) is required before restricting fluids.

- The amount of fluid excreted daily should be measured for 1 to 2 days. This can be done using a voiding record or, if patient is severely incontinent, by inserting a temporary catheter.

Atrophic Vaginitis.

Caused by reduced amount of the female hormone estrogen, this condition causes or contributes to incontinence in many women.

- Examine vagina for evidence of estrogen deficiency.

Optimally, a pelvic exam checks for signs of atrophic vaginitis.

If a resident is impaired, or appropriate equipment is not readily available, an exam may be done in the resident's bed by spreading the labia and looking inside for redness, dryness, pinpoint hemorrhages, or easy bleeding.

- Pain or irritation during the insertion of a catheter is another useful sign of the condition (catheterization normally may be uncomfortable, but should not be painful).
- Atrophic vaginitis can be treated with a low dose of oral conjugated estrogens. Contraindications to estrogen therapy include a history of breast or endometrial cancer.

Abnormal Lab Values.

Several conditions detectable only by laboratory tests can cause incontinence. These include high blood calcium or glucose and Vitamin B12 deficiency. It is also important to check the blood urea nitrogen (BUN) or creatinine because some causes of incontinence also can damage the kidneys. All of these tests should have been done within the last 60 days, except the B12, which should have been checked within the past 3 years.

Serious Conditions That Cause or Accompany Incontinence (To Be Considered By Primary Doctor)

A doctor or a nurse practitioner can identify potentially life-threatening conditions that cause or accompany urinary incontinence. These include bladder cancer or bladder stones, prostate cancer, spinal cord or brain lesions (such as slipped discs and metastatic tumors), poor bladder compliance, and tabes dorsalis.

- Bladder cancer or stones are suggested by the presence of any amount of blood in the urine (even in microscopic amounts) without evidence of UTI. To investigate for bladder cancer, the first morning urine is sent for 2 or 3 days for cytology examinations. Residents more likely to have bladder cancer are men, smokers, and those with suprapubic pain or discomfort, a history of work exposure to certain dyes, or recent onset of urge incontinence. The physician will decide who is worked up or referred to a urologist.
- Suspected prostate cancer can be detected by a rectal exam.
- Spinal cord diseases are detected by a neurological exam.
- Decreased bladder compliance can result in damage to the kidneys and should be suspected in residents with a history of conditions that result in decreased bladder compliance (pelvic radiation therapy, abdominal/pelvic resection, radical hysterectomy or prostatectomy, or spinal cord disease).
- Another cause of incontinence is tabes dorsalis (an advanced stage of syphilis), which is treatable with antibiotics.

C. FINAL EVALUATION IF INCONTINENCE PERSISTS

After the above causes of easily treatable incontinence have been eliminated and the most serious underlying conditions have been investigated, conclude the evaluation with an assessment of the four causes of incontinence that are due to abnormalities within the bladder itself. The following section first describes these abnormalities and then describes the tests to detect their presence. A variety of treatment options is available for each type of incontinence, including treatment and care plans appropriate for every resident. In each case, the care plan can be tailored to the needs and characteristics of the resident with dementia, immobility, etc. Notably, bladder training and medications have been shown to significantly improve incontinence in even severely demented residents. The options are discussed in full detail in the educational material.

Exclusions: Although demented residents have been shown to benefit from targeted therapy, certain patients have a low probability of responding. Therefore, if a resident has no memory recall **[B3e = checked]**, is extensively dependent in self-transfer **[E1b or c = 3 or 4]**, and the facility's ability to toilet the resident on a regular schedule is limited, then the patient may not benefit from this part of the evaluation, and should be managed with pads, frequent turning and changing, or external catheters. Indications for an indwelling catheter are: the resident is in a coma or has terminal illness, a stage 3 or 4 pressure ulcer in an area affected by the incontinence, untreatable urethral blockage, the need for exact measurement of urine output, a history of being unable to void after having a catheter removed in the past, or a resident with quad/paraplegia who failed a past attempt to remove a catheter.

The bladder abnormalities can be simply understood: either (1) the bladder contracts when it should not ("uninhibited bladder"), abruptly soaking the patient ("urge incontinence"); or (2) the bladder fails to contract when it should ("atonic" or underactive bladder), so that urine builds up and spills over as "overflow incontinence." Alternatively the urethra, through which the bladder empties, is either (3) blocked by an obstruction (e.g., a large prostate) or (4) unable to close tightly enough ("stress incontinence").

By doing a "stress test" and measuring the amount of urine that remains in the bladder after voiding (Post Void Residual — PVR) these conditions can be separated: the uninhibited bladder generally has little residual urine (<100 ml) and a negative stress test, while the atonic bladder has a much larger residual (e.g., >400 ml). Women with stress incontinence (it is rare in men) generally have <100 ml residual urine and a positive stress test. Men with a blocked urethra (rare in women) generally have >100 ml residual urine and a negative stress test.

Post-Void Residual (PVR).

The PVR (post-void residual) is the amount of urine left in the bladder after a void. Research has shown that many elderly people have large amounts left in the bladder after a void, even though they demonstrate no signs of this. That is, they do not feel full or uncomfortable, they have a good urine output, and do not seem to have a large bladder by palpation or percussion. Also, in men, a high PVR can signal a variety of problems, and in both men and women, knowledge of the PVR can help guide the selection of medication. Therefore, a PVR should be determined in all patients who reach this point of the evaluation. In some cases, a physician's order may be necessary to perform a PVR. If the physician chooses not to allow this, it should be documented in the chart.

- When the resident feels relatively full, he/she should void as normally as possible into a commode, bedpan, urinal, or a toilet equipped with a collection device (hat). Measure volume voided. Within 15 minutes of voiding, under sterile conditions, insert a nonpermanent catheter to measure the residual volume (PVR). Adding the volume voided to PVR gives the Total Bladder Volume (TBV).

Attention to several points will ensure that the test is done correctly. First, if the resident cannot void intentionally, do the test after an episode of incontinence. Second, after allowing the urine to drain, apply gentle pressure with your hand to the abdomen to increase the drainage. When the urine has stopped draining, withdraw the catheter slowly, continuing to press on the lower abdomen. If possible, have the resident sit up during the catheter withdrawal. Under sterile conditions, the risk of causing an infection is under 3%. Residents with known valvular heart disease (who receive antibiotic prophylaxis for dental work) probably should receive a dose of antibiotics before the PVR is checked.

Kidney Ultrasound Test for Men With a PVR Greater Than 100 ml.

- Ultrasound of the kidneys is indicated in male residents with a PVR greater than 100 ml to rule out hydronephrosis (inability of the kidneys to drain properly), which could be due to bladder obstruction and result in preventable kidney damage.

This test has no risks (compared to the risk of the dye injection in an IVP). Evidence of urine backing into the kidneys strongly suggests the need for urologic referral; if this is not done, the resident needs chronic indwelling catheterization.

Bladder Stress Test for Female Patients.

- Bladder Stress Test. When the resident has a relatively full bladder, but not a strong urge to void, have her stand or assume as upright a position as possible, relax, and cough vigorously or strain. The test is positive if there is immediate leakage similar in volume and circumstance to usual incontinence. The stress test is negative if there is a delay of more than 5 seconds, no leakage, or leakage of only a few drops, or if it is dissimilar to the usual volume and circumstance of leakage.
- Measure void plus PVR as described above (i.e., calculate Total Bladder Volume).
- Repeat Stress Test. If the bladder stress test is negative AND the Total Bladder Volume is less than 200 ml, another test is needed for verification. Insert a sterile catheter into the bladder (preferably do this while the catheter for PVR measurement is still in the bladder) and fill it with at least 200 ml of sterile water, if possible. Remove the catheter, have the patient stand up (if possible), and repeat the stress test as above.

D. FINAL EVALUATION FOR RESIDENTS WITH INDWELLING CATHETERS

After the resident with an indwelling catheter has been treated for infection and all the other treatable conditions listed above, a voiding trial can be attempted — unless the resident has terminal illness, stage 3 or 4 pressure ulcers, or untreatable urethral blockage. This trial may reveal that the catheter is not necessary after all.

Exclusions: The resident is in a coma or has terminal illness, a stage 3 or 4 pressure ulcer in an area affected by the incontinence, untreatable urethral blockage, the need for exact measurement of urine output, a history of being unable to void after having a catheter removed in the past, or a resident with quad/paraplegia who failed a past attempt to remove a catheter.

- If appropriate, institute a voiding trial.

(1) Before removing the catheter, record urine output every 6 hours for one or two days. Use this record to plan when to remove the catheter so that the expected urine will not be over 800 mls during the time of the voiding trial.

(2) Remove catheter and observe. For example, if the resident usually puts out 500 ml on the day shift, remove the catheter at the beginning of that shift and observe; if resident has not voided by the end of the shift, wait until the volume gets higher, but do not exceed a volume of 800 ml.

(3) If resident is able to void, check the PVR, as detailed in **Section C**.

- If volume is greater than 400 ml, reinsert indwelling catheter permanently or until resident can be referred to a urologist.
- If PVR is between 100 and 400 ml, observe resident carefully as urinary retention may redevelop over a few days to a few weeks. If not, check for presence of incontinence: if present, complete **Section C** (above).
- If PVR is less than 100 ml, check for presence of incontinence; if present, complete **Section C** (above).

(4) If resident has not voided by the time the expected volume is 800 ml, and there is no sensation of fullness, no urge to void, and no void, reinsert an indwelling catheter and record the volume. Residents who fail the voiding trial need either urologic referral, if appropriate, or permanent catheterization.

(5) If the resident has no memory recall, is unable to transfer independently, and has incontinence that is resistant to all therapy for more than 2 weeks after removing the catheter, a catheter may be reinserted if deemed appropriate by the staff.

URINARY INCONTINENCE AND INDWELLING CATHETER RAP KEY

TRIGGERS

Incontinence care plan suggested if:

1. Incontinent 2+ Times a Week
   [F1b = 2, 3 or 4]

2. Use of Catheter or Pads
   [F3b, F3c, F3d, F3f = any checked]

EXCLUSIONS: Comatose **[B1 = 1]** or Explicit terminal prognosis **[J1z = checked]**

GUIDELINES

Possible reversible problems to be reviewed in evaluating incontinence or need for catheter:

1. Conditions: UTI **[F2a; J1ee]**, Fecal Impactions **[F2b; K1e]**, Delirium **[B5]**, Depression **[J1q]**, Edema **[K1d]**
2. Environment: Locomotion **[E1c]**, Lack of access to toilet, Barriers **[observation]**, Restraints **[P3]**
3. Diagnoses: CHF **[J1c]**, CVA **[J1k]**, Parkinson's **[J1m]**, Diabetes **[J1y]**
4. Medications: Diuretics, Parkinson's meds, Disopyramide, Antispasmodics, Antihistamines, Drugs that stimulate or block sympathetic nervous system, Calcium channel blockers (verapomil, nifedipine, diltiozem), Narcotics **[from record]**
5. Psychoactive Medications: Antipsychotics, Antianxiety/hypnotics, Antidepressants **[O4]**

Other Potential factors contributing to incontinence or use of catheter:

1. Conditions: Pain; Excessive or inadequate urine output, Atrophic vaginitis, Cancer of bladder, prostate, brain, or spine, tabes dorsalis **[from record or exam]**
2. Abnormal Lab Values: High blood calcium, high blood glucose, low B_{12}, High BUN or Creatinine **[from record]**

Final evaluation if incontinence persists:

1. Specific Tests: Not indicated when Comatose **[B1]** or both No memory recall **[B3e]** AND Dependent in Transfer, Locomotion **[E1b, E1c]**, for others, do: Post Void Residual, bladder stress test for females, reflux test (kidney ultrasound) for males with PVR >100 ml

Final evaluation for residents with indwelling catheters:
If indwelling catheter **[F3c]**, do Voiding Trial unless terminal illness **[J1z]**, stage 3/4 pressure ulcer **[N2]** and/or untreatable urethral blockage **[J2]**

RESIDENT ASSESSMENT PROTOCOL: PSYCHOSOCIAL WELL-BEING

I. PROBLEM

Well-being refers to feelings about self and social relationships. Positive attributes include initiative and involvement in life; negative attributes include distressing relationships and concern about loss of status. On average, 30% of residents in a typical nursing facility will experience problems in this area, two-thirds of whom will also have serious behavior and/or mood problems. When such problems coexist, initial treatment is often focused on mood and behavior manifestations. In such situations, treatment for psychosocial distress is dependent on how the resident responds to the primary mood/behavior treatment regimen.

II. TRIGGERS

A psychosocial well-being problem is suggested if:

1. One or More Problems With Relationships [G2a, G2b, G2c, G2d = any checked]

2. Grief Over Lost Status/Roles [G3b = checked]

III. GUIDELINES

Sequentially review the items found on the RAP KEY.

Confounding Problems

Treatment for mood/behavior problems are often immediately beneficial to well-being.

- Do mood/behavior problems affect well-being?
- Did the mood/behavior problems appear before the reduced sense of well-being?
- Have ongoing treatment programs been effective?

Situational Factors That May Impede Ability to Interact With Others

Environmental and situational problems are often amenable to staff intervention without the burden of staff having to "change the resident."

- Have key social relationships been altered/terminated?
- Have changes in the resident's environment altered access to others or to routine activities — for example, room assignment, use of physical restraints, assignment to new dining area?

Resident Characteristics That May Impede Ability to Interact With Others

These items focus on areas where the resident may lack the ability to enter freely into satisfying social relationships. They represent substantial impediments to easy interaction with others and highlight areas where staff intervention may be crucial.

- Do cognitive/communication deficits or a lack of interest in activities impede interactions with others?
- Does resident indicate unease in social relationships?

Lifestyle Issues

Residents can withdraw or become distressed because they feel life lacks meaning.

- Was life more satisfactory prior to entering the nursing facility?
- Is resident preoccupied with the past, unwilling to respond to the needs of the present?
- Has the facility focused on a daily schedule that resembles the resident's prior lifestyle?

Additional Information to Clarify the Nature of the Problem

Supplemental assessment items can be used to specify the nature of the well-being problem for residents for whom a well-being care plan is anticipated. These items represent topics around which to phrase questions and to establish a trusting exchange with the resident. Each item includes the positive and negative end of a continuum, representing the possible range that staff can use in thinking about these issues. Staff can use or not use the items in this list. For those items selected, the following issues should be considered:

- How do staff/resident perceive the severity of the problem?
- Has the resident ever demonstrated (while in the facility) strengths in the area under review?
- Are corrective strategies now being used? Have they been used in the past? To what effect?
- Is this an area that might be improved?

PSYCHOSOCIAL WELL-BEING RAP KEY

TRIGGERS

Well-being problem suggested if:

1. One or More Problems With Relationships **[G2a, G2b, G2c, G2d = any checked]**

2. Grief Over Lost Status/Roles **[G3b = checked]**

GUIDELINES

Confounding problems:
1. Increasing/persistent sad mood **[H2, H6]**
2. Increasing/daily disturbing behavior **[H3, H7]**

Situational factors that may impede ability to interact with others:
1. Loss of family member, friend, or staff close to resident **[G2f; from record]**
2. Initial use of physical restraints **[P3]**
3. Change in room assignment or new admission **[Intake I2; from record]**

Resident characteristics that may impede ability to interact with others:
1. Delirium/cognitive decline **[B5, B6]**
2. Communication deficit/decline **[C4, C5, C6]**
3. Locomotion deficit/use of wheelchair **[E1c, E5c, E5d]**
4. Ill at ease interacting with others **[G1]**
5. Diseases that impede communication — Alzheimer's **[J1h]**, Other dementia **[J1i]**, Depression **[J1q]**, terminal prognosis **[J1z]**, Mental retardation **[Intake I12]**
6. Uninvolved in activities **[I2, I4]**

Lifestyle issues:
1. Strong identification with past roles/status **[G3a]**
2. Incongruence of current and prior style of life **[Intake III]**
3. Length of time problem existed **[from record]**

Supplemental problem clarification issues [from resident/family if necessary]:
1. Ability to relate to others
   - — Skill/unease in dealing with others
   - — Reaches out/distances self
   - — Friendly/unapproachable
   - — Flexible/ridiculed by others

2. Relationships resident could draw on
   - — Supported/isolated
   - — Many friends/friendless

3. Dealing with grief
   - — Moving through grief/bitter and inconsolable
   - — Religious faith/feels punished

RESIDENT ASSESSMENT PROTOCOL: MOOD STATE

I. PROBLEM

About 15% of nursing home residents will have a major depression; about 30% will exhibit noticeable symptomatic signs of a mood state problem. Such signs are often expressed as sad mood, feelings of emptiness, anxiety or unease. They are also manifested in a wide range of bodily complaints and dysfunctions, such as loss of weight, tearfulness, agitation, aches and pains.

II. TRIGGERS

A Mood State problem is suggested if any of the following are found:

1. Verbal Expressions of Sad or Anxious Mood [H1a = checked].
2. Demonstrated (observable) Signs of Mental Distress [H1b, H1c, H1d, H1e, H1f, H1g = any checked].
3. Persistent Sad or Anxious Mood [H2 = 1].

III. GUIDELINES

Specific conditions stated below suggest the need for an altered/new care strategy. They are not exhaustive; other situations may arise in which staff decide that an altered care plan is necessary. The most obvious are instances of drug-induced side effects (addressed in Psychotropic Drug Use RAP). Residents whose mood problems do not call for care plan alterations are those with stable behavior and no unusual confounding problems.

Many of the questions and issues that follow relate to the MDS items listed on the Mood State RAP KEY. An altered care strategy is suggested when specified conditions are met.

Have Mood State Problems Recently Intensified?

- Were mood problems present 6 months ago?
- Does resident have a cyclic history of decline and improvement in mood state?
- Has loss of appetite with accompanying weight loss occurred?
- Has interest in activities declined, even though resident remains physically capable?

Mood Unimproved and Potentially Reversible Causes Present.

Resolution of delirium (fluctuating consciousness) behavioral, relationship and/or communication problems often affect a resident's mood state. Only when these conditions have been addressed can the nature of a mood problem be fully understood.

- Review record to determine whether there has been a sudden onset or worsening of cognitive symptoms or communication skills following initiation of treatment (e.g., medications)
- Review to determine whether the resident is using any medications known to cause mood shifts, such as: psychotropics; antihypertensives, such as clonidine (Catapres), quanethedine (Ismelin), methlydopa (Aldomet), propeneral (Inderal), and reserpine; cimetidine (Tagamet); cytoxic agents; digitalis; immunosuppressives; sedatives; steroids; or stimulants.

Also, consider the possible presence of other complicating factors, such as:

- Delirium
- Review recent changes in the life of the resident (e.g., death of a child, transfer to new environment, separation from loved ones, loss of functional abilities or change in body image, loss of autonomy)
- Review nature and intensity of relationship and/or behavior problems

ADL decline can be both a cause and a consequence of distressed mood. Reviewing the sequence of ADL and mood decline may be informative. In any case, where mood seems to impair ADL functioning, useful strategies include modifying the physical environment, separating the resident's performance of ADL activities into a series of subtasks, and using verbal reminders and cues.

When Staff/Family Try to "Cheer Up" Resident, Is Mood Unchanged? Does the Resident Lack Initiative?

The passive resident with distressed mood may be overlooked. Such a resident may be erroneously assumed to have no mood state problem.

- Does the resident show little/no initiative?
- Does he/she remain uninvolved in activities (alone or with others)?
- Is the sad mood persistent?

Are There Indications of New or Intensified Problems With Conditions That May Affect Mood Problems?

These conditions include: Alzheimer's Disease, cancer, cardiac disease, metabolic and endocrine disorders (e.g., hypercalcemia, Cushing's disease, Addison's disease, hypoglycemia, hypokalemia, porphyria), Parkinson's disease, stroke, or other neurological disease, and thyroid disease.

Does Sad Mood Appear to Respond to Treatment (e.g., Drug Regimen)?

- Has the mood problem remained relatively unchanged for the last 90 days, or has it improved with the current treatment program?
- Have there been cycles of decline and improvement?
- Is resident receiving medications and/or psychosocial therapy?

MOOD STATE RAP KEY

TRIGGERS

A mood problem suggested if:

1. Verbal Expression of Sad/Anxious Mood **[H1a = checked]**
2. Any Demonstrated Sign of Mental Distress **[H1b, H1c, H1d, H1e, H1f, H1g = any checked]**
3. Mood Persistence **[H2 = 1]**

GUIDELINES

Indicators of the need to consider a new/altered care strategy:

1. Mood decline **[H6]**
2. Mood unimproved **[H6]** AND reversible conditions present
   - — Delirium/cognitive decline; Hallucinations/ delusions **[B5, B6; K1g]**
   - — Communication decline **[C6]**
   - — ADL decline **[E8]**
   - — Grief due to loss of loved one **[G2]**
   - — Recent move into/within facility **[INTAKE I2]**
   - — Use of meds known to cause mood shifts (e.g., antihypertensives, cimetidine, clonidine, cytoxic agents, digitalis, guanethidine, immunosuppressive, methyldopa, nitrates, propranolol, reserpine, steroids, stimulants) **[from record]**
3. Mood unimproved **[H6]** AND indication of cognitive ability/memory, decision-making ability, and ability to understand **[B2, B4; C5]** AND ANY of following:
   - — Little or no initiative shown **[G1]**
   - — Little or no involvement in activities **[I2]**
   - — No medications **[O1]**
   - — No psychological therapy **[P1n]**
4. Relationship and/or behavioral problems present **[G2; H3]**

Confounding issues to be considered:

1. Communication skills **[C4; C5]**
2. Diseases: Neurological disease **[J1h, J1i, J1j, J1m]**, CVA **[J1k]**, Anxiety **[J1p]**, Depression **[J1q]**, Manic depressive **[J1r]**, Thyroid disease **[J1aa]**, Hypercalcemia, Cushing's, Addison's, Hypoglycemia, Hypokalemia, Porphyria, Psychosis **[J2]**

RESIDENT ASSESSMENT PROTOCOL: BEHAVIOR PROBLEM

I. PROBLEM

Between 60% and 70% of residents in a typical nursing facility exhibit emotional, social, and/or behavior disorders; about 40% have purely behavioral problems (i.e., wandering, verbal abuse physically aggressive and/or socially inappropriate behaviors). Residents with behavior problems also frequently have other related problems. Over 80% of those who have behavior problems will have some type of cognitive deficit; about 75% will have mood and/or relationship problems.

Problem behaviors are often seen as a source of danger and distress to the residents themselves and sometimes to other residents and staff. Nursing facilities often find such residents difficult to cope with, and physicians often seem unaware of the wide range of available treatment and management options. As a result, overuse of physical restraints or psychotropic drugs is not uncommon. About one-half of residents who exhibit "problem" behaviors will be physically restrained, and about one-half will receive psychoactive medications — antipsychotics (neuroleptics), antianxiety agents, and, to a lesser extent, antidepressants. These interventions, however, have potentially serious negative side-effects, and many nurses in nursing facilities report being uncomfortable using only physical restraints and/or psychotropics to manage residents with behavior problems. As a result, there is an increasing trend toward using other interventions and treatments in addressing problem behaviors.

II. TRIGGERS

The MDS trigger items identify two types of residents for whom further review is suggested: residents who exhibit the problem behaviors of wandering, being verbally abusive, being physically aggressive and/or exhibiting socially inappropriate behaviors AND residents who are not currently exhibiting problem behaviors but who are receiving treatment or intervention that might mask or prevent the manifestation of the behavior (e.g. no wandering because restrained).

Review of behavior status is suggested if resident has:

1. One or More Behavior Problems [H3a, H3b, H3c or H3d = 1 or 2]

The possibility of elimination or reduced treatment/intervention is suggested if:

2. Behavior Improved [H7 = 1] AND Use of Antipsychotics OR Antidepressants [O4a or O4c = 1 - 7]

3. Behavior Improved [H7 = 1] AND Use of Trunk OR Limb Restraints [P3b or P3c = 1 or 2]

III. GUIDELINES

The items in this RAP (and in the RAP KEY) begin with those items that help to draw the distinction between serious behavior problems and others that can be more easily accommodated. This is followed by a section on potential causes or factors involved in the manifestation of problem behaviors the resolution of which might reduce or eliminate the behavior(s).

EVALUATING THE SERIOUSNESS OF BEHAVIOR PROBLEMS

The first trigger identifies residents who currently exhibit some type of problem behavior for which additional or new treatment programs may be considered. Not all behaviors need an extensive intervention. Some behaviors neither endanger nor distress the resident or others. For example, many

hallucinations and delusions (when not a sign of a psychosis or an acute condition such as delirium) are benign. Residents with such behavioral manifestations may be accommodated (e.g., tolerated, behavior rechanneled or redirected) within the environment of the nursing facility. Thus, determining whether a particular behavioral manifestation is a problem is an important step and involves determining the nature and severity of the behavior(s) in question and the effects of the behavior(s).

Observing Specific Behavioral Manifestations in the Most Recent 7-Day Period.

- Review to determine the intensity, duration, and frequency of behavior problems over the last 7-day and 14-day periods. Did these change or vary over time?
- Is there a pattern to the behavior manifestations based on observations over a 7-14 day time period? (Consider such factors as time of day, nature of the environment, what the resident and others were doing at the time the problem behavior was manifested.)

Identifying Stability/Change in the Nature of Behavioral Problems.

Identifying patterns of behaviors over time may help clarify the underlying causes of problem behaviors. For example, such a review may reveal a pattern in which a resident's catastrophic reactions typically occur only in the presence of a particular combination of stressors (e.g., a person who can tolerate large groups for singing but not for meals). Similarly, observing a resident over time may reveal that a resident's seemingly random behaviors are associated with particular events (e.g., yelling/screaming associated with objecting to someone changing the channel during a favored television program; wandering associated with the need to toilet). Addressing the causes of such patterns may reduce or eliminate the behavior.

- How did behavior develop over time? Were problem signs evident earlier in the resident's stay or even earlier in the resident's life?
- Has resident experienced recent changes (e.g., movement to a new unit, assignment of new nonlicensed direct care staff to the unit, change in medication, withdrawal from a treatment program, decline in cognitive status)?

Determining the Ways in Which Behavior Problem Impinges on Other Functioning.

Understanding that a behavior can — but does not always — interfere with a resident's self-performance and treatment regimens is useful in considering the need for interventions. This view can also help to ensure that aggressive treatments or interventions (e.g., physical restraints or antipsychotics) are not introduced simply to keep the resident "looking normal."

- Does the behavior endanger the resident? Others? If so, in what ways does it endanger the resident or others?
- Are behavior problems related to daily variations in functional performance? If so, how?
- Does behavior problem lead to resistance to care?
- Does it lead to difficulties dealing with people and coping in the facility?

REVIEW OF POTENTIAL CAUSES OF BEHAVIOR PROBLEMS

Many behaviors, however, are problematic for the resident or others. Many are directly associated with acute health conditions, neurological diseases, or psychiatric conditions. Still others originate in the resident's reaction to external factors, such as psychotropic medications, the use of physical restraints, and stressors in the environment (e.g., loud noises, changes in familiar routines). Identifying the various factors involved in the manifestation of problem behaviors is critical. Such a process may reveal conditions that can be resolved, thus eliminating or reducing the problem behaviors. Further, distinguishing

among potential causes or interrelationships is essential to developing an appropriate care plan (e.g., distinguishing between behaviors originating with neurological condition as contrasted to a psychotic syndrome). Consideration of the items in the Behavior Problem RAP KEY (as well as in related RAPs as indicated) should facilitate this process.

Cognitive Status Interactions

Decision-making ability is a key indicator of effective cognitive skills. Resolving acute confusional state or delirium, a potentially reversible problem, can be critical to behavior management. (See Delirium RAP if a diagnosis or signs and symptoms of delirium are present.)

For many residents with chronic progressive dementia, certain behaviors may continue in spite of remedial treatments or interventions. In some instances, the behaviors will be distressing; however, in many instances behaviors can be accommodated. For example, many residents who wander can be accommodated without restraints in a hazard-free environment. Similarly, the needs and patterns of demanding residents or those with catastrophic reactions can often be anticipated or the most disrupting reactions to the distress alleviated. The Cognitive Loss/Dementia RAP refers to several issues that can be considered for such residents. Thus, that RAP should be completed prior to this RAP on Behaviors for residents who have cognitive problems.

Presence of Disturbed Mood and/or Relationship Interactions

Mood and relationship problems often produce disturbed behaviors. If the underlying problems are resolved, the behavior may lessen or stop.

- Does the resident have an unresolved mood state or relationship problem that may lead to behavior problems (e.g., anxiety disorder and agitation; depression or isolation and verbally abusive behavior)? Refer to the Psychosocial Well-Being RAP and to the Mood State RAP.

- Is there an association among mood state, relationship, and behavior problems?
- Can a cause and effect relationship be determined?
- Does the resident experience a sense of frustration because of rejection by family? If so, does this frustration result in the resident verbally abusing staff or other residents?

Relationship Difficulties That May Affect Behavior

- Does the presence or absence of other persons precipitate an event?
- Was a combative act prompted by paranoid delusions about another's motives or actions?
- Did recent loss of a loved one, change in staff, an intrafacility move, or placement with a roommate with whom the resident cannot communicate lead to disruptive behavior?

Environmental Conditions

A review of the resident's behaviors over time may, as noted earlier, reveal a pattern of behaviors that helps identify the causes of the behaviors. Because environmental conditions often have a profound effect on residents' behaviors, these factors should be given special consideration.

- Are staff sufficiently responsive? Do they recognize stressors for the resident and early warning signs of problem behavior?
- Do staff follow the resident's familiar routines?
- Do noise, crowding or dimly lit areas affect resident's behavior?
- Are other residents physically aggressive?

Illness/Conditions

Sometimes, the onset of acute illnesses and/or the worsening of a chronic illness produces disturbed behaviors. Often identification and treatment of the illness will resolve the problem behavior. In addition, a resident with certain chronic conditions, particularly difficulties in making his/her needs understood or in understanding others may also exhibit problem behaviors that can be eliminated or reduced if more effective methods of communication are adopted by staff and families. Sensory impairments (vision, hearing) may also produce disruptive behaviors that would lessen or disappear if the underlying condition were addressed.

- Can physical health factors close in time to the disturbed behavior be identified (e.g., pain or discomfort from physical conditions such as arthritis, constipation, or headache)?
- Can the observed behavior be associated with an acute illness (e.g., urinary tract infection, other infections, fever, hallucinations/delusions, sleep deprivation, physical trauma, nutritional deficiencies, weight loss, dehydration/insufficient fluids, electrolyte disorder, or acute hypotension)?
- Can the observed behavior be associated with the worsening of a chronic illness (e.g., congestive heart failure, diabetes, psychoses, Alzheimer's disease or other dementia, CVA, or hypoglycemia for a diabetic)?
- What was the role of impaired hearing, vision, or ability to communicate?

Current Treatment Procedures: Positive and Negative Consequences

A number of treatment or management interventions may affect a resident's behavior. Some may have had a positive effect, while others may exacerbate existing problem behaviors — or produce new problems. Both are important to consider in reaching a decision about whether to proceed with a care plan intervention. For example, review the resident's interest in, use of, or participation in psychological treatment program(s). This review will be especially important for residents who have recently experienced improved behavioral status. For some residents and some management programs, continuation of treatments may be central to maintaining their new-found control. In other cases, either the interventions can be normally reduced (at least on a trial basis), or the side effects of the intervention may be so severe that alterations in the treatment regimen should be considered. For example, a drug or restraint program may result in increased confusion and agitation, reduced ADL self-performance, a decline in mood, or a general decrease in the quality of life for the resident. On the other hand, breaking tasks of daily life down into smaller steps that the resident can comprehend and perform may reduce stress and prevent problem behavior.

- Has the resident been reviewed by a psychiatrist, etc.? When?
- Are there indicators that treatments have helped resident gain increased control over life? What were they?
- Can improvement be attributed to an identifiable treatment?
- If behavioral problems have lessened, can medication or behavior management programs be withdrawn?
- Is the onset or change of behaviors associated with the start of (or change in prescription of) a medication(s)?
- Is the behavior associated with the use of a physical restraint (e.g., increased agitation and anger)?
- Has the resident received care in a specially designed therapeutic unit?
- Are there special staff training/support programs that focus on managing behavior problems? What disciplines are involved? How frequent/consistent is the training?
- Has task segmentation been used to maximize resident involvement?

BEHAVIOR PROBLEM RAP KEY

TRIGGERS

Review of behavior status suggested if:

1. One or More Behavior Problems [H3a, H3b, H3c or H3d = 1 or 2]

Review of treatment intervention suggested if:

2. Behavior Improved AND Use of Antipsychotics or Antidepressants [H7 = 1 AND O4a or O4c = 1-7]

3. Behavior Improved and Use of Trunk or Limb Restraints [H7 =1 AND P3b or P3c = 1 or 2]

GUIDELINES

Review and describe problem behavior:

1. **Evaluating the seriousness and stability/change of behavior problems.** Review of intensity, duration, frequency and, if any, pattern of behaviors, their development over time, and their effect on the resident and others [from record].

Review potential causes that could be addressed or resolved:

1. **Cognitive status problems.** Delirium/periodic disordered thinking [B5, J2], Alzheimer's [J1h] or other dementia [J1i], effects of stroke [J1k; from record].
2. **Mood and/or relationship problems.** Unsettled relationships [G2], sad or anxious mood [H1], psychiatric diagnosis [J1p, J1q, J1r].
3. **Environmental conditions.** Staff responses, presence of stressful conditions or physically aggressive resident, departure from resident's normal routines [from record; interviews with staff, resident].
4. **Illness/conditions.** Onset of acute illness, worsening of chronic illness, and other related problems, such as CHF [J1c], pneumonia [J1o], diabetes [J1y], septicemia [J1dd], UTI [J1ee] or other infection [from record], constipation [K1a], fever [K1f], hallucinations/delusions [K1g], pain [K1j], fall with physical trauma to head [K2; from record].
5. **Communication deficits.** Difficulty making self understood [C4] and/or understanding others [C5].
6. **Sensory impairments.** Hearing/visual problems [C1; D1].
7. **Treatment/management procedures.** Antipsychotics, antianxiety/hypnotics, antidepressants [O4], trunk, limb or chair restraints [P3], behavior management program [H5; from record].

RESIDENT ASSESSMENT PROTOCOL: ACTIVITIES

I. PROBLEM

The Activities RAP targets residents for whom a revised activity care plan may be required to identify those residents whose inactivity may be a major complication in their lives. Resident capabilities may not be fully recognized: the resident may have recently moved into the facility or staff may have focused too heavily on the instrumental needs of the resident and may have lost sight of complications in the institutional environment.

Resident involvement in passive as well as active activities can be as important in the nursing home as it was in the community. The capabilities of the average resident have obviously been altered as abilities and expectations change, disease intervenes, situational opportunities become less frequent, and extended social relationships less common. But something that should never be overlooked is the great variability within the resident population: many will have ADL deficits, but few will be totally dependent; impaired cognition will be widespread, but so will the ability to apply old skills and learn new ones; and sense may be impaired, but some type of two-way communication is almost always possible.

For the nursing home, activity planning is a universal need. For this RAP, the focus is on cases where the system may have failed the resident, or where the resident has distressing conditions that warrant review of the activity care plan. The types of cases that will be triggered are: (1) residents who have indicated a desire for additional activity choices; (2) cognitively intact, distressed residents who may benefit from an enriched activity program; (3) cognitively deficient, distressed residents whose activity levels should be evaluated; and (4) highly involved residents whose health may be in jeopardy because of their failure to "slow down."

In evaluating triggered cases, the following general questions may be helpful:

- Is inactivity disproportionate to the resident's physical/cognitive abilities or limitations?
- Have decreased demands of nursing home life removed the need to make decisions, to set schedules, to meet challenges? Have these changes contributed to resident apathy?
- What is the nature of the naturally occurring physical and mental challenges the resident experience in everyday life?
- In what activities is the resident involved? Is he/she normally an active participant in the life of the unit? Is the resident reserved, but actively aware of what is going on around him/her? Or is he/she unaware of surroundings and activities that take place?
- Are there proven ways to extend the resident's inquisitive/active engagement in activities?
- Might simple staff actions expedite resident involvement in activities? For example: Can equipment be modified to permit greater resident access of the unit? Can the resident's location or position be changed to permit greater access to people, views, or programs? Can time and/or distance limitations for activities be made less demanding without destroying the challenge? Can staff modes of interacting with the resident be more accommodating, possibly less threatening, to resident deficits?

II. TRIGGERS

The following sets of MDS based conditions indicate those residents who will require further review, as well as the types of the action that may be required:

1. Revised activity plan suggested if:

   Resident Prefers More or Different Activity Choices [I5 = 1]

2. Revised activity care plan suggested to help resident overcome resident distress when ALL THREE of the following conditions met:

   a. Little/No involvement in activities [I2 = 2 or 3]
   b. One/More of following indicators of Distress:

      - Unsettled relationships in any area [G2a ,G2b, G2c, G2d = Any checked]
      - Sadness over lost roles/status [G3b = checked]
      - Verbal expressions of sad mood [H1a = checked]
      - Withdrawn — as indicated by complete absence of General Activity Preferences [I4j = checked]

   c. Two or more of following indicators of Communication/Cognitive Ability:

      - Short-term memory OK [B2a = 0]
      - At least some decision-making ability [B4 = 0, 1, or 2]
      - Understood/usually understood by others [C4 = 0 or 1]
      - Understood/usually understand others [C5 = 0 or 1]

3. Review of activity care plan to determine if its modification might help to overcome resident distress when either of the following conditions met:

   - -a- and -b- conditions above AND resident is bedfast [E4b = checked]
   - -a- and -b- conditions above AND resident has No or Only One of the four indicators of Communication/Cognitive ability (c. above).

4. Review of activity care plan suggested if: Most involvement in activities [I2 = 0] AND Two or more checked in measurement of time awake [I1a, I1b, I1c = more than 1 checked]

III. GUIDELINES

The followup review looks for factors that may impede resident involvement in activities. Although many factors can play a role, age as a valid impediment to participation can normally be ruled out. If age continues to be linked as a major cause of lack of participation, a staff education program may prove effective remedying what may be overprotective staff behavior.

Is Resident Suitably Challenged, Overstimulated? To some extent, competence depends on environmental demands. When the challenge is not sufficiently demanding, a resident can become bored, perhaps withdrawn, may resort to fault-finding and perhaps even behave mischievously to relieve the boredom. Eventually, such a resident may become less competent because of the lack of challenge. In contrast, when the resident lacks the competence to meet challenges presented by the surroundings, he or she may react with anger and aggressiveness.

- Do available activities correspond to resident lifetime values, attitudes, and expectations?
- Does resident consider "leisure activities" a waste of time — he/she never really learned to play, or to do things just for enjoyment?
- Have the resident's wishes and prior activity patterns been considered by activity and nursing professionals?
- Have staff considered how activities requiring lower energy levels may be of interest to the resident — e.g., reading a book, talking with family and friends, watching the world go by, knitting?
- Does the resident have cognitive/functional deficits that either reduce options or preclude involvement in all/most activities that would otherwise have been of interest to him/her?

Health-related factors that may affect participation in activities. Diminished cardiac output, an acute illness, reduced energy reserves, and impaired respiratory function are some of the many reasons that

activity level may decline. Most of these conditions need not necessarily incapacitate the resident. All too often, disease-induced reduction of activity may lead to progressive decline through disuse, and further decrease in activity levels. However, this pattern can be broken: many activities can be continued if they are adapted to require less exertion or if the resident is helped in adapting to a lost limb, decreased communication skills, new appliances, and so forth.

- Is resident suffering from an acute health problem?
- Is resident hindered because of embarrassment/unease due to the presence of health-related equipment (tubes, oxygen tank, colostomy bag, wheelchair)?
- Has the resident recovered from an illness? Is the capacity for participation in activities greater?
- Has an illness left the resident with some disability (e.g., slurred speech,necessity for use of cane/walker/wheelchair, limited use of hands)?
- Does resident's treatment regimen allow little time or energy for participation in preferred activities?

Recent decline in resident status — cognition, communication, function, mood, or behavior. When pathologic changes occur in any aspect of the resident's competence, the pleasurable challenge of activities may narrow. Of special interest are problematic changes that may be related to the use of psychoactive medications. When residents or staff overreact to such losses, compensatory strategies may be helpful — e.g., impaired residents may benefit from periods of both activity and rest; task segmentation can be considered; or available resident energies can be reserved for pleasurable activities (e.g., using usual stamina reserves to walk to the card room rather than to the bathroom) or activities that have individual significance (e.g., sitting unattended at a daily prayer service rather than at group activity program).

- Has staff or the resident been overprotective? Or have they misread the seriousness of resident cognitive/functional decline? In what ways?
- Has the resident retained skills, or the capacity to learn new skills, sufficient to permit greater activity involvement?
- Does staff know what the resident was like prior to the most recent decline? Has the physical/other staff offered a prognosis for the resident's future recovery, or change of continued decline?
- Is there any substantial reason to believe that the resident cannot tolerate or would be harmed by increased activity levels? What reasons support a counter opinion?
- Does resident retain any desire to learn or master a specific new activity? Is this realistic?
- Has there been a lack of participation in the majority of activities which he/she stated as preference areas, even though these types of activities are provided?

Environmental factors. Environmental factors include recent changes in resident location, facility rules, season of the year, and physical space limitations that hinder effective resident involvement.

- Does the interplay of personal, social, and physical aspects of the facility's environment hamper involvement in activities? How might this be addressed?
- Are current activity levels affected by the season of the year or the nature of the weather during the MDS assessment period?
- Can the resident choose to participate in or to create an activity? How is this influenced by facility rules?
- Does resident prefer to be with others, but the physical layout of the unit gets in the way? Do other features in the physical plant frustrate the resident's desire to be involved in the life of the facility? What corrective actions are possible? Have any been taken?

Changes in availability of family/friends/staff support. Many residents wil experience not only a change in residence but also a loss of relationships. When this occurs, staff may wish to consider ways for a resident to develop a supportive relationship with another resident, staff member or volunteer that may increase the desire to socialize with others and/or to attend and/or paticipate in activities with this new friend.

- Has a staff person who has been instrumental in involving a resident in activities left the facility/ been reassigned?
- Is a new member in a group activity viewed by a resident as taking over?
- Has another resident who was a leader on the unit died or left the unit?
- Is resident shy, unable to make new friends?
- Does resident's expression of dissatisfaction with fellow residents indicate he/she does not want to be a part of an activities group?

Possible Confounding Problems to be Considered for Those Now Actively Involved in Activities. Of special interest are cardiac and other diseases that might suggest a need to slow down.

ACTIVITIES RAP KEY

TRIGGERS

1. Revised activity plan suggested if: Resident Prefers More or Different Activity Choices [I5 = 1]

2. Revised activity plan suggested to help resident overcome distress if ALL of the following:
   a. Little or no involvement in activities [I2 = 2 or 3]
   b. Distress: Any indicators of unsettled relationships [G2a, G2b, G2c, G2d = any checked] OR Sadness over lost roles/status [G3b = checked] OR Verbal expressions of sad mood [H1a = checked] OR Absence of general activity preferences [I4j = checked]
   c. Two or more indicators of intact Communication and/or Cognitive Ability:
      — Short-term memory OK [B2a = 0]
      — Some decision-making ability [B4 = 0, 1 or 2]
      — Understood/usually understood by others [C4 = 0 or 1]
      — Understands/usually understands others [C5 = 0 or 1]

3. Revised activity plan suggested to determine whether modifications might help resident overcome distress if all of the following:
   a. Little or no involvement in activities [I2 = 2 or 3]
   b. Distress: Two or more indicators of unsettled relationships [G2a, G2b, G2c, G2d = two or more checked] OR Sadness over lost roles/status [G3b = checked] OR Verbal expressions of sad mood [H1a = checked] OR Absence of general activity preferences [I4j = checked]
   c. Resident is bedfast [E4b = checked] OR None or Only One indicator of intact Communication and/or Cognitive Ability:
      — Short-term memory OK [B2a = 0]
      — Some decision-making ability [B4 = 0, 1 or 2]
      — Understood/usually understood by others [C4 = 0 or 1]
      — Understands/usually understands others [C5 = 0 or 1]

4. Review of activity plan suggested if: Resident has Most time involvement in activities [I2 = 0] AND is awake all or most of time [I1a, I1b, I1c = more than 1 checked]

GUIDELINES

Problems to be considered as activity plan is developed:

1. Cognitive status [B]
2. Unstable/acute health conditions [K3]
3. Number of treatments received [P1]
4. Time in Facility [INTAKE I2]
5. Use of psychoactive medications [04]

Confounding problems to be considered:

Cardiac dysrhythmias [J1b], Hypertension [J1d], CVA [J1k]

RESIDENT ASSESSMENT PROTOCOL: FALLS

I. PROBLEM

Falls are a common source of serious injury and death among the elderly. Each year, 40% of nursing home residents fall. Up to 5% of falls result in fractures; an additional 15% result in soft tissue injuries. Moreover, most elders are afraid of falling, and this fear can limit their activities.

In about one-third of falls, a single potential cause can be identified; in two-thirds, more than one risk factor will be involved. Risk factors that are internal to the resident include the resident's physical health and functional status. External risk factors include medication side effects, the use of appliances and restraints, and environmental conditions. Identification and assessment of those who have fallen and those who are at high risk of falling are the goals of this RAP.

II. TRIGGERS

Residents who have fallen at least once are at high risk for future falls, unless underlying causes of the falls can be identified and resolved. Thus, review is suggested if there is potential for additional falls.

1. Fell in Past 30 Days [K2a = checked]

2. Fell in Past 31-180 Days [K2b = checked]

Identifying and addressing risk factors is also an important preventive step for individuals who are at very high risk of falls but have not yet fallen. The resident who has not yet had a fall is at highest risk when all three conditions listed in the third trigger are met. Elderly persons with all three risks have a nearly certain probability of falling within six months, unless risks can be reduced. Thus, review is suggested for a resident with high risk for initial falls:

3. No Indication of Fall [K2a, K2b = not checked] AND TWO OR MORE of following:
   - Use of Any Psychoactive Drugs [O4a, O4b or O4c = 1-7]
   - Impaired Sense of Balance [E4a, E4j = any checked]
   - Bedfast or Hemi/Quadriplegia or Poor Leg Control [E4b, E4d, E4e, E4h = any checked]

III. GUIDELINES

To reach a decision on a care plan, begin by reviewing whether one or more of the major risk factors listed on the RAP KEY are present. Clarifying information on the nature of the risk or type of issue to be considered for the RAP KEY items follows.

Is There a Previous History of Falls, or was the Fall an Isolated Event?

Refer to the MDS, reports of the family, and incident reports.

Internal Risk Factors

Review to determine whether the items listed on the RAP KEY under the following headings are present. Each of these represents an underlying health problem or condition that can cause falls and may be addressed to prevent future falls.

- Cardiovascular.
- Neuromuscular/functional.
- Orthopedic.
- Perceptual.
- Psychiatric or cognitive.

External Risk Factors.

These risk factors can often be modified to reduce the resident's risk of falls.

- Medications. Certain drugs can produce falls by causing related problems (hypotension, muscle rigidity, impaired balance, other extrapyramidal side effects [e.g., tremors], and decreased alertness). These drugs include: antipsychotics, antianxiety/hypnotics, antidepressants, cardiovascular medications, and diuretics.

- Were these medications administered prior to or after the fall?
- If prior to the fall, how close to it were they first administered?

- Appliances and Devices.

- If the resident who falls (or is at risk of falling) uses an appliance, observe his/her use of the appliance for possible problems.
- Review the MDS and the resident's record to determine whether restraints were used prior to the fall and might have contributed to the fall (e.g., causing a decline function or an increase in agitation).

- Environmental/Situational Hazards. Many easily modifiable hazards (e.g., poor lighting, patterned carpeting, poorly arranged furniture) in the environment may cause falls both in relatively healthy and in frail elderly residents.

For Those Who Have Fallen Previously, Review the Circumstances Under Which the Fall Occurred.

Attempt to gather information on most recent fall. Needed information includes:

- Time of day, time since last meal.
- Was resident doing usual or unusual activity?
- Was he/she standing still or walking? Reaching up or down? Not reaching?
- Was resident in a crowd of people? Responding to bladder/bowel urgency?
- Was there glare or liquid on floors? Foreign objects in walkway? New furniture placement or other changes in environment?
- Is there a pattern of falls in any of the above circumstances?
- If you know what the resident was doing during the fall, have her/him perform that activity and observe (protect resident to ensure that a fall does not occur during this test).

Take necessary vital signs:

- At time of fall, obtain supine and upright blood pressure and heart rate, IF the resident does not have a serious injury such as a fracture of the hip or lower extremity.
- When reproducing circumstances of a fall (e.g., if the resident fell 10 minutes after eating a large meal, take vital signs 10 minutes after the residents eats).
- Measure blood pressure and heart rate when the resident is supine AND 1 and 3 minutes after standing; note temperature and respiratory rate.

For Residents At Risk of Future Falls, Review Environmental/Situational Factors to Determine Whether Modifications Are Needed

- Observe resident's usual pattern of interaction with his/her environment — the way he/she gets out of bed, walks, turns, gets in and out of chairs, uses the bathroom. Observations may reveal environmental solutions to prevent falls.
- Observe him/her getting out of bed, walking 20 feet, turning in a 360° circle, standing up from a chair without pushing off with his/her arms (fold arms in front), and using the bathroom.

FALLS RAP KEY

TRIGGERS

Potential for ADDITIONAL FALLS suggested if:

1. Fell in Past 30 Days **[K2a = checked]**
2. Fell in Past 31-180 Days **[K2b = checked]**

High Risk for INITIAL FALL suggested if:

3. No Indications of Falls **[K2a, K2b = not checked] AND TWO OR MORE** of the following:
   - — Use of any Psychotropic Drugs **[O4a, O4b or O4c = 1-7]**
   - — Impaired Sense of Balance **[E4a, E4j = any checked]**
   - — Bedfast or Hemi/Quadriplegia or Poor Leg Control **[E4b, E4d, E4e, E4h = any checked]**

GUIDELINES

Review risk factors for falls to identify problems that may be addressed/resolved:

1. **Multiple Falls. [K2a, K2b]**

2. **Internal Risk Factors.**
   a. Cardiovascular: Cardiac dysrhythmia **[J1b]**, Hypotension **[J1e]**, Syncope **[K1m]**
   b. Neuromuscular/functional: CVA **[J1k]**, Parkinson's **[J1m]**, Chronic/acute condition makes unstable **[K3]**, Hemiplegia **[E4d]**, Loss of leg or arm movement **[E4f, E4h]**, Unsteady gait **[E4i]**, Incontinence **[F1]**, Decline in functional status **[E8]**,Seizure disorder **[J1cc]**
   c. Orthopedic: Arthritis **[J1w]**, Joint pain **[K1i]**, Osteoporosis **[J1bb]**, Fracture of the hip **[K2c]**
   d. Perceptual: Impaired hearing **[C1]**, Dizziness/vertigo **[K1c]**
   e. Psychiatric or cognitive: Decline in cognitive skills **[B6]**, Alzheimer's **[J1h]**, Other Dementia **[J1i]**, Delirium **[B5]**, Manic depressive **[J1r]**

3. **External Factors.**
   a. Medications: Psychotropic meds**[O4a, O4b, O4c]** cardiovascular meds and diuretics **[from record]**
   b. Appliances/devices (time started): pacemaker/walker/cane **[E5a; from record]**; physical restraints **[P3b, P3c, P3d]**
   c. Environmental/situational hazards and, if relevant, circumstances of recent fall(s): glare; poor illumination; slippery floors; uneven surfaces; patterned carpets; objects in walkway; new arrangement of objects; recent move into/within facility; proximity to aggressive resident; time of day; time since meal; type of activity; standing still/walking; in a crowded area; reaching/not reaching; responding to bladder/bowel urgency

RESIDENT ASSESSMENT PROTOCOL: NUTRITIONAL STATUS

I. PROBLEM

Malnutrition is not a response to normal aging; it can arise from many causes. Its presence may signal the worsening of a life-threatening illness, and it should always be seen as a dramatic indicator of the resident's risk of sudden decline. Severe malnutrition is, however, relatively rare, and this RAP focuses on signs and symptoms that suggest that the resident may be at risk of becoming malnourished. For many who are triggered, there will be no obvious, outward signs of malnutrition. Prevention is the goal, and early detection is the key.

Early problem recognition can help to ensure appropriate and timely nutritional intervention. For many residents, simple adjustments in feeding patterns may be sufficient. For others, compensation or correction for food intake problems may be required.

Within a nutrition program, food intake is best accomplished via oral feedings. Tube (enteral) feeding is normally limited to residents who have a demonstrated inability to orally consume sufficient food to prevent major malnutrition or weight loss. Parenteral feeding is normally limited to life-saving situations where both oral and enteral feeding is contraindicated or inadequate to meet nutrient needs. Oral feeding is clearly preferred. Depending on the nature of the problem, residents can be encouraged to use finger foods; to take small bites; to use the tongue to move food in the mouth from side to side; to chew and swallow each bite; to avoid food that causes mouth pain, etc. Therapeutic programs can also be designed to review for the need for adaptive utensils to compensate for problems in sucking, closing lips, or grasping utensils; to help the confused resident maintain a fixed feeding routine, etc.

II. TRIGGERS

Nutritional problem suggested if any of following observed:

1. Nutrition Deficiency ICD codes [J2 = 260, 261, 262, 263, 263.0, 263.1, 263.2, 263.8 or 263.9]

2. Weight Loss — Significant unintentional weight loss in the past month (5% or more) or six months (10% or more) is a major risk indicator. [L2c = 1]

3. Taste Alterations [L3a = checked]. Some diseases can disrupt the sense of tastes, and this can affect food intake. For example, some residents undergoing cancer therapy may find protein-like foods to be repugnant; other foods may taste bitter, overly sweet, or have no taste at all.

4. Hunger [L3d = checked]. In the absence of weight loss and in the presence of well-balanced and adequate meals, hunger is inconsistent with a good quality of life. In the presence of weight loss or in the absence of a well designed nutrition program at the facility, hunger can be an early indicator of a deficient food service program for this resident.

5. Parenteral/IV feeding [L4a = checked]. Tube or parenteral feedings may be essential for the resident who is unable to swallow oral nutriment without choking or aspirating (as in cases of Parkinson's disease and amyotrophic lateral sclerosis [ALS]), or if staff have not been able to maintain or improve the resident's nutritional status through oral intake alone.

6. Mechanically altered diet, syringe (oral) feeding, or therapeutic diet [L4c, L4d, L4e = any checked]. An overly managed diet may cause malnutrition because of the resident's refusal to eat a narrow group of selected foods or because of disinterest in the available food. The resident on such a diet must also be monitored to ensure that there is no unintended weight loss.

7. Leaves 25% of food uneaten at most meals [L3e = checked]. Assuming that portions are not excessive, this is an important indicator of the need to identify the cause of the problem. Several factors may account for this pattern: poor appetite secondary to mental or confusional problems or other disease (e.g., Alzheimer's disease, confusion, depression, cancer, food intolerances, gastroparesis secondary to diabetes mellitus, constipation); food quality may be questionable; resident may not be permitted to state food preferences; mealtimes may be poorly spaced; or quality of the food service andwr dining experience may be unacceptable.

8. Presence of pressure ulcers [N2 = 1, 2, 3 or 4]. Malnutrition and weight loss can cause pressure ulcers; pressure ulcers, in turn, can cause malnutrition. Stage II, III, and IV pressure ulcers and major stasis ulcers increase the resident's requirement for calories, protein, and fluid, and, to a lesser extent, vitamin C, zinc, and most other nutrients.

III. GUIDELINES

RESIDENT FACTORS THAT MAY IMPEDE ABILITY TO CONSUME FOOD

Chewing problems

Residents with oral abscesses, ill-fitting dentures, teeth that are broken, loose, carious or missing, or those on mechanically altered diets frequently cannot eat enough food to meet their calorie and other nutrient needs. Significant weight loss can, in turn, result in poorly fitting dentures and infections that can lead to more weight loss.

Swallowing problems

Swallowing problems arise in several contexts: the long-term result of chemotherapy, radiation therapy, or surgery for malignancy (including head and neck cancer); fear of swallowing because of COPD/emphysema/asthma; stroke; hemiplegia or quadriplegia; Alzheimer's disease or other dementia; and ALS.

Reduced ability to feed self

Reduced ability to feed self can be due to arthritis, contractures, partial or total loss of voluntary arm movement, hemiplegia or quadriplegia, vision problems, inability to perform activities of daily living without significant assistance, and coma.

Possible Medical Causes

Numerous conditions and diseases can result in increased nutrient requirements (calories, protein, vitamins, minerals, water, and fiber) for residents. Among these are cancer and cancer therapies, Parkinson's disease with tremors, septicemia, pneumonia, gastrointestinal influenza, fever, vomiting, diarrhea and other forms of malabsorption including excessive nutrient loss from ostomy, burns, pressure ulcers, COPD/emphysema/asthma, Alzheimer's disease with concomitant pacing or wandering, and hyperthyroidism.

Malignancy and nutritional consequences of chemotherapy, radiation therapy/surgery. For the resident undergoing therapy aimed at remission or cure, aggressive nutritional support is necessary to achieve the goal; for the resident with incurable malignancy who is undergoing palliative therapy or is not responding to curative therapy, aggressive nutritional support is often medically inappropriate.

Have the wishes of the resident and family concerning aggressive nutritional support been ascertained?

Anemia (nutritional deficiency, not malnutrition). A hematocrit of less than 41% is predictive of increased morbidity and mortality for residents.

Are shortness of breath, weakness, paleness of mucous membranes and nailbeds, and/or clubbing of nails present?

Chronic COPD increases calorie needs and can be complicated by an elevated fear of choking when eating or drinking.

Shortness of breath (frequently seen with congestive heart failure, hypertension, edema, and COPD/emphysema/asthma). This is another condition that can cause a fear of eating and drinking, with a consequent reduction in food intake.

Constipation/intestinal obstruction/pain can inhibit appetite.

Drug-induced anorexia often causes decreased or altered ability to taste and smell foods.

Delirium.

PROBLEMS TO BE REVIEWED FOR CAUSAL LINK

Mental problems.

Dementia, depression, paranoid fears that food is poisoned, and mental retardation can all lead to anorexia, resulting in significant amounts of uneaten food and subsequent weight loss.

Behavior patterns and problems.

Residents who are fearful, who pace or wander, withdraw from activities, cannot communicate, or refuse to communicate, often refuse to eat or will eat only a limited variety and amount of foods. Left untreated, behavior problems that result in refusal to eat can cause significant weight loss and subsequent malnutrition.

- Does resident use food to gain staff attention?
- Is resident unable to understand the importance of eating?

Inability to Communicate.

For most residents, enjoying food and mealtimes crucially affects quality of life. Inability to make food and mealtime preferences known can result in a resident eating poorly, losing weight, and being unhappy. Malnutrition due to poor communication usually indicates substandard care. Early correction of communication problems, where possible, can prevent malnutrition.

- Does the area in which meals are served lend itself to socialization among residents? Is it a place where social communication can easily take place?
- Has there been a failure to provide adequate staff and/or adequate time in feeding or assisting residents to eat?
- Has there been a failure to recognize the need and supply adaptive feeding equipment for residents who can be helped to self-feed with such assistance?
- Is the resident capable of telling staff that he/she has a problem with the food being served — e.g., finds it to be unappetizing or unattractively presented?

NUTRITIONAL STATUS RAP KEY

TRIGGERS

Malnutrition problem suggested if:

1. Nutritional Deficiency [J2 = 260, 261, 262, 263, 263.1, 263.2, 263.8 or 263.9]
2. Weight loss [L2c = 1]
3. Taste alterations [L3a = checked]
4. Hunger [L3d = checked]
5. Parenteral/IV feeding [L4a = checked]
6. Mechanically altered diet, syringe (oral feeding), or therapeutic diet [L4c, L4d, L4e = any checked]
7. Leaves 25% or more food uneaten at most meals [L3e = checked]
8. Pressure sores [N2 = 1, 2, 3 or 4]

GUIDELINES

Factors that impede ability to consume food:

1. Chewing problems [L1a]
2. Swallowing problems [L1b]
3. Reduced ability to feed self [E2e]
4. Possible medical causes: Cancer [J1x], cancer therapies [P1a, P1b], septicemia [J1dd], pneumonia [J1o], fever [K1f], diarrhea [K1b], ostomy losses [F3h], anemia [J1v], shortness of breath [K1l], and nutrient/medication interactions (e.g., antipsychotics, cardiac drugs, diuretics, laxatives, antacids) [from record]

Problems to be reviewed for possible relationship to nutritional status problem:

1. Mental problems: fear that food is poisoned [from record; H1a, H1e], Alzheimer's [J1h], other dementia [J1i], anxiety disorders [J1p], depression [J1q]
2. Behavior problems: Slowness in self feeding [E7c], pacing [H1c], wandering [H3a], failure to eat and withdrawal from activities [H1d], throwing food [H3d]
3. Inability to communicate: Comatose [B1], unable to make food and mealtime preferences known [C3f], and difficulty making self understood [C4], difficulty understanding others [C5], aphasia [J1j]
4. Amputation [E4k].

RESIDENT ASSESSMENT PROTOCOL: FEEDING TUBES

I. PROBLEM

The efficacy of tube feedings is difficult to assess. When the complications and problems are known to be high and the benefits difficult to determine, the efficacy of tube feedings as a long-term treatment for individuals requires careful evaluation.

Where residents have difficulty eating and staff have limited time to assist them, insertion of feeding tubes for the convenience of nursing staff is an unacceptable rationale for use. The only rationale for such feedings is demonstrated medical need to prevent malnutrition or dehydration. Even here, all possible alternatives should be explored prior to using such an approach for long-term feeding, and restoration to normal feeding should remain the goal throughout the treatment program.

Use of nasogastric and nasointestinal tubes can result in many complications including, but not limited to: agitation, self-extubation (removal of the tube by the patient), infections, aspiration, unintended misplacement of the tube in the trachea or lungs, inadvertent dislodgement, and pain.

This RAP focuses on reviewing the status of the resident using tubes. The Nutritional Status and Dehydration/Fluid Maintenance RAPs focus on resident needs that may warrant the use of tubes. To help clarify the latter issue, the following guidelines indicate the type of review process required to ensure that tubes are used in only the exceptional and acceptable situation. As a general rule, residents unable to swallow or eat food and unlikely to eat within a few days due to physical problems in chewing or swallowing (e.g., stroke or Parkinson's disease) or mental problems (e.g., Alzheimer's depression) should be assessed regarding the need for a nasogastric or nasointestinal tube or an alternative feeding method. In addition, if normal caloric intake is substantially impaired with endotracheal tubes or a tracheostomy, a nasogastric or nasointestinal tube may be necessary. Finally, tubes may be used to prevent meal-induced hypoxemia (insufficient oxygen to blood), which occurs with patients with COPD or other pulmonary problems that interfere with eating (e.g., use of oxygen, bronchodilators, tracheostomy, endotracheal tube with ventilator support).

1. Assess causes of poor nutritional status that may be identified and corrected as a first step in determining whether or not a nasogastric or nasointestinal tube is necessary (see Nutritional Status RAP).

   (a) Eating, swallowing and chewing disorders can negatively affect nutritional status (low weight in relation to height, weight loss, serum albumin level, and dietary problems) and the initial task is to determine the potential causes and period of time such problems are expected to persist. Recent lab work should also be reviewed to determine if there are electrolyte imbalances, fluid volume imbalances, BUN, creatinine, low serum albumin, and low serum protein levels before treatment decisions are made. Laboratory measurement of sodium and potassium tell whether or not an electrolyte imbalance exists. Residents taking diuretics may have potassium losses requiring potassium supplements. If these types of imbalances cannot be corrected with oral nutrition and fluids or intravenous feedings, then a nasogastric or nasointestinal tube may be considered.

   (b) Determine whether fluid intake and hydration problems are short-term or long-term.

   (c) Review for gastrointestinal distention, gastrointestinal hemorrhage, increased gastric acidity, potential for stress ulcers, and abdominal pain.

   (d) Identify pulmonary problems (e.g., COPD and use of endotracheal tubes, tracheostomy, and other devices) that interfere with eating or dehydration.

(e) Review for mental status problems that interfere with eating such as depression, agitation, delirium, dementia, and mood disorders.

(f) Review for other problems such as cardiovascular disease or stroke.

2. Determine the need for such a tube. Examine alternatives.

Alternatives to nasogastric and nasointestinal tubes should always be considered. Intravenous feedings should be used for short-term therapy as a treamtent of choice or at least a first option. Jejunostomy may have some advantages for long-term therapy, although may increase the risk for infection. A gastrostomy is better tolerated by agitated patients and those requiring prolonged therapy (more than 2 weeks). Gastrostomy with bolus feedings is preferable to nasogastric or nasointestinal tubes for long-term therapy for comfort reasons and to prevent the dislodgement and complications associated with nasal tubes. It is also less disfiguring as it can be completely hidden under clothing when not in use.

3 Assure informed consent and right to refuse treatment. Informed consent is essential before inserting a nasogastric or nasointestinal tube. Potential advantages disadvantages, and potential complications need to be discussed. Resident preferences are normally given the greatest weight in decisions regarding tube feeding. State laws and judicial decisions must also be taken into account. If the resident is not competent to make the decision, a durable power of attorney or living will may determine who has the legal power to act on the resident's behalf. Where the resident is not competent or no power of attorney is in effect, the physician may have the responsibility for making a decision regarding the use of tube feeding. In any case, when illness is terminal and/or irreversible, technical means of providing fluids and nutrition can represent extraordinary rather than ordinary means of prolonging life.

4. Monitor for complications and correct/change procedures and feedings when necessary. Periodic changing of the nasogastric and intestinal tubes is necessary, although the appropriate interval for changing tubes is not clear. Assessment and determination of continued need should be completed before the tube is reinserted. Specific written orders by the physician are required.

Individuals at risk of pulmonary aspiration (such as those with altered pharyngeal reflexes or unconsciousness) should be given a nasointestinal tube rather than a nasogastric tube, or other medical alternative. Those at risk for displacement of a nasogastric tube, such as those with coughing, vomiting, or endotracheally intubated, should also be given a nasointestinal tube rather than a nasogastric tube or other medical alternative.

II. TRIGGER

1. Tubes currently in use. [L4b = checked]

III. GUIDELINES

COMPLICATIONS OF TUBE FEEDING

To reiterate, serious potential negative consequences include agitation, depression, mood disorders, self-extubation (removal of the tube by the patient), infections, aspirations, misplacement of tube in trachea or lungs, pain, and tube dysfunction. Abnormal lab values can be expected and should be reviewed.

Infection in the trachea or lungs. Gastric organisms grow as a result of alkalizing (raising) the gastric pH. Gastric colonization results in transmission of gastric organisms to the trachea and the development of nosocomial pneumonia. In one study, colonization in 89% of patients within 4 days in ventilated patients with enteral nutrition was found with nosocomial respiratory infection in 62% of the patients studied. Symptoms of respiratory infections to be monitored include coughing, shortness of breath, fever, chest pain, respiratory arrest, delirium, confusion, and seizures.

Aspiration of gastric organisms into the trachea and the lungs. The incidence is difficult to determine, but most studies suggest it is relatively high.

Inadvertent respiratory placement of the tube is the most common side effect of tube placement. In one study, 15% of small-bore nasogastric tubes and 27-50% of nasointestinal tubes were found to be out of their intended position upon radiographic examination without any other evidence of displacement. Respiratory placement can occur in any patient, but is most likely in those who are neurologically depressed, heavily sedated, unable to gag, or endotracheally intubated. Detecting such placement is difficult; the following comments address this issue:

- Radiologic detection is the most definitive means to detect tube displacement. Under this procedure, pneumothorax and inadvertent placement in the respiratory tract can be avoided by first placing the feeding tube in the esophagus with the tip above the xiphoid process and then securing the tube and confirming placement with a chest x-ray. Then the tube may be advanced into the stomach and another x-ray taken to confirm the position. The stylet can then be removed and tube feeding begun. Unfortunately, nursing homes are highly unlikely to have appropriate radiological technology and it is normally unreasonable to expect them to make arrangements to have patients transported to available radiology.

- pH testing of gastric aspirates to determine whether a tube is in the gastric, intestine, or the respiratory area is a promising method for testing feeding tube placement. However, parameters for various secretions from the three areas have not yet been clinically defined.

- Aspiration of visually recognizable gastrointestinal secretions, although a frequently used method of determining placement of tubes, is of questionable value as the visual characteristics of secretions can be similar to those from the respiratory tract.

- Ausculatory method: although "shooshing" or gurgling sounds can indicate placement in the stomach, the same sounds can occur when feeding tubes are inadvertently placed in the pharynx, esophagus and respiratory tract. Although small-bore tubes make the ausculatory method more difficult to use, large-bore nasogastric tubes may also be placed inadvertently in the respiratory tract producing false gurgling.

Inadvertent dislodgement of the tubes. Nonweighted tubes appear to be more likely to be displaced than weighted tubes (with an attached bolus of mercury or tungsten at the tip).

Other complications include: pain, epistaxis, pneumothorax, hydrothorax, nasal alar necrosis, nasapharyngitis, esophagitis, eustachitis, esophageal strictures, airway obstruction, pharyngeal and esophageal perforations. Symptoms of respiratory infections are to be reviewed.

Complications of gastric tract infections and gastric problems. Symptoms include abdominal pain, abdominal distention, stress ulcers, and gastric hemorrhage. There is also a need to monitor for complications including diarrhea, nausea, abdominal distention, and asphyxia. Such complications signal the need for a change in the type of formula or diagnostic work for other pathology.

Complications for the cardiovascular system. Symptoms of cardiac distress or arrest to be monitored include chest pain, loss of heart beat, loss of consciousness, and loss of breathing.

Periodic tests to assure positive nitrogen balance during enteral feeding. Where positive balance is not achieved, a formula with high nitrogen density is needed. The absorptive capacity is impaired in many elderly patients so that serum fat and protein should be monitored. Effective nutrients should result in positive nitrogen balance, maintenance or increases in body weight, triceps skinfold and midarm muscle circumference maintenance, total iron binding capacity maintenance, and serum urea nitrogen level maintenance. Caloric intake and resident weight should be monitored on a regular basis.

FEEDING TUBES RAP KEY

TRIGGERS

Feeding Tube present [L4b = checked]

GUIDELINES

Factors that may impede removal of tube:

1. Comatose [B1]
2. Failure to eat [H1d] AND Resists assistance in eating [H4b; from record]
3. Diagnoses: CVA [J1k], gastric ulcers, gastric bleeding [J2]
4. Chewing problem [L1a]
5. Swallowing problem [L1b]
6. Mouth pain [L1c]
7. Length of time feeding tube has been in use [from record]

Potential complications of tube feeding:

1. Diagnostic conditions: delirium [B5], agitation [H1], anxiety [J1p], depression [J1q], lung aspirations [K1k]
2. Self-extubation (removal of tube by resident) [from record]
3. Limb restraints in use to prevent self-extubation [P3c]
4. Infections in lung/trachea: fever [K1f], shortness of breath [K1l], pneumonia [J1o], placement or dislodgement of tube into lung [from exam, record]
5. Side-effects of enteral feeding solutions: constipation [K1a], diarrhea [K1b], fecal impaction [K1e], abdominal distention or pain [exam], dehydration [L3b]
6. Respiratory problems: pneumothorax, hydrothorax, airway obstruction, acute respiratory distress, respiratory distress [J2; from observation, record]
7. Cardiac distress/arrest: chest pain, loss of heart beat, loss of consciousness, loss of breathing [from observation, record]
8. Abnormal lab values [P2]

RESIDENT ASSESSMENT PROTOCOL: DEHYDRATION/FLUID MAINTENANCE

I. PROBLEM

On average, one can live only four days without water. Water is necessary for the distribution of nutrients to cells, elimination of wastes, regulation of body temperature, and countless other complex processes.

Dehydration is a condition in which water or fluid loss (output) far exceeds fluid intake. The body becomes less able to maintain adequate blood pressure, deliver sufficient oxygen and nutrients to the cells, and rid itself of wastes. Many distressing symptoms can originate from this conditions, including:

- Dizziness on sitting/standing (blood pressure insufficient to supply oxygen and glucose to brain);
- Confusion or change in mental status (decreased oxygen and glucose to brain);
- Decreased urine output (kidneys conserve water);
- Decreased skin turgor, dry mucous membranes (symptoms of dryness);
- Constipation (water insufficient to rid body of wastes); and
- Fever (water insufficient to maintain normal temperature).

Other possible consequences of dehydration include: decreased functional ability, predisposition to falls (because of orthostatic hypotension), fecal impaction, predisposition to infection, fluid and electrolyte disturbances, and ultimately death.

Nursing home residents are particularly vulnerable to dehydration. It is often difficult or impossible to access fluids independently; the perception of thirst can be muted; the aged kidney can have a decreased ability to concentrate urine; and acute and chronic illnesses can alter fluid and electrolyte balance.

Unfortunately, many symptoms of this condition do not appear until significant fluid has been lost. Early signs and symptoms tend to be unreliable and nonspecific; staff will often disagree about the clinical indicators of dehydration for specific cases; and the identification of the most crucial symptoms of the condition are most difficult to identify among the aged. Early identification of dehydration is thus problematic, and the goal of this RAP is to identify any and all possible high risk cases, permitting the introduction of programs to prevent the condition from occurring.

When dehydration is in fact observed, treatment objectives focus on restoring normal fluid volume, preferably orally. If the resident cannot drink between 2500-3000 cc's every 24 hours, water and electrolyte deficits can be made up via other routes. Fluids can be administered intravenously, subcutaneously, or by tube until resident is adequately hydrated and can take and retain sufficient fluids orally.

II. TRIGGERS

Dehydration suggested if either of following conditions apply:

1. Insufficient fluid/dehydration — actual fluid deficit [L3b = checked]

2. Two or more of the following are present:

   - Deteriorated cognitive status [B6 = 2]
   - Deteriorated ADL status [E8 = 2]
   - Failure to eat or take medications [H1d = checked]
   - UTI [J1ee = checked]
   - Dehydration diagnosis [J2 = 276.5]
   - Diarrhea, fever, or internal bleeding [K1b, K1f, K1h = any checked]
   - Dizziness/vertigo [K1c = checked]
   - Vomiting [K1n = checked]
   - Recent weight loss [L2c = 1]
   - Did not consume all liquids provided [L3c = checked]
   - Leaves 25%+ food uneaten [L3e = checked]
   - Parenteral/IV or feeding tube [L4a, L4b = any checked]
   - Taking diuretic [from record]

III. GUIDELINES

RESIDENT FACTORS THAT MAY IMPEDE ABILITY TO MAINTAIN FLUID BALANCE

Moderate/severely impaired decision-making Ability.

- Has there been a recent unexplainable change in mental status?
- Does resident seem unusually agitated or disoriented?
- Is resident delirious?
- Is resident comatose?

Comprehension/Communication problems.

- Does dementia, aphasia or other condition seriously limit resident's understanding of others, or how well others can understand the resident?

Body control problems.

- Does resident require extensive assistance to transfer?
- Does resident freely move on the unit?
- Has there been recent ADL decline?

Hand dexterity problem.

- Can resident grasp cup?

Swallowing problems.

- Does resident have mouth sore(s)/ulcer(s)?
- Does resident refuse food, meals, meds?
- Can resident drink from a cup or suck through a straw?

Use of Parenteral/IV.

- Are feeding tubes in use?

RESIDENT DEHYDRATION RISK FACTORS

Dehydration risk factors can be categorized in terms of whether they decrease fluid intake or increase fluid loss. The higher the number of factors, the greater the risk of dehydration. Ongoing fluid loss through the lungs and skin occurs at a normal rate of approximately 500 cc/day and increases with rapid respiratory rate and sweating. Therefore, decreased fluid intake for any reason can lead to dehydration.

Purposeful Restriction of Fluid Intake.

- Has there been a decrease in thirst perception?
- Is resident unaware of the need to intake sufficient fluids?
- Has resident or staff restricted intake to avoid urinary incontinence?
- Are fluid restricted because of diagnostic procedure or other health reason?
- Does sad mood, grief, or depression cause resident to refuse foods/liquids?

Presence of infection, fever, vomiting/diarrhea/nausea, excessive sweating (e.g., a heat wave).

Frequent use of laxatives, enemas, diuretics.

Excessive urine output (polyuria).

Excessive urine output (polyuria) may be due to:

- Drugs (e.g., lithium, phenytoin), alcohol abuse
- Diseases (e.g., diabetes mellitus, diabetes insipidus)
- Other conditions (e.g., hypoaldosteronism, hyperparathyroidism)

Other test results.

Relevant test result to be considered:

- Does systolic/diastolic blood pressure drop 20 points on sitting/standing?
- On inspection, do oral mucous membranes appear dry?
- Does urine appear more concentrated and/or decreased in volume?

DEHYDRATION/FLUID MAINTENANCE RAP KEY

TRIGGER

Dehydration Suggested if:

1. Insufficient Fluid/dehydration [L3b = checked]

2. Two or More of following are Present:

   - Deteriorated cognitive status [B6 = 2]
   - Deteriorated ADL status [E8 = 2]
   - Failure to eat or take medications [H1d = checked]
   - UTI [J1ee = checked]
   - Dehydration diagnosis [J2 = 276.5]
   - Diarrhea, fever, or internal bleeding [K1b, K1f, K1h = any checked]
   - Dizziness/vertigo [K1c = checked]
   - Vomiting [K1n = checked]
   - Recent weight loss [L2c = 1]
   - Did not consume all liquids provided [L3c = checked]
   - Leaves 25%+ food uneaten [L3e = checked]
   - Parenteral/IV or feeding tube [L4a, L4b = any checked]
   - Taking diuretic [from record]

GUIDELINES

Resident Factors That May Impede Ability to Maintain Fluid Balance:

1. Moderate/severely impaired decision-making ability [B4]
2. Comprehension/communication problem [C4, C5]
3. Body control problems [E4, E8]
4. Hand dexterity problem [E4g]
5. Swallowing problem [L1b]
6. Use of Parenteral/IV [L4a]

Resident Dehydration Risk Factors:

1. Purposeful restriction of fluids [from record]
2. Presence of infection [J1o, J1dd, J1ee], diarrhea [K1b], fever [K1f], vomiting [K1n], nausea [from record], excessive urine loss [from record, exam]
3. Frequent laxative/enema/diuretic use [from record]
4. Excessive urine output [from record]
5. Other tests: Standing/sitting blood pressure, status of oral mucous membranes, urine output volume [from record; exam]

RESIDENT ASSESSMENT PROTOCOL: DENTAL CARE

I. PROBLEM

Having teeth/dentures that function properly is an important requisite for nutritional adequacy. Having teeth/dentures that are clean and attractive can promote a resident's positive self-image as well as personal appearance thereby enhancing social interactions among residents, residents and staff, and residents and visitors. Good oral health can decrease a resident's risk of oral discomfort and in some instances, systemic illness from oral infections/cancer. Residents at greatest risk due to impaired abilities are primarily those with multiple medical conditions and medications, functional limitations in self-care, and communication deficits. Also at risk are more self-sufficient residents who lack motivation or have no consistent history of performing oral health functions. Residents with a history of alcohol and/or tobacco use have a greater risk of developing chronic oral lesions.

II. TRIGGERS

The Dental Care RAP triggers two types of residents:

- residents with oral hygiene problems; and
- residents with oral/dental health problems who may benefit from dental evaluation

A dental care problem is suggested if the following signs are present:

1. Mouth debris [**M1a = checked**] **OR** Less than daily cleaning of teeth/dentures [**M1f = not checked**]

Potential for oral/dental health problems is suggested if any of the following signs/symptoms are present:

1. Mouth pain [**L1c = checked**] **OR** Broken, loose, carious teeth [**M1d = checked**] **OR** Inflamed gums, oral abscesses, swollen or bleeding gums, ulcers, rashes [**M1e = checked**]

2. Some/all natural teeth lost —does not have or does not use dentures (or partial plates) [**M1c = checked**]

III. GUIDELINES

CONFOUNDING PROBLEMS

Debris on teeth, gums, and oral tissues may consist of food and bacteria-laden plaque that can begin to decay teeth or cause foul denture odors if not removed at least once daily. The purpose of this section is to examine confounding problems (from the MDS) which may be prohibiting a resident from adequately removing oral debris.

Impaired cognitive skills:

- Does the resident need reminders to clean his/her teeth/dentures?
- Does he remember the steps necessary to complete oral hygiene?
- Would he benefit from task segmentation or supervision?

Impaired ability to understand:

- Can the resident follow verbal directions or demonstrations for mouth care?
- If the resident has language difficulties, does he/she know what to do when handed a toothbrush/toothpaste and placed at the bathroom sink?

Impaired vision.

- Is resident's vision adequate for performing mouth care or checking its adequacy?

Impaired personal hygiene.

- Did the resident receive supervision or assistance with oral/dental care during the last 7 days?
- Has he/she been assessed to see if he/she could do it independently?
- Does the resident have partial/total loss of voluntary arm movement or impaired hand dexterity that interferes with self-care?
- What would the resident need to be more independent?

Motivation/Knowledge of resident who is independent in oral/dental care but still has debris or performs care less than daily.

- Is he/she brushing adequately?
- Does he/she know that it is most important to brush near the gumline?
- Does he/she need to be shown how or be given reinforcement for maintaining good hygiene?

Adaptive equipment for oral hygiene.

- Has the resident tried or would he/she benefit from using a built-up, long-handled, or electric toothbrush, or suction brush for cleaning teeth?
- If resident has dentures, does he/she have denture cleaning devices (e.g., denture brush, soaking bath)?

Resists ADL assistance:

- Does the resident resist mouth care? If so, why (e.g., would rather do own care, painful mouth, apathy related to depression, not motivated—never cared for teeth/mouth, approach of staff, fear)?

Dry mouth from dehydration or medications.

- Dry mouth can contribute to the formation of debris. Is the resident's lips, tongue, or mouth dry, sticky, or coated with film?
- Is the resident taking enough fluids? Is lip balm being applied to resident who has painful, cracking or bleeding lips?
- Is he/she taking any medications that can cause dry mouth (e.g., decongestants, antihistamines, diuretics, antihypertensives, antidepressants, antipsychotics, antineoplastics)?
- If these medications are necessary, has the resident tried saliva substitutes to stimulate moisture?

TREATMENT HISTORY AND OTHER RELEVANT FACTORS

Mouth pain or sensitivity can be related to either minor and easily treatable (e.g., gum irritation from ill-fitting dentures, localized periodontal problem) or more serious problems (e.g., oral abscess, cancer, advanced tooth decay or periodontal disease). The presence of pain may prevent the resident from eating adequately. Residents with cognitive impairment and/or those who have difficulty making their needs known are difficult to assess. They may not complain specifically of mouth pain but may instead have decreased food intake or changes in behavior.

The presence of lesions, ulcers, inflammation, bleeding, swelling, or rashes may be representative of a minor problem (e.g. irritation from wearing dentures for 24 hours/day), which resolves when the cause is alleviated (e.g., combination of mouth care and leaving dentures out). However, these signs may also

indicate more serious problems, even dental emergencies (e.g., infection). If the problem does not resolve with specific local treatment after a couple of days, OR if these signs are accompanied by pain, fever, lymphadenopathy (swollen glands) and/or other signs of local infection (e.g., redness), chewing or swallowing problems, or changes in mental status or behavior, a dental consult should be considered.

- Review mouth for Candidiasis (white areas that appear to be able to be removed — anywhere in mouth, mostly on tongue) for lethargic residents who have one or more of following diagnoses: stroke, Alzheimer's, Parkinson's, anxiety disorder, depression, diabetes, osteoporosis, or septicemia.

Broken, loose, or carious teeth may progress to more severe problems (e.g., dislodging a decayed tooth and swallowing or aspirating it). Although, not emergencies, a dental consult should be considered.

If a resident has lost some or all of his/her natural teeth and does not have dentures (or partial plates) staff should consider if the resident has the cognitive ability and motivation to wear dentures.

- Has a dentist evaluated resident for dentures?
- Why doesn't resident use his/her dentures (or partial plates)?
- Are teeth in good repair?
- Do they fit well?
- Are they comfortable to wear when eating or talking?
- Does the resident like the way he/she looks when wearing them?
- Has a dentist evaluated resident for dentures?
- Has a dental hygienist interviewed and made recommendations regarding oral hygiene care?

Exam by dentist since problem noted. When evaluating a resident with mouth pain or the presence of any of the other trigger signs, check the record to see if a dentist has examined the resident since the problem was first noted.

- Was the current problem addressed?
- What were the recommendations?

Use of anticoagulants.

- Is the resident on coumadin or heparin that would put him/her at risk for bleeding if dental work is necessary?
- Is it noted on the medical record?

Valvular heart disease or prosthesis (e.g., heart valve, false hip, etc.).

- Are either of these conditions present?
- If so are they clearly noted in the medical record so that necessary precautions be taken prior to

DENTAL CARE RAP KEY

TRIGGERS

Dental Care problem suggested if:

1. Mouth Debris [M1a = checked] OR Less Than Daily Cleaning of Teeth/Dentures [M1f = not checked]

Potential for oral/dental health problems suggested if:

2. Mouth Pain [L1c = checked]; Broken, Loose or Carious Teeth [M1d = checked] OR Inflamed Gums, Oral Abscesses, Swollen/Bleeding Gums, Ulcers, Rashes [M1e = checked]

3. Some/All natural teeth lost and does not have or does not use dentures [M1c = checked]

GUIDELINES

Confounding problems to be considered:

1. Impaired cognitive skills [B1, B4]
2. Impaired ability to understand [C1, C5]
3. Impaired vision [D1]
4. Impaired personal hygiene [E2g]
5. Motivation/knowledge [from observation]
6. Adaptive equipment for oral hygiene [from record]
7. Resists ADL assistance [H4b]
8. Dry mouth from hydration [L3b, L3c] or from medications [from medication sheet]

Treatment history/relevant factors:

1. Mouth pain or sensitivity [L1c]
2. Presence of lesions, ulcers, inflammation, bleeding, swelling or rashes [M1e]
3. Broken, loose or carious teeth [M1d]
4. Natural teeth lost/no dentures [M1c]
5. Exam by dentist/dental hygenist since problem noted [from record]
6. Use of anticoagulants [from record]
7. Valvular heart disease or valvular appliance [J1, J2]

RESIDENT ASSESSMENT PROTOCOL: PRESSURE ULCERS

I. PROBLEM

Between 3% and 5% (or more) of residents in nursing facilities have pressure ulcers (pressure sores, decubitus ulcers, bedsores). Sixty percent or more of residents will typically be at risk of pressure ulcer development. Pressure ulcers can have serious consequences for the elderly and are costly and time consuming to treat. However, they are one of the most common, preventable and treatable conditions among elderly who have restricted mobility. Successful outcomes can be expected with preventive and treatment programs.

Assessment goals are: (1) to ensure that a treatment plan is in place for residents with pressure ulcers; and (2) to identify residents at risk for developing a pressure ulcer who are not currently receiving some type of preventive care program.

II. TRIGGERS

1. Pressure Ulcer Present. **[N2 = 1, 2, 3 or 4]**

2. Risk Factors for Pressure Ulcer. One or more of the following problems AND NOT receiving any skin care program **[N4c, N4d, N4e, N4f, N4g = not checked]**: (NOTE: these are listed in the order in which they appear in the MDS and RAP KEY — not by type or severity of risk.)

   Impaired Transfer or Bed Mobility. **[E1a or E1b = 3 or 4]** Increased risk occurs when a resident's impaired ability prevents repositioning at regular intervals.

   Bedfast, Hemiplegia, Quadriplegia. **[E4b, E4d, E4e = any checked]** These conditions predispose a resident to immobility, and the extended time (2 hours or less) spent in one position will generate sufficient pressure to cause skin breakdown. Pressure relief at regular intervals (2 hours is maximum) through repositioning can alleviate the problem. Maximum time varies because of other differences in individual skin integrity and presence of other risk factors. A pressure-reducing device (e.g., foam mattress, water mattress, or specialized bed) is helpful, but it can not replace regular repositioning.

   Urinary or bowel incontinence. **[F1a or F1b = 3 or 4]** The presence of urine or feces on the skin for a prolonged time can lead to skin maceration (softening) and subsequent breakdown. Bowel incontinence requires evaluation for the presence of neurologic disorder, bowel disorder, drug side effects, or acute illness.

   Peripheral vascular disease. **[J1f = checked]** Poor circulation places resident at risk of pressure ulcer formation, especially in heels and ankles. Any decrease in blood flow permits ischemia (lack of tissue oxygenation) in areas where pressure is applied. This can happenquite rapidly (i.e., within 2 hours). If peripheral vascular disease is present, physician referral should be considered.

   Diabetes mellitus. **[J1y = checked]** Diabetes, particularly insulin-dependent diabetes, increases risk, probably from the effects of diabetes on vasculature or blood flow. Although not proven, control of blood sugar may minimize this risk factor.

   Hip fracture. **[K2c = checked]** Recent fracture of hip (or lower limb) increases risk in that a fracture can lead to decreased mobility and increased time spent in one position.

   Weight loss. **[L2c = 1]** Weight loss should raise concerns about malnutrition. Malnutrition can lead to decreased skin integrity and muscle weakness, which can impair repositioning ability. Malnutrition also impedes healing.

Pressure ulcer history. [N3 = 1] Persons with a history of pressure ulcers are at risk for a recurrence. Current risk factors should be assessed.

Impaired tactile sensory perception. [N4b = checked] Skin that is not sensitive to pain, pressure or discomfort may impede ability to change position because of blunted response to pain, which can be a warning that skin pressure is excessive and breakdown imminent.

Medications. [O4a = 7] Daily use of antipsychotics, can retard mobility, exacerbate incontinence, or lead to mental confusion — conditions that increase the risk of pressure ulcer formation.

Restraints. [P3b, P3c or P3d = 2] Daily use of restraints leads to immobility, increases the time spent in one position, and decreases an individual's ability to change positions. As pressure to a particular area increases (e.g., buttocks or hips), pressure ulcer risk increases.

III. GUIDELINES

Review the MDS items listed on the RAP KEY for relevance in understanding the type of care that may be required.

Complicating Conditions and Treatments.

Consider carefully whether the resident exhibits conditions or is receiving treatments that may either place the resident at higher risk of developing pressure ulcers or complicate their treatment. Such conditions include:

Alzheimer's Disease and other dementias. An impairment in cognitive ability, particularly in severe end-stage dementia, can lead to immobility.

Edema. The presence of extravascular fluid can impair blood flow. If prolonged or excess pressure is applied to an area with edema, skin breakdown can occur.

Antidepressants and antianxiety/hypnotics. These medications can produce or contribute to lessened mobility, worsen incontinence, and lead to or increase confusion.

Things to Consider if the Resident Develops a New Pressure Ulcer or an Ulcer Being Treated is not Resolved.

A variety of factors may explain this occurrence; however, they may suggest the need to evaluate current interventions and modifications of the care plan.

- Review the resident's medical condition and other risk factors to determine whether the care plan (for prevention or cure) addresses all potential causes or complications.
- Review the care plan to determine whether it is actually being followed (e.g., is the resident being turned often enough to prevent ulcer formation).

Things to Consider if the Resident is At Risk for Pressure Ulcers But is Not Receiving Preventive Skin Care

Even if pressure ulcers are not present, determine why this course of prevention is not being provided to a resident with risk factors.

- Is the resident new to the unit?
- Do few or many risk factors for the development of pressure ulcers apply to this resident?
- Are staff concentrating on other problems (e.g., resolution of behavior problems) so that the risks pressure of ulcers are masked?

PRESSURE ULCERS RAP KEY

TRIGGERS

1. Pressure Ulcer Present [N2 = 1, 2, 3 or 4]

2. At Risk for Pressure Ulcer when Both of Following (a&b) True:

   a. One or More of the Following are Present:

      — Bed mobility/Transfer Problem [E1a or E1b = 3 or 4]
      — Bedfast, Hemiplegia, Quadriplegia [E4b, E4d, E4e = any checked]
      — Incontinence [F1a or F1b = 3 or 4]
      — Peripheral Vascular Disease [J1f = checked]
      — Diabetes Mellitus [J1y = checked]
      — Hip Fracture [K2c = checked]
      — Weight Loss [L2c = 1]
      — Previous Pressure Ulcer [N3 = 1]
      — Impaired Tactile Sense [N4b = checked]
      — Daily Antipsychotics [O4a = 7]
      — Daily Trunk, Limb or Chair restraints [P3b, P3c or P3d = 2]

   b. Absence of ALL of the Following Treatments:

      — Protective/Preventive skin care [N4c = not checked]
      — Turning/repositioning [N4d = not checked]
      — Pressure relieving beds/chair pads [N4e = not checked]
      — Wound care/treatment [N4f = not checked]
      — Other skin care/treatment [N4g = not checked]

GUIDELINES

Other factors that address or may complicate treatment of pressure ulcers or risk of ulcers:

1. **Diagnoses:** Alzheimer's disease [J1h], Other dementia [J1i], Edema [K1d]

2. **Interventions/Programs:**
   Protective/preventive skin care [N4c]
   Turning/repositioning [N4d]
   Pressure relieving beds/chair pads [N4e]
   Wound care/treatment [N4f]
   Use of restraints [P3]

3. **Medications:**
   Antipsychotics [O4a]
   Antianxiety/hypnotics [O4b]
   Antidepressants [O4c]

RESIDENT ASSESSMENT PROTOCOL: PSYCHOTROPIC DRUG USE

I. PROBLEM

Psychotropic drugs are among the most frequently prescribed agents for elderly nursing home residents. Studies in nursing facilities suggest that 35% to 65% of residents receive psychotropic medications.

When used appropriately and judiciously, these medications can enhance the quality of life of residents who need them. However, all psychotropic drugs have the potential for producing undesirable side effects or aggravating problematic signs and symptoms of existing conditions. An important example is postural hypotension, a condition associated with serious and life-threatening side effects. Severity of delirium side effects is dependent on: the class and dosage of drug, interactions with other drugs, and the age and health status of the resident.

Maximizing the resident's functional potential and well-being while minimizing the hazards associated with drug side effects are important goals of therapy. In reviewing a psychotropic drug regimen there are several rules of thumb:

- Evaluate the need for the drug (e.g., consider amount and type of distress, response to nonpharmacologic interventions, pros and cons of drug side effects in relation to distress without the drug). Distinguish between treating specific diagnosed psychiatric disorders and treating symptoms. Specific psychiatric disorders (e.g., schizophrenia, major depression) have specific drug treatments with published guidelines for dosage and duration of treatment. However, a recorded diagnosis of a psychiatric disorder does not necessarily require drug treatment if symptoms are inactive.
- Start low, go slow. If needed, psychotropic drugs should be started at lowest dosage possible. To minimize side effects, doses should be increased slowly until either there is a therapeutic effect, side effects emerge, or the maximum recommended dose is reached.
- Each drug has its own set of actions and side effects, some more serious than others; these should be evaluated in terms of each user's medical-status profile, including interaction with other medications.
- Consider symptoms or decline in functional status as a potential side effect of medication.

II. TRIGGERS

The RAP should be completed when the resident takes any psychotropic drug and one or more of the following 5 combinations of MDS conditions are present:

Potential for Drug-Related Hypotension if:

1. Antipsychotic AND/OR Antidepressant Use [O4a or O4c = 1-7] AND ANY of the following:

   - Hypotension [J1e = checked]
   - Dizziness/Vertigo [K1c = checked]
   - Syncope [K1m = checked]
   - Accidents [K2a, K2b, K2c = any checked]

Potential for Drug-Related Movement Disorder if:

2. Antipsychotic Use [O4a = 1-7] AND ANY of the following:

   - Parkinson's Disease [J1m = checked]
   - Poor Balance [E4a = checked]
   - Unsteady Gait [E4i = checked]
   - Difficulty Positioning/Turning [E4j = checked]
   - Tardive Dyskenisia [J2 = 333.82]
   - Partial/Total Loss of Voluntary Arm/Leg Movement [E4f, E4h = any checked]
   - Motor Agitation [H1c = checked]
   - Chewing/Swallowing Problem [L1a, L1b = any checked]

Potential for Drug-Related Gait Disturbance (other than antipsychotic induced) if:

3. Antianxiety/hypnotic Use [O4b = 1-7] AND ANY of the following:

   - Poor Balance [E4a = checked]
   - Unsteady Gait [E4i = checked]
   - Difficulty Positioning/Turning [E4j = checked]
   - Dizziness/Vertigo [K1c = checked]
   - Accidents [K2a, K2b, K2c = any checked]

Potential for Drug-Related Cognitive/Behaviorial Impairment if:

4. Any Psychotropic use [O4a, O4b or O4c = 1-7] AND ANY of the following:

   - Delirium/Disordered Thinking [B5a, B5b, B5c, B5d, B5e = any checked]
   - Withdrawal [H1d = checked]
   - Depression [J1q = checked]
   - Hallucinations/Delusions [K1g = checked]
   - Major Difference in ADL Self-Performance [E7d = checked]
   - Deterioration in Cognition, Communication, ADL, Continence, Mood and/or Behavior [B6=2 or C6=2 or E8=2 or F4=2 or H6=2 or H7=2]

Potential for Drug-Related Discomfort if:

5. Any Psychotropic [O4a, O4b or O4c = 1-7] use AND ANY of the following:

   - Constipation [K1a = checked]
   - Fecal Impaction [K1e = checked]
   - Urinary Retention [J2 = 788.2]

III. GUIDELINES

If any of the triggered conditions are present, complete the following:

Step One:

Conduct the following reviews:

1. Drug review [from record]

- Length of time between when the drug was first taken and onset of problem
- Dose of drug and how frequently taken
- Number of classes of psychotropics taken
- Reason drug prescribed

2. Review resident's conditions that impair drug metabolism/excretion

- Acute condition(s)
- Dehydration
- Impaired liver/renal function

3. Review behavior/mood/psychiatric status

- Current problem status
- Recent change in mood behavior
- Behavior management program
- Psychiatric conditions

Step Two:

Compare the drugs the resident is currently taking with common side effects listed below. Refer to Tables A, B, and C for clarification.

POTENTIAL PSYCHOTROPIC DRUG-RELATED SIDE EFFECTS

Hypotension

Postural (orthostatic) hypotension (decrease in blood pressure upon standing) is one of the major risk factors for falls related to psychotropic drugs. It is commonly seen with the low-potency antipsychotic drugs (chlorpromazine, thioridizene) and with tricyclic antidepressants. Both classes of drugs have anticholinergic properties. Within each class, drugs with the most potent anticholinergic properties also seem to produce the greatest hypotensive effects. Symptoms of dizziness/vertigo upon sitting or standing from a lying position, syncope (fainting), and falls/fractures should be seriously considered as potential indicators of psychotropic drug-induced hypotension. In addition, these symptoms may be due to a disturbance of heart rhythm, which could be aggravated by a tricyclic antidepressant. The occurrence of any of the aforementioned symptoms requires assessment of postural vital signs and heart rhythm.

Measurement of postural vital signs. Measure blood pressure and pulse when the resident is lying down. Remeasure blood pressure and pulse after the resident has been on his/her feet for one to five minutes (if unable to stand, ensure after the resident has been sitting). Occasionally,further drops in blood pressure occur after the person has been up for some time. While a drop of more than 20 mm Hg systolic is always abnormal, it is particularly significant if accompanied by dizziness, loss of balance, or standing blood pressure of less than 100 mm Hg. A large drop may be clinically significant even if the lower pressure is not abnormally low, particularly in residents who have some degree of cerebrovascular disease.

Movement Disorder.

High fever AND/OR muscular rigidity. Antipsychotic drugs can interfere with temperature regulation, which can lead to the potentially fatal problem of hyperthermia. Also, when high fever is accompanied by severe muscular rigidity, "neuroleptic malignant" syndrome must be suspected. Fever above 103 degrees in a resident on an antipsychotic drug is a medical emergency because of the disturbed temperature regulation. Even lesser degrees of fever, if accompanied by severe muscular rigidity, are medical emergencies. Temperature must therefore be monitored especially closely in residents on psychotropic drugs with anticholinergic properties. In addition, nonantipsychotic drugs with anticholinergic properties, such as antidepressants, may aggravate fever by impairing sweating.

Parkinson's disease. This condition is known to be aggravated by all antipsychotic drugs. At times it is difficult to know whether parkinsonian symptoms (e.g., tremors, especially of hands; pill-rolling of hands; muscle rigidity of limbs, necks, trunk) are due to Parkinson's disease or to present or recent antipsychotic drug therapy. There should be a strong bias in favor of reducing or eliminating antipsychotic drugs in residents with Parkinson's disease unless there are compelling behavioral or psychotic indications. Antiparkinson drugs should be considered when antipsychotic drugs are clinically necessary in residents with Parkinson's disease.

Five movement disorders are commonly encountered in residents on antipsychotic drugs. All of these disturbances can adversely affect a resident's quality of life as well as increase his/her risk of accidents. The triggered MDS items in Group 2 are signs/symptoms of these disorders. To clarify whether the resident is suffering from one of these disorders, all residents on antipsychotic drugs should be periodically screened for the following conditions:

Parkinsonism. As with Parkinson's disease, this condition may involve ANY combination of tremors, postural unsteadiness, and rigidity of muscles in the limbs, neck, or trunk. Although the most common is a pill-rolling or alternating tremor of the hands, other kinds of tremors are occasionally seen. Occasionally, a resident with Parkinsonism will have no tremor, only rigidity and shuffling gait. Symptoms respond to antiparkinson drugs, but not always completely. Dosage reduction or substitution of nonantipsychotic drug, when feasible, is the preferred management.

Akinesia. This condition is characterized by marked decrease in spontaneous movement, often accompanied by nonparticipation in activity and self-care. It is managed by reducing the antipsychotic drug or adding an antiparkinson drug.

Dystonia. This disorder is marked by holding of the neck or trunk in a rigid, unnatural posture. Usually the head is either hyperextended or turned to the side. The condition is uncomfortable and prompt treatment with an antiparkinson drug can be helpful.

Akathisia — the inability to sit still. The resident with this disorder is driven to constant movement, including pacing, rocking, or fidgeting, which can at times persist for weeks, even after the antipsychotic drug is stopped. The condition responds occasionally to antiparkinson drugs, but less consistently than parkinsonism or dystonia. Sometimes benzodiazepines or beta-blockers are helpful in treating the symptom, although dosage reduction is the most desirable treatment when possible.

Tardive dyskinesia — persistent, sometimes permanent movements induced by long-term antipsychotic drug therapy. Most typical are thrusting movements of the tongue, movements of the lips, or chewing or puckering movements. These involuntary movements can clearly interfere with chewing and swallowing. When they do, the dyskinesia can be suppressed by raising the dose of the antipsychotic drug, but this will make the problem more permanent. When possible, it is usually preferable to reduce or eliminate the antipsychotic drug, because the symptoms of dyskinesia will often decrease over time after drug discontinuation.

Other variations of tardive dyskinesia include abnormal limb movements, such as peculiar and recurrent postures of the hands and arms, or rocking or writhing trunk movements. There is no consistently effective treatment. Withdrawal of the antipsychotic drug leads to eventual reversal of the symptoms over many months in about 50% of cases.

Gait Disturbance (Other Than That Induced by Antipsychotics).
Long-acting benzodiazepine antianxiety drugs have been implicated in increasing the risk of falls and consequent injury by producing disturbances of balance, gait, and positioning ability. They also produce marked sedation, often manifested by short-term memory loss, decline in cognitive abilities, slurred speech, drowsiness in the morning/daytime sedation, and little/no activity involvement. If an antianxiety drug is needed to treat an anxiety disorder, a short-acting benzodiazepine or buspirone would be preferable to a long-acting benzodiazepine. Buspirone is nonsedating and takes several weeks to work. Dosage should be increased slowly.

Cognitive/Behavior Impairment.

Periodic disordered thinking/awareness. These MDS items, which tap the syndrome of acute confusion or delirium, can all be caused or aggravated by psychotropic drugs of any of the major classes. If the resident does not have acute confusion related to a medical illness or severe depression, consider the psychotropic drug as a cause. The most helpful information in establishing a relationship is the linkage between starting the drug and the occurrence of the change in cognitive status.

Depression. Both anti-anxiety and antipsychotic drugs may cause symptoms of depression as a side effect, or may aggravate depression in a resident with a depressive disorder who receives these drugs rather than specific antidepressive therapy.

Hallucinations/delusions. While these are often symptoms of mental illness, all of the major classes of psychotropic drugs can actually produce or aggravate hallucinations. The antidepressant drugs, the more anticholinergic antipsychotic drugs, and the shorter-acting benzodiazepines such as triazolam and lorazepam are most implicated in causing visual hallucinations. Visual hallucinations in the aged are virtually always indicative of brain related disturbance (e.g., delirium) rather than a psychiatric disorder.

Major differences in AM/PM self-performance. All classes of psychotropic drugs can have an effect on a resident's ability to perform activities of daily living. Establishing a link between the time a drug is taken and the change in self-performance is helpful in evaluating the problem.

Decline in cognition/communication. Decline in these areas signals the possibility that the decline is drug-induced and the need to review the relationship of the decline with initiation or change in drug therapy. All major classes of psychotropics can cause impairment of memory and other cognitive skills in vulnerable residents. While memory loss in nursing facility residents is caused primarily by dementing disorders and other neurologic disease, psychotropic drugs, particularly those with anticholinergic side effects, and long-acting benzodiazepines, definitely contribute to memory impairment. In contrast, treatment of depression or psychosis can actually improve usable memory, which is very much disrupted by severe psychiatric illness. If memory worsens after initiating or increasing the dose of a psychotropic drug, consider reducing or discontinuing the drug, or substituting a less anticholinergic drug. For a resident with anxiety, a short-acting benzodiazepine or buspirone is preferable to a long-acting benzodiazepine.

Decline in mood. (See reference to Depression above.)

Decline in behavior. Problem behaviors may be aggravated and worsened by psychotropic drugs as they can contribute to confusion, perceptual difficulties, and agitation.

Decline in ADL status. Drug side effects must always be considered if a resident becomes more dependent in ADLs. In addition, psychotropic drugs can precipitate or worsen bladder incontinence either through a change in cognition or through a direct action on bladder function.

Discomfort.

Constipation/fecal impaction. Any psychotropic drug with anticholinergic effects can cause or aggravate constipation; the effects are pronounced with tricyclic antidepressants and with low-potency antipsychotic drugs such as chlorpromazine or thioridizine. Milder cases of constipation can be treated with stool softeners, bulk-forming agents, and increased fluid; more severe constipation is best managed by substituting a less anticholinergic agent, or decreasing or discontinuing the psychotropic drug if possible. Antianxiety drugs can contribute to constipation if they sedate the resident to the point that fluid intake or exeresis is impaired. The problem can be handled by switching to a less sedating drug, decreasing dosage, or discontinuing the drug if possible.

Urinary retention. This condition may be manifested by the inability to urinate, or new onset or worsening of urinary incontinence (caused by overflow of urine from a full bladder that cannot empty properly). Any psychotropic drug with anticholinergic properties can produce or aggravate urinary retention. The problem is best managed by substituting a less anticholinergic agent, or decreasing or discontinuing the psychotropic drug if possible.

Dry mouth. This symptom is a common side effect of any psychotropic drug with anticholinergic properties. Dry mouth can aggravate chewing and swallowing problems. Substituting a less anticholinergic drug may be helpful. Other remedies include artificial saliva or sugar-free mints or candies (sugar contributes to cavity formation).

WHEN TO DISCONTINUE DRUG TREATMENT.

1. Drug treatment that is ineffective after a reasonable trial should be discontinued or changed. The definition of a reasonable trial depends on the drug class and therapeutic indication.

2. When a medication is effective, but produces troublesome side effects, either the dose should be reduced or the medication should be replaced by a therapeutically equivalent agent less likely to cause the problematic side effect. If this is not feasible, or if doing it leads to a recurrence of symptoms, specific medical therapy for the troublesome side effects should be considered. For example, if the best drug for treating a resident's depression causes constipation, stool softeners, laxatives, or bulk-forming agents can be prescribed.

3. When a medication is effective and does not cause troublesome side effects, it should be continued for a defined period, and then efforts should be made to taper and eventually discontinue the drug.

4. Psychotropic medication should be prescribed on a permanent basis only if symptoms have recurred on at least two previous attempts to taper the medication after a defined period of therapy.

COMMONLY PRESCRIBED PSYCHOTROPIC DRUGS AND THEIR SIDE EFFECTS

TABLE A. ANTIPSYCHOTIC (NEUROLEPTIC) DRUGS

Generic Name	Brand Name	Incidence of Side Effects			
		Sedation	Hypotension	Anti-cholinergic Symptoms[1]	Extra-pyramidal Symptoms[2]
Chloropromazine	Thorazine	Marked	Marked	Marked	Mild
Thioridizine	Mellaril	Marked	Marked	Marked	Mild
Acetophenazine	Tindal	Mild	Mild	Moderate	Mild
Perphenazine	Trilafon	Mild	Mild	Moderate	Moderate
Loxapine	Loxitane	Mild	Mild	Moderate	Moderate
Molindone	Moban	Mild	Mild	Moderate	Moderate
Trifluoperazine	Stelazine	Mild	Mild	Mild	Marked
Thiothixene	Navane	Mild	Mild	Mild	Marked
Fluphenazine	Prolixin	Mild	Mild	Mild	Marked
Haloperidol	Haldol	Minimal	Minimal	Mild	Marked

TABLE B. ANTIDEPRESSANT DRUGS

Generic Name	Brand Name	Incidence of Side Effects		
		Sedation	Hypotension	Anti-cholinergic Symptoms[1]
Cyclic antidepressants				
Imipramine	Tofranil	Mild	Moderate	Mod-strong
Desipramine	Norpramin	Mild	Mild-mod	Mild
Doxepin	Adapin Sinequan	Mod-strong	Moderate	Strong
Amitriptyline	Elavil Triavil	Strong	Moderate	Very Strong
Nortriptyline	Aventyl Pamelor	Mild	Mild	Moderate
Maprotiline	Ludiomil	Mod-strong	Moderate	Moderate
Amoxapine*	Asendin	Mild	Moderate	Moderate
Fluoxetine	Prozac	Variable	Nil	Nil
Triazolopyridine Antidepressant				
Trazodone	Desyrel	Mod-strong	Moderate	Mild
MAO inhibitors*				
Phenelzine	Nardil	Mild	Moderate	Mild
Tranylcypromine	Parnate	Mild	Moderate	Mild
Other				
Bupropion	Wellbutrin	None	Nil	Nil
		May cause agitation High incidence of seizures		

* Also a neuroleptic drug with all the neuroleptic side effects.
* Special diet required; many drug interactions.
[1] Anticholinergic symptoms include: dry mouth, constipation, urinary retention, blurred vision, confusion, disorientation, short-term memory loss, hallucinations, insomnia, agitation and restlessness, picking behaviors, fever.
[2] Extrapyramidal symptoms include: movement disorders, such as Parkinsonism, dyskinesias, and akathisia (described in text). Antidepressants (except Amoxapine) and antianxiety/hypnotics do not produce extrapyramidal side effects.

COMMONLY PRESCRIBED PSYCHOTROPIC DRUGS AND THEIR SIDE EFFECTS (cont.)

TABLE C. ANTIANXIETY AND HYPNOTIC DRUGS

Generic Name	Brand Name	Duration of Action
Benzodiazepines		
Triazolam	Halcion	Very short
Oxazepam	Serax	Short
Temazepam	Restoril	Short
Lorazepam	Activan	Short
Alprazolam	Xanax	Medium
Chlorodiazepoxide	Librium	Long
Diazepam	Valium	Long
Chlorazepate	Tranxene	Long
Flurazepam	Dalmane	Very long
Barbiturates		
Antihistamines		
Dephenhydramine	Benadryl	Moderate
Hydroxyzine	Vistaril	Moderate

PSYCHOTROPIC DRUG USE RAP KEY

TRIGGERS

Potential for Drug-Related Hypotension if:

1. Antipsychotic AND/OR Antidepressant Use **[O4a or O4c = 1-7]** AND ANY of the following:
   - — Hypotension **[J1e = checked]**
   - — Dizziness/Vertigo **[K1c = checked]**
   - — Syncope **[K1m = checked]**
   - — Accidents **[K2a, K2b, K2c = any checked]**

Potential for Drug-Related Movement Disorder if:

2. Antipsychotic Use **[O4a = 1-7]** AND ANY of the following:
   - — Partial/Total Loss of Voluntary Arm/Leg Movement **[E4f, E4h = any checked]**
   - — Unsteady Gait **[E4i = checked]**
   - — Partial/Total Loss of Ability to Position, Balance, Turn Body/Balance While Standing **[E4a, E4j = any checked]**
   - — Motor Agitation **[H1c = checked]**
   - — Parkinson's **[J1m = checked]**
   - — Tardive Dyskinesia **[J2 = 333.82]**
   - — Chewing/Swallowing Problem **[L1a, L1b = any checked]**

Potential for Drug-Related Gait Disturbance (other than antipsychotic-induced) if:

3. Antianxiety/hypnotic Use **[O4b = 1-7]** AND ANY of the following:
   - — Poor Balance **[E4a = checked]**
   - — Unsteady Gait **[E4i = checked]**
   - — Difficulty Positioning/Turning **[E4j = checked]**
   - — Dizziness/Vertigo **[K1c = checked]**
   - — Accidents **[K2a, K2b, K2c = any checked]**

GUIDELINES

If resident is triggered, review the following:

1. Drug review **[from record]** Length of time between when the drug was first taken and onset of problem; Doses of drug and how frequently taken; Number of classes of psychotropics taken; Reason drug prescribed
2. Review resident's conditions that affect drug metabolism/excretion
   Acute condition **[K3b]**; dehydration **[L3b]**; impaired liver/renal function **[J2; P1c; from record]**
3. Review Behavior/Mood Status:
   Current problem status **[H1, H2, H3]**
   Recent changes **[H6, H7]**
   Behavior management program **[H5]**
   Psychiatric Diagnoses **[J1p, J1q, J1r; J2]**

Then Consider:

- **Clarifying Information For Hypotension:**
  1. Postural changes in vital signs **[from exam]**
  2. Drugs with marked anticholinergic properties **[from record]**

- **Clarifying Information For Movement Disorder:**
  1. High Fever **[K1f]** AND/OR Muscular rigidity **[from record, observation]**
  2. Tremors, especially of hands; pill-rolling of hands; muscle rigidity of limbs, neck, trunk (Parkinsonism) **[from record, observation]**
  3. Marked decrease in spontaneous movement (Akinesia) **[from record, observation]**
  4. Rigid, unnatural, uncomfortable posture of neck or trunk (Dystonia) **[from record, observation]**
  5. Restlessness, inability to sit still (Akathisia) **[from record, observation]**
  6. Persistent movements of the mouth (e.g., thrusting of tongue, movements, of lips, chewing/puckering) AND/OR peculiar and recurrent postures of limbs, trunk (Tardive dyskinesia) **[from record, observation]**

Potential for Drug-Related Cognitive/Behavioral Impairment if:

4. ANY Psychotropic Use [O4a, O4b or O4c = 1-7] AND ANY of the following:
   - — Delirium/Disordered Thinking [B5a, B5b, B5c, B5d, B5e = any checked]
   - — Withdrawal [H1d = checked]
   - — Depression [J1q = checked]
   - — Hallucinations/Delusions [K1g = checked]
   - — Major Difference in ADL Self-Performance [E7d = checked]
   - — Deterioration in Cognition, Communication, ADL, Continence, Mood and/or Behavior [B6 = 2 or C6 = 2 or E8 = 2 or F4 = 2 or H6 = 2 or H7 = 2]

Potential for Drug-Related Discomfort if:

5. ANY Psychotropic Use [O4a, O4b or O4c = 1-7] AND ANY of the following:
   - — Constipation [K1a = checked]
   - — Fecal Impaction [K1e = checked]
   - — Urinary Retention [J2 = 788.2]

- **Clarifying Information For Gait Disturbances:**
  1. Long-acting benzodiazepines [from med record]
  2. Recent dosage increase [from med record]
  3. Short-term memory loss; Decline in cognition; Slurred speech [B2, B6; observation]
  4. Decreased AM wakefulness; Little/no activity involvement [I1, I2]

- **Clarifying Information For Cognitive/Behavioral Impairment:**

  If neither of the following are present, psychotropic drug side effects can be considered as a major cause of problem:
  1. Acute confusion (delirium) related to medical illness [B5]
  2. Depression [H1, H2]

- **Clarifying Issues For Drug-Related Discomfort:**
  1. Dehydration [L3b]; Reduced dietary bulk; Lack of exercise [from record]

  Other potential drug-related discomforts that may require resolution:
  2. Dry mouth, if on antipsychotic or antidepressant [observation]

RESIDENT ASSESSMENT PROTOCOL: PHYSICAL RESTRAINTS

I. PROBLEM

Studies of nursing homes show that between 30 and 40% of residents are physically restrained. This is quite serious since negative effects of restraint use include declines in residents' physical functioning (e.g., ability to ambulate) and muscle condition, contractures, increased incidence of infections, and development of pressure sores, delirium, agitation, and incontinence. Moreover, restraints have been found in some cases to increase the incidence of falls and other accidents (e.g., strangulation). Finally, residents who are restrained face the loss of autonomy, dignity and self-respect. In effect, the use of physical restraints undercuts the major goals of long-term care — to maximize independence, functional capacity, and quality of life. Thus, the goal of minimizing or eliminating restraint use has become central to both clinical practice and federal law.

The primary reason given for applying restraints is to protect residents from falls and accidents. Facilities are also concerned about potential lawsuits and malpractice claims that might result if residents should fall. Other reasons cited for restraint use include to provide postural support or positioning for residents, to facilitate treatment (e.g., preventing residents from pulling out IV lines or NG tubes), and to manage behaviors such as wandering or physical aggressiveness.

The experience of many health care providers suggests that facility goals can often be met without the use of physical restraints and their negative side effects. In part, this involves identifying and treating health, functional, or psychosocial problems that may be causing the condition for which restraints were ordered (e.g., falls, wandering, agitation). Minimizing use of restraints also involves care management alternatives, such as: modifying the environment to make it safer; maintaining an individual's customary routine; using less intrusive methods of administering medications and nourishment; and recognizing and responding to residents' needs for psychosocial support, responsive health care, meaningful activities, and regular exercise.

II. TRIGGERS

Definition: Physical restraints are any manual method or physical or mechanical device, material, or equipment attached or adjacent to the resident's body that the resident cannot easily remove and that restricts freedom of movement or normal access to his/her body.

ANY use of trunk restraint, limb restraint, or chair that prevents rising **[P3b, P3c or P3d = 1 or 2]**

III. GUIDELINES

In evaluating and reconsidering the use of restraints for a resident, consider needs, problems, conditions, or risk factors (e.g., for falls) which, if addressed, could eliminate the need for using restraints. Refer to the RAP KEY for specific MDS items to consider as you review the following issues.

WHY ARE RESTRAINTS USED?

The first step in determining whether use of a restraint can be reduced or eliminated is to identify the reasons a restraint was applied.

- Review the resident's record and consult primary caregivers to determine reason for use.

Ask the following questions:

- Why is the resident restrained?
- What type(s) of restraint is used?
- During what time of day is each type(s) used?
- Where is the resident restrained (e.g., own room in bed, chair in hallway)?
- How long is the resident restrained each day?
- Under what circumstances (e.g., when left alone, after family leave, when not involved in structured activity, when eating)?
- Who suggested that the resident be restrained (e.g., staff, family, resident)?

CONDITIONS ASSOCIATED WITH RESTRAINT USE

It may be possible to identify and resolve health/functional/psychosocial needs, risks, or problems that caused restraints to be used. By addressing the underlying condition(s) and cause(s), the facility may eliminate the apparent need for the restraint(s). In addition, a review of underlying needs, risks, or problems may help to identify other potential kinds of treatments. After determining why and how a restraint is used, review the appropriate areas described below.

Problem Behavior.

To determine presence of a behavior problem, review the MDS. If the behavior for which the resident is restrained was not exhibited in the last 7 days, was it because the restraint prohibited the behavior from occurring (e.g., resident was restrained and could not wander)? If a behavior problem was present during the last 7 days or the resident was restrained to prevent a problem behavior, consider the resident to have a behavior problem and review Behavior Problem RAP as indicated.

Many problem behaviors are manifestations of unmet health, functional, and/or psychosocial needs that can often be reduced, eliminated, or managed by addressing the conditions that produced them. (See RAP on Behavior Problem). Conditions associated with problem behaviors and restraint use include:

- Delirium (acute confusional state)
- Impaired cognition
- Impaired communication (e.g., difficulty making needs/wishes understood or understanding others)
- Unmet psychosocial needs (e.g., social isolation, disruption of familiar routines, anger with family members)
- Sad or anxious mood
- Resistance to treatment, medication, nourishment
- Psychotropic drug side effects (e.g., motor agitation, confusion, gait disturbance)
- If a behavior management program is in place, does it adequately address the causes of the resident's particular problem behaviors?

Risk of Falls.

Although restraints have not been shown to safeguard residents from injury, one of the most common reasons given by facilities for restraining residents is to prevent falls. In some instances, restraints have been reported to contribute to falls and injuries. Because of the complications associated with restraint use, many physicians and geriatric clinicians recommend exploring alternatives for preventing falls, such as treating health problems and making environmental modifications.

- Review risk factors for falls on RAP KEY. Refer to Falls RAP if these risks are present or if the restraint is being used to prevent falls.

Treatment Regimens.

Another reason facilities give for using restraints is to prevent a resident from removing tubes.

If the resident is being restrained to manage resistance to any type of tube or mechanical device (e.g., indwelling/external catheter, feeding tube, intravenous line, oxygen mask/cannula, wound dressing), review the following to facilitate decision-making:

- Is the tube/mechanical device used to treat a life-threatening condition?
- Does the resident actually need a particular intervention that may be potentially burdensome to him/her? Are there less intrusive treatment options?
- Why is the resident reacting to the tube/mechanical device with resistance? (e.g., Does the device produce discomfort or irritation? Is the resident really resisting or is the device just something to fidget with? Is the treatment compatible with the resident's wishes? Does the resident understand the reason for the method of treatment? Has the resident/family been informed about the risks and benefits of treatment options?)

HCFA Guideline: "If there are medical symptoms which are life threatening (such as dehydration, electrolyte imbalance, urinary blockage) then a restraint may be used temporarily to provide necessary lifesaving treatment. Physical restraints may be used for brief periods to allow medical treatment to proceed, if there is documented evidence of resident or legal approval of the treatment."

- If an indwelling or external catheter is present, review the Urinary Incontinence RAP for alternatives.
- If a feeding tube is present, review the Feeding Tubes RAP

ADL Self-Performance.

In rare instances, a restraint can enhance a resident's ability to be more self-sufficient, IF the restraint use is supportive and time-limited.

Review the MDS to determine if the restraint contributes to the resident's self-performance of an activity (e.g., wheelchair belt supports trunk while resident wheels self, geri-chair used only at meals enables wandering resident to attend to feeding self).

Other Factors.

Resident's Response to Restraints

In evaluating restraint use, it is important to review the resident's reaction to restraints (e.g., positive and negative, such as passivity, anger, increased agitation, withdrawal, pleas for release, calls for help, constant attempts to untie/release self). This will help determine whether presumed benefits are outweighed by negative side effects.

Review MDS items on other potential negative effects of restraint use, such as declines in functional self-performance, body control, skin condition, mood and cognition, since restraints have been in use.

Alternatives to Restraints

Many interventions may be as effective or even more effective than restraints in managing a resident's needs, safety risks, and problems. To be effective the intervention must address the underlying problem. Examples of alternatives include: use of familiar, comfortable chairs; activities that are meaningful to resident; behavior management programs; judicious use of psychotropic drugs to treat active psychiatric disorders (e.g., psychoses, panic disorders); cheduled toileting plans; and regular exercise for agitated residents.

- Review resident's record and confer with staff to determine whether alternatives to restraints have been tried.
- If alternatives to restraints have been tried, what were they?
- How long were the alternatives tried?
- What was the resident's response to the alternatives at the time?
- If the alternative(s) attempted were ineffective, what else was attempted?
- How recently were alternatives other than restraints attempted?

Philosophy and Attitudes.

In reconsidering the use of restraints for a resident, consider the philosophy, values, attitudes, and wishes of the resident regarding restraint use, as well as those of his family/significant others, and caregivers. Consider the impact of restraints on facility environment and morale.

- Is there consensus or differences among affected parties in choosing between resident independence and freedom in favor of presumed safety?

PHYSICAL RESTRAINTS RAP KEY

TRIGGERS

Potential for decline if:

1. ANY use of Trunk Restraint, Limb Restraint, or Chair that Prevents Rising **[P3b, P3c or P3d = 1 or 2]**

GUIDELINES

Review factors and complications associated with restraint use:

Problem Behavior: Motor agitation **[H1c]**, Any problem behavior **[H3]**, Part of behavior management program **[H5]**

Risk of Falls: Falls **[K2a, K2b]**;
Antidepressant **[O4c]**;
Impaired balance **[E4a, E4j]**;
Bedfast or Hemi/Quadriplegia or Poor leg control **[E4b, E4d, E4e, E4h]**

Conditions and Treatments:
Unstable/acute condition **[K3a, K3b]**;
Hip fracture **[K2c]**; Catheter **[F3b, F3c]**;
Parenteral/IV and/or feeding tube **[L4a, L4b]**;
Wound care/treatment **[N4f]**; IV meds **[P1f]**;
Respiratory/Oxygen **[P1h]**

ADL Self-Performance [E1]

Confounding problems to be considered:

1. Delirium **[B5]**
2. Cognitive loss/dementia **[B2, B3, B4]**
3. Impaired communication **[C4, C5]**
4. Unmet psychosocial needs **[G1, G2, G3]**
5. Sad/anxious mood **[H1, H2]**
6. Resistance to treatment/meds/nourishment **[H4a; observation]**
7. Psychotropic drug side effects **[O4]**

Other factors to be considered:
Resident's response to restraint(s); use of alternatives to restraints; resident/family/staff philosophy, values, wishes, attitudes about restraints **[record, observation, discussion]**

BILLING CODE 4120-03-C

Attachment D—Approval Criteria for Alternate Instruments

Approval Criteria for Alternate Instruments

To Receive Approval, an Alternate Instrument Must Contain:

- *The Utilization Guidelines.*
- *The MDS.* All data elements and corresponding coding categories specified in the MDS must be contained in the State's instrument. The State may not alter the MDS definitions or the coding categories used with each MDS element. For example, Section E. Activities of Daily Living (ADLs) has five coding categories. The State may not change the order of elements within a section. Therefore, the State cannot specify coding categories with four levels of measurement. The State may propose, however, changing the order of the major sections of the MDS, for example, move Section E. to follow Section R. In those situations, the State must provide a conversion table between its instrument and the MDS, and data supplied to HCFA from the MDS must be ordered in the same manner as designated in this issuance.

The State may include in its resident assessment instrument data elements additional to those in the MDS if the State believes this information will serve unique operational needs such as supporting pre-admission screening, quality assurance, quality incentive, or case-mix payment classification systems. This material will only be reviewed by HCFA to assure there is no conflict with elements included in the MDS, that is, HCFA will not evaluate the merits of including those elements.

- *Resident Assessment Protocols.* An alternate resident assessment instrument may include all, some, or none of the RAPs designated by HCFA.

A State developed alternate resident assessment instrument must provide frameworks for comprehensive assessment in the following care areas:

—Cognitive loss/dementia;
—Visual function;
—Communication;
—Activities of daily living functional potential;
—Rehabilitation potential (HCFA's instrument combines the Rehabilitation RAP with the ADLs RAP);
—Urinary incontinence and indwelling catheter;
—Psychosocial well-being (In the instrument designated by HCFA, in addition to a distinct psychosocial well-being protocol, we include three distinct RAPs that bear on psychosocial functioning, that is, "mood", "behavior", and "delirium".);
—Activities;
—Falls;
—Nutritional status;
—Feeding tubes;
—Dehydration/fluid maintenance;
—Dental care;
—Pressure ulcers;
—Psychotropic drug use; and
—Physical restraints.

These care areas may be combined in different ways to create a RAP comparable to that designated by HCFA. For example, the State may have a RAP that combines nutrition and tube feeding or activities of daily living and rehabilitation potential. However, if the State creates alternative RAPs through combining care areas, it must provide a cross-walk chart from its RAPs to the above care areas.

Each RAP the State develops must include assessment triggers, based on MDS elements or other information requirements, that screen which residents are subject to additional assessment.

If a State selects alternative triggers and/or information requirements for its RAI, it should provide supporting documentation for its decisions. Such documentation may take the form of citations from the literature, results of field testing, or the consensus of experts that the State uses to assist in designing these RAPs.

The State must also specify a standardized format that long term care facilities will use to document information derived from RAPs about the nature of problems, complications and risk factors, the need for referral to appropriate health professionals, and the reasons for deciding to proceed or not to proceed with care planning specific to the triggered problems. There must be provision for identification of the location of the assessment results and for certification of completion and accuracy. See the RAP formats proposed by HCFA.

Also, be advised that we plan to require MDS data to be transmitted in computer readable form at a later date through rulemaking and instructions, however, we will not gather data nationally from any assessment material beyond the MDS.

Department of Housing and Urban Development

Office of the Secretary

24 CFR Part 574
Housing Opportunities for Persons with AIDS; Interim Rule and Notice

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Secretary

24 CFR Part 574

[Docket No. R-92-1606; FR-3178-I-02]

RIN 2501-AB41

Housing Opportunities for Persons With AIDS

AGENCY: Office of the Secretary, HUD.

ACTION: Interim rule.

SUMMARY: This interim rule is being issued pursuant to a schedule prescribed by the Housing and Community Development Act of 1992 (Pub. L. 102-550, approved October 28, 1992), which amended the program established under the AIDS Housing Opportunity Act (42 U.S.C. 12901). The program provides States and localities with the resources and incentives to devise long-term comprehensive strategies for meeting the housing needs of persons with acquired immunodeficiency syndrome (AIDS) or related diseases and their families. The program authorizes entitlement grants and competitively awarded grants for housing assistance and services.

DATES: Effective date: December 28, 1992. Comment due date: February 26, 1993.

ADDRESSES: Interested persons are invited to submit comments regarding this rule to the Office of the General Counsel, Rules Docket Clerk, room 10276, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, DC 20410-0500. Communications should refer to the above docket number and title. A copy of each communication submitted will be available for public inspection and copying during regular business hours (7:30 a.m. to 5:30 p.m. Eastern Time) at the above address.

FOR FURTHER INFORMATION CONTACT: James N. Forsberg, Director, Office of Special Needs Assistance Programs, (202) 708-4300; TDD: (202) 708-2565); Department of Housing and Urban Development, 451 Seventh Street SW., Washington, DC 20410-7000. (Telephone numbers are not toll-free.)

SUPPLEMENTARY INFORMATION:

I. Information Collections

The information collection requirements for the HOPWA program were approved under the Paperwork Reduction Act of 1980 by the Office of Management and Budget (OMB) through January 31, 1993, and assigned OMB control number 2506-0133. Information on the estimated public reporting burden is provided in this document in paragraph I of Section III., Findings and Certifications. Comments regarding burden estimates or any other aspects of the information collection requirements should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, room 3001, Washington, DC 20503, Attention: HUD Desk Officer, and to the HUD Rules Docket Clerk, at the address stated in the address section above.

II. Introduction

A. Background

The initial Interim Rule for the Housing Opportunities for Persons with AIDS (HOPWA) Program was published in the **Federal Register** on July 20, 1992 (57 FR 32106), establishing regulations for the implementation of a new program during Fiscal Year 1992. The Department also published at that time (57 FR 32124) the Announcement of Allocations for HOPWA that provided for a distribution of $42,935,000 in formula funds to 11 eligible States and 27 eligible metropolitan statistical areas for Fiscal Year 1992 appropriations; a correction to the announcement was published on August 6, 1992 (57 FR 34782). The Department also published a Notice of Funding Availability in the **Federal Register** on August 25, 1992 (57 FR 38552) to announce the competitive program under § 574.200 of the Interim Rule. This notice provided for $4,771,000 in funds to be awarded by competition with applications due to the Department on October 26, 1992.

At the time of publication of the initial Interim Rule, HUD indicated that its procedures for rulemaking, which generally require the publication of a proposed rule with public comment prior to the implementation of a program, were not being followed in order to more expeditiously address the pressing needs for housing and services for persons with AIDS and related diseases. The Department did, however, solicit public comment on the Interim Rule to be considered in the drafting of a final rule. The Department announced a comment due date of September 18, 1992 and received twelve public comments during this period. The comments were submitted by nonprofit organizations, national and local coalitions of AIDS organizations, professional organizations, State, and local governments, representing 47 groups located in 13 States. A number of these comments were highly supportive of those provisions of the Interim Rule that allow flexibility in the selection of activities, the inclusion of supportive services, the amendment and waiver procedures, the potential for HUD-approval for other activities, and the requirement for beneficiary confidentiality. Other comments recommended revisions to the Interim Rule which will be addressed below in this preamble.

Additional revisions are being made to the HOPWA program pursuant to the statutory changes provided by Section 606 of the Housing and Community Development Act of 1992, Public Law 102-550, approved October 28, 1992 (hereafter "the Act"). That statute requires HUD to issue interim regulations within 45 days from the enactment of that Act with the regulations taking effect upon publication. The Act further specifies that final regulations are to be issued within 90 days from the publication of interim regulations, including the opportunity for public comment during a period of not less than 60 days. Statute revisions are addressed below along with any public comments which coincide with the respective statutory provision. Additional technical changes have been identified through the Department's experience in initiating this program and are also addressed below.

B. Statutory Revisions and Related Public Comments

1. Eligible Persons Include Families

Section 606(c)(3) of the Act expanded the term "eligible person" to include "and the family of such a person." While the Department believes that grantees were empowered to assist the families of eligible persons under the existing program, the statutory clarification of the term is reflected throughout the second Interim Rule in the use of "eligible person," which is defined to include the family of the person with AIDS, as a replacement for the terms persons or individuals with AIDS. These revisions also accommodate comments which supported a clarification that a family is eligible under the program.

2. Nonprofits as Eligible Applicants and Project Sponsors

Section 606(d)(1) of the Act revised the term "applicant" to provide that nonprofit organizations are eligible to apply for and receive funding directly from HUD. This authorization is limited to the non-formula allocation of funds for special projects of national significance in section 606(d)(4)(B). These changes are found at §§ 574.3 and 574.200(a)(1) of the rule.

Nonprofit organizations may also continue to serve as project sponsors for grantees under this program. Since the grantees, as governmental jurisdictions are subject to the requirement of having a Comprehensive Housing Affordability Strategy (CHAS), the nonprofit organization serving as project sponsor would have to obtain a certification of consistency of any housing activity with the CHAS of the grantee or, in the case of an EMSA, the CHAS of the jurisdiction where the housing activity is to be located.

The Act further revised the definition of nonprofit, found at § 574.3 of the rule, by replacing the direct reference to section 501(c) of the Internal Revenue Code of 1986 with a description that requires nonprofits to: (i) Be organized under State or local laws; (ii) have no benefit inuring to members, (iii) have acceptable financial accountability, and (iv) have significant AIDS related housing or services among its purposes. The Department interprets this revised definition as including both public and private nonprofit organizations. The rule's use of the fourth component also reflects comments which recommended that all community-based organizations that are selected as project sponsors have prior experience in serving persons with HIV/AIDS.

3. Definition of Project Sponsors

Section 606(c)(3) of the Act creates a definition for project sponsor including any nonprofit organization or governmental housing agency. In the initial Interim Rule, HUD did not specify that only a "housing" agency could operate a project for a grantee. Given the differences in administrative structures of State and local governments, HUD interprets this new definition at § 574.3 to include government agencies that engage in housing activities as an established function of that office, such as providing direct housing assistance and related community development activities, emergency/transitional shelter, residential care, and housing subsidies.

4. Applicants for Formula Allocations to Eligible Metropolitan Statistical Areas

The Act revises the formula allocation section of the program by designating the government that will serve as the applicant for an eligible metropolitan statistical area (EMSA). Section 606(d)(2) stipulates that the city that is the most populous unit of general local government in an EMSA will be allocated the funds for that EMSA. The term "city" is defined by the Act, as provided in § 574.3, as a municipality, and, in some circumstances, a town or township, but it does not include county governments. Under this Interim Rule, county governments are not authorized to receive formula funds, regardless of their status as the most populous unit of general local government in an EMSA. The selection process found at § 574.110 of the initial Interim Rule is eliminated in conformance with the statutory provision.

The statute further requires in section 606(d)(7) that the city applicant for an EMSA provide assurances to HUD that grant funds will be used to address the needs of eligible persons residing within its metropolitan statistical area and that coordination will occur with other localities in that EMSA in providing this assistance. Additions at §§ 574.120, 574.160(c)(5), and 574.420(c) of this rule implement this requirement.

5. Formula Change on Data

The program's formula allocation, at § 574.130, is revised by changing the date of the data used for the number of cases of AIDS. The statute under section 606(d)(3), uses March 31 of the fiscal year immediately preceding the fiscal year of the appropriations as the standard date for this element of the formula. In the first formula allocation, HUD had used data as of September 30 to coincide with the standard dates for the Department's fiscal year.

6. Administrative Costs Authorized

Section 606(f)(2) of the Act authorizes administrative costs for grantees and project sponsors. Under § 574.300(b)(9) of this Interim Rule, a grantee can use up to 3 percent of the grant amount for its own administrative costs for administering the grant and allocating funds to project sponsors. A project sponsor can use up to 7 percent of the amounts it receives for its own administrative costs in carrying out eligible activities, including costs of staff necessary to carry out those activities. This limitation on staff costs may somewhat constrain the amount of funds available under HOPWA for project sponsors that directly provide those supportive services which are staff-intensive, such as assessment, counseling and assistance in gaining access to other benefits and services. However, this 7 percent limitation does not apply to contracted services. This authorization for administrative costs responds to comments which requested that the program authorize administrative costs. Also pursuant to this statutory change, a related reference to staff training and recruitment has been deleted under operating costs at § 574.300(b)(8) as these items are administrative costs.

7. Other Revised Eligible Activities

In addition to administrative costs, other changes were made by the statute to the list of eligible activities at § 574.300(b) (7) and (11). The health services component of supportive services is limited by section 606(g)(1) of the Act to eligible persons who are individuals with AIDS or related diseases. Family members who are otherwise eligible for HOPWA assistance, as discussed above, do not qualify for health services funded by a grant under this program.

The final category of activity, "any other activity proposed by the applicant and approved by HUD," was made applicable to competitive grants only by section 606(e) of the Act. Formula grantees are no longer authorized to use this provision.

8. Prohibition of Fees

The original statute prohibited fees for any service provided by HOPWA funds, directed HUD to use Section 8 provisions to the extent practicable, and required resident rent payments at community residences (42 U.S.C. 12910). The Department implemented these provisions at §§ 574.430 and 574.320. Section 606(f)(1) of the Act prohibits fees for any housing provided to eligible persons. Since the statute did not remove the references to Section 8 and resident rent, the Department interprets this additional provision found at § 574.430 as prohibiting any fees over and above resident rent.

9. Removal of Location Limitation on Short-Term Facilities

Section 606(g)(2)(A) deletes a previous limitation on the location of short-term supported housing for eligible persons. That provision of the Interim Rule at § 574.330(b)(2), which authorized a facility in or contiguous to another emergency or short-term housing facility if that other facility is used exclusively by persons with AIDS or related diseases, was removed from this Interim Rule.

10. Waiver Presumption for Good Faith Efforts

Section 606(g)(2)(B) establishes a presumption for a waiver by HUD of time limits for residency in short-term supported housing facilities in cases where the project sponsor has made a good faith effort to acquire permanent housing for the resident. Section 574.330(a)(2) implements this statutory provision. Clarification was also added at § 574.330(a)(1) that the time

limitations for short-term supported housing are not applicable to rental assistance provided under § 574.300(b)(5).

C. Other Revisions in Response to Public Comments

1. Involvement of Organizations Serving Persons with AIDS

A number of comments were received which recommended that applicants consult with and involve organizations experienced with serving persons with AIDS in their application planning process. The Department agrees and has revised §§ 574.160(c)(5) and 574.240(c)(6) to require that applications submitted for formula and competitive grants contain information on this matter.

2. SRO Units in Community Residences

A number of comments were received recommending changes to enhance single room occupancy (SRO) dwellings, including use of technical assistance to help plan and develop such dwellings. Comments also noted that buildings with SRO units may meet the definition of community residences at § 574.340(a). The initial Interim Rule at § 574.300(b)(9) provides for technical assistance in establishing and operating a community residence. In order for a SRO building to receive technical assistance under a HOPWA grant, it must meet the qualifications for a community residence at § 574.340 in accordance with section 861 of the AIDS Housing Opportunity Act.

3. Timely Expenditure of Funds

Comments on § 574.540 expressed concern that the term timely manner was undefined and non-objective. A clarification is made that funds may be deobligated if not expended within 3 years.

4. Audit Procedures

One comment recommended that the audit procedures for nonprofit organizations be updated. This has been done in § 574.650.

D. Other Points Raised in Public Comments

1. Comments were received that the announcement of formula allocations should specify the process for curing technical deficiencies. The processes for curing technical deficiencies under the formula program provide for greater flexibility than that established for the competitive program in the notice of funding availability (NOFA) for that program. The Department is reluctant to impose the competitive standard given its experience under the first formula allocation under which formula applicants and HUD Field Offices cooperated successfully in correcting deficiencies.

Comments were also received that formula application deadlines could be difficult to meet in the initiation of the applicant's HOPWA program. The first Interim Rule provided flexibility in addressing this concern. The Department may extend the deadline for the submission of a formula application in exceptional circumstances pursuant to the waiver provision at § 574.4.

2. One comment recommended allowing applicants for EMSAs to proportionately share grant amounts with other jurisdictions in that EMSA based on AIDS prevalence, planning council recommendations or other means and to delegate grant management responsibilities to those jurisdictions. Grantees are required by § 574.420 to coordinate with other governments within an EMSA in addressing the needs of eligible persons. The statute provides for only one grantee for each EMSA and the rule therefore does not permit a grantee to diminish or delegate its responsibilities for grant administration under subpart F.

3. Comments were received recommending removal of the provision at § 574.300(c)(1)(i)(C) regarding voluntary nondenominational prayer before meetings of primarily religious organizations. The Department is not adopting this recommendation because it believes that the provision is permissible under the Constitution.

4. Comments recommended that the rental assistance standards at § 574.320 authorize the use of documented open market rental rates or otherwise exempt high cost areas from fair market rent (FMR) provisions. The Department believes that the procedures to establish and update FMRs under the Section 8 program are adequate to address these concerns. The related use of this procedure will provide for greater consistency in HUD programs and avoid redundant administrative activities.

5. The provision for due process in terminating assistance is found at § 574.310(e). One comment contended that this provision does not adequately address participant's rights within the program's administrative procedures which may lead to the loss of housing as compared to the use of judicial procedures for evictions under other HUD programs. The Interim Rule is consistent with other homeless assistance programs operated by the Department where housing assistance is integrated with supportive services.

E. Additional Technical Changes

1. HIV Included

The definition of acquired immunodeficiency syndrome and related diseases at § 574.3 includes infection with the human immunodeficiency virus (HIV). It is the Department's observation that while HIV infection was included under the term "etiologic agent" found in both the original definition and the authorizing statute, it was not clearly understood by interested parties. Therefore, the definition of acquired immunodeficiency syndrome and related diseases now explicitly includes HIV infection.

2. CHAS Consistency

Under § 574.160(a), a clarification is provided that only the State CHAS is applicable for the State application under the formula program.

3. Criteria for Competitive Grants

In implementing the first competitive program, HUD included in the notice of funding availability (NOFA) a rating criterion for the appropriateness of housing and supportive services, under authority existing at § 574.250(b)(2)(vi). This specific criterion has been included in this Interim Rule.

4. Applicability of Housing Quality Standards

Under § 574.310(b) in the first Interim Rule, the housing quality standards (HQS) provision was mistakenly applied to the current residence of an eligible person seeking short-term rent, mortgage, and utility payments under § 574.300(b)(6). Requiring conformance with HQS in this regard could have unintended consequences for residents in incurring unnecessary costs for repairs that in some cases may exceed the value of the requested HOPWA assistance. It could also lead to waiver requests and monitoring activities that delay or restrict assistance intended to address short-term emergency circumstances and temporary needs. Therefore, § 574.310(b) has been revised to delete the reference to § 574.300(b)(6).

5. Community Residence Service Agreement

Section 574.340(b)(1) requires that a written agreement to provide services be entered into by the two parties involved in that community residence. A clarification is made in identifying the parties as the grantee and the community resident's service provider and allowance is made if the grantee is providing the services itself.

6. Submission of Technical Information

A procedural change is provided at § 574.250(a)(3) regarding the grant selection process. To reduce the amount of documentation required to be submitted by all applicants, only those applicants with the highest rated applications within each competitive category will be required to submit detailed technical information. That process of identifying these top applicants is labeled a conditional approval of their applications. However, submission of such additional technical information will be a prerequisite to a grant offer from HUD.

7. Conflict of Interest Exceptions

Section 574.625 contains conflict of interest provisions for this program. This interim rule adds paragraphs (b) and (c) to the section to provide exceptions to be approved to the conflict of interest prohibition under appropriate circumstances. These paragraphs mirror provisions already included in regulations for the HOME program and the Community Development Block Grants program. The Department has found that waiver of the original provision is very time-consuming and difficult and believes that these added paragraphs provide for exceptions to be granted only where it is clearly in the interest of the HOPWA program.

8. Americans With Disabilities Act

References to this new statute were added to the provisions of § 574.600 dealing with nondiscrimination on the basis of handicap and on disability requirements.

F. Environmental Provisions

No public comments were made on Part 50, Protection and Enhancement of Environmental Quality. Since the 1992 Act did not make any changes that would affect the environmental issues, no changes to part 50 have been included here. The final rule incorporating changes to that part based on the previous interim rule will be included in the final rule on changes to part 574.

However, a few technical changes were made to § 574.510 to correct that section on environmental procedures, and environmental information was added to § 574.250(a)(4)(iv) to the list of specific technical information needed in the competitive program after an applicant has received conditional approval.

III. Findings and Certifications

A. Justification for Interim Rulemaking

In general, the Department publishes a rule for public comment before issuing a rule for effect, in accordance with its own regulations on rulemaking, 24 CFR part 10. However, the Housing and Community Development Act of 1992 (Pub. L. 102–550, approved October 28, 1992) requires the Department to submit draft interim regulations to Congress not later than the expiration of the 30-day period beginning on the date of the enactment of that Act, or November 27, 1992. Section 606(k)(1) further provides that following the 15-day period beginning upon the submission of the draft interim regulations to the Congress, HUD must publish interim regulations which will take effect upon publication.

Section 606(k)(2) of the Act provides that the comment period on the interim rule is to be 60 days long; that final regulations must be published following that notice and opportunity for public comment within 90 days of publication of the interim regulations; and that the final regulations will take effect upon publication. The Department invites public comment on this interim rule. The comments received within the 60-day comment period will be considered during the development of the final rule, which will supersede this interim rule.

B. Environmental Impact

A finding of no significant impact with respect to the environment has been made in accordance with HUD regulations at 24 CFR part 50, which implement section 102(2)(C) of the National Environmental Policy Act of 1969. The finding of no significant impact is available for public inspection between 7:30 a.m. to 5:30 p.m. weekdays in the Office of the Rules Docket Clerk at the above address.

C. Impact on the Economy

This rule does not constitute a "major rule" as that term is defined in section 1(b) of the Executive Order on Federal Regulation issued by the President on February 17, 1981. An analysis of the rule indicates that it does not (1) have an annual effect on the economy of $100 million or more; (2) cause a major increase in costs or prices for consumers, individual industries, federal, State, or local government agencies, or geographic regions; or (3) have a significant adverse effect on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

D. Impact on Small Entities

The Secretary, in accordance with the Regulatory Flexibility Act (5 U.S.C. 605(b)), has reviewed this rule before publication and by approving it certifies that this rule does not have a significant economic impact on a substantial number of small entities, because jurisdictions that are statutorily eligible to receive formula allocations are limited to States and metropolitan statistical areas with a relatively large cumulative number of cases of persons with AIDS.

E. Semiannual Agenda of Rules

This rule was listed as sequence number 1377 under the Office of the Secretary in the Department's Semiannual Agenda of Regulations, published on November 3, 1992 (57 FR 51392, 51408) in accordance with Executive Order 12291 and the Regulatory Flexibility Act.

F. Federalism Impact

The General Counsel, as the Designated Official under section 6(a) of Executive Order 12612, Federalism, has determined that the policies contained in this rule will not have substantial direct effects on States or their political subdivisions, or the relationship between the Federal government and the States, or on the distribution of power and responsibilities among the various levels of government. As a result, the rule is not subject to review under the Order. The rule authorizes entitlement grants to a limited number of States and metropolitan areas and authorizes competitively awarded grants under a limited statutory allocation for housing assistance and services for the Housing Opportunities for Persons with AIDS program, but the grants are administered locally.

G. Impact on the Family

The General Counsel, as the Designated Official for Executive Order 12606, the Family, has determined that this rule, to the extent the funds provided under it are directed to families, has the potential for a beneficial impact on family formation, maintenance and general well-being. The program provides housing assistance and services for individuals with acquired immunodeficiency syndrome or related diseases and their families and defines the term eligible person to include the family of a person with AIDS or related diseases. Such assistance will help enable those families with a participating member

who has AIDS to live in decent, safe, and sanitary housing and receive the supportive services necessary to assist a person with AIDS to live independently. Since the impact on the family is beneficial, no further review is considered necessary.

H. "Takings" Assessment

The General Counsel, as the Designated Official under Executive Order 12630, Government Actions and Interference with Constitutionally Protected Property Rights, has determined that this rule does not have "takings implications" as defined in HUD's "Supplemental Guidelines for the Evaluation of Risk and Avoidance of Unanticipated Takings." The Department does not regard the effects of this rule on private property rights as "effectively denying economically viable use of any distinct legally protected property interest of a property owner, or resulting in a permanent or temporary physical occupation, invasion, or deprivation." The rule would authorize acquisition of property by grantees or their project sponsors under the normal State and local governmental procedures for the limited purpose of providing housing assistance for eligible persons.

I. Public Reporting Burden

The information collection requirements contained in this rule have been submitted to the Office of Management and Budget under the Paperwork Reduction Act of 1980 (44 U.S.C. 3501–3520). The Department has determined that the following provisions contain information collection requirements.

TABLE 1.—TABULATION OF ANNUAL REPORTING BURDEN

Description of information collection	Provision of interim rule	Number of respondents	Number of responses per respondent	Total annual responses	Hours per response	Total hours
Applications to HUD:						
—State entitlements	§574.160	11	1	11	8.0	88
—City for EMSA	§574.160	27	1	27	12.0	324
—Competitive awards	§574.240	100	1	100	20.0	2,000
Annual report to HUD	§574.520	48	1	48	12.0	576
Waiver requests to HUD	§574.4 §574.310(c) §574.330(b)	5	1	5	4.0	20
Amendments submitted	§574.180 §574.260	5	1	5	4.0	20
Uniform relocation act appeals process	§574.630	5	1	5	2.0	10
Environmental review recordkeeping	§574.510	48	1	48	4.0	192
Total Burden						3,230

J. Catalog

The Catalog of Federal Domestic Assistance program number for the Housing Opportunities for Persons with AIDS program is 14.241.

List of Subjects in 24 CFR Part 574

AIDS, Community facilities, Disabled, Emergency shelter, Grant programs—housing and community development, Grant programs—social programs, Homeless, Housing, Low and moderate income housing, Nonprofit organizations, Rent subsidies, Reporting and recordkeeping requirements, Technical assistance.

Accordingly, title 24 of the Code of Federal Regulations is amended by revising part 574 to read as follows:

PART 574—HOUSING OPPORTUNITIES FOR PERSONS WITH AIDS

Subpart A—General

Sec.
574.1 Purpose.
574.2 Overview.
574.3 Definitions.
574.4 Waivers.

Subpart B—Formula Entitlements

574.100 Eligible applicants.
574.120 Responsibility of applicant to serve EMSA.
574.130 Formula allocations.
574.140 Eligible persons.
574.150 Eligible activities.
574.160 Application requirements.
574.170 Application review and approval.
574.180 Amendments.
574.190 Reallocation of grant amounts.

Subpart C—Competitive Grants

574.200 Amounts available for competitive grants.
574.210 Eligible applicants.
574.220 Eligible persons.
574.230 Eligible activities.
574.240 Application requirements.
574.250 Grant selection process.
574.260 Amendments.

Subpart D—Uses of Grant Funds

574.300 Eligible activities.
574.310 General standards for eligible housing activities.
574.320 Additional standards for rental assistance.
574.330 Additional standards for short-term supported housing.
574.340 Additional standards for community residences.

Subpart E—Special Responsibilities of Grantees and Project Sponsors

574.400 Prohibition of substitution of funds.
574.410 Capacity.
574.420 Cooperation.
574.430 Fee prohibitions.
574.440 Confidentiality.
574.450 Financial records.

Subpart F—Grant Administration

574.500 Responsibility for grant administration.
574.510 Environmental procedures and standards.
574.520 Performance reports.
574.530 Recordkeeping.
574.540 Obligation and deobligation of funds.

Subpart G—Other Federal Requirements

574.600 Nondiscrimination and equal opportunity.
574.605 Applicability of OMB circulars.
574.610 Drug-free workplace.
574.615 Anti-lobbying certification.
574.620 Debarred or suspended contractors.
574.625 Conflict of interest.
574.630 Displacement, relocation and real property acquisition.
574.635 Lead-based paint.
574.640 Flood insurance protection.
574.645 Coastal barriers.
574.650 Audit.

Authority: 42 U.S.C. 12901–12912.

Subpart A—General

§ 574.1 Purpose.

The Housing Opportunities for Persons with AIDS (HOPWA) program is authorized by AIDS Housing Opportunity Act (AOHA) and amended by the Housing and Community Development Act of 1992 (Pub. L. 102–550, approved October 28, 1992). The program is designed to provide States and localities with resources and incentives to devise long-term comprehensive strategies for meeting the housing needs of persons with acquired immunodeficiency syndrome or related diseases and their families. The program authorizes entitlement grants and competitively awarded grants for housing assistance and services.

§ 574.2 Overview.

(a) *Available funds.* The Department awards funds appropriated for any fiscal year for the program through a formula allocation and a competitive grant process. The amount of funds available will be specified in an Announcement of Allocations for entitlement grants and a Notice of Funds Availability (NOFA) for competitive grants, both published in the Federal Register. Certain States and cities that are the most populous unit of general local government in eligible metropolitan statistical areas will receive (upon submission of an application and approval by HUD) formula allocations based on their State or metropolitan population and proportionate number of cases of persons with AIDS. They will receive funds under this part for eligible activities that address the housing needs of persons with AIDS or related diseases and their families. All States and units of general local government and nonprofit organizations are eligible to apply for competitive grants to fund projects of national significance. Only those States and units of general local government that do not qualify for formula allocations are eligible to apply for competitive grants to fund other projects.

(b) *Formula entitlements.* Under the Act, 90 percent of appropriated amounts are to be distributed by formula entitlement. See § 574.130(b).

(c) *Competitive grants.* The 10 percent remainder of appropriated funds are awarded through a competitive process. See subpart C of this part.

§ 574.3 Definitions.

Acquired immunodeficiency syndrome (AIDS) or related diseases means the disease of acquired immunodeficiency syndrome or any conditions arising from the etiologic agent for acquired immunodeficiency syndrome, including infection with the human immunodeficiency virus (HIV).

Applicant means a State or city applying for a formula allocation as described under § 574.100 or a State, unit of general local government, or a nonprofit organization applying for a competitive grant as described under § 574.210.

City means any unit of general local government which is classified as a municipality by the U.S. Bureau of the Census or any other unit of general local government which is a town or township and which, in the determination of the Secretary:

(1) Possesses powers and performs functions comparable to those associated with municipalities;

(2) Is closely settled; and

(3) Contains within its boundaries no incorporated places as defined by the U.S. Bureau of the Census which have not entered into cooperation agreements with such town or township to undertake or to assist in the undertaking of essential community development and housing assistance activities.

Eligible Metropolitan Statistical Area (EMSA) means a metropolitan statistical area that has a population of more than 500,000 and has more than 1,500 cumulative cases of AIDS.

Eligible person means a person with acquired immunodeficiency syndrome or a related disease and the family of such person.

Eligible State means a State that has:

(1) More than 1,500 cumulative cases of AIDS in those areas of the State outside of eligible metropolitan statistical areas that are eligible to be funded through a qualifying city; and

(2) An approved Comprehensive Housing Affordability Strategy (CHAS) as provided by § 574.160. A State may carry out activities anywhere in the State, including within an eligible metropolitan statistical area.

Grantee means a State, unit of general local government, or nonprofit organization receiving a grant directly from HUD under this part.

Low-income individual means any individual or family whose income does not exceed 80 percent of the median income for the area, as determined by HUD, with adjustments for smaller and larger families, except that HUD may establish income ceilings higher or lower than 80 percent of the median income for the area if HUD finds that such variations are necessary because of prevailing levels of construction costs or unusually high or low family incomes.

Metropolitan statistical area means a metropolitan statistical area as established by the Office of Management and Budget.

Moderate rehabilitation means rehabilitation that involves costs that are less than or equal to 75 percent of the value of the building after rehabilitation.

Nonprofit organization means any nonprofit organization (including a State or locally chartered, nonprofit organization) that:

(1) Is organized under State or local laws;

(2) Has no part of its net earnings inuring to the benefit of any member, founder, contributor, or individual;

(3) Has a functioning accounting system that is operated in accordance with generally accepted accounting principles, or has designated an entity that will maintain such an accounting system; and

(4) Has among its purposes significant activities related to providing services or housing to persons with acquired immunodeficiency syndrome or related diseases.

Population means total resident population based on data compiled by the U.S. Census and referable to the same point in time.

Project sponsor means any nonprofit organization or governmental housing agency that receives funds under a contract with the grantee to carry out eligible activities under this part.

Qualifying city means a city that is the most populous unit of general local government in an Eligible Metropolitan Statistical Area (EMSA) and that has an approved Comprehensive Housing Affordability Strategy (CHAS) as provided by § 574.160.

Rehabilitation means the improvement or repair of an existing structure, or an addition to an existing structure that does not increase the floor area by more than 100 percent.

Secretary means the Secretary of the Department of Housing and Urban Development.

State means a State of the United States of America, the District of Columbia, and the Commonwealth of Puerto Rico, or any agency or instrumentality thereof that is established pursuant to legislation and designated by the chief executive to act on behalf of the jurisdiction with regard to provisions of this part.

Substantial rehabilitation means rehabilitation that involves costs in excess of 75 percent of the value of the building after rehabilitation.

Unit of general local government means any city, town, township, parish, county, village, or other general purpose political subdivision of a State; Guam, the Northern Mariana Islands, the Virgin

Islands, American Samoa, the Federated States of Micronesia and Palau, the Marshall Islands, or a general purpose political subdivision thereof; and any agency or instrumentality thereof that is established pursuant to legislation and designated by the chief executive to act on behalf of the jurisdiction with regard to provisions of the National Affordable Housing Act.

§ 574.4 Waivers.

Upon a determination and finding of good cause, the Secretary may waive any requirement of this part in any particular case subject only to statutory limitations. Each waiver must be in writing and must be supported by documentation of the pertinent facts and grounds.

(Approved by the Office of Management and Budget under OMB control number 2506–0133)

Subpart B—Formula Entitlements

§ 574.100 Eligible applicants.

(a) Eligible States and qualifying cities, as defined in § 574.3, qualify for formula allocations under HOPWA.

(b) List. A list of qualifying cities and eligible States will be contained in the Announcement of Allocations published annually in the Federal Register.

§ 574.120 Responsibility of applicant to serve EMSA.

The EMSA's applicant shall serve eligible persons who live anywhere within the EMSA, except that housing assistance shall be provided only in localities within the EMSA that have a HUD-approved CHAS and have provided a certification of consistency in accordance with § 574.160(a). In allocating grant amounts among eligible activities, the EMSA's applicant shall address needs of eligible persons who reside within the metropolitan statistical area, including those not within the jurisdiction of the applicant.

§ 574.130 Formula allocations.

(a) *Data sources.* HUD will allocate funds based on the number of cases of acquired immunodeficiency syndrome reported to and confirmed by the Director of the Centers for Disease Control, and on population data provided by the U.S. Census. The number of cases of acquired immunodeficiency syndrome used for this purpose shall be the number reported as of March 31 of the fiscal year immediately preceding the fiscal year for which the amounts are appropriated and allocated.

(b) *Distribution of appropriated funds for entitlement awards.* (1) Seventy-five percent of the funds allocated under the formula is distributed to qualifying cities and eligible States, as described in § 574.100, based on each metropolitan statistical area's or State's proportionate share of the cumulative number of AIDS cases in all eligible metropolitan statistical areas and eligible States.

(2) The remaining twenty-five percent is allocated among qualifying cities, but not States, where the per capita incidence of AIDS for the year, April 1 through March 31, preceding the fiscal year of the appropriation is higher than the average for all metropolitan statistical areas with more than 500,000 population. Each qualifying city's allocation reflects its EMSA's proportionate share of the high incidence factor among EMSA's with higher than average per capita incidence of AIDS. The high incidence factor is computed by multiplying the population of the metropolitan statistical area by the difference between its twelve-month-per-capita-incidence rate and the average rate for all metropolitan statistical areas with more than 500,000 population. The EMSA's proportionate share is determined by dividing its high incidence factor by the sum of the high incidence factors for all EMSA's with higher than average per capita incidence of AIDS.

(c) *Minimum grant.* No grant awarded under paragraph (b) of this section shall be less than $200,000. Therefore, if the calculations under paragraph (b) of this section would result in any eligible metropolitan statistical area or eligible State receiving less than $200,000, the amount allocated to that entity is increased to $200,000 and allocations to entities in excess of $200,000 are proportionately reduced by the amount of the increase.

§ 574.140 Eligible persons.

Persons eligible to receive assistance or services under this part are persons with acquired immunodeficiency syndrome or related diseases who are low-income individuals and their families. A person with AIDS or related diseases or a family member regardless of income is eligible to receive housing information services, as described in § 574.300(b)(1). Any person living in proximity to a community residence is eligible to participate in that residence's community outreach and educational activities regarding AIDS or related diseases, as provided in § 574.300(b)(9).

§ 574.150 Eligible activities.

Grantees under this subpart are authorized to provide, or contract with project sponsors to provide, housing assistance or service activities as described in Subpart D—Uses of Grant Funds. The selection of project sponsors is not subject to the procurement requirements of 24 CFR 85.36

§ 574.160 Application requirements.

(a) *CHAS.* Assistance may not be made available under this subpart unless the applicant has submitted a certification that proposed housing assistance is consistent with a Comprehensive Housing Affordability Strategy (CHAS) submitted to and approved by HUD in accordance with 24 CFR part 91. The applicant's certification of consistency must be submitted by the public official responsible for submitting the CHAS. Where the applicant is a city that is the most populous unit of general local government in an EMSA, it must also obtain and keep on file certifications of consistency from such public officials for each other locality in the EMSA in which housing assistance is provided. Where the applicant is a State, the certification applies to consistency with the State's CHAS.

(b) *Application requirements.* To receive a grant, a State or city applicant for an EMSA applying for a formula grant award on the basis of an allocation under § 574.130 must submit an application that meets the requirements of paragraph (c) of this section, and the application must be submitted within the time period established by HUD in the Announcement of Allocations for Housing Opportunities for Persons with AIDS, published annually in the Federal Register. This Announcement:

(1) Gives the location for obtaining application packages, which provides specific application requirements and guidance;

(2) Specifies the time and the place for submitting completed applications; and

(3) Identifies States and the cities that are the most populous unit of general local government in metropolitan statistical areas eligible to receive funding available under the announcement.

(c) *Application contents.* A formula entitlement grant application, at a minimum, must contain:

(1) A description of the proposed activities, including general locations, and costs;

(2) A description of the number and characteristics of the eligible persons who would be served by the proposed activities;

(3) A description of the public and private resources that are expected to be made available in connection with the proposed activities;

(4) A description of the method of selecting project sponsors;

(5) A description of efforts that have been or will be taken to coordinate proposed activities with State and local government agencies responsible for providing services to persons with AIDS or related diseases, including, where applicable, coordination with agencies administering assistance provided pursuant to the Ryan White Comprehensive AIDS Resources Emergency Act of 1990 (42 U.S.C. 300). In addition, for city applicants, coordination with other units of general local government located within the metropolitan statistical area to address needs within that area. This description should also describe how community-based nonprofit organizations experienced in caring for persons with AIDS and organizations which represent persons with AIDS have been consulted and involved in the application planning process;

(6) A certification that any building or structure assisted under this part will be maintained as a facility to provide assistance for eligible persons:

(i) For a period of not less than 10 years in the case of assistance involving new construction, substantial rehabilitation or acquisition of a facility; and

(ii) For a period of not less than 3 years in cases involving non-substantial rehabilitation or repair of a building or structure;

(7) Description of how the proposed activities will meet urgent needs that are not being met by available public and private sources. In addition, for city applicants, a description of how the proposed activities will address the needs within the metropolitan statistical area in which the city is located, including areas not within the jurisdiction of the city;

(8) A certification that proposed housing activities are consistent with a CHAS approved by HUD, as described in paragraph (a) of this section;

(9) An assurance that the applicant will:

(i) Supply HUD with information necessary for HUD to perform any applicable environmental review for each property in accordance with the environmental laws and authorities cited in 24 CFR part 50;

(ii) Carry out mitigating measures required by HUD or select alternate eligible property; and

(iii) Not acquire, rehabilitate, convert, lease, repair or construct property to provide housing, or commit HUD, State, local, or other funds to such program activities with respect to any eligible property until HUD approval is received. See § 574.510 of this part for the environmental procedures and standards for applicants for assistance; and

(10) Such other information or certifications as HUD determines to be necessary.

(Approved by the Office of Management and Budget under OMB control number 2506–0133)

§ 574.170 Application review and approval.

The application review and approval process for assistance under this section consists of the following stages:

(a) *Review.* Applications will be reviewed to determine:

(1) Whether the application is adequate in time of submission, form, and completeness;

(2) Whether the applicant, the population to be served and project sponsor, if any, are eligible; and

(3) Whether the proposed activities are eligible for assistance under the program.

(b) *Approval.* The Department will award a grant in the amount determined under § 574.130 of this part to eligible applicants with approved applications.

§ 574.180 Amendments.

(a) A grantee must notify HUD in writing of any substantial change in the approved program of activities. A substantial change is any addition or deletion of an eligible activity, or any change that will significantly alter the scope, location, service area, or objectives of an activity or the number of eligible persons served, that has been approved in an application.

(b) Each amendment request must contain a description of the revised proposed use of funds and, for grantees receiving formula awards, a certification that the proposed use of funds is consistent with the applicable Comprehensive Housing Affordability Strategy. Funds may not be expended for the revised proposed use of funds until:

(1) HUD accepts the revised proposed use; and

(2) For amendments to acquire, rehabilitate, convert, lease, repair or construct properties to provide housing, an environmental review of the revised proposed use of funds has been completed in accordance with § 574.510.

§ 574.190 Reallocation of grant amounts.

Funds allocated to eligible States or to the cities that are the most populous unit of general local government in EMSAs, that do not submit an application by the deadline specified by HUD, will be added to the funds available for formula allocations in the current fiscal year. Any formula funds that become available as a result of deobligations or the imposition of sanctions as provided for in § 574.540 will be added to the funds available for formula allocations in the next fiscal year.

Subpart C—Competitive Grants

§ 574.200 Amounts available for competitive grants.

(a) The Department will set aside 10 percent of the amounts appropriated under this program to fund on a competitive basis:

(1) Special projects of national significance; and

(2) Other projects submitted by States and localities that do not qualify for formula grants.

(b) Any competitively awarded funds that become available as a result of deobligations or the imposition of sanctions, as provided in § 574.540, will be added to the funds available for competitive grants in the next fiscal year.

§ 574.210 Eligible applicants.

(a) All States, units of general local government, and nonprofit organizations, may apply for grants for projects of national significance.

(b) Only those States and units of general local government that do not qualify for formula grants, as described in § 574.100; may apply for grants for other projects as described in § 574.200(a)(2).

(c) Except for grants for projects of national significance, nonprofit organizations are not eligible to apply directly to HUD for a grant but may receive funding as a project sponsor under contract with a grantee.

§ 574.220 Eligible persons.

Persons eligible to receive assistance or services under this part are persons with acquired immunodeficiency syndrome or related diseases who are low-income individuals and their families. A person with AIDS or related diseases or a family member regardless of income is eligible to receive housing information services, as described in § 574.300(b)(1). Any person living in proximity to a community residence is eligible to participate in that residence's community outreach and educational activities regarding AIDS or related diseases, as provided in § 574.300(b)(9).

§ 574.230 Eligible activities.

Grantees under this subpart are authorized to provide, or contract with project sponsors to provide, housing assistance or service activities as

described in Subpart D—Uses of Grant Funds. The selection of project sponsors is not subject to the procurement requirements of 24 CFR 85.36.

§ 574.240 Application requirements.

(a) *Notice of fund availability for competitive grants.* Applications must comply with the provisions of the Department's Notice of Fund Availability (NOFA) to be published in the **Federal Register** in accordance with 24 CFR part 12. The notice:

(1) Gives the location for obtaining application packages, which will provide specific application requirements and guidance;

(2) Specifies the time and the place for submitting completed applications;

(3) States the amount and status of funding available under the notice, including the amounts allocated to each of the two categories of assistance;

(4) Specifies the timing and conditions for curing technical deficiencies in reviewed application;

(5) Provides other appropriate program information and guidance, including purpose, authority, and eligibility; and

(6) Describes the factors relative to each ranking criterion contained in § 574.250 of this part, and indicates the weight or relative importance of the criteria as they will be applied to the funding round announced in the Notice.

(b) *Application requirements.* To receive grant amounts, a State, unit of general local government, or nonprofit organization that elects to apply for a competitive grant award must submit an application that meets the requirements of paragraph (c) of this section and must be submitted within the time period established by HUD in the Notice of Funds Availability.

(c) *Application contents.* A competitive grant application, at a minimum, must contain:

(1) Applicant and project sponsor data, including a description of the applicant and sponsor's past experience in administering programs providing assistance to persons with AIDS, including minority persons, and for nonprofit organizations, description of how it is consistent with the definition of nonprofit organization as provided in § 574.3;

(2) A description of the proposed activities, including site information and costs;

(3) A description of the number and characteristics of the persons who would be served by the proposed activities;

(4) A description of the public and private resources that are expected to be made available in connection with the proposed activities;

(5) A description of the method of selecting project sponsors;

(6) A description of efforts that have been or will be taken to coordinate proposed activities with State and local government agencies responsible for providing services to persons with AIDS or related diseases, including, where applicable, coordination with agencies administering assistance provided pursuant to the Ryan White Comprehensive AIDS Resources Emergency Act of 1990 (42 U.S.C. 300). The description should also describe how community-based nonprofit organizations experienced in caring for persons with AIDS and organizations which represent persons with AIDS have been consulted and involved in the application planning process;

(7) A certification that any building or structure assisted with amounts under this part will be maintained as a facility to provide assistance for eligible persons:

(i) For not less than 10 years in the case of assistance involving new construction, substantial rehabilitation or acquisition of the building; and

(ii) For not less than 3 years in cases involving non-substantial rehabilitation or repair of a building or structure;

(8) Description of how the proposed activities will meet urgent needs that are not being met by available public and private sources;

(9) For grants for projects of national significance, a description of the innovative nature of the project and its potential for replication in similar localities or nationally;

(10) An assurance that the applicant will:

(i) Supply HUD with information necessary for HUD to perform any applicable environmental review for each property in accordance with the environmental laws and authorities cited in 24 CFR part 50;

(ii) Carry out mitigating measures required by HUD or select alternate eligible property; and

(iii) Not acquire, rehabilitate, convert, lease, repair or construct property to provide housing, or commit HUD, State, local, or other funds to such program activities with respect to any eligible property until HUD approval is received. See § 574.510 of this part for the environmental procedures and standards for applicants for assistance;

(11) For States and units of general local government, a certification that proposed housing activities are consistent with a CHAS approved by HUD (see § 574.160(a)); and

(12) Such other information or certifications as the Secretary determines to be necessary.

(Approved by the Office of Management and Budget under OMB control number 2506–0133)

§ 574.250 Grant selection process.

(a) *Selection process*—(1) *Review.* Applications will be reviewed to determine:

(i) Whether the application is adequate in time of submission, form, and completeness;

(ii) Whether the applicant, the population to be served and project sponsor(s), if any, are eligible;

(iii) Whether the proposed activities are eligible for assistance under the program; and

(iv) Whether the applicant is currently in compliance with the Federal requirements contained in Subpart G—Other Federal Requirements, §§ 574.600–574.650.

(2) *Rating.* Applications received by the deadline will be rated based on the selection criteria provided in paragraph (b) of this section;

(3) *Conditional selection for funding.* The highest rated applications within each of the two categories of assistance will be selected for potential funding in accordance with their ranked order to the extent funds are available. Each conditionally selected applicant will be invited to provide additional project information, as described in paragraph (a)(4) of this section, as a prerequisite to a grant offer from HUD.

(4) *Obtaining additional information.* When an applicant is selected for potential funding, the applicant will be invited by HUD to submit additional project information, which may include:

(i) Documentation to show that the project is feasible;

(ii) Documentation showing site control, as described in § 574.240(c)(2);

(iii) Information necessary for HUD to perform an environmental review under § 574.510; and

(iv) Such other documentation that is necessary for clarification or confirmation of the information in the application, as specified by HUD in writing to the applicant.

(5) *Receipt of additional information.* The required additional information must be received in acceptable form by the deadline established by HUD in a notice of funding availability published in the **Federal Register**. HUD reserves the right to remove any project from further consideration for grant assistance if the required additional information is not received in acceptable form by the established deadline.

(6) *Grant award.* Following receipt of the additional information in acceptable form and following completion of an

acceptable environmental review, HUD will approve the application and send a grant agreement for execution to the applicant.

(b) *Rating criteria for applications for funds for competitive grants—(1) General.* Applications for funds for competitive grants will be assigned a rating score and placed in ranked order, based upon the criteria listed in paragraphs (b)(2) and (b)(3) of this section. The criteria, including the point value for each, will be described in more detail in the Notice of Funds Availability which will be published in the Federal Register.

(2) *Criteria.* HUD will award points for the following criteria:

(i) Applicant capacity;

(ii) Need for the project in the area to be served, including the relative numbers of AIDS cases and per capita AIDS incidence, and the housing needs of eligible persons in the community;

(iii) Appropriateness of housing and supportive services, including how activities carried out with HOPWA funds and other resources will provide a continuum of housing and services to meet the changing needs of eligible persons;

(iv) Extent of leveraged public and private resources for the project;

(v) Extent of local planning and coordination of housing programs for eligible persons and the likelihood of the continuation of State and local efforts; and

(vi) Other criteria as determined by the Secretary and announced in the NOFA.

(3) *Additional criteria for projects of national significance.* For projects of national significance, HUD also will award points for the following criteria:

(i) Innovative nature of the proposal, including the effectiveness of the proposed model(s) for providing supportive housing for eligible persons; and

(ii) Potential for replication of the proposed activity in other similar localities or nationally.

(c) *Ties between applicants.* In the event of a tie between applicants, HUD will use need for the project to determine which application should be selected for potential funding.

(d) *Procedureal error.* If HUD makes a procedural error in a funding competition that, when corrected, would warrant funding of an otherwise eligible application, HUD will select that application for potential funding when sufficient funds become available.

§ 574.260 Amendments.

(a) After an application has been selected for funding, any change that will significantly alter the scope, location, service area, or objectives of an activity or the number of eligible persons served must be justified to HUD and approved by HUD. Whenever any other amendment to the application is made, the grantee must provide a copy to HUD.

(b) Each amendment request must contain a description of the revised proposed use of funds. Funds may not be expended for the revised proposed use of funds until:

(1) HUD accepts the revised proposed use; and

(2) For amendments to acquire, rehabilitate, convert, lease, repair or construct properties to provide housing, an environmental review of the revised proposed use of funds has been completed in accordance with § 574.510.

(Approved by the Office of Management and Budget under OMB control number 2506–0133)

Subpart D—Uses of Grant Funds

§ 574.300 Elegible activities.

(a) *General.* Subject to applicable requirements described in §§ 574.310, 574.320, 574.330, and 574.340, HOPWA funds may be used to assist all forms of housing designed to prevent hopelessness including emergency housing, shared housing arrangements, apartments, single room occupancy (SRO) dwellings, and community residences. Appropriate supportive services, as required by § 574.310(a), must be provided as part of any HOPWA assisted housing, but HOPWA funds may also be used to provide services independently of any housing activity.

(b) *Activities.* The following activities may be carried out with HOPWA funds:

(1) Housing information services including, but not limited to, counseling, information, and referral services to assist an eligible person to locate, acquire, finance and maintain housing. This may also include fair housing counseling for eligible persons who may encounter discrimination on the basis of race, color, religion, sex, age, national origin, familial status, or handicap;

(2) Resource identification to establish, coordinate and develop housing assistance resources for eligible persons (including conducting preliminary research and making expenditures necessary to determine the feasibility of specific housing-related initiatives);

(3) Acquisition, rehabilitation, conversion, lease, and repair of facilities to provide housing and services;

(4) New construction (for single room occupancy (SRO) dwellings and community residences only).

(5) Project- or tenant-based rental assistance, including assistance for shared housing arrangements;

(6) Short-term rent, mortgage, and utility payments to prevent the homelessness of the tenant or mortgagor of a dwelling;

(7) Supportive services including, but not limited to, health, mental health, assessment, permanent housing placement, drug and alcohol abuse treatment and counseling, day care, nutritional services, intensive care when required, and assistance in gaining access to local, State, and Federal government benefits and services, except that health services may only be provided to individuals with acquired immunodeficiency syndrome or related diseases and not to family members of these individuals;

(8) Operating costs for housing including maintenance, security, operation, insurance, utilities, furnishings, equipment, supplies, and other incidental costs;

(9) Technical assistance in establishing and operating a community residence, including planning and other pre-development or pre-construction expenses and including, but not limited to, costs relating to community outreach and educational activities regarding AIDS or related diseases for persons residing in proximity to the community residence;

(10) Administrative expenses:

(i) Each grantee may use not more than 3 percent of the grant amount for its own administrative costs relating to administering grant amounts and allocating such amounts to project sponsors; and

(ii) Each project sponsor receiving amounts from grants made under this program may use not more than 7 percent of the amounts received for its own administrative costs relating to carrying out eligible activities under this section, including costs of staff necessary to carry out eligible activities.

(11) For competitive grants only, any other activity proposed by the applicant and approved by HUD.

(c) *Limitations of assistance to primarily religious organizations—(1) Provision of assistance.* (i) Assistance may be provided under this part by a grantee to a project sponsor that is a primarily religious organization if the primarily religious organization agrees to provide all eligible activities under this program in a manner that is free from religious influences and in accordance with the following principles:

(A) It will not discriminate against any employee or applicant for employment on the basis of religion and will not limit employment or give preference in employment to persons on the basis of religion.

(B) It will not discriminate against any person applying for any of the eligible activities under this part on the basis of religion and will not limit such housing or other eligible activities or give preference to persons on the basis of religion.

(C) It will provide no religious instruction or counseling, conduct no religious services or worship (which term does not include voluntary nondenominational prayer before meetings), engage in no religious proselytizing, and exert no other religious influence in the provision of eligible activities under this part.

(ii) Assistance will not be provided to a project sponsor that is a primarily religious organization to construct or acquire a structure. Assistance may be provided to a project sponsor that is a primarily religious organization to rehabilitate or convert a structure owned by the organization, only as described in paragraph (c)(2) of this section.

(2) *Rehabilitation or conversion of structures owned by primarily religious organizations.* Grant amounts may be used to rehabilitate or convert a structure that is owned by a primarily religious organization, only if:

(i) The structure (or portion thereof) that is to be rehabilitated or converted with HUD assistance has been leased to an existing or newly established wholly secular organization (which may be established by the religious organization under the provisions of paragraph (c)(3) of this section).

(ii) The HUD assistance is provided to the secular organization (and not the religious organization) to make the improvements.

(iii) The leased structure will be used exclusively for secular purposes available to all persons regardless of religion.

(iv) The lease payments paid to the primarily religious organization do not exceed the fair market rent for the structure before the rehabilitation or conversion was done.

(v) The portion of the cost of any improvements that benefit any unleased portion of the structure will be allocated to, and paid for by, the religious organization.

(vi) The primarily religious organization agrees that if the secular organization does not retain the use of the leased premises for wholly secular purposes for the useful life of the improvements, the primarily religious organization will pay an amount equal to the residual value of the improvements to the original grantee from which the amounts used to rehabilitate or convert the building were derived. While the original grantee is expected to use this amount for eligible HOPWA activities, there is no requirement that funds received after the close of the grant period be used in accordance with the requirements of this part.

(3) *Assistance to a wholly secular private nonprofit organization established by a primarily religious organization.*

(i) A primarily religious organization may establish a wholly secular private nonprofit organization to serve as a project sponsor. The secular organization may be eligible to receive all forms of assistance available under this part.

(ii) The secular organization must agree to provide eligible activities under this part in a manner that is free from religious influences and in accordance with the principles set forth in paragraph (c)(1)(i) of this section.

(iii) The secular organization may enter into a contract with the religious organization to operate the housing assistance, supportive services and other eligible activities for the project. In such a case, the religious organization must agree in the contract to carry out its contractual responsibilities in a manner free from religious influences and in accordance with the principles set forth in paragraph (c)(1)(i) of this section.

(iv) The rehabilitation or conversion of structures are subject to the requirements of paragraph (c)(2) of this section.

§ 574.310 General standards for eligible housing activities.

All grantees using grant funds to provide housing must adhere to the following standards:

(a) *Supportive services.* The grantee shall ensure that qualified service providers in the area make available appropriate supportive services to the individuals assisted with housing under this subpart. Supportive services are described in § 574.300(b)(7). For any individual with acquired immunodeficiency syndrome or a related disease who requires more intensive care than can be provided in housing assisted under this subpart, the grantee shall provide for locating a care provider who can appropriately care for the individual and for referring the individual to the care provider.

(b) *Housing quality standards.* All housing assisted under § 574.300(b) (3), (4), (5), and (8) must meet the applicable housing quality standards outlined below.

(1) *State and local requirements.* Each recipient of assistance under this part must provide safe and sanitary housing that is in compliance with all applicable State and local housing codes, licensing requirements, and any other requirements in the jurisdiction in which the housing is located regarding the condition of the structure and the operation of the housing.

(2) *Habitability standards.* Except for such variations as are proposed by the locality and approved by HUD, recipients must meet the following requirements:

(i) *Structure and materials.* The structures must be structurally sound so as not to pose any threat to the health and safety of the occupants and so as to protect the residents from hazards.

(ii) *Access.* The housing must be accessible and capable of being utilized without unauthorized use of other private properties. Structures must provide alternate means of egress in case of fire.

(iii) *Space and security.* Each resident must be afforded adequate space and security for themselves and their belongings. An acceptable place to sleep must be provided for each resident.

(iv) *Interior air quality.* Every room or space must be provided with natural or mechanical ventilation. Structures must be free of pollutants in the air at levels that threaten the health of residents.

(v) *Water supply.* The water supply must be free from contamination at levels that threaten the health of individuals.

(vi) *Thermal environment.* The housing must have adequate heating and/or cooling facilities in proper operating condition.

(vii) *Illumination and electricity.* The housing must have adequate natural or artificial illumination to permit normal indoor activities and to support the health and safety of residents. Sufficient electrical sources must be provided to permit use of essential electrical appliance while assuring safety from fire.

(viii) *Food preparation and refuse disposal.* All food preparation areas must contain suitable space and equipment to store, prepare, and serve food in a sanitary manner.

(ix) *Sanitary condition.* The housing and any equipment must be maintained in sanitary condition.

(c) *Minimum use period for structures.* (1) Any building or structure assisted with amounts under this part

must be maintained as a facility to provide housing or assistance for individuals with acquired immunodeficiency syndrome or related diseases:

(i) For a period of not less than 10 years, in the case of assistance provided under an activity eligible under § 574.300(b) (3) and (4) involving new construction, substantial rehabilitation or acquisition of a building or structure; or

(ii) For a period of not less than 3 years in the cases involving non-substantial rehabilitation or repair of a building or structure.

(2) Waiver of minimum use period. HUD may waive the minimum use period of a building or structure as stipulated in paragraph (c)(1) of this section if the grantee can demonstrate, to the satisfaction of HUD, that:

(i) The assisted structure is no longer needed to provide supported housing or assistance, or the continued operation of the structure for such purposes is no longer feasible; and

(ii) The structure will be used to benefit individuals or families whose incomes do not exceed 80 percent of the median income for the area, as determined by HUD with adjustments for smaller and larger families, if the Secretary finds that such variations are necessary because of construction costs or unusually high or low family incomes.

(d) *Resident rent payment.* Each person receiving rental assistance under this program or residing in any rental housing assisted under this program must pay as rent, including utilities, an amount determined in accordance with section 3(a) of the United States Housing Act of 1937 and 24 CFR 813.106. Under these authorities, each resident must pay as rent the higher of:

(1) 30 percent of the family's monthly adjusted income (adjustment factors include the age of the individual, medical expenses, size of family and child care expenses and are described in detail in 24 CFR 813.102);

(2) 10 percent of the family's monthly gross income; or

(3) If the family is receiving payments for welfare assistance from a public agency and a part of the payments, adjusted in accordance with the family's actual housing costs, is specifically designated by the agency to meet the family's housing costs, the portion of the payments that is designated.

(e) *Termination of assistance.* Assistance to participants who reside in housing programs under this grant may be terminated if the participant violates program requirements or conditions of occupancy. Grantees must ensure that supportive services are provided, so that a participant's assistance is terminated only in the most severe cases. In terminating assistance to any program participant, grantees must provide a formal process that recognizes the rights of individuals receiving assistance to due process of law. This process at a minimum, must consist of:

(1) Serving the participant with a written notice containing a clear statement of the reasons for termination;

(2) Permitting the participant to have a review of the decision, in which the participant is given the opportunity to present written objections before a person other than the person (or a subordinate of that person) who made or approved the termination decision; and

(3) Providing prompt written notification of the final decision to the participant.

(Paragraph (c) approved by the Office of Management and Budget under OMB control number 2506–0133)

§ 574.320 Additional standards for rental assistance.

(a) If grant funds are used to provide rental assistance, the following additional standards apply:

(1) *Maximum subsidy.* The amount of grant funds used to pay monthly assistance for an eligible person may not exceed the difference between:

(i) The lower of the rent standard or reasonable rent for the unit; and

(ii) The resident's rent payment calculated under § 574.310(d).

(2) *Rent standard.* The rent standard shall be established by the grantee and shall be no more than the published section 8 fair market rent (FMR) or the HUD-approved community-wide exception rent for the unit size. However, on a unit by unit basis, the grantee may increase that amount by up to 10 percent for up to 20 percent of the units assisted.

(3) *Rent reasonableness.* The rent charged for a unit must be reasonable in relation to rents currently being charged for comparable units in the private unassisted market and must not be in excess of rents currently being charged by the owner for comparable unassisted units.

(b) With respect to shared housing arrangements, the provisions of subpart C of 24 CFR part 882 shall be followed.

§ 574.330 Additional standards for short-term supported housing.

Short-term supported housing includes facilities to provide temporary shelter to eligible individuals as well as rent, mortgage, or utilities payments to enable eligible individuals to remain in their own dwellings. If grant funds are used to provide such short-term supported housing assistance, the following additional standards apply:

(a) *Time limits.* (1) A short-term supported housing facility may not provide residence to any individual for more than 60 days during any six month period. Rent, mortgage, or utilities payments to prevent the homelessness of the tenant or mortgagor of a dwelling may not be provided to such an individual for these costs accruing over a period of more than 21 weeks in any 52 week period. These limitations do not apply to rental assistance provided under § 574.300(b)(5).

(2) *Waiver of time limitations.* HUD may waive, as it determines appropriate, the limitations of paragraph (a)(1) and will favorably consider a waiver based on the good faith effort of a project sponsor to provide permanent housing under subsection (c).

(b) *Residency limitations*—(1) *Residency.* A short-term supported facility may not provide shelter or housing at any single time for more than 50 families or individuals;

(2) *Waiver of residency limitations.* HUD may waive, as it determines appropriate, the limitations of paragraph (b)(1) of this section.

(c) *Placement.* A short-term supported housing facility assisted under this part must, to the maximum extent practicable, provide each individual living in such housing the opportunity for placement in permanent housing or in a living environment appropriate to his or her health and social needs.

(d) *Assistance to continue independent living.* In addition to the supportive services provided when an individual is relocated to a short-term supported housing facility, supportive services may be provided to individuals when they remain in their residence because the residence is appropriate to the needs of the individual. In the latter case, a rent, mortgage or utilities payments program assisted under this part shall provide, when reasonable, supportive services specifically designed to maintain the individual in such residence.

(e) *Case management services.* A program assisted under this section shall provide each assisted individual with an opportunity, if eligible, to receive case management services from the appropriate social service agencies.

(Paragraph (b) approved by the Office of Management and Budget under OMB control number 2506–0133)

§ 574.340 Additional standards for community residences.

(a) A community residence is a multiunit residence designed for eligible

persons to provide a lower cost residential alternative to institutional care; to prevent or delay the need for such care; to provide a permanent or transitional residential setting with appropriate services to enhance the quality of life for those who are unable to live independently; and to enable such persons to participate as fully as possible in community life.

(b) If grant funds are used to provide a community residence, except for planning and other expenses preliminary to construction or other physical improvement for the development of a community residence, the grantee must, prior to the expenditure of such funds, obtain and keep on file certifications that:

(1) The grantee has entered into a written agreement with service providers to provide, or the grantee will itself provide, services as required by § 574.310(a) to eligible persons assisted by the community residence;

(2) The grantee has acquired sufficient funding for these services, or has on file an analysis of the service level needed for each community residence and a statement of which agencies will provide the needed services and how the services will be funded, and the service providers are qualified to assist eligible persons; and

(3) Any construction or physical improvements carried out with amounts received from the grant will comply with any applicable State and local housing codes and licensing requirements in the jurisdiction in which the community residence is located.

Subpart E—Special Responsibilities of Grantees and Project Sponsors

§ 574.400 Prohibition of substitution of funds.

Amounts received from grants under this part may not be used to replace other amounts made available or designated by State or local governments through appropriations for use for the purposes of this part.

§ 574.410 Capacity.

The grantee shall ensure that any project sponsor with which the grantee contracts to carry out an activity under this part has the capacity and capability to effectively administer the activity.

§ 574.420 Cooperation.

(a) The grantee shall agree, and shall ensure that each project sponsor agrees, to cooperate and coordinate in providing assistance under this part with the agencies of the relevant State and local governments responsible for services in the area served by the grantee for eligible persons and other public and private organizations and agencies providing services for such eligible persons.

(b) A grantee that is a State shall obtain the approval of the unit of general local government in which a project is to be located before entering into a contract with a project sponsor to carry out an activity authorized under this part.

(c) A grantee that is a city receiving a formula allocation for an EMSA shall coordinate with other units of general local government located within the metropolitan statistical area to address needs within that area.

§ 574.430 Fee prohibitions.

The grantee shall agree, and shall ensure that each project sponsor agrees, that no fee, except rent, will be charged of any eligible person for any housing or services provided with amounts from a grant under this part.

§ 574.440 Confidentiality.

The grantee shall agree, and shall ensure that each project sponsor agrees, to ensure the confidentiality of the name of any individual assisted under this part and any other information regarding individuals receiving assistance.

§ 574.450 Financial records.

The grantee shall agree, and shall ensure that each project sponsor agrees, to maintain and make available to HUD for inspection financial records sufficient, in HUD's determination, to ensure proper accounting and disbursing of amounts received from a grant under this part.

Subpart F—Grant Administration

§ 574.500 Responsibility for grant administration.

(a) *General.* Grantees are responsible for ensuring that grants are administered in accordance with the requirements of this part and other applicable laws. Grantees are responsible for ensuring that their respective project sponsors carry out activities in compliance with all applicable requirements.

(b) *Grant agreement.* The grant agreement will provide that the grantee agrees, and will ensure that each project sponsor agrees, to:

(1) Operate the program in accordance with the provisions of these regulations and other applicable HUD regulations;

(2) Conduct an ongoing assessment of the housing assistance and supportive services required by the participants in the program;

(3) Assure the adequate provision of supportive services to the participants in the program; and

(4) Comply with such other terms and conditions, including recordkeeping and reports (which must include racial and ethnic data on participants) for program monitoring and evaluation purposes, as HUD may establish for purposes of carrying out the program in an effective and efficient manner.

(c) *Enforcement.* HUD will enforce the obligations in the grant agreement in accordance with the provisions of 24 CFR 85.43. A grantee will be provided an opportunity for informal consultation before HUD will exercise any remedies authorized in paragraph (a) of that section.

§ 574.510 Environmental procedures and standards.

(a) Before any amounts under this program are used to acquire, rehabilitate, convert, lease, repair or construct properties to provide housing, HUD shall perform a review in accord with 24 CFR part 50, which implements the National Environmental Policy Act and the related Federal environmental laws and authorities listed under 24 CFR 50.4. In performing its environmental review, HUD may use previously issued environmental reviews prepared by other local, State, or federal agencies for the proposed property. The grantee will cooperate in providing these documents. HUD must, however, conduct the environmental analysis and prepare the environmental review and be responsible for the required environmental findings.

(b) HUD shall determine whether an environmental assessment under NEPA is required. HUD also shall determine whether the proposed property triggers thresholds for the applicable federal environmental laws and authorities listed under 24 CFR 50.4. These may apply when the property:

(1) Is located within designated coastal barriers;

(2) Is listed on, or eligible for listing on, the National Register of Historic Places; located within, or adjacent to, an historic district, or is a property whose area of potential effects includes a historic district or property;

(3) Is located near hazardous industrial operations handling fuels or chemicals of an explosive or flammable nature;

(4) Is contaminated by toxic chemicals or radioactive materials;

(5) Is located within a runway clear zone at a civil airport or within a clear zone or accident potential zone at a military airfield;

(6) Is located within certain flood hazard areas or a designated wetland;

(7) Is located within an area requiring flood insurance protection;

(8) Is located within a high noise area;

(9) Is located within a coastal management zone;

(10) Is located on a sole source aquifer; or

(11) Would affect an endangered species.

(c) A grantee or project sponsor shall refer the property to HUD for threshold review and shall submit all available, relevant information to HUD to permit HUD to make the review.

(d) If HUD determines that one or more of the thresholds are exceeded, HUD shall conduct an environmental review of the issue and, if appropriate, establish mitigating measures that the grantee and/or project sponsor shall carry out for the property unless it decides to select an alternate property.

(e) HUD will issue a notice specifying applicable threshold and documentation requirements.

(Approved by the Office of Management and Budget under OMB control number 2506.0133)

§ 574.520 Performance reports.

A grantee shall submit to HUD annually a report describing the use of the amounts received, including the number of individuals assisted, the types of assistance provided, and any other information that HUD may require. Annual reports are required until all grant funds are expended.

(Approved by the Office of Management and Budget under OMB control number 2506–0133)

§ 574.530 Recordkeeping.

Each grantee must ensure that records are maintained for a three-year period to document compliance with the provisions of this part. Grantees must maintain current and accurate data on the race and ethnicity of program participants.

§ 574.540 Obligation and deobligation of funds.

Selection of an application for funding and notification of the applicant constitutes the obligation of funds by HUD to cover the amount of the approved assistance. HUD may deobligate all or a portion of the amounts approved for eligible activities if such amounts are not expended in a timely manner, or the proposed activity for which funding was approved is not provided in accordance with the approved application and the requirements of this regulation. HUD may deobligate any amount of grant funds that have not been expended within a three-year period from the date of the signing of the grant agreement. The grant agreement may set forth other circumstances under which funds may be deobligated or sanctions imposed.

Subpart G—Other Federal Requirements

§ 574.600 Nondiscrimination and equal opportunity.

Grantees and project sponsors must, within the eligible population, comply with the following requirements for nondiscrimination on the basis of race, color, religion, sex, national origin, age, familial status and handicap:

(a) *Fair housing requirements.* The requirements of the Fair Housing Act (42 U.S.C. 3601–19) and implementing regulations at 24 CFR part 100; Executive Order 11063 and implementing regulations at 24 CFR part 107; and title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d) (Nondiscrimination in Federally Assisted Programs) and implementing regulations issued at 24 CFR part 1;

(b) *Discrimination on the basis of age or handicap.* The prohibitions against discrimination based on age under the Age Discrimination Act of 1975 (42 U.S.C. 6101–07) and implementing regulations at 24 CFR part 146; the prohibitions against discrimination against handicapped individuals under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and implementing regulations at 24 CFR part 8; and applicable provisions of the Americans with Disabilities Act (42 U.S.C. 12101–12213) and implementing regulations at 28 CFR part 35 (States and local government grantees) and part 36 (public accommodations requirements for certain types of short-term housing assistance).

(c) *Employment opportunities.* The requirements of section 3 of the Housing and Urban Development Act of 1968, (12 U.S.C. 1701(u)) (Employment Opportunities for Lower Income Persons in Connection with Assisted Projects).

(d) *Minority and women's business enterprises.* The requirements of Executive Orders 11625, 12432, and 12138 apply to grants under this part. Consistent with HUD's responsibilities under these Orders, the grantee and project sponsor must make efforts to encourage the use of minority and women's business enterprises in connection with funded activities.

(e) *Affirmative outreach.* A grantee or project sponsor must adopt procedures to ensure that all persons who qualify for the assistance, regardless of their race, color, religion, sex, age, national origin, familial status, or handicap, know of the availability of the HOPWA program, including facilities and services accessible to persons with a handicap, and maintain evidence of implementation of the procedures.

(f) *Disability requirements.* The grantee and project sponsor must not discriminate against persons with AIDS or related diseases based on an additional handicap of such persons in violation of the Fair Housing Act or section 504 of the Rehabilitation Act of 1973. In addition, the grantee and project sponsor must comply with the reasonable modification requirement of the Fair Housing Act, the reasonable accommodation requirements of the Fair Housing Act and section 504 of the Rehabilitation Act of 1973, and the accessibility requirements of the Fair Housing Act, section 504 of the Rehabilitation Act of 1973, and the Americans with Disabilities Act, and implementing regulations. See 42 U.S.C. 3604(f) and 24 CFR 100.203–100.205; 29 U.S.C. 794 and 24 CFR part 8; and 28 CFR parts 35 and 36.

§ 574.605 Applicability of OMB circulars.

The policies, guidelines, and requirements of 24 CFR part 85 (codified pursuant to OMB Circular No. A–102) and OMB Circular No. A–87 apply with respect to the acceptance and use of funds under the program by States and units of general local government, including public agencies, and Circulars Nos. A–110 and A–122 apply with respect to the acceptance and use of funds under the program by private non-profit entities. (Copies of OMB Circulars may be obtained from E.O.P. Publications, room 2200, New Executive Office Building, Washington, DC 20503, telephone (202) 395–7332. (This is not a toll-free number.) There is a limit of two free copies.

§ 574.610 Drug-free workplace.

Grantees are subject to the requirements of sections 5151–5180 of the Drug-Free Workplace Act of 1988 and HUD's implementing regulations at 24 CFR part 24, subpart F.

§ 574.615 Anti-lobbying certification.

Recipients of Federal contracts, grants, and loans are prohibited from using appropriated funds for lobbying the Executive or Legislative Branches of the Federal Government. The rule is found at 24 CFR part 87. It requires applicants, grantees, and project sponsors of assistance exceeding $100,000 to certify that no Federal funds have been or will be spent on lobbying activities in connection with the assistance. The rule also requires

disclosures from applicants, grantees, and project sponsors if nonappropriated funds have been spent or committed for lobbying activities if those activities would be prohibited if paid with appropriated funds. Substantial monetary penalties may be imposed for failure to file the required certification or disclosure.

§ 574.620 Deberred or suspended contractors.

The provisions of 24 CFR part 24 relating to the employment, engagement of services, awarding of contracts, or funding of any contractors or subcontractors during any period of debarment, suspension, placement in ineligibility status are applicable to grantees and project sponsors under this part.

§ 574.625 Conflict of interest.

(a) In addition to the conflict of interest requirements in OMB Circular A–102 and 24 CFR 85.36(b)(3), no person who is an employee, agent, consultant, officer, or elected or appointed official of the grantee or project sponsor and who exercises or has exercised any functions or responsibilities with respect to assisted activities, or who is in a position to participate in a decision making process or gain inside information with regard to such activities, may obtain a financial interest or benefit from the activity, or have an interest in any contract, subcontract, or agreement with respect thereto, or the proceeds thereunder, either for himself or herself or for those with whom he or she has family or business ties, during his or her tenure or for one year thereafter.

(b) *Exceptions: Threshold requirements.* Upon the written request of the recipient, HUD may grant an exception to the provisions of paragraph (a) of this section when it determines that the exception will serve to further the purposes of the HOPWA program and the effective and efficient administration of the recipient's program or project. An exception may be considered only after the recipient has provided the following:

(1) A disclosure of the nature of the conflict, accompanied by an assurance that there has been public disclosure of the conflict and a description of how the public disclosure was made; and

(2) An opinion of the recipient's attorney that the interest for which the exception is sought would not violate State or local law.

(c) *Factors to be considered for exceptions.* In determining whether to grant a requested exception after the recipient has satisfactorily met the requirements of paragraph (b) of this section, HUD will consider the cumulative effect of the following factors, where applicable:

(1) Whether the exception would provide a significant cost benefit or an essential degree of expertise to the program or project that would otherwise not be available;

(2) Whether the person affected is a member of a group or class of eligible persons and the exception will permit such person to receive generally the same interests or benefits as are being made available or provided to the group or class;

(3) Whether the affected person has withdrawn from his or her functions or responsibilities, or the decisionmaking process with respect to the specific assisted activity in question;

(4) Whether the interest or benefit was present before the affected person was in a position as described in paragraph (a) of this section;

(5) Whether undue hardship will result either to the recipient or the person affected when weighed against the public interest served by avoiding the prohibited conflict; and

(6) Any other relevant considerations.

§ 574.630 Displacement, relocation and real property acquisition.

(a) *Minimizing displacement.* Consistent with the other goals and objectives of this part, grantees and project sponsors must assure that they have taken all reasonable steps to minimize the displacement of persons (families, individuals, businesses, nonprofit organizations, and farms) as a result of a project assisted under this part.

(b) *Relocation assistance for displaced persons.* A displaced person (defined in paragraph (f) of this section) must be provided relocation assistance at the levels described in, and in accordance with the requirements of, the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (URA) (42 U.S.C. 4601–4655) and implementing regulations at 49 CFR part 24.

(c) *Real property acquisition requirements.* The acquisition of real property for a project is subject to the URA and the requirements described in 49 CFR part 24, subpart B.

(d) *Appeals.* A person who disagrees with the grantee's or project sponsor's determination concerning whether the person qualifies as a "displaced person," or the amount of relocation assistance for which the person is eligible, may file a written appeal of that determination with the grantee. A low-income person who is dissatisfied with the grantee's determination on his or her appeal may submit a written request for review of that determination to the HUD Field Office.

(e) *Responsibility of grantee.* (1) Each grantee shall certify (i.e., provide assurance of compliance as required by 49 CFR part 24) that it will comply with the URA, the regulations at 49 CFR part 24, and the requirements of this section, and shall ensure such compliance notwithstanding any third party's contractual obligation to the grantee to comply with these provisions.

(2) The cost of required relocation assistance is an eligible project cost in the same manner and to the same extent as other project costs. Such costs also may be paid for with funds available from other sources.

(3) The grantee shall maintain records in sufficient detail to demonstrate compliance with these provisions.

(f) *Definition of displaced person.* (1) For purposes of this section, the term "displaced person" means a person (family, individual, business, nonprofit organization, or farm) that moves from real property, or moves personal property from real property, permanently, as a direct result of acquisition, rehabilitation, or demolition for a project assisted under this part. This includes any permanent, involuntary move for an assisted project including any permanent move for an assisted project, including any permanent move from the real property that is made:

(i) After notice by the grantee, project sponsor, or property owner to move permanently from the property, if the move occurs on or after the date that the grantee submits to HUD an application for assistance that is later approved and funded;

(ii) Before the submission of the application to HUD, if the grantee, project sponsor, or HUD determines that the displacement resulted directly from acquisition, rehabilitation, or demolition for the assisted project; or

(iii) By a tenant-occupant of a dwelling unit, if any one of the following three situations occurs:

(A) The tenant moves after the "initiation of negotiations" and the move occurs before the tenant has been provided written notice offering him or her the opportunity to lease and occupy a suitable, decent, safe and sanitary dwelling in the same building/complex, under reasonable terms and conditions, upon completion of the project. Such reasonable terms and conditions include a monthly rent and estimated average monthly utility costs that do not exceed the greater of:

(1) The tenant's monthly rent before the initiation of negotiations and estimated average utility costs, or

(2) 30 percent of gross household income; or

(B) The tenant is required to relocate temporarily, does not return to the building/complex and either:

(1) The tenant is not offered payment for all reasonable out-of-pocket expenses incurred in connection with the temporary relocation, or

(2) Other conditions of the temporary relocation are not reasonable; or

(C) The tenant is required to move to another unit in the same building/complex but is not offered reimbursement for all reasonable out-of-pocket expenses incurred in connection with the move, or other conditions of the move are not reasonable.

(2) Notwithstanding the provisions of paragraph (f)(1) of this section, a person does not qualify as a "displaced person" (and is not eligible for relocation assistance under the URA or this section), if:

(i) The person has been evicted for serious or repeated violation of the terms and conditions of the lease or occupancy agreement, violation or applicable Federal, State or local law, or other good cause, and HUD determines that the eviction was not undertaken for the purposes of evading the obligation to provide relocation assistance;

(ii) The person moved into the property after the submission of the application and, before signing a lease and commencing occupancy, was provided written notice of the project, its possible impact on the person (e.g., the person may be displaced, temporarily relocated, or suffer a rent increase) and the fact that the person would not qualify as a "displaced person" (or for any assistance provided under this section), if the project is approved;

(iii) The person is ineligible under 49 CFR 24.2(g)(2); or

(iv) HUD determines that the person was not displaced as a direct result of acquisition, rehabilitation, or demolition for the project.

(3) The grantee or project sponsor may request, at any time, HUD's determination of whether a displacement is or would be covered under this section.

(g) *Definition of initiation of negotiations.* For purposes of determining the formula for computing the replacement housing assistance to be provided to a residential tenant displaced as a direct result of privately undertaken rehabilitation, demolition, or acquisition of the real property, the term "initiation of negotiations" means the execution of the agreement between the grantee and the project sponsor.

§ 574.635 Lead-based paint.

The grantee and project sponsor must comply with the requirements of the Lead-Based Paint Poisoning Prevention Act (42 U.S.C. 4821–4846) and implementing regulations at 24 CFR part 35, as applicable. In addition, the grantee and project sponsor must also meet the following requirements relating to inspection and abatement of defective lead-based paint surfaces:

(a) Treatment of defective paint surfaces must be performed before final inspection and approval of the renovation, rehabilitation or conversion activity under this part; and

(b) Appropriate action must be taken to protect facility occupants from the hazards associated with lead-based paint abatement procedures.

(Approved by the Office of Management and Budget under OMB control number 2506–0133)

§ 574.640 Flood insurance protection.

No property to be assisted under this part may be located in an area that has been identified by the Federal Emergency Management Agency (FEMA) as having special flood hazards, unless:

(a)(1) The community in which the area is situated is participating in the National Flood Insurance Program and the regulations thereunder (44 CFR parts 59 through 79); or

(2) Less than a year has passed since FEMA notification regarding such hazards; and

(b) The grantee will ensure that flood insurance on the structure is obtained in compliance with section 102(a) of the Flood Disaster Protection Act of 1973 (42 U.S.C. 4001 et seq.).

§ 574.645 Coastal barriers.

In accordance with the Coastal Barrier Resources Act, 16 U.S.C. 3501, no financial assistance under this part may be made available within the Coastal Barrier Resources System.

§ 574.650 Audit.

The financial management system used by a State or unit of general local government that is a grantee must provide for audits in accordance with 24 CFR part 44. A nonprofit organization that is a grantee or a project sponsor is subject to the audit requirements set forth in 24 CFR part 45.

Dated: December 2, 1992.

Jack Kemp,

Secretary.

BILLING CODE 4210-32-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Assistant Secretary for Community Planning and Development

[Docket No. N-92-3440; FR-3294-N-01]

Announcement of Allocations for Housing Opportunities for Persons With AIDS

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This notice contains a listing of formula allocations for Fiscal Year 1993 under the Housing Opportunities for Persons With AIDS (HOPWA) program and information on how eligible applicants may apply for the formula grants to which they are entitled. An Interim Rule for the Fiscal Year 1993 program containing the requirements and other programmatic information for HOPWA is published elsewhere in this issue of the **Federal Register**.

DATES: Application packages will be available beginning December 28, 1992, from the HUD field offices listed at the end of this announcement. Applications may be submitted any time before the deadline date and will be processed as soon as they are received. Applicants are encouraged to submit their applications as soon as possible.

The original copy of the application must be received at the HUD Field Office serving the jurisdiction of the applicant no later than 4 p.m. local time on March 15, 1993. An additional copy of the application must also be sent to the following address: Department of Housing and Urban Development, Office of Special Needs Assistance Programs, room 7262, 451 Seventh Street, SW., Washington, DC 20410, Attention: James N. Forsberg, Director. However, a determination that an application was received on time will be made solely on receipt of the original application at the Field Office. Additional information regarding the submission of applications is included in the package.

FOR FURTHER INFORMATION CONTACT: The HUD Field Office serving the jurisdiction of the applicant. See the listing at the end of the announcement.

Program Authority

The $90,000,000 in assistance made available in this announcement is authorized by the AIDS Housing Opportunity Act (42 U.S.C. 12901), as amended by the Housing and Community Development Act of 1992 (Pub. L. 102-550, approved October 28, 1992), and was appropriated by the Department's appropriation act for fiscal year 1993 (Pub. L. 102-389, approved October 6, 1992). An additional $10,000,000 in appropriated funds, to be awarded by competitive grants, will be announced in a Notice of Funding Availability (NOFA) to be published later.

Eligibility

Under the Act, entitlement grants are to be awarded to eligible States and to qualifying cities in eligible metropolitan statistical areas (EMSAs), as they are defined in § 574.3 of the Interim Rule published elsewhere in this issue of the **Federal Register**, in accordance with an allocation formula described in § 574.130 of that rule. Eligible States must have more than 1,500 cumulative cases of persons with AIDS in that portion of the State outside of any eligible metropolitan statistical area, and they must have an approved Comprehensive Housing Affordability Strategy (CHAS). In the case of a city applicant, the city must be the most populous unit of general local government in the eligible metropolitan statistical area and must have an approved CHAS. In addition, the EMSA must have more than 1,500 cumulative cases of persons with AIDS and a population of more than 500,000.

For the fiscal year 1993 awards, the number of cumulative cases of AIDS used to determine if the 1,500 threshold has been met is as of March 31, 1992 and is from data collected by the U.S. Department of Health and Human Services, Centers for Disease Control. The Department has used 1990 U.S. Census data to determine the populations of metropolitan statistical areas and the city that is the most populous unit of general local government in each eligible metropolitan statistical area.

Recipient Disclosures: HUD Reform Act

States and units of general local government receiving assistance under this NOFA must make all applicant disclosure reports available to the public for three years. Required update reports must be made available along with the applicant disclosure reports, but in no case for a period less than three years. Each State and unit of general local government may use HUD Form 2880 to collect the applicant disclosure and update reports, or it may develop its own form. (See CFR part 12, subpart C, and the notice published in the **Federal Register** on January 16, 1992 (57 FR 1942) for further information on these disclosure requirements.)

Efforts to influence HUD's decisions with respect to financial assistance under these allocations are subject to disclosure requirements imposed by section 13 of the Department of Housing and Urban Development Act. That Act contains two provisions dealing with efforts to influence HUD's decisions with respect to financial assistance. The first imposes disclosure requirements on those who are typically involved in these efforts—those who pay others to influence the award of assistance or the taking of a management action by the Department and those who are paid to provide the influence. The second restricts the payment of fees to those who are paid to influence the award of HUD assistance or management of the award, if the fees are tied to the number of housing units received or are based on the amount of assistance received, or if they are contingent upon the receipt of assistance.

Section 13 was implemented by final rule published in the **Federal Register** on May 17, 1991 (56 FR 22912). If readers are involved in any efforts to influence the Department in these ways, they are urged to read the final rule, particularly the examples contained in Appendix A of the rule.

Listing of Eligible Metropolitan Statistical Areas and States With Projected Awards

Chart 1, below, provides the Department's determination of the States entitled to formula grants from the 1993 appropriation and their formula allocations. Chart 2, below, provides the Department's determination of the eligible metropolitan statistical areas that are entitled to formula grants from the 1993 appropriation, the city that is the most populous unit of general local government in an eligible metropolitan statistical area, and the formula allocation.

CHART 1.—STATES THAT QUALIFY FOR THE HOPWA PROGRAM AND FISCAL YEAR 1993 AWARDS

State	1993 award
Arizona	$571,000
California	1,801,000
Connecticut	882,000
Florida	2,205,000
Missouri	925,000
New Jersey	1,166,000
New York	1,312,000
North Carolina	822,000
Ohio	1,086,000
Pennsylvania	693,000
Puerto Rico	904,000
South Carolina	519,000
Tennessee	542,000

CHART 1.—STATES THAT QUALIFY FOR THE HOPWA PROGRAM AND FISCAL YEAR 1993 AWARDS—Continued

State	1993 award
Texas	1,827,000
Virginia	630,000

CHART 2. ELIGIBLE METROPOLITAN STATISTICAL AREAS THAT QUALIFY FOR THE HOPWA PROGRAM, FISCAL YEAR 1993 AWARDS, AND THE CITY WITHIN EACH EMSA THAT IS THE ELIGIBLE APPLICANT

Name of EMSA and applicant city	1993 award
** Anaheim-Santa Ana, CA	$1,017,000
Santa Ana	
** Atlanta, GA	2,341,000
Atlanta	
** Baltimore, MD	1,091,000
Baltimore	
** Bergen-Passaic, NJ	631,000
Paterson	
** Boston, MA	1,188,000
Boston	
** Chicago, IL	2,292,000
Chicago	
** Dallas, TX	1,767,000
Dallas	
** Denver, CO	709,000
Denver	
** Detroit, MI	729,000
Detroit	
** Fort Lauderdale-Hollywood, FL	2,308,000
Fort Lauderdale	
** Houston, TX	3,016,000
Houston	
** Jersey City, NJ	1,277,000
Jersey City	
** Los Angeles-Long Beach, CA	7,219,000
Los Angeles	
** Miami-Hialeah, FL	4,697,000
Miami	
** Nassau-Suffolk, NY	709,000
Islip Town	
** New Orleans, LA	1,082,000
New Orleans	
** New York, NY	20,796,000
New York	
** Newark, NJ	2,838,000
Newark	
** Oakland, CA	1,072,000
Oakland	
** Philadelphia, PA–NJ	1,607,000
Philadelphia	
** Riverside-San Bernardino, CA	522,000
Riverside	
** San Diego, CA	1,245,000
San Diego	
** San Francisco, CA	6,647,000
San Francisco	
** San Juan, PR	2,220,000
San Juan Municipio	
** Seattle, WA	825,000
Seattle	
** Tampa-St. Petersburg-Clearwater, FL	950,000
Tampa	
** Washington, DC-MD-VA	2,292,000
Washington	
** West Palm Beach-Boca Raton-Delray, FL	1,028,000
West Palm Beach	
Total grants allocated for 1993 in charts 1 and 2	$90,000,000

HUD Field Offices

Telephone numbers for Telecommunications Devices for the Deaf (TDD machines) are listed for field offices; all HUD numbers, including those noted *, may be reached via TDD by dialing the Federal Information Relay Service on 1–800–877–TDDY or (1–800–877–8339) or (202) 708–9300.

Arizona

Diane Domzalski, 400 N. 5th St., Suite 1600, Arizona Center, Phoenix, AZ 85004; (602) 379–4754; TDD (602) 379–4461.

California (Southern)

Herbert L. Roberts, 1615 W. Olympic Blvd., Los Angeles, CA 90015–3801; (213) 251–7235; TDD (213) 251–7038.

(Northern)

Gordon H. McKay, 450 Golden Gate Ave., P.O. Box 36003, San Francisco, CA 94102–3448; (415) 556–5576; TDD (415) 556–8357.

Colorado

Barbara Richards, Exec. Tower Bldg., 1405 Curtis St., Denver, CO 80202–2349; (303) 844–3811; TDD (303) 844–6158.

Connecticut

Daniel Kolesar, 330 Main St., Hartford, CT 06106–1860; (203) 240–4508; TDD (203) 240–4522.

District of Columbia

James H. McDaniel, 820 First St., NE, Washington, DC 20002; (202) 275–0994; TDD (202) 275–0967.

Florida

Presidential Documents

Title 3—

The President

Proclamation 6517 of December 23, 1992

To Amend the Generalized System of Preferences

By the President of the United States of America

A Proclamation

1. Pursuant to sections 501 and 502 of the Trade Act of 1974, Public Law 93–618, as amended (19 U.S.C. 2461 and 2462) ("Trade Act"), and having due regard for the eligibility criteria set forth therein, I have determined that it is appropriate to designate Ethiopia as a beneficiary developing country for purposes of the Generalized System of Preferences ("GSP").

2. Pursuant to section 504(a)(1) of the Trade Act (19 U.S.C. 2464(a)(1)), the President may withdraw, suspend, or limit the application of the duty-free treatment accorded under the GSP with respect to any article or any country after considering the factors set forth in sections 501 and 502(c) of the Trade Act (19 U.S.C. 2461 and 2462(c)). Accordingly, after taking into account the factors set forth in sections 501 and 502(c) of the Trade Act, I have determined that it is appropriate to withdraw the duty-free treatment accorded under the GSP to imports of sulfanilic acid provided for in subheading 2921.42.24 of the Harmonized Tariff Schedule of the United States ("HTS").

3. Section 604 of the Trade Act (19 U.S.C. 2483) authorizes the President to embody in the HTS the substance of the provisions of that Act, and of other acts affecting import treatment, and actions thereunder.

NOW, THEREFORE, I, GEORGE BUSH, President of the United States of America, acting under the authority vested in me by the Constitution and the laws of the United States of America, including but not limited to sections 501, 502(c), 504(a)(1), and 604 of the Trade Act, do proclaim that:

(1) General note 3(c)(ii)(A) to the HTS, listing those countries whose products are eligible for benefits of the GSP, is modified by inserting "Ethiopia" in alphabetical order in the enumeration of independent countries.

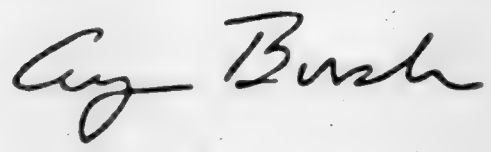
(2) In order to withdraw the duty-free treatment accorded under the GSP to sulfanilic acid, the HTS is modified as provided in the Annex to this proclamation.

(3) For HTS subheadings 2921.42.26 and 2921.42.28, effective with respect to goods originating in the territory of Canada which are entered, or withdrawn from warehouse for consumption, on or after January 1, 1993, in the Rates of Duty 1-Special subcolumn of the HTS, the HTS is modified by deleting the symbol "(CA)" and the duty rate preceding it, and inserting in the parentheses following the "Free" rate the symbol "CA," in alphabetical order.

(4) Any provisions of previous proclamations and Executive orders inconsistent with the provisions of this proclamation are hereby superseded to the extent of such inconsistency.

(5) The modifications to the HTS made by paragraphs (1) and (2) of this proclamation shall be effective with respect to articles that are: (i) imported on or after January 1, 1978, and (ii) entered, or withdrawn from warehouse for consumption, on or after 15 days after the date of publication of this proclamation in the **Federal Register**.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-third day of December, in the year of our Lord nineteen hundred and ninety-two, and of the Independence of the United States of America the two hundred and seventeenth.



Billing code 3195-01-M

ANNEX

The Harmonized Tariff Schedule ("HTS") is modified as provided below, with bracketed matter included to assist in the understanding of proclaimed modifications. The following supersedes matter in the HTS. The subheadings and superior text are set forth in columnar format, and material in such columns is inserted in the columns of the HTS designated "Heading/Subheading", "Article Description", "Rates of Duty 1-General", "Rates of Duty 1-Special", and "Rates of Duty 2", respectively.

Subheading 2921.42.24 is superseded by:

	[Amine-function compounds:]			
	[Aromatic monoamines ...:]			
	[Aniline derivatives ...:]			
*2921.42.26	Metanilic acid.....	2.4¢/kg + 18.8%	Free (A*,E,IL,J) 0.4¢/kg + 3.7% (CA)	15.4¢/kg + 60%
2921.42.28	Sulfanilic acid.....	2.4¢/kg + 18.8%	Free (E,IL,J) 0.4¢/kg + 3.7% (CA)	15.4¢/kg + 60%*

Conforming change: General note 3(c)(ii)(D) to the HTS is modified by deleting "2921.42.24 India" and inserting, in numerical sequence, "2921.42.26 India" in lieu thereof.

CFR CHECKLIST

This checklist, prepared by the Office of the Federal Register, is published weekly. It is arranged in the order of CFR titles, stock numbers, prices, and revision dates.

An asterisk (*) precedes each entry that has been issued since last week and which is now available for sale at the Government Printing Office.

A checklist of current CFR volumes comprising a complete CFR set, also appears in the latest issue of the LSA (List of CFR Sections Affected), which is revised monthly.

The annual rate for subscription to all revised volumes is $620.00 domestic, $155.00 additional for foreign mailing.

Mail orders to the Superintendent of Documents, Attn: New Orders, P.O. Box 371954, Pittsburgh, PA 15250–7954. All orders must be accompanied by remittance (check, money order, GPO Deposit Account, VISA, or Master Card). Charge orders may be telephoned to the GPO Order Desk, Monday through Friday, at (202) 783–3238 from 8:00 a.m. to 4:00 p.m. eastern time, or FAX your charge orders to (202) 512-2233.

[1] Because Title 3 is an annual compilation this volume and all previous volumes should be retained as a permanent reference source.

[2] The July 1, 1985 edition of 32 CFR Parts 1–189 contains a note only for Parts 1–39 inclusive. For the full text of the Defense Acquisition Regulations in Parts 1–39 consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[3] The July 1, 1985 edition of 41 CFR Chapters 1–100 contains a note only for Chapters 1 to 49 inclusive. For the full text of procurement regulations in Chapters 1 to 49, consult the eleven CFR volumes issued as of July 1, 1984 containing those chapters.

[4] No amendments to this volume were promulgated during the period Jan. 1, 1987 to Dec. 31, 1991. The CFR volume issued January 1, 1987, should be retained.

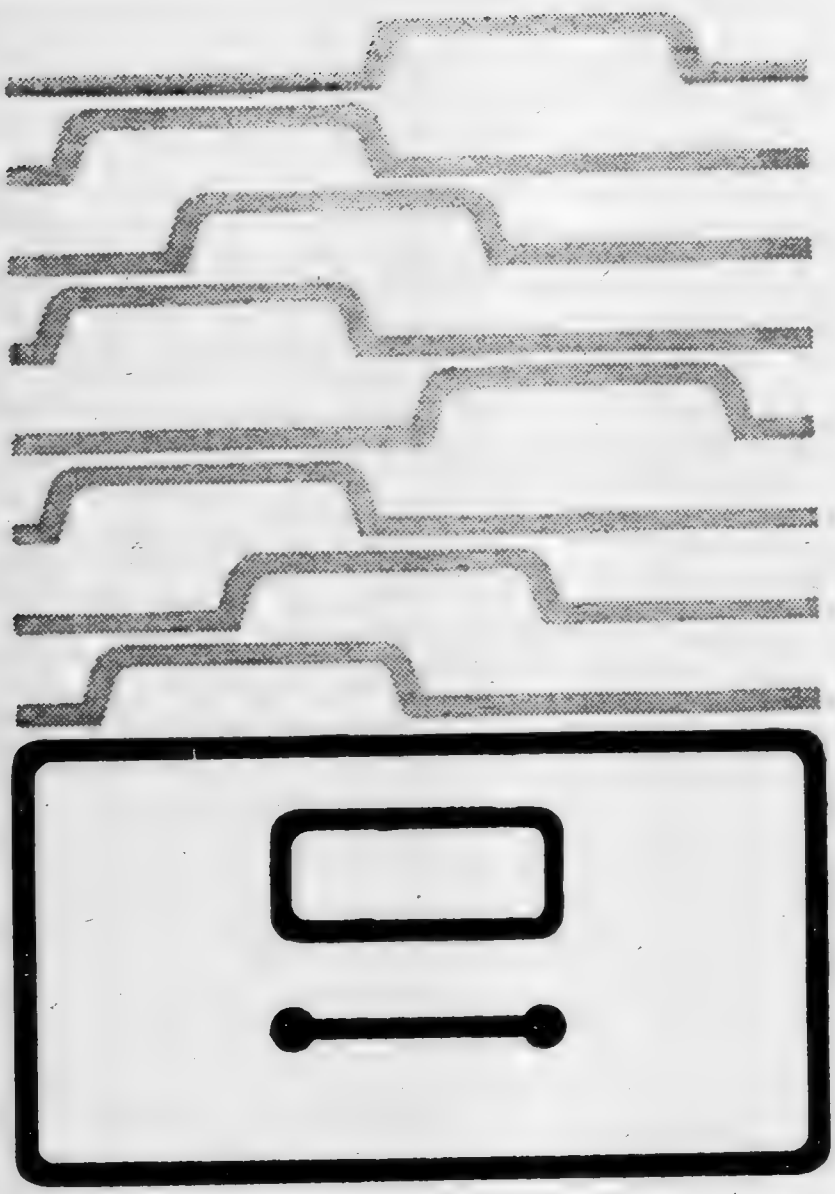
[5] No amendments to this volume were promulgated during the period Apr. 1, 1990 to Mar. 31, 1991. The CFR volume issued April 1, 1990, should be retained.

[6] No amendments to this volume were promulgated during the period Apr. 1, 1991 to Mar. 30, 1992. The CFR volume issued April 1, 1991, should be retained.

[7] No amendments to this volume were promulgated during the period July 1, 1989 to June 30, 1992. The CFR volume issued July 1, 1989, should be retained.

[8] No amendments to this volume were promulgated during the period July 1, 1991 to June 30, 1992. The CFR volume issued July 1, 1991, should be retained.

[9] No amendments to this volume were promulgated during the period October 1, 1991 to September 30, 1992. The CFR volume issued October 1, 1991, should be retained.



Guide to Record Retention Requirements

in the Code of Federal Regulations (CFR)

GUIDE: Revised January 1, 1992

The GUIDE to record retention is a useful reference tool, compiled from agency regulations, designed to assist anyone with Federal recordkeeping obligations.

The various abstracts in the GUIDE tell the user (1) what records must be kept, (2) who must keep them, and (3) how long they must be kept.

The GUIDE is formatted and numbered to parallel the CODE OF FEDERAL REGULATIONS (CFR) for uniformity of citation and easy reference to the source document.

Compiled by the Office of the Federal Register, National Archives and Records Administration.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The seal of the National Archives and Records Administration authenticates this issue of the **Federal Register** as the official serial publication established under the Federal Register Act. 44 U.S.C. 1507 provides that the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper, 24x microfiche format and magnetic tape. The annual subscription price for the **Federal Register** paper edition is $375, or $415 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $353; and magnetic tape is $37,500. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $4.50 for each issue, or $4.50 for each group of pages as actually bound; or $1.50 for each issue in microfiche form; or $175.00 per magnetic tape. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA or MasterCard. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 57 FR 12345.

Rules and Regulations

Federal Register
Vol. 57, No. 250
Tuesday, December 29, 1992

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

ADMINISTRATIVE CONFERENCE OF THE UNITED STATES

1 CFR Parts 305 and 310

Recommendations and Statements of the Administrative Conference Regarding Administrative Practice and Procedure

AGENCY: Administrative Conference of the United States.

ACTION: Recommendations and amendments.

SUMMARY: The Administrative Conference of the United States adopted three recommendations at its Forty-Seventh Plenary Session addressing: The Federal administrative judiciary; administration of the Office of Juvenile Justice and Delinquency Prevention's formula grant program; and de minimis settlements under Superfund.

The Administrative Conference of the United States is a Federal agency established to study the efficiency, adequacy, and fairness of the administrative procedures used by Federal agencies in carrying out administrative programs, and to make recommendations for improvements.

At this time, the Conference is removing the texts of certain recommendations and statements from the Code of Federal Regulations because they are deemed to be no longer of continuing general interest.

EFFECTIVE DATE: December 29, 1992.

FOR FURTHER INFORMATION CONTACT: Renee Barnow, Information Officer (202–254–7020).

SUPPLEMENTARY INFORMATION: The Administrative Conference of the United States was established by the Administrative Conference Act, 5 U.S.C. 591–596. The Conference studies the efficiency, adequacy, and fairness of the administrative procedures used by Federal agencies in carrying out administrative programs, and makes recommendations for improvements to the agencies, collectively or individually, and to the President, Congress, and the Judicial Conference of the United States (5 U.S.C. 594(1)).

At its Forty-Seventh Plenary Session, held December 10–11, 1992, the Assembly of the Administrative Conference of the United States adopted three recommendations. These recommendations were issued December 22, 1992.

Recommendation 92–7, The Federal Administrative Judiciary, is the result of a comprehensive study of federal administrative adjudications. It calls upon Congress, when creating new programs, to preserve the uniformity of process and of qualifications of presiding officers contemplated by the Administrative Procedure Act, and it contains guidelines for assigning adjudications to administrative law judges (ALJs). The Recommendation also urges reform of the ALJ selection process administered by the Office of Personnel Management so that agencies can hire from a larger pool of qualified applicants. More specifically, the Conference recommends elimination of the veterans' preference in the ALJ hiring process in order to make it more possible for agencies to hire qualified women candidates as ALJs. Recommendation 92–7 also recommends that a system of review of ALJ performance be developed, and that it be administered by agency Chief ALJs. The system would include a mechanism for investigating ALJ allegations of improper agency infringement of, or interference with, their decisional independence, and it would include procedures for investigating complaints of ALJ misconduct, such as allegations of bias or prejudice.

Recommendation 92–8, Administration of the Office of Juvenile Justice and Delinquency Prevention's Formula Grant Program, contains Conference recommendations for improving administration of the formula grant program, including changes related to OJJDP's communication and consultation with states, coordination and collaboration at various levels of government, consistency and clarity of policy elaboration, staffing, and training.

Recommendation 92–9, De Minimis Settlements Under Superfund, urges the Environmental Protection Agency to expand its efforts to negotiate settlements with "potentially responsible parties" that have contributed relatively small amounts of hazardous waste at sites covered by the Superfund program. A more active agency role is recommended and suggestions are made for additional guidance from EPA headquarters to regional offices. The recommendation also calls for establishing a central, publicly accessible repository of de minimis settlement documents.

The full texts of the recommendations are set out below. The recommendations will be transmitted to the affected agencies and, if so directed, to the Congress of the United States. The Administrative Conference has advisory powers only, and the decision on whether to implement the recommendations must be made by each body to which the various recommendations are directed.

The transcript of the Plenary Session is available for public inspection at the Conference's offices at suite 500, 2120 L Street NW., Washington, DC. Recommendations and statements of the Administrative Conference are published in full text in the **Federal Register**. Complete lists of recommendations and statements, together with the texts of those deemed to be of continuing interest, are published in the Code of Federal Regulations (1 CFR part 305). Copies of all past Conference recommendations and statements, and the research reports on which they are based, may be obtained from the Office of the Chairman of the Administrative Conference.

The authority citation for parts 305 and 310 is being revised to conform to renumbering of the Administrative Conference Act in Pub. L. 102–354.

List of Subjects in 1 CFR Parts 305 and 310

Administrative practice and procedure, Administrative adjudication, Administrative law judges, Juvenile justice, and Superfund.

Parts 305 and 310 of title 1 of the Code of Federal Regulations are amended as follows:

PART 305—RECOMMENDATIONS OF THE ADMINISTRATIVE CONFERENCE OF THE UNITED STATES

1. The authority citation for part 305 is revised to read as follows:

Authority: 5 U.S.C. 591–596.

2. New §§ 305.92–7 through 305.92–9 are added to read as follows:

§ 305.92–7 The Federal Administrative Judiciary (Recommendation No. 92–7).

At the request of the Office of Personnel Management, the Administrative Conference undertook a study of a series of issues relating to the roles of Federal administrative law judges (ALJs) and non-ALJ adjudicators, or administrative judges (AJs),[1] as they have evolved over the last several decades. The study addressed a number of different issues, including those relating to selection and evaluation of ALJs and AJs, the relationship of ALJs and AJs to their employing agencies, including the appropriate level of "independence" of such decisionmakers, and under what circumstances each type of decisionmaker should be used. Many of these issues are controversial, and the Conference has heard strong arguments from those with differing views.

The Administrative Conference takes as its starting point in considering the role of the Federal administrative judiciary the role created for "hearing examiners," now redesignated as "administrative law judges," in the Administrative Procedure Act in 1946.[2] That Act contemplated the existence of impartial factfinders, with substantive expertise in the subjects relevant to the adjudications over which they preside, who would be insulated from the investigatory and prosecutorial efforts of employing agencies through protections concerning hiring, salary, and tenure, as well as separation-of-functions requirements. The decisions of such impartial factfinders were made subject to broad review by agency heads to ensure that the accountable appointee at the top of each agency has control over the policymaking for which the agency has responsibility.

The need for impartial factfinders in administrative adjudications is evident. To ensure the acceptability of the process, some degree of adjudicator independence is necessary in those adjudications involving some kind of hearing.[3] The legitimacy of an adjudicatory process also depends on the consistency of its results and its efficiency.

ALJs possess a degree of independence that dates back to the enactment of the APA and is governed by the APA and related statutes. The APA provides that certain separations of functions must be observed to protect the ALJ from improper pressures from agency investigators and prosecutors. ALJs are selected through a special process overseen by OPM. Their pay is set by statute and OPM regulations. Any attempt by an agency to discipline or remove an ALJ requires a formal hearing at the Merit Systems Protection Board. ALJs are also exempt from the performance appraisal requirements applicable to almost all other Federal employees under the Civil Service Reform Act.

While the number of ALJs in the Federal government has leveled off in the last decade, and has actually decreased outside of the Social Security Administration, some agencies have been making increased use of AJs. The amount of functional independence accorded to AJs varies with the particular agency and type of adjudication; however, AJs generally lack the statutory protections guaranteed to ALJs. AJs are not statutorily exempt from performance appraisals, and several major groups of AJs regulatory undergo such appraisals by the agencies for which they work. In general, however, AJs presiding in agency adjudications in which a hearing is provided are accorded de facto protection from pressure from agency investigators and prosecutors, and, according to the Conference's survey, do not perceive themselves as significantly more subject to agency pressure than do ALJs.

The Conference's general view is that the movement away from the uniformity of qualifications, procedures, and protections of independence that derives from using ALJs in appropriate adjudications is unfortunate. The Conference believes that, to some extent, this movement away from ALJs toward AJs has been fueled by perceptions among agency management of difficulties in selecting and managing ALJs. These recommendations attempt to address these perceived problems. It should be noted that these recommendations are interdependent. For example, recommendations concerning the conversion of AJ positions to ALJ positions, and creation of new ALJ positions in new programs, are premised on the implementation of improvements in the selection and evaluation processes.

Use of ALJs and AJs

There is no apparent rationale undergirding current congressional or agency decisions on the use of ALJs or non-ALJs in particular types of cases. Congress seems to make such choices on an ad hoc basis. Moreover, it is quite clear that similar types of determinations made in different agencies are being made by different types of decisionmakers. For example, disability benefits adjudications at the Social Security Administration are handled by ALJs; at the Department of Veterans Affairs, AJs adjudicate similar types of cases. Moreover, in some contexts, non-ALJ adjudicators preside over cases in which extremely important issues of personal liberty are potentially at stake, such as deportation proceedings and security clearance cases.

The uniform structure established by the APA for on-the-record hearings and for qualifications of presiding officers serves to provide a consistency that helps furnish legitimacy and acceptance of agency adjudication. A rationalized system of determining when ALJs should be used would encourage uniformity not only in procedure, and in the qualifications of the initial decider, but in adjudication of similar interests. The Conference, therefore, recommends that Congress consider the conversion of AJ positions to ALJ positions in certain contexts. While the Conference does not identify specific types of cases for which such conversion should be made, it proposes a series of factors for Congress to consider in making such determinations; these same factors should also apply when Congress creates new programs involving evidentiary hearings.

One critical factor is the nature of the interest being adjudicated. The separation of functions mandated by the APA, as well as the selection criteria designed to ensure the highest quality adjudicators, are of particular value in situations where the most important interests are at stake. Generally speaking, a hearing that is likely to involve a substantial impact on personal liberties or freedom, for example, is one where use of an ALJ likely would be

---

[1] The term "administrative judge," as used here, includes non-ALJ hearing officers, whatever their title, who preside at adjudicatory hearings.

[2] In 1969, the Conference addressed some of these issues in the context of hearing examiners. See Conference Recommendation 69–9. 1 CFR 305.69–9 (part A) (1986). Many of the recommendations set forth here pertaining to selection and training of ALJs are broadly consistent with the earlier recommendation, but to the extent that they differ, this recommendation is intended to supersede part A of Recommendation 69–9.

[3] The study underlying this recommendation limited its consideration to adjudicators who preside over some kind of hearing. More informal adjudication processes are outside the scope of the study.

appropriate. Similarly, cases that could result in an order carrying with it a criminal-like finding of culpability, imposition of sanctions with a substantial economic effect (such as large monetary penalties or some license revocations),[4] or a determination of discrimination under civil rights laws (unless there is an opportunity for a de novo hearing in court) represent categories of proceedings that may call for ALJ use. This characterization should be done for types of cases rather than for particular cases.

Another factor to consider is whether the procedures established by statute or by rule for cases heard and decided are, or would be, substantially equivalent to APA formal hearings. In such cases, the additional uniformity that would derive from making the cases formally subject to 5 U.S.C. 554, 556, and 557 would argue in favor of ALJs.

ALJs are required to be lawyers. Some AJs who decide cases are not lawyers, but have other needed specialized expertise. For example, certain adjudicators at the Nuclear Regulatory Commission are physicists or engineers who participate on multi-member boards. In determining whether it is appropriate to use ALJs in particular types of cases, Congress should consider whether the benefits of using ALJs are outweighed by the benefits of having other expertise brought to bear. It should also consider whether lawyers serving with nonlawyers on decision panels should be ALJs.

A final consideration, particularly in the context of considering conversion of existing AJ positions to ALJ positions, is the extent to which the current adjudicators closely approximate ALJs in their decisional independence, the criteria for their selection, or their compensation and experience levels. If existing AJs are functioning well and do not approach parity with ALJs on these criteria, there may be no need to make the conversion. On the other hand, if they closely match ALJs on these factors, uniformity interests may weigh in favor of conversion.

Although none of these factors is necessarily intended to be determinative, the more that these factors weigh in favor of ALJ status for the decisionmaker, the more appropriate it is for Congress to mandate such status. It should be noted, however, that these recommendations are not intended to be seen as encouraging increased formalization of administrative adjudicatory processes.

[4] Grant or contract disputes would not fall within this category, unless a monetary penalty was involved.

In situations where Congress does convert AJ positions to ALJ positions, those AJs who can satisfy OPM eligibility qualifications should be eligible for immediate appointment as ALJs. Thus, only those existing AJs meeting the standards for ALJ appointment would become ALJs, but they would not be required to go through the competitive selection process.

Historically, OPM has had responsibility to review and rule on agency requests for additional ALJ positions. In the past, when there were government-wide limits on "supergrade" positions, which included ALJs, this oversight role served a purpose. Those limits no longer exist, and it is no longer necessary for OPM to participate in this process. Agencies should be free, within their normal resource allocation constraints, to determine for themselves whether they need more or fewer ALJs.

ALJ Selection

The selection process for ALJs has been administered by OPM (and its predecessor agency) since 1946. OPM develops the criteria for selection, accepts applications for the register of eligibles, and rates the applicants on the basis of their experience as described in a lengthy statement prepared by the applicant, a personal reference inquiry, a written demonstration of decision-writing ability, and a panel interview. The scores from this process determine an applicant's rank on the register of eligibles. Because OPM has historically considered ALJs as being in the competitive service, OPM follows the statutory requirements for filling vacancies. Thus, OPM rates and ranks eligibles on a scale from 70 to 100, and when an agency seeks to fill a vacancy, OPM certifies the top three names on the register to that agency. In practice, only applicants with scores from 85 to 100 have been certified.

The Veterans' Preference Act, which has historically applied to most civil service hiring, is applicable to selection of administrative law judges. As applied, veterans deemed qualified for the preference are awarded an extra 5 points, and disabled veterans are awarded an extra 10 points in their scores. These extra points have had an extremely large impact, given the small range in unadjusted scores. In addition, under current law, agencies may not pass over a veteran to hire a nonveteran with the same or lower score on the certificate. As a consequence, application of the veterans' preference has almost always been determinative in the ALJ selection system.

There has been concern about the ALJ selection process, arising from the determinative impact of veterans' preference and the very limited selection options available to agencies. In fact, most agencies in recent years have found ways to circumvent this process somewhat, primarily by hiring laterally from other agency ALJ offices, or (in those few agencies that hire substantial numbers of ALJs) by waiting until there are numerous slots to fill at one time, thus entitling them to a larger certificate of eligibles from OPM.

Despite this circumvention, the application of veterans' preference to the ALJ selection process has had a materially negative effect on the potential quality of the federal administrative judiciary primarily because it has effectively prevented agencies from being able to hire representative numbers of qualified women candidates as ALJs. There is also some evidence that application of the veterans' preference may have adversely affected the hiring of racial minorities. Thus, agencies are prevented from being able to select the best qualified ALJs for specific positions from a pool of representative applicants. The Conference recognizes that the general policy of veterans' preference in Federal hiring reflects a valid social concern, particularly as it helps those who leave military service enter the Federal civilian workforce. But, in view of the conflict between this policy and the valid need of Federal agencies to have an opportunity to select the best qualified ALJs from among representative applicants, the Conference recommends that Congress abolish veterans' preference in the particular and limited context of ALJ selection.[5] In that connection, it should be noted that in 1978, Congress created a similar narrow exemption for members of the Senior Executive Service. Moreover, there is no veterans' preference in the selection for any other Federal judicial position.

The Conference's recommendation on the selection of ALJs would leave with OPM the responsibility for preparing the register of eligibles (i.e., for determining the basic qualifications for the position and rating the applicants). OPM is urged to ensure that all applicants placed on the register are in fact qualified to fulfill the responsibilities of being an ALJ.

In conjunction with this, however, the recommendation would also expand the choices that agencies would have in

[5] The Conference has recommended a similar modification to the veterans' preference in this context before. See Conference Recommendation 69-9, 1 CFR 305.69-9 ¶ A(4) (1969).

selecting from among those qualified applicants. Under this recommendation, after OPM rated the applicants, it would compile a register of all applicants deemed qualified following the final rating process. An agency could request a certificate with the names of all applicants whose numerical ratings placed them in the highest-ranked 50 percent of the register. Agencies could also request a certificate containing a smaller number of names or applicants in a higher percentile. The agency would have the authority to hire anyone on the certificate.[6]

In addition, if, following review of the highest-ranked 50 percent, an agency needed to review additional names to find a suitable candidate, it could request an additional certificate from OPM. Such an exception should be invoked rarely, and only upon a showing of exceptional circumstances.

The Conference recognizes that any limitation on the number of qualified candidates on the certificate, including the "top three" limitation now in place, might be criticized as arbitrary. By recommending the highest-ranked 50 percent of the applicants OPM has determined to be qualified, the Conference is attempting to balance two factors. The Conference recognizes the agencies' strong interest in having a substantially larger pool of qualified candidates from which to select ALJs who meet their varying criteria and needs. It also recognizes the importance of ensuring that such a pool is highly qualified, as measured by a uniform objective rating system. The Conference believes that its recommendation provides a reasonable balance of these factors. It provides a pool large enough that agencies should be able to find candidates for ALJ positions who satisfy their varying and specific needs. At the same time, OPM estimates that the top 50 percent of the register corresponds to those applicants with scores of 85 or better out of 100.

Agencies would also have access to a computerized database that would contain the complete application files of individual applicants on their certificate, including numerical ratings, geographical or agency preferences, particular kinds of experience, and veterans status. This database would allow agencies the option to narrow the list of qualified applicants and focus on those whom they would like to consider further. For example, an agency could search for all candidates willing to relocate to New York City, who spoke Spanish, and had ratings in the top 20 percent.

To ensure that the register contains a broad range of qualified applicants, the Conference also recommends that OPM and hiring agencies expand recruitment of women and minority applicants for ALJ positions. In addition, because questions have been raised about OPM's current method of assessing litigation experience for the purposes of scoring applicants for ALJ positions, the Conference recommends that OPM review its rating criteria to determine whether they are appropriate.

For much of the last decade, the register has been closed, thus precluding newly interested applicants from being considered for ALJ positions. Although OPM deferred reopening the register pending the outcome of the Conference's consideration and recommendations, it has announced that the register will be reopened in the spring of 1993. While the Conference's recommendations would significantly affect the ALJ selection process, the impact would come mostly at the end of the process, after OPM has evaluated and rated the new applicants. This procedure is likely to be a time-consuming one, given the expected large influx of applicants. Therefore, the Conference supports reopening the application process, so that OPM can begin rating the candidates now, even though the recommended changes in the later stages have not yet been implemented. This way, when and if those changes are in place, the updated register will be readily available. It should be noted, however, that the Conference is also recommending that OPM review some of its rating criteria, which would need to be done before it begins rating new applicants.

OPM has indicated that it has a planned program to expand recruitment of women and minority applicants for the register. The Conference both encourages OPM to give such a program a high priority, and recommends that OPM and the hiring agencies take steps in particular to recruit among minority bar associations and other institutions with large numbers of minorities or women.

The Conference's view is that implementing these recommendations will provide agencies the opportunity to select ALJs from a broad range of highly qualified candidates and to hire the best applicants from a representative register.

ALJ Evaluation and Discipline

At present, ALJs, virtually alone among Federal employees, are statutorily exempt from any performance appraisal. Although agencies may seek removal or discipline of ALJs "for good cause" by initiating a formal proceeding at the MSPB, the Board has applied standards that have strictly limited the contexts in which such actions may successfully be taken against an ALJ. For example, agency actions premised on low productivity have never been successful before the Board.

The Conference recognizes the importance of independence for ALJs. Their role under the APA as independent factfinders requires that they be protected from pressure in making their decisions. There can be a tension, however, between this independence and the agency's role as final policymaker, including the need for consistency of result and political accountability. Moreover, agencies have a legitimate interest in being able to manage their employees, including ALJs, in order to ensure that the adjudicatory system is an efficient and fair one.

The Conference, therefore, recommends that a system of review of ALJ performance be developed. Chief ALJs would be given the responsibility to coordinate development of case processing guidelines, with the participation of other agency ALJs, agency managers and others. These guidelines, which would address issues such as ALJ productivity and step-by-step time goals,[7] would be one of the bases upon which Chief ALJs would conduct regular (e.g., annual) performance reviews. Judicial comportment and demeanor would be another basis for review. Another factor on the list of bases for performance review, which list is not intended to be exclusive, would be the existence of a clear disregard of, or pattern of nonadherence to, properly articulated and disseminated rules, procedures, precedents and other agency policy. Such performance review systems need not involve quantitative measures or specific performance levels, but they should provide meaningful and useful feedback on performance.[8]

[6] In order to implement this recommendation, Congress would need at a minimum to modify the veterans' preference to eliminate the provision restricting the passing over of veterans, so that agencies would have the ability to hire any qualified applicant on the certificate.

[7] See Conference Recommendation 86–7, "Case Management as a Tool for Improving Agency Adjudication," 1 CFR 305.86–7 (1992), at ¶2.

[8] Many states now use performance reviews for their state court judges and ALJs. The performance of Federal magistrate-judges is evaluated as a condition of reappointment. Even some Federal courts are beginning to experiment with evaluation of judges' performance.

Conversely, ALJs should also have a mechanism for dealing with legitimate concerns about improper agency infringement of, or interference with, their decisional independence. Under the Conference's recommendation, each agency employing ALJs should set up a system for receiving and investigating allegations of such activity by agency management officials and, where warranted, referring them to the appropriate authorities for action.[9] OPM would have oversight responsibility, and could, upon request by an ALJ or at its own discretion, review an agency's response to such allegations, and recommend appropriate further action.

Under the Conference recommendation, the Chief ALJs' responsibilities would also include developing ALJ training and counseling programs designed to enhance professional capabilities and to remedy individual performance deficiencies, and, in appropriate cases, issuing reprimands or recommending disciplinary action.[10]

Recently, attention has been focused on allegations of prejudice against certain classes of litigants by some ALJs.[11] While there is no known evidence that such a problem is widespread, the Conference's view is that it is important to have a mechanism for handling complaints or allegations relating to ALJ misconduct, including allegations of bias or prejudice. The Conference, therefore, recommends that Chief ALJs, either individually or through an ALJ peer review group, receive and investigate such complaints or allegations, and recommend appropriate corrective or disciplinary actions. To the extent practicable, such investigation and the processing of any corrective or disciplinary recommendation should be expedited to protect affected interests and create public confidence in the process. Where appropriate, consensual resolutions are encouraged. The Conference also recommends that agencies publicize the existence of their complaint procedures, in published rules and procedures or in some other appropriate fashion, and inform complainants in a timely manner of the disposition of their complaints.

The Conference is also recommending that OPM assign the various responsibilities relating to ALJs to a specific unit within that agency. Such a unit would, among other things, have responsibility for overseeing personnel, hiring and performance matters involving Chief ALJs, thus providing them additional insulation from agency pressures. Because of the increased importance of the position of Chief ALJ under this proposal, Congress also should consider making the position subject to a term appointment, as it has done for Chief Judges of United States District Courts.

The Conference also recommends that proceedings before the Merit Systems Protection Board involving charges against ALJs be heard by a three-judge panel. Judging administrative law judges is a sensitive process, and the benefit of collegial decisionmaking in this context seems worth the added cost. The panel should be selected from a pool of ALJs. Currently, MSPB has only on ALJ. So long as this is the case, the pool should consist of ALJs from other agencies, but the panel in a particular case should not involve ALJs from the same agency as the respondent ALJ.

Policy Articulation

As discussed, the APA model of agency decisionmaking is based on the use of independent ALJs to find facts and to apply agency policy to those facts. This system requires that ALJs be granted independence as factfinders, but it also must ensure that agency policymakers are able to establish policies in an efficient manner for application by ALJs in individual cases. The methods available to agencies include promulgation of rules of general applicability, the use of a system of precedential decision,[12] or other appropriate practices, such as proper use of policy statements.[13] Such policy statements must be properly disseminated.

Where the agency has made its policies known in an appropriate fashion, ALJs and AJs are bound to apply them in individual cases. Policymaking is the realm of the agency, and the ALJ's (or AJ's) role is to apply such policies to the facts that the judge finds in an individual case.

The Concept of an ALJ Corps

There has been over the last decade considerable discussion of the concept of an ALJ corps. Although there have been differences among the specific proposals, the concept in general includes separating ALJs from individual agencies, and placing them in a new, separate agency. Recent legislative proposals provided, among other things, that new ALJs would be selected by a chief judge of the corps, and that ALJs would be divided into several general subject matter divisions (such as health and benefits; safety and environment; and communications, public utility and transportation regulation).[14]

The Conference discussed these recent legislative proposals to establish a centralized ALJ corps as a means of handling some of the issues addressed in this recommendation. Some of these recommendations are independent of such proposals; others are inconsistent with them. The Conference concluded that there is no basis at this time for structural changes more extensive than those proposed here.

Recommendation

I. Congressionally Mandated Use of ALJs and AJs[15]

A. When Congress considers new or existing programs that involve agency on-the-record adjudications, it should seek to preserve the uniformity of process and of qualifications of presiding officers contemplated by the APA, by providing for the use of administrative law judges (ALJs) in all appropriate circumstances.[16] In order to further this goal, Congress should consider converting certain existing administrative judge (AJ) positions[17] to ALJ positions. In determining the appropriateness of converting existing AJ positions to ALJ status and of requiring the use of ALJs in particular types of new adjudications, Congress should consider the following factors, if present, as indicia to weigh in favor of requiring ALJ status:

1. The cases to be heard and decided are likely to involve:

a. Substantial impact on personal liberties or freedom;

---

[9] Such authorities might include OPM for certain lesser sanctions, and the Office of Special Counsel or MSPB in more serious cases.

[10] See 43 Op. Att'y Gen. 1 (1977) (discussing certain limitations on agency's authority to reprimand ALJs).

[11] See, e.g., U.S. GAO, Social Security: Racial Difference in Disability Decisions Warrants Further Investigation, GAO/HRD–92–56 (April 1992). Cf. Ninth Circuit Gender Bias Task Force, Preliminary Report (Discussion Draft) (July 1992) at 93–103 (discussing gender bias issues relating to disability determinations).

[12] See Conference Recommendation 89–8, "Agency Practices and Procedures for the Indexing and Public Availability of Adjudicatory Decisions," 1 CFR 305.89–8 (1992) ¶1 at n. 2.

[13] See Conference Recommendation 92–2, "Agency Policy Statements," 57 FR 30101, 30103 (1992), to be codified at 1 CFR 305.92–2.

[14] See S. 826 and H.R. 3910, 102d Cong.

[15] The recommendations in this Part I are interdependent with those of Parts II and III urging improvements in the selection and evaluation processes for ALJs.

[16] This recommendation is not intended to be seen as encouraging increased formalization of administrative adjudicatory processes.

[17] The term "administrative judge," as used here, includes non-ALJ hearing officers, whatever their title, who preside at adjudicatory hearings.

b. Orders that carry with them a finding of criminal-like culpability;

c. Imposition of sanctions with substantial economic effect; or

d. Determination of discrimination under civil rights or other analogous laws.

2. The procedures established by statute or regulation for the cases heard and decided are, or would be, the functional equivalent of APA formal hearings.

3. The deciders in such cases are, or ought to be, lawyers—taking into consideration the possibility that some programs might require other types of specialized expertise on the part of adjudicators or on panels of adjudicators.

4. Those incumbent AJs in such cases who are required to be lawyers already meet standards for independence, selection, experience, and compensation that approximate those accorded to ALJs.

B. When Congress determines that it should require ALJs to preside over hearings in specific classes of existing federal agency adjudications at which ALJs do not now preside, it should specify that those AJs presiding over such proceedings at that time who can satisfy the Office of Personnel Management's eligibility qualifications for ALJs be eligible for immediate appointments as ALJs.

C. Congress should provide that OPM should no longer be responsible for reviewing and ruling on agency requests for additional ALJ positions. Decisions relating to an agency's need for more or fewer ALJ positions should be made by the individual agencies through the normal resource allocation process.

II. ALJ Selection

A. Congress should authorize where required, and OPM should establish, a process for the selection of qualified ALJs by federal agencies that contains the following elements:

1. OPM should continue to administer the process for determining whether applicants are qualified to be on the register of eligibles for ALJ positions and for rating such applicants. OPM should ensure that all applicants appearing on the register are in fact qualified to fulfill the duties of an ALJ under applicable law, including that they have the capability and willingness to provide impartial, independent factfinding and decisionmaking. To the extent that this may require revising the examination process, OPM should make the appropriate changes.

2. Those applicants determined by OPM to be qualified should be listed on the register with their numerical scores noted. Agencies seeking to fill ALJ positions should be allowed to request a certificate containing the names of those applicants whose numerical ratings place them in the highest-ranking 50 percent of the register of eligible applicants. Agencies should have the discretion to request a certificate with a smaller number of percentage of the register. Agencies should also be given access to a computerized database containing the complete application files of those applicants on the certificate.

3. A hiring agency should be permitted to select any applicant from the certificate who, in the agency's opinion, possesses the qualifications for the particular position to be filled. An agency may request that OPM provide an additional number of names upon a showing of exceptional circumstances.

B. OPM and the hiring agencies should give a high priority to expanding recruitment of women and minority applicants for ALJ positions. OPM also should review its ALJ application criteria to determine whether its current method of assessing litigation experience is appropriate.

C. OPM immediately should implement Parts II (A)(1) and (B), which may involve revisions to the examination or scoring process. Pending implementation of the other recommendations in this Part, OPM should open the register application process as soon as possible, and keep it open continuously.

D. In order to implement the proposals in paragraphs II (A) and (B) above, Congress should abolish the veterans' preference in ALJ selection.

III. ALJ Evaluation and Discipline

Congress should authorize, where necessary, and OPM and the agencies that employ ALJs should establish, the following processes for assisting ALJs and the agencies that employ them to carry out their responsibilities to the public and to individual parties:

A. Organization

1. OPM should assign a specific unit the responsibility for (a) overseeing those matters concerning the selection of ALJs, (b) overseeing all personnel, hiring and performance matters that involve Chief ALJs, (c) acting on allegations of improper interference with decisional independence of ALJs, (d) conducting regular performance reviews of Chief ALJs, and (e) periodically publishing reports on the effectiveness with which OPM's responsibilities are performed and seeking recommendations as to how the program may be improved.

2. Each agency that employs more than one ALJ should designate a Chief ALJ, who is given the responsibility within the agency to do the tasks assigned to the Chief ALJ under this Part III.[18]

3. OPM should provide guidance and assistance to aid Chief ALJs fulfilling the responsibilities given to them under this Part III.

4. OPM and the agencies should ensure that Chief ALJs are insulated from improper agency influence when carrying out the responsibilities described in this Part III.[19]

B. Evaluation and Training

Chief ALJs should be given the authority to:

1. Develop and oversee a training and counseling program for ALJs designed to enhance professional capabilities and to remedy individual performance deficiencies.

2. Coordinate the development of case processing guidelines, with the participation of other agency ALJs, agency managers and, where available, competent advisory groups.

3. Conduct regular ALJ performance reviews based on relevant factors, including case processing guidelines, judicial comportment and demeanor, and the existence, if any, of a clear disregard of or pattern of nonadherence to properly articulated and disseminated rules, procedures, precedents, and other agency policy.

4. Individually, or through involvement of an ALJ peer review group established for this purpose, provide appropriate professional guidance, including oral or written reprimands, and, where good cause appears to exist, recommend that disciplinary action against ALJs be brought by the employing agency at the Merit Systems Protection Board (MSPB), based on such performance reviews.

C. Complaints About ALJs

Each agency that employs ALJs should set up a system for receiving and evaluating complaints or allegations of misconduct by an ALJ, including bias or prejudice.

1. The Chief ALJ in each agency, individually or through involvement of

[18] In agencies with large numbers of ALJs, the Chief ALJ might appropriately delegate some or all such responsibility to deputy or regional chief ALJs.

[19] Congress also should consider making the position of Chief ALJ subject to a term appointment. This suggestion does not result from a finding by the Conference that any number of current Chief ALJs are not functioning effectively. The Conference notes, however, that Chief Judges of United States District Courts are subject to term appointments and believes it is appropriate to consider whether a similar limitation should apply to Chief ALJs.

an ALJ peer review group established for this purpose, should be given responsibility for receiving and investigating such complaints.

2. If a Chief ALJ determines that ALJ misconduct occurred, the Chief ALJ should recommend that the agency take appropriate corrective action, or, in appropriate cases, recommend that disciplinary action against the ALJ be brought by the agency at the MSPB.

3. If a Chief ALJ determines that further investigation by another authority is warranted, he or she should refer the case to that authority.

4. Each agency should make known to interested persons in an appropriate fashion the existence of such complaint procedure.

5. Where allegations of misconduct implicate a Chief ALJ, they should be referred to OPM for such investigation and recommended action.

6. Complainants should be given notice of the disposition of their complaints.

D. Complaints by ALJs

Each agency that employs ALJs should set up a system for receiving and investigating allegations of unlawful agency infringement on ALJ decisional independence or other improper interference in the fulfillment of ALJ responsibilities. Such a system should be subject to OPM oversight. Where investigation reveals the probable occurrence of such an impropriety, the matter should be referred to the appropriate authority for review and recommended action designed to remedy the situation and prevent recurrence, including the issuance of oral or written reprimands and other appropriate sanctions.

E. MSPB Panels

MSPB should assign cases involving charges against ALJs to a three-judge panel of ALJs drawn from a pool. No judge on the panel should be from the same agency as the respondent ALJ.

IV. Policy Articulation

To ensure that ALJs and affected persons are aware of their responsibilities, agencies should articulate their policies through rules of general applicability, a system of precedential decisions, or other appropriate practices.[20] Congress, the President, and the courts should encourage such policy articulation.

V. The Concept of an ALJ Corps

Congress should not at this time make structural changes more extensive than those proposed here, such as those in recent legislative proposals to establish a centralized corps of ALJs.

§ 305.92–8 Administration of the Office of Juvenile Justice and Delinquency Prevention's Formula Grant Program (Recommendation No. 92–8).

In 1974 Congress enacted the Juvenile Justice and Delinquency Prevention ("JJDP") Act, which created the Office of Juvenile Justice and Delinquency Prevention ("OJJDP" or "the Office") within the U.S. Department of Justice. Among OJJDP's responsibilities, then and now, is that of administering a program of formula grants to states and local governments. While the overall purposes of the formula grant program were broadly framed,[1] the statute also required states to achieve several very specific substantive outcomes. Compliance with those mandates,[2] as well as with a variety of other administrative and procedural requirements, continues to determine eligibility for formula grant funds from OJJDP.

Monitoring for levels of state compliance, determining grant eligibility status, reviewing submitted plans and reports, and responding to technical assistance requests all fall to OJJDP's State Relations and Assistance Division (SRAD). Its administration of the formula grant program is guided by a substantial body of regulations, rules, policies and interpretations that OJJDP has developed over the years. Mechanisms such as waivers, exceptions, and de minimis criteria—characteristic features of many regulatory and grant programs—have been adopted by either Congress or the agency over the years.

The Conference, in response to a request from OJJDP, studied OJJDP's administration of the formula grant program, including its efforts to monitor and assist state compliance with the statutory mandates and requirements. As part of this study, the Conference examined issues of communication and consultation with states, coordination and collaboration at various levels of government, consistency and clarity of policy elaboration, staffing, and training.

Recommendation

I. Policymaking

(a) The Department of Justice should ensure that overall policy, priorities, and objectives for all Federal juvenile delinquency programs and activities are coordinated so that related activities and programs advance efforts by OJJDP and the states to achieve and maintain compliance with the substantive mandates of the JJDP Act.

(b) OJJDP should (1) create, and ensure adherence to, internal operating guidelines and (2) assign formula grant staff responsibilities, so that important issues of policy or interpretation are identified and dealt with promptly. Once such an issue has been finally resolved, the Office's policy or interpretation should be made available promptly by appropriate means—whether the **Federal Register** or otherwise—to all state juvenile justice specialists,[3] the National Coalition of State Juvenile Justice Advisory Groups,[4] and other groups and entities, that may have a substantial interest in the policy or interpretation.

(c) In all instances where issues of policy or interpretation may substantially affect interested persons or organizations or the interests of one or more states, the Office should engage in pre-decisional consultation with the affected persons or entities. OJJDP, in selecting a mode of consultation, should take into account the scope and impact of the policy or interpretation and other matters relevant to effective communication of views and efficient decisionmaking.

(d) The Office should ensure that the reasons underlying its policies and

[20] See generally Conference Recommendation 71–2, "Articulation of Agency Policies," 1 CFR 305.71–2 (1992); Conference Recommendation 87–7, "A New Role for the Social Security Appeals Council," 1 CFR 305.87–7 (1992); Conference Recommendation 89–8, "Agency Practices and Procedures for the Indexing and Public Availability of Adjudicatory Decisions," 1 CFR 305.89–8 (1992); Conference Recommendation 92–2, "Agency Policy Statements," 57 FR 30101, 30103 (1992), to be codified at 1 CFR 305.92–2.

[1] Funds may be used for a broad variety of programs and services related to juvenile justice and the treatment and prevention of juvenile delinquency. State participation in the formula grant program is strictly voluntary, with state funding levels determined on the basis of relative population under age 18.

[2] The three substantive mandates are as follows:

1. Juveniles who are accused or convicted of status offenses (conduct not considered criminal if committed by an adult, such as running away or truancy) and nonoffenders (such as abused, dependent, or neglected children) must not be placed in secure detention or secure correctional facilities.

2. Juveniles who are accused or adjudicated of delinquency or status offenses must not have regular contact with incarcerated adults where both juveniles and adults are confined in the same institution.

3. No juvenile may be detained or confined in any adult jail or lockup.

[3] State juvenile justice specialists serve as the states' primary staff liaison with OJJDP.

[4] The Coalition consists of the members of the state advisory groups that are appointed by the governors of all states participating in the formula grant program. The JJDP Act provides for the Coalition to play an advisory role to Congress and the Administrator of OJJDP on program operations and related matters.

interpretations, including changes and clarifications, are clearly explained in documents announcing them.

(e) The Office should develop adequate internal procedures to ensure that consistent advice regarding the requirements applicable to the formula grant program is afforded to affected states by the OJJDP state representatives.

2. OJJDP Staffing

(a) The Office should have a general attorney assigned primarily to advising OJJDP state representatives,[5] the SRAD Director, and OJJDP's Administrator concerning general legal issues arising in OJJDP's grant administration.

(b) The Office should take steps to ensure that the evaluation of monitoring data and other information relevant to determining compliance and waiver of grant termination is even-handed and takes into full account Office policies and interpretations. In so doing, the Office should consider reestablishing the position of "monitoring coordinator."

(c) The Office should refrain from so frequently shifting the state assignments of the OJJDP state representatives that the value of familiarity with state programs is lost.

3. Background and Training of OJJDP and State Formula Grant Personnel

(a) The Office should accord due weight to prior general training or experience in the area of juvenile justice and grants management in hiring applicants for the position of state representative.

(b) The Office should train both new and experienced state representatives to ensure that they:

(i) Are fully informed with regard to their roles and responsibilities;

(ii) Have adequate knowledge regarding the Office's procedures and practices for the conduct of their work;

(iii) Have a firm working knowledge of the relevant state and Federal statutes, regulations, and guidelines applicable to the formula grant program; and

(iv) Are kept apprised of recent developments in relevant Office policy and in the area of juvenile justice generally that may affect their work as state representatives.

(c) The Office should ensure that adequate training is provided to states' juvenile justice specialists for their role in the implementation of the formula grant program. This should include regularly scheduled training programs for new and experienced state juvenile justice specialists. The programs should (i) be timed so that necessary training is provided soon after new specialists take their positions, and (ii) make sure that training materials are updated expeditiously to reflect new developments in Office policy and interpretation, juvenile justice generally, and state compliance efforts.

4. Information Dissemination to States

(a) As part of its research and program development functions, the Office should collect information that may be helpful to the states in complying with the statutory mandates; the Office should disseminate this information to state juvenile justice specialists in a timely fashion and accessible format.

(b) The Office should create procedures to ensure that states will be (i) fully consulted in a timely manner regarding applications for special emphasis grants awarded to projects in their respective jurisdictions and (ii) regularly informed about the progress, results, and lessons of those projects.

(c) The Office should advise all states in a timely fashion concerning promising approaches to achieving and maintaining compliance with the substantive mandates of the JJDP Act.

(d) The Office should ensure that state-submitted monitoring data and other information by which it determines compliance and waiver are widely available both to the states and the public generally.

(e) A study should be undertaken to determine whether restructuring of, or improving communications between, the four divisions that have responsibilities for establishing juvenile delinquency and prevention programs, evaluating effective strategies, fostering promising approaches, and disseminating information would help the Office achieve its goals.

5. Enforcement and Administration

To enhance administration of the program, Congress should repeal the existing provision of the JJDP Act that authorizes waiver of the requirement that states submit annual monitoring reports to OJJDP. It should also retain the current requirement that the Office periodically audit state monitoring systems to ensure their reliability.

§ 305.92–9 De Minimis Settlements Under Superfund (Recommendation No. 92–9).

In the last decade, following the passage in 1980 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA),[1] commonly referred to as Superfund, the nation has begun focusing its attention on the cleanup of hazardous waste sites. The task is a daunting one. There currently are approximately 1200 sites on the National Priorities List (NPL), the list of most hazardous sites, and it is likely that many more will be added to this list in the coming decades. The average cleanup cost at each of these sites is about $25 million. The aggregate cost of remedying the hazardous waste problem has been placed at several hundred billion dollars.

Joint and several liability for these cleanup costs has been imposed on a very broad set of parties—practically any party that had any connection with hazardous substances placed at a site in need of a cleanup, as well as owners and operators of contaminated facilities. Potentially responsible parties, known as PRPs, at typical Superfund sites include not only large industrial firms, but an array of small entities. Under the governing contribution rule, responsibility does not depend on the size of the firm, but rather depends generally on the firm's hazardous waste contribution at the site. Some PRPs therefore bear a large share of the liability at a site because they generated a large proportion of the hazardous substances. Other PRPs, which generated a relatively small proportion, may be responsible for only a few thousand dollars in cleanup costs. The process for apportioning the cleanup costs at a site gives rise to substantial transaction costs, principally legal fees and technical consulting costs. Parties that are responsible for only a small share of the cleanup costs might have to disburse several times this amount in transaction costs.

Congress expressed concern about this situation in 1986 when it reauthorized the program and substantially amended the statute. The Superfund Amendments and Reauthorization Act of 1986 (SARA),[2] included provisions designed to make it easier for such "de minimis parties" to enter into early settlements with EPA, thereby limiting their transaction costs.

SARA set forth a far-reaching scheme for imposing liability for the cleanup of hazardous waste sites. The liability provisions are triggered by the release or threat of release of hazardous substances into the environment. For each site, the

[5] OJJDP state representatives serve in a liaison role between OJJDP and the states, communicating and interpreting federal policy, reviewing state plans and performance, and providing technical assistance to state agencies.

[1] Pub. L. No. 96–510, 94 Stat. 2767 (1980) (codified as amended at 42 U.S.C. §§ 9601–9675).

[2] Pub. L. No. 99–499, 100 Stat. 1613 (1986). This law generally reflects the pro-negotiation approach urged by the Conference in Recommendation 84–4, "Negotiated Cleanup of Hazardous Waste Sites under CERCLA" (1984).

statute establishes four categories of liable parties: The generators of the hazardous substances present at the site, the transporters of these substances to the site, the current owner of the site, and prior owners during whose period of ownership there was disposal of hazardous substances at the site.[3] These parties are liable for the costs of cleanup of the site, as well as for damage to natural resources under the control of the Federal or state governments, or Indian tribes.[4]

The language of the statute has the effect of imposing a strict liability rather than a negligence standard. Moreover, current law holds parties jointly and severally liable if the harm at the site is indivisible. Under the statute, PRPs held jointly and severally liable can seek contribution from other PRPs. The existence of joint and several liability is significant in the Superfund context because, given the significant periods of time—often several decades—between the disposal of hazardous substances and the cleanup, it is particularly likely that some liable parties will not be found, or will be insolvent. The remaining PRPs will then have to bear a disproportionate share of the costs.

The statute provides a limited set of defenses. Generally, a party can escape liability only if it can show by a preponderance of the evidence that the release or threat of release was caused solely by an act of God, an act of war, an act or omission of a third party, or a combination of these causes. Only the third-party defense has been of practical significance. In addition to showing causation by a third party, a PRP seeking to escape liability must show that (i) it took due care with respect to the hazardous substances, (ii) it took precautions against foreseeable acts or omissions of the third party, and (iii) such acts or omissions did not occur in connection with a contractual relationship with the PRP. So, for example, a generator cannot escape liability simply by showing that the problem was caused by the transporter with which it contracted for the disposal of the wastes.

To understand the context for de minimis settlements, it is important to review both the process of cleanup of hazardous waste sites and the allocation of responsibility for this cleanup among EPA and the PRPs. One of the most compelling reasons for offering early settlements to parties who bear only a small share of the liability is the very long time (averaging 12 years) that elapses between the discovery of a site and its ultimate cleanup. Settling with de minimis parties relatively early in this process can save them substantial legal and consulting costs.

The allocation of responsibility between EPA and the major PRPs at a particular site is also of critical importance. Many of the issues raised by a de minimis settlement concern its effect on subsequent settlements pursuant to which the major parties agree to undertake the cleanup of the site.

The early stages in the Superfund process involve the screening of sites to determine which pose the most serious health problems, and should therefore become the focus of EPA's attention. The later stages involve the cleanup of these sites. Obviously, the call for de minimis settlements during the early stages of the process is more compelling because the process is a slow one.

Congress translated these concerns into statutory provisions encouraging settlements in general[5] and de minimis settlements in particular.[6] With regard to de minimis settlements, the statute provides that "whenever practicable and in the public interest," the Administrator "shall as promptly as possible reach a final settlement with a potentially responsible party * * * if such settlement involves only a minor portion of the response costs at the facility." In addition, to qualify for de minimis status, generators and transporters must show that the amount and the effect of their hazardous waste contribution are both minimal in comparison to other hazardous substances at the facility.

Landowners constitute a unique class of PRPs. They may invoke an "innocent landowner" third-party defense to escape liability if they can establish that they (i) "did not conduct or permit the generation, transportation, storage, treatment, or disposal of any hazardous substance at the facility," (ii) "did not contribute to the release or threat of release of a hazardous substance at the facility through any act or omission," and (iii) purchased the property without "actual or constructive knowledge that the property was used for the generation, transportation, storage, treatment, or disposal of any hazardous substances." If they elect, instead of pursuing this defense, to limit their liability by a settlement, they may do so. Since such settlements are entered into under the statutory provisions applicable to do minimis settlements, these landowners are customarily referred to as "de minimis landowner" PRPs.

This recommendation identifies several procedural steps that can be taken by the Environmental Protection Agency to improve the functioning of the de minimis settlement program.

As a general principle, EPA should establish procedures and incentives to negotiate de minimis settlements as a standard practice at all multi-party Superfund sites involving de minimis parties. The Conference's study indicates that the vast majority of de minimis settlements have been entered relatively late in the process, and that the majority of the regional offices have shown little interest in undertaking earlier settlements. They frequently have favored resolving the liability of de minimis parties as part of global settlements pursuant to which the major parties undertake cleanups by requiring de minimis parties to negotiate directly with the major parties to determine their contribution to the cleanup cost. Paragraph 1 expresses the Conference's belief that transaction costs can be reduced significantly by settling with de minimis parties rather than seeking de minimis settlements as part of a global settlement.

The predominant approach to de minimis settlements taken by EPA regional offices has been to wait for groups of de minimis parties to form and take the first step in proposing settlements. However, the formation of such groups requires the expenditure of transaction costs by private parties and can take considerable time, and such group might not represent the smaller de minimis parties that have the greatest interest in settlement. Paragraph 2 recommends that EPA's regional offices take a more active role in seeking such settlements. The Conference also recognizes, however, that reasonable limitations on the negotiation process may be appropriate to avoid unduly protracted negotiations.

The study found significant differences in the approaches of the regional offices, and even across sites in the same region, due to the lack of concrete guidance on several important issues. Perhaps the most significant example is the variation in the volumetric determinant used to determine de minimis status. This lack of uniformity increases the incentives for parties to protest the terms of individual settlements, and increases the probability that such settlements

[3] 42 U.S.C. 9607(a). Under a limited set of circumstances a prior owner can be liable even if there was no disposal during its period of ownership. Liability will attach if the prior owner had actual knowledge of the release or threatened release when it owned the property, and transferred it without disclosing such knowledge. 42 U.S.C. 9607(35)(C).

[4] 42 U.S.C. 9607(a), (f)(1).

[5] 42 U.S.C. § 9622.

[6] 42 U.S.C. § 9622(g).

could be successfully challenged in court. Paragraph 3(a) addresses this concern.

Paragraph 3(b) recognizes that, while current policy guidelines on de minimis landowner settlements contemplate some payment, they do not specify either how to compute this payment or its relationship to estimated costs of cleanup. Such guidelines are necessary because the current "innocent landowner" guidance does not provide any assistance to the regional offices in determining an appropriate settlement figure for such landowners.

Currently, settlement documents are dispersed throughout the regions, making it difficult to determine both the extent to which de minimis settlements are used and the content of the settlements reached. Assurance that similarly situated parties are treated similarly requires knowledge of what actual practice has been, and any efforts to standardize the practice would benefit from knowledge of the variants already employed. Paragraph 3(c) urges creation of a central repository of such documents to address this need.

The explanation given most frequently by the regional offices as to the impracticality of early de minimis settlements is the lack of sufficiently reliable information on cleanup costs. EPA's recent guidance document has attempted to deal with this question on a regional level. Paragraph 4(a) suggests that this task is better accomplished on the national level. In general, there is no reason for a regional office to confine itself to its own sites in determining the costs of similar cleanups, as the inventory of comparable sites that have progressed sufficiently in the cleanup process may be small or nonexistent. Furthermore, there is no central repository for de minimis settlement documents, which might contain relevant data, and no EPA database contains their full terms. While this information can generally be obtained from the individual regional offices, this process is cumbersome and time-consuming.

An element over which there is substantial conflict among EPA and the de minimis and major parties is the premium to be charged in exchange for a waiver of any cost overrun and the risk that future events may trigger the possibility of further action by EPA against a party that has already settled ("reopeners"). The study found wide variation, ranging from approximately 50% to 250%, not readily explained merely by the different stages at which the settlements were entered. Moreover, there does not appear to be a standardized method for calculating premiums. Paragraph 4(b), like paragraph 3(a), intended to reduce the potential for conflict by standardizing the approach.

In general, earlier settlements will be based on less accurate estimates of ultimate cleanup costs than settlement reached at later stages of the process. Paragraph 4(c) suggests that settlements, at the time they are reached, should represent a fair allocation of expected burdens.

The study found some evidence of confusion as to whether EPA can set up an account to finance a cleanup in cases in which it will not perform the cleanup itself and negotiations with the major parties are not sufficiently advanced. In these cases, the funds are generally placed in the Superfund and are not made available to finance a later cleanup by the major parties. These parties, understandably, object to this outcome, and the resulting friction is one of the reasons why several of the regional offices favor global settlements. Paragraph 5 suggests that EPA headquarters seek mechanisms to provide that an appropriate portion of the proceeds from de minimis settlements benefit the parties that take responsibility for the cleanup. Appropriate benefits might include amounts paid for future cleanup costs and premium payments.

Recommendation

1. EPA should make further efforts to establish procedures and incentives to negotiate de minimis settlements as a standard practice at all multi-party Superfund sites involving de minimis parties. EPA should not rely on global settlements as the preferred mechanism for resolving the liability of de minimis parties.

2. EPA's regional offices should actively seek de minimis settlements by informing potentially responsible parties (PRPs) of their potential eligibility and circulating a draft settlement agreement as soon as the required statutory findings can be made.[7] These steps should be taken as soon as is practicable, but in any event no later than the time EPA completes the "waste-in list," which identifies the type and quantity of waste contributed to a site by each PRP. In undertaking settlement negotiations with de minimis parties, EPA regional office should be permitted to impose reasonable limitations on the negotiation process.

3. EPA headquarters should:

(a) Make further efforts to standardize the general terms of de minimis settlements and should establish a procedure to determine site-specific terms,

(b) Provide guidelines for the determination of appropriate payments and terms in de minimis landowner settlements, and

(c) Create and maintain a central repository of de minimis settlement documents, readily accessible to the public.

4. To facilitate de minimis settlements, EPA headquarters should:

(a) Establish a database and methodology to assist and guide the regional offices in estimating site cleanup costs,

(b) Establish principles for determining premiums (additional fees charged to settling parties in exchange for immunity against reopening of their cases) applicable at different stages in the process, and

(c) Make clear that regional offices should seek settlements that, at the time of settlement, represent a fair allocation of expected burdens.

5. To enhance the acceptability of de minimis settlements, EPA headquarters should, to the extent permitted by law, establish mechanisms to ensure that the parties that take responsibility for the cleanup receive appropriate benefits from the proceeds of de minimis settlements.

3. The editorial note preceding Conference recommendations is revised to read as follows:

Note: For an explanation of the publication policy regarding these recommendations, see § 304.2(a) of this chapter. Copies of the texts of Recommendations not published in part 305 may be obtained from the Office of the Chairman, Administrative Conference of the United States, 2120 L Street, NW., suite 500, Washington, DC 20037; telephone: (202) 254–7020.

4. Part 305 is amended by removing the texts (but not the titles or **Federal Register** citations) of the following sections and, in some cases, inserting explanatory notes:

§ 305.79–4 Appropriate Restrictions on Participation by a Former Agency Official in Matters Involving the Agency (Recommendation No. 79–7).

Note: This recommendation has become moot as a result of the Ethics Reform Act of 1989, Pub. L. 101–194, 103 Stat. 1716.

§ 305.83–1 The Certification Requirement in the Contract Disputes Act (Recommendation No. 83–1).

Note: Congress corrected the problem identified by this recommendation in the Court of Federal Claims Technical and Procedural Improvement Act of 1992, Pub. L. 102–572, Title IX.

[7] See 42 U.S.C. 9622(g).

§ 305.84–4 Negotiated Cleanup of Hazardous Waste Sites Under CERCLA (Recommendation No. 84–4).

Note: This recommendation was substantially implemented by EPA memorandum and by the Superfund Amendments and Reauthorization Act of 1986.

§ 305.84–6 Disclosure of Confidential Information Under Protective Order in International Trade Commission Proceedings (Recommendation No. 84–6).

§ 305.87–1 Priority Setting and Management of Rulemaking by the Occupational Safety and Health Administration (Recommendation No. 87–1).

Note: This recommendation contains advice to OSHA on internal management improvements to its rulemaking; Recommendation 87–10, which is preserved in the Code of Federal Regulations, addresses broader reforms of OSHA rulemaking.

§ 305.87–12 Adjudication Practices and Procedures of the Federal Bank Regulatory Agencies (Recommendation No. 87–12).

Note: This recommendation was implemented by the Financial Institutions Reform, Recovery and Enforcement Act of 1989, Pub. L. 101–73, 101 Stat. 183, and by subsequent agency actions.

§ 305.88–4 Deferred Taxation for Conflict-of-Interest Divestitures (Recommendation No. 88–4).

Note: This recommendation was implemented by the Ethics Reform Act of 1989, Pub. L. 101–194, 103 Stat. 1716.

§ 305.88–8 Resolution of Claims Against Savings Receiverships (Recommendation No. 88–8).

Note: The issues addressed by this recommendation were resolved by the Financial Institutions Reform, Recovery and Enforcement Act of 1989, Pub. L. 101–73, 101 Stat. 183.

§ 305.89–6 Public Financial Disclosure by Executive Branch Officials (Recommendation No. 89–6).

Note: This recommendation has become moot as a result of the Ethics Reform Act of 1989, Pub. L. 101–194, 103 Stat. 1716.

PART 310—MISCELLANEOUS STATEMENTS

1. The authority citation for part 310 is revised to read as follows:

Authority: 5 U.S.C. 591–596.

2. Part 310 of title 1 CFR is amended by removing the text (but not the title or Federal Register citation) of the following section:

§ 310.14 Statement on Mass Declsionmaking Programs: The Alien Legalization Experience.

Dated: December 21, 1992.

Jeffrey S. Lubbers,

Research Director.

[FR Doc. 92–31365 Filed 12–28–92; 8:45 am]

BILLING CODE 6110–01–M

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 532

RIN 3206–AF26

Prevailing Rate Systems

AGENCY: Office of Personnel Management.

ACTION: Final rule with request for comments.

SUMMARY: The Office of Personnel Management (OPM) is deleting Horry County, South Carolina, from the survey area for the Southeastern North Carolina appropriated fund wage area. This action is being taken because Myrtle Beach Air Force Base (AFB), which is located in Horry County, is scheduled to close on March 31, 1993. When Myrtle Beach AFB closes, there will no longer be any Federal Wage System (FWS) appropriated fund employees in the county and no further reason to survey the county. Deleting Horry County will make future surveys in the area easier to administer and less costly.

DATES: This final rule becomes effective on January 12, 1993. In view of its publication without an opportunity for prior comment, comments will still be considered. To be timely, comments must be received on or before January 28, 1993.

ADDRESS: Send or deliver written comments to Barbara L. Fiss, Assistant Director for Compensation Policy, Personnel Systems and Oversight Group, U.S. Office of Personnel Management, room 6H31, 1900 E Street NW., Washington, DC 20415.

FOR FURTHER INFORMATION CONTACT: Barbara Fudge, (202) 606–2848.

SUPPLEMENTARY INFORMATION: Horry County, South Carolina, was added to the survey area for the Southeastern North Carolina wage area in 1984 under a one-time application of stated criteria to certain counties identified by the Federal Prevailing Rate Advisory Committee. The county was added because there were in the county in 1984 at least 100 FWS employees subject to the regular schedule and at least 10 establishments within the scope of regular survey specifications. Myrtle Beach AFB, which is located in Horry County and is the only employer of FWS appropriated fund employees in the county, is scheduled for closure on March 31, 1993. The closure of Myrtle Beach AFB eliminates the rationale for having Horry County in the wage area survey. In addition, the Department of Defense (DOD) Wage Fixing Authority reports that a review of the last full-scale survey indicates that elimination of data from firms located in Horry County would have no significant impact on the survey sample yield. The deletion of Horry County has the consensus support of the DOD Wage Committee and the Federal Prevailing Rate Advisory Committee.

Under sections 553(b)(3)(B) and 553(d)(3) of title 5 of the United States Code, I find that good cause exists for waiving the general notice of proposed rulemaking and for making this amendment effective in less than 30 days. The closure of Myrtle Beach AFB removes the rationale for retaining Horry County as part of the survey area, and its deletion would have no significant effect on the survey findings. The regulation is being made effective immediately because the next full-scale survey for the Southeastern North Carolina wage area is scheduled to begin on January 12, 1993.

If substantive comments are received, OPM will respond to those comments in a future document.

E.O. 12291, Federal Regulation

I have determined that this is not a major rule as defined under section 1(b) of E.O. 12291, Federal Regulation.

Regulatory Flexibility Act

I certify that these regulations would not have a significant economic impact on a substantial number of small entities because they would apply only to Federal agencies and employees.

List of Subjects in 5 CFR Part 532

Administrative practice and procedure, Government employees, Wages.

U.S. Office of Personnel Management.

Douglas A. Brook,

Acting Director.

Accordingly, OPM is amending 5 CFR part 532 as follows:

PART 532—PREVAILING RATE SYSTEMS

1. The authority citation for 5 CFR part 532 continues to read as follows:

Authority: 5 U.S.C. 5343, 5346; § 532.707 also issued under 5 U.S.C. 552, Freedom of Information Act, Public Law 92–502.

2. Appendix C to subpart B is amended by revising the wage area listing for the Southeastern North Carolina wage area to read as follows:

Appendix C to Subpart B of Part 532—Appropriated Fund Wage and Survey Areas

* * * * *

Southeastern North Carolina

Survey Area

North Carolina:

Brunswick	Lenoir
Carteret	New Hanover
Columbus	Onslow
Craven	Pamlico
Jones	Pender

Area of Application. Survey area plus:

North Carolina:

Beaufort	Hyde
Bertie	Martin
Dare	Pitt
Duplin	Tyrrell
Greene	Washington
Hertford	

South Carolina:

Horry

[FR Doc. 92–31420 Filed 12–28–92; 8:45 am]

BILLING CODE 6325–01–M

---

5 CFR Part 532

RIN 3206–AF27

Prevailing Rate Systems

AGENCY: Office of Personnel Management.

ACTION: Interim rule with request for comments.

SUMMARY: The Office of Personnel Management (OPM) is issuing an interim regulation to abolish the Horry, South Carolina, Nonappropriated Fund (NAF) Wage Area. The Horry wage area is composed of Horry County, South Carolina (survey area), and New Hanover County, North Carolina (area of application). This regulation redefines Horry County, South Carolina, to the Charleston, South Carolina, wage area as an area of application and New Hanover County, North Carolina, to the Onslow, North Carolina, wage area as an area of application. Because of downsizing associated with a scheduled base closure, the Horry County, South Carolina, survey area will no longer have the required minimum of 26 NAF wage employees, and no local activity within the Horry wage area has the capability to conduct a wage survey.

DATES: This interim rule becomes effective on January 1, 1993. Comments must be received on or before January 28, 1993.

ADDRESSES: Send or deliver comments to Barbara L. Fiss, Assistant Director for Compensation Policy, Personnel Systems and Oversight Group, U.S. Office of Personnel Management, room 6H31, 1900 E Street NW., Washington, DC 20415.

FOR FURTHER INFORMATION CONTACT: Brenda Roberts (202) 606–2848.

SUPPLEMENTARY INFORMATION: Horry County, South Carolina, is presently defined as a separate wage area for NAF pay-setting purposes. The Department of Defense notified OPM that the host activity for the Horry wage area, Myrtle Beach Air Force Base (AFB), is scheduled to close on March 31, 1993. Downsizing is underway, and most NAF activities are scheduled to close by the end of December 1992. Myrtle Beach AFB will not have the capability to conduct the full-scale wage survey for the Horry, South Carolina, wage area that is required to begin in January 1993, in accordance with appendix B to subpart B of part 532, title 5, Code of Federal Regulations.

In addition, Horry County, South Carolina, will no longer meet the regulatory criteria for an established nonappropriated fund wage area under 5 CFR 532.219. Myrtle Beach AFB and Fort Fisher are the only installations with NAF employment in the Horry wage area. As of March 31, 1993, Myrtle Beach AFB will be closed. Fort Fisher, located in New Hanover County, North Carolina, does not employ the minimum of 26 employees required to establish an NAF wage area. Thus, Horry and New Hanover Counties must both be redefined as areas of application to existing wage areas for pay-setting purposes.

The following criteria are taken into consideration when two or more counties are to be combined to constitute a single wage area:

(1) Proximity of largest activity in each county;

(2) Transportation facilities and commuting patterns; and

(3) Similarities of the counties in:

(i) Overall population;

(ii) Private employment in major industry categories; and

(iii) Kinds and sizes of private industrial establishments.

Geographically, Myrtle Beach AFB in Horry County is closest in proximity (approximately 145 km (90 miles)) to Charleston Naval Air Station in Charleston County, the survey area for the Charleston, South Carolina, wage area. The next closest wage area activity is approximately 217 km (135 miles) distant in Onslow County, North Carolina. Transportation facilities also favor definition to Charleston. Commuting patterns indicate 38,113 workers live and work in Horry County and that 92 Horry residents commute to work in the Richland, South Carolina, wage area. Residents do not commute to any other FWS wage area. Horry is most similar to Onslow County in overall population. However, no one wage area is clearly most similar to Horry in private employment in major industry categories and the kinds and sizes of private industrial establishments.

Geographically, Fort Fisher in New Hanover County is closest in proximity (approximately 97 km (60 miles)) to Camp LeJeune in Onslow County, North Carolina, the survey area for the Onslow, North Carolina, wage area. The next closest wage area activity is approximately 145 km (90 miles) distant in Wayne County, North Carolina. Transportation facilities and commuting patterns also favor Onslow. Although the majority of workers live and work in New Hanover County (36,414), 196 New Hanover residents commute to work in the Onslow, North Carolina, wage area. Residents do not commute from New Hanover to any other FWS wage area. New Hanover is most similar to Onslow County in overall population. However, no one wage area is clearly most similar to New Hanover in private employment in major industry categories and the kinds and sizes of private industrial establishments.

Based on a review of the criteria for establishing and combining wage areas, we find that the Horry, South Carolina, wage area should be abolished on January 1, 1993. In addition, on March 31, 1993, Horry County, South Carolina, should be redefined as an area of application to the Charleston, South Carolina, wage area and New Hanover County, North Carolina, should be redefined as an area of application to the Onslow, North Carolina, wage area. Thus, employees paid from the Horry, South Carolina, wage schedule will remain on their current schedule until the Myrtle Beach AFB officially closes on March 31, 1993. The Federal Prevailing Rate Advisory Committee (FPRAC) reviewed this request and recommended approval by consensus.

In addition, these regulations include a technical amendment to correct an oversight in appendix B to subpart B of part 532 by deleting the listing for the former Imperial, California, wage area in conformance with the previous abolishment of that wage area in appendix D to subpart B.

Pursuant to sections 553(b)(3)(B) and (d)(3) of title 5, United States Code, I find that good cause exists for waiving the general notice of proposed

rulemaking to accommodate changes necessitated by DOD downsizing and expedite this wage area redefinition. By December 1992, Horry County, South Carolina, will not meet the current criteria for establishing nonappropriated fund wage areas. Myrtle Beach AFB will not have the capability to conduct the Horry County full-scale survey that is required to begin in January 1993, and no local activity within the Horry wage area has the capability to conduct a wage survey.

E.O. 12291, Federal Regulation

I have determined that this is not a major rule as defined under section 1(b) of E.O. 12291, Federal Regulation.

Regulatory Flexibility Act

I certify that these regulations will not have a significant economic impact on a substantial number of small entities because they affect only Federal agencies and employees.

5 CFR Part 835

RIN 3206–AE72

Debt Collection

AGENCY: Office of Personnel Management.
ACTION: Final regulations.

SUMMARY: The Office of Personnel Management (OPM) is issuing final regulations to establish a new part 835 dealing entirely with debt collection. Collection procedures for both the Civil Service Retirement System (CSRS) and the Federal Employees Retirement System (FERS) will be combined in this part. This regulation establishes a subpart F covering procedures whereby delinquent debts owed to OPM will be referred to the Internal Revenue Service (IRS) for collection by offset against Federal income tax refunds under 31 U.S.C. 3720A. These regulations are necessary for OPM to participate in the Tax Refund Offset Program for the 1992 tax year. Separate regulations will be prepared to cover subparts A through E of part 835.

EFFECTIVE DATE: December 29, 1992.
FOR FURTHER INFORMATION CONTACT: Patricia Rochester, (202) 606–0299.
SUPPLEMENTARY INFORMATION: On October 5, 1992, we published (at 57 FR 45753) proposed regulations describing the procedures OPM would use to refer past-due legally enforceable debts to the IRS for offset against the Federal income tax refunds of persons owing debts to OPM. Interested parties were given 30 days to comment on the proposed regulations. Aside from several questions concerning the applicability of the proposed regulations to other Federal agencies and employees, we did not receive any comments. We did not make any substantive changes to the proposed regulations.

Under section 553(d)(3) of title 5 of the United States Code, I find that good cause exists to make this amendment effective in less than 30 days. The regulation is being made effective immediately because the Internal Revenue Service requires final regulations to be in effect before it will allow participation in the Tax Refund Offset Program. OPM must have final regulations before the end of the year in order to meet its commitment to participate in the Program for the 1992 tax year.

E.O. 12291, Federal Regulation

I have determined that this is not a major rule as defined under section 1(b) of E.O. 12291, Federal Regulation.

Regulatory Flexibility Act

I certify that this rule will not have a significant economic impact on a substantial number of small entities because it will only affect private persons who owe debts to the Civil Service Retirement and Disability Fund.

List of Subjects in 5 CFR Part 835

Administrative practice and procedure, Claims, Disability benefits, Firefighters, Government employees, Income taxes, Intergovernmental relations, Law enforcement officers, Pensions, Retirement, Survivors.

U.S. Office of Personnel Management.
Douglas A. Brook,
Acting Director.

Accordingly, OPM is adding a new 5 CFR part 835 to read as follows:

PART 835—DEBT COLLECTION

Subparts A–E—[Reserved]

Subpart F—Collection of Debts by Federal Tax Refund Offset

Sec.
835.601 Purpose.
835.602 Past-due legally enforceable debt.
835.603 Notification of intent to collect.
835.604 Reasonable attempt to notify.
835.605 OPM action as a result of consideration of evidence submitted in response to the notice of intent.
835.606 Change in notification to Internal Revenue Service.
835.607 Administrative charges.

Authority 5 U.S.C. 8347(a) and 8461(g). Subpart F also issued under 31 U.S.C. 3720A.

Subparts A–E—[Reserved]

Subpart F—Collection of Debts by Federal Tax Refund Offset

§ 835.601 Purpose.

This subpart establishes procedures for OPM to refer past-due legally enforceable debts to the Internal Revenue Service (IRS) for offset against the income tax refunds of persons owing debts to OPM. It specifies the agency procedures and the rights of the debtor applicable to claims referred under the Federal Tax Refund Offset Program for the collection of debts owed to OPM.

§ 835.602 Past-due legally enforceable debt.

A past-due legally enforceable debt for referral to the IRS is a debt that—

(a) Resulted from—

(1) Erroneous payments made under the Civil Service Retirement or the Federal Employees' Retirement Systems; or

(2) Unpaid health or life insurance premiums due under the Federal Employees' Health Benefits or Federal Employees' Group Life Insurance Programs; or

(3) Any other statute administered by OPM;

(b) Is an obligation of a debtor who is a natural person;

(c) Except in the case of a judgment debt, has been delinquent at least 3 months but not more than 10 years at the time the offset is made;

(d) Is at least $25.00;

(e) With respect to which the individual's rights described in 5 CFR 831.1301 through 831.1309 have been exhausted;

(f) With respect to which either:

(1) OPM's records do not contain evidence that the person owing the debt (or his or her spouse) has filed for bankruptcy under Title 11 of the United States Code; or

(2) OPM can clearly establish at the time of the referral that the automatic stay under 11 U.S.C. 362 has been lifted or is no longer in effect with respect to the person owing the debt or his or her spouse, and the debt was not discharged in the bankruptcy proceeding;

(g) Cannot currently be collected under the salary offset provisions of 5 U.S.C. 5514(a)(1);

(h) Is not eligible for administrative offset under 31 U.S.C. 3716(a) because of 31 U.S.C. 3716(c)(2), or cannot currently be collected as an administrative offset by OPM under 31 U.S.C. 3716(a) against amounts payable to the debtor by OPM; and

(i) Has been disclosed by OPM to a consumer reporting agency as authorized by 31 U.S.C. 3711(f), unless the consumer reporting agency would be prohibited from reporting information concerning the debt by reason of 15 U.S.C. 1681c, or unless the amount of the debt does not exceed $100.

§ 835.603 Notification of intent to collect.

(3) *Notification before submission to the IRS.* A request for reduction of an IRS income tax refund will be made only after OPM makes a determination that an amount is owed and past-due and gives or makes a reasonable attempt to give the debtor 60 days written notice of the intent to collect by IRS tax refund offset.

(b) *Contents of notice.* OPM's notice of intention to collect by IRS tax refund offset (Notice of Intent) will state:

(1) The amount of the debt;

(2) That unless the debt is repaid within 60 days from the date of OPM's Notice of Intent, OPM intends to collect the debt by requesting the IRS to reduce any amounts payable to the debtor as a Federal income tax refund by an amount equal to the amount of the debt and all accumulated interest and other charges;

(3) A mailing address for forwarding any written correspondence and a contract name and a telephone number for any questions; and

(4) That the debtor may present evidence to OPM that all or part of the debt is not past due or legally enforceable by—

(i) Sending a written request for a review of the evidence to the address provided in the notice;

(ii) Stating in the request the amount disputed and the reasons why the debtor believes that the debt is not past-due or is not legally enforceable;

(iii) Including in the request any documents that the debtor wishes to be considered or stating that the additional information will be submitted within the remainder of the 60-day period.

§ 835.604 Reasonable attempt to notify.

In order to constitute a reasonable attempt to notify the debtor, OPM must have used a mailing address for the debtor obtained from the IRS pursuant to 26 U.S.C. 6103(m)(2) within a period of 1 year preceding the attempt to notify the debtor, unless OPM received clear and concise notification from the debtor that notices from the agency are to be sent to an address different from the address obtained from IRS. Clear and concise notice means that the debtor has provided the agency with written notification, including the debtor's name and identifying number (as defined in 26 CFR 301.6109–1), and the debtor's intent to have the agency notices sent to the new address

§ 835.605 OPM action as a result of consideration of evidence submitted as a result of the notice of intent.

(a) *Consideration of evidence.* If, as a result of the Notice of Intent, OPM receives notice that the debtor will submit additional evidence or receives additional evidence from the debtor within the prescribed time period, any notice to the IRS will be stayed until OPM can—

(1) Consider the evidence presented by the debtor; and

(2) Determine whether or not all or a portion of the debt is still past due and legally enforceable; and

(3) Notify the debtor of its determination.

(b) *Notification to the debtor.* Following review of the evidence, OPM will issue a written decision notifying the debtor whether OPM has sustained, amended, or canceled its determination that the debt is past-due and legally enforceable. The notice will advise the debtor of any further action to be taken and explain the supporting rationale for the decision.

(c) *OPM action on the debt.* (1) OPM will notify the debtor of its intent to refer the debt to the IRS for offset against the debtor's Federal income tax refund, if it sustains its decision that the debt is past-due and legally enforceable. OPM will also notify the debtor whether the amount of the debt remains the same or is modified.

(2) OPM will not refer the debt to the IRS for offset against the debtor's Federal income tax refund, if it reverses its decision that the debt is past-due and legally enforceable.

§ 835.606 Change in notification to Internal Revenue Service.

(a) Except as noted in paragraph (b) of this section, after OPM sends IRS notification of an individual's liability for a debt, OPM will promptly notify IRS of any change in the notification, if OPM—

(1) Determines that an error has been made with respect to the information contained in the notification;

(2) Receives a payment or credits a payment to the account of the debtor named in the notification that reduces the amount of the debt referred to the IRS for offset; or

(3) Receives notification that the individual owing the debt has filed for bankruptcy under Title 11 of the United States Code or has been adjudicated bankrupt and the debt has been discharged.

(b) OPM will not notify the IRS to increase the amount of a debt owed by

a debtor named in OPM's original notification to the IRS.

(c) If the amount of a debt is reduced after referral by OPM and offset by the IRS, OPM will refund to the debtor any excess amount and will promptly notify the IRS of any refund made by OPM.

§ 835.607 Administrative charges.

All administrative charges incurred in connection with the referral of the debts to the IRS will be assessed on the debt and thus increase the amount of the offset.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 948

[Docket No. FV-92-044FR]

Irish Potatoes Grown in Colorado; Reapportionment of Committee Membership

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This final rule suspends, for an indefinite period, a provision of the marketing order requiring the Colorado Potato Committee (Committee) to be composed of two members and alternate members from each of three area committees. The production area is divided into three regulatory areas and provision is made for the area committees to act as administrative agencies for each of the areas. Area 1 has not been regulated for years, and is not expected to begin commercial interstate potato marketing in the foreseeable future. Because of this, the Committee has had to operate with only four members and alternate members. To allow the Committee to operate at its maximum membership level of six members and alternate members, this final rule also reapportions Committee membership by adding one member and alternate member each to the active Area 2 and 3 committees and not providing representation for the inactive Area 1 committee. In addition, the references to Area 1 are also suspended in the marketing order and regulations, as appropriate. This action will improve the efficiency of the Committee and allow it to remain functional if some members are absent.

EFFECTIVE DATE: December 29, 1992.

FOR FURTHER INFORMATION CONTACT: Dennis L. West, Northwest Marketing Field Office, Fruit and Vegetable Division, AMS, USDA, Green-Wyatt Federal Building, room 369, 1220 SW Third Avenue, Portland, OR 97204, telephone 503-326-2725, or Robert F. Matthews, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, P.O. Box 96456, room 2523-S, Washington, DC 20090-6456, telephone 202-690-0464.

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Agreement No. 97 and Order No. 948 [7 CFR part 948], both as amended, regulating the handling of Irish potatoes grown in Colorado. The marketing agreement and order are authorized by the Agricultural Marketing Agreement Act of 1937, as amended [7 U.S.C. 601-674], hereinafter referred to as the Act.

This final rule has been reviewed by the Department of Agriculture (Department) in accordance with Departmental Regulation 1512-1 and the criteria contained in Executive Order 12291 and has been determined to be a non-major rule.

This final rule has been reviewed under Executive Order 12778, Civil Justice Reform. This action is not intended to have retroactive effect. This final rule will policies, unless they present an irreconcilable conflict with this final rule.

The Act provides that administrative proceedings must be exhausted before parties my file suit in court. Under section 8c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and requesting a modification of the order or to be exempted therefrom. A handler is afforded the opportunity for a hearing on the petition. After a hearing the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his principal place of business, has jurisdiction in equity to review the Secretary's ruling on the petition, provided a bill a equity is filed not later than 20 days after the date of the entry of the ruling.

Pursuant to the requirements set forth in the Regulatory Flexibility Act (RFA), the administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 120 handlers of Colorado potatoes subject to regulation under the marketing order, and approximately 400 producers in the production area. Small agricultural service firms are defined as those whose annual receipts are less than $3,500,000, and small agricultural producers have been defined by the Small Business Administration [15 CFR 121.601] as those having annual receipts of less than $500,000. The majority of potato handlers and producers regulated under the marketing agreement and order may be classified as small entities.

The production area under Marketing Order No. 948 is divided into three separate regulatory areas. Area 1, also called the Western Slope, consists of the northwestern portion of the State of Colorado. Area 2, known as the San Luis Valley, is located in the southwestern part of the State. Area 3, referred to as the Northern Colorado or the Greeley area, covers most of the eastern part of the State. Section 948.50 establishes area committees as administrative agencies for each of the three areas.

The Committee is established, pursuant to § 948.51, consisting of six members, with alternates. Section 948.51 further specifies that two members and alternates for the Committee shall be selected by the Secretary from each area committee. The Committee coordinates activities and affairs of mutual interest among the area committees.

For years, the primary cash crops of Area 1 have been relatively high-value tree fruit crops. As fruit production has increased, potato production has decreased. The small volume of potatoes still produced there is being consumed locally. As a result of such changes in potato production, rising costs of equipment, and crop inputs, the potato industry in Area 1 has diminished significantly.

Consequently, handling regulations have not been implemented and an area committee has not been selected for years. Because of this, the Committee has had no representatives from Area 1 and has had to operate with only four members (two members and alternates each from the Area 2 and 3 committees). The Committee believes that it could function more effectively and obtain a broader cross-section of industry views with six members and alternates, as

provided under § 948.51. Industry representatives believe it unlikely that Area 1 will again increase potato production to significant levels. Thus, it is unlikely that Area 1 will be able to provide the membership necessary to allow the Committee to operate with six members.

In light of this situation, the Committee met November 8, 1991, and unanimously passed a motion requesting the Area 2 and 3 committees to recommend reapportionment of the Committee. It requested that the two member and alternate member positions currently allocated to the Area 1 committee be allocated to the Area 2 and 3 committees so that each committee will have three members and alternates, rather than two members and alternates. On November 21, 1991, the Area 2 committee recommended this reapportionment action, and on December 5, 1991, the Area 3 committee recommended the same action.

In order to so reapportion Committee membership, the second sentence of § 948.51 will be suspended. That sentence specifies that, "Two members and alternates shall be selected from each area committee." With that sentence suspended, § 948.51 specifies that, "The Colorado Potato Committee is hereby established consisting of six members, with alternates. Committeemen shall be selected by the Secretary from nominations of area committee members or alternates." This language permits the Committee to be composed of an equal number of members from each active area committee currently regulating shipments. This makes use of all six authorized member positions. The Committee believes that an additional member and alternate member from each active area provide increased input, interest, and guidance in operating the marketing order. In the unlikely event that Area 1 again becomes a commercially important producer of potatoes, the Committee could again be reapportioned to reflect such changes in production. Such action would be considered by the Secretary at the request of the industry.

In addition, paragraph (a) of §§ 948.4 and 948.50 of the order were to be suspended by the proposed rule. Paragraph (a) of the definition of the term "area" describes Area 1. Paragraph (a) of § 948.50 establishes the composition of Area 1 (Western Slope) with the selection of four producers and handlers. However, this action does not suspend paragraph (a) of § 948.4 as proposed. The definition of Area 1 remains unsuspended for clarity. Paragraph (c) of § 948.4 defines Area 3 in terms of counties not included in Area No. 1 or Area No. 2. A new § 948.151 is added to the regulations concerning Committee membership. In addition to the new section added to the regulations as proposed, this action would also suspend references to Area No. 1 in §§ 948.103 and 948.104 of the regulations concerning the fiscal period and terms of office, respectively.

A proposed rule was published in the **Federal Register** on August 25, 1992 (57 FR 38446). This document contained a proposal to reapportion the Colorado Potato Committee and suspend related provisions. This rule provided that interested persons could file comments through September 9, 1992. No comments were filed.

Based on available information, the Administrator of the AMS has determined that this action will not have a significant economic impact on a substantial number of small entities, and that the reapportionment of the Committee benefits Colorado potato producers and handlers.

After consideration of all relevant matter presented, including the information and recommendations submitted by the two area committees, and other available information, it is hereby found that with regard to the suspension of the provisions of the order and the regulations as set forth herein, these provisions no longer tend to effectuate the declared policy of the Act, and that the amendment to the regulations, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

It is further found that good cause exists for not postponing the effective date of this action until 30 days after publication in the **Federal Register** (5 U.S.C. 553) because: (1) The reapportioned Committee should be in place as soon as possible to be of maximum benefit to the active growing areas; (2) this action is fully supported by those areas; (3) prompt implementation of this action will allow nominations for the additional positions to be held and a Committee with six, rather than four, members to be selected; and (4) no useful purpose would be served by delaying the effective date of this action.

List of Subjects in 7 CFR Part 948

Marketing agreements, Potatoes, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 948 is hereby amended as follows:

PART 948—IRISH POTATOES GROWN IN COLORADO

1. The authority citation for 7 CFR part 948 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

§ 948.50 [Amended]

2. In § 948.50, paragraph (a) is suspended for an indefinite period.

§ 948.51 [Amended]

3. In § 948.51, the second sentence is suspended for an indefinite period. With that sentence suspended, § 948.51 reads as follows:

§ 948.51 Colorado Potato Committee.

The Colorado Potato Committee is hereby established consisting of six members, with alternates. Committeemen shall be selected by the Secretary from nominations of area committee members or alternates.

§ 948.103 [Amended]

4. In § 948.103(a), the words, "Area No. 1 and" are suspended for an indefinite period.

§ 948.104 [Amended]

5. In § 948.104(a)(1), the words, "Area No. 1 and" are suspended for an indefinite period.

6. A new § 948.151 is added to Subpart—Rules and Regulations (7 CFR 948.100–948.150) to read as follows:

§ 948.151 Colorado Potato Committee membership.

The Colorado Potato Committee shall be comprised of six members and alternates selected by the Secretary. Three members and three alternates shall be selected from nominations of Area 2 committee members or alternates, and three members and three alternates shall be selected from nominations of Area 3 committee members or alternates.

Dated: December 21, 1992.

John E. Frydenlund,

Deputy Assistant Secretary, Marketing and Inspection Services.

7 CFR Part 959

[Docket No. FV–92–096IFR]

South Texas Onions; Increased Expenses and Establishment of Assessment Rate

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Interim final rule with request for comments.

SUMMARY: This interim final rule amends a previous interim final rule which authorized administrative expenses for the South Texas Onion Committee (Committee) under M.O. No. 959. This interim final rule increases the level of authorized expenses and establishes an assessment rate to generate funds to pay those expenses. Authorization of this increased budget enables the Committee to incur expenses that are reasonable and necessary to administer the program. Funds to administer this program are derived from assessments on handlers.

DATES: Effective August 1, 1992, through July 31, 1993. Comments received by January 28, 1993, will be considered prior to issuance of a final rule.

ADDRESSES: Interested persons are invited to submit written comments concerning this action. Comments must be sent in triplicate to the Docket Clerk, Fruit and Vegetable Division, AMS, USDA, P.O. Box 96456, room 2523–S, Washington, DC 20090–6456. Comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be available for public inspection in the office of the Docket Clerk during regular business hours.

FOR FURTHER INFORMATION CONTACT: Belinda G. Garza, McAllen Marketing Field Office, Fruit and Vegetable Division, AMS, USDA, 1313 East Hackberry, McAllen, TX 78501, telephone (512) 682–2833, or Martha Sue Clark, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, P.O. Box 96456, room 2523–S, Washington, DC 20090–6456, telephone (202) 720–9918.

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Agreement No. 143 and Order No. 959, both as amended (7 CFR Part 959), regulating the handling of onions grown in South Texas. The marketing agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the Act.

The Department of Agriculture is committed to carrying out its statutory and regulatory mandates in a manner that best serves the public interest. Therefore, where legal discretion permits, the Department actively seeks to promulgate regulations that promote economic growth, create jobs, are minimally burdensome, and are easy for the public to understand, use, or comply with. In short, the Department is committed to issuing regulations that maximize net benefits to society and minimize costs imposed by those regulations. This principle is articulated in President's Bush's January 28, 1992, memorandum to agency heads, and in Executive Orders 12291 and 12498. The Department applies this principle to the fullest extent possible, consistent with law.

The Department has developed and reviewed this regulatory action in accordance with these principles. Nonetheless, the Department believes that public input from all interested persons can be invaluable in ensuring that the final regulatory product is minimally burdensome and maximally efficient. Therefore, the Department specifically seeks comments and suggestions from the public regarding any less burdensome or more efficient alternative that would accomplish the purposes described in this action. Comments suggesting less burdensome or more efficient alternatives should be addressed to the agency as provided in this rule.

This rule has been reviewed by the Department of Agriculture (Department) in accordance with Departmental Regulation 1512–1 and the criteria contained in Executive Order 12291 and has been determined to be a "non-major" rule.

This interim final rule has been reviewed under Executive Order 12778, Civil Justice Reform. Under the marketing order provisions now in effect, South Texas onions are subject to assessments. It is intended that the assessment rate as issued herein will be applicable to all assessable onions handled during the 1992–93 fiscal period, which began August 1, 1992, through July 31, 1993. This interim final rule will not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and requesting a modification of the order or to be exempted therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his principal place of business, has jurisdiction in equity to review the Secretary's ruling on the petition, provided a bill in equity is filed not later than 20 days after date of the entry of the ruling.

Pursuant to the requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 47 producers of South Texas onions under this marketing order, and approximately 34 handlers. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.601) as those having annual receipts of less than $500,000, and small agricultural service firms are defined as those whose annual receipts are less than $3,500,000. The majority of South Texas onion producers and handlers may be classified as small entities.

The budget of expenses for the 1992–93 fiscal period was prepared by the South Texas Onion Committee, the agency responsible for local administration of the marketing order, and submitted to the Department of Agriculture for approval. The members of the Committee are producers and handlers of South Texas onions. They are familiar with the Committee's needs and with the costs of goods and services in their local area and are thus in a position to formulate an appropriate budget. The budget was formulated and discussed in a public meeting. Thus, all directly affected persons have had an opportunity to participate and provide input.

The assessment rate recommended by the Committee was derived by dividing anticipated expenses by expected shipments of South Texas onions. Because that rate will be applied to actual shipments, it must be established at a rate that will provide sufficient income to pay the Committee's expenses.

Committee administrative expenses of $100,000 for personnel, office, and travel expenses were recommended in a mail vote completed July 3, 1992. The assessment rate and funding for the research and promotion projects were to be recommended at a later Committee meeting. The Committee administrative expenses of $100,000 were published in

the **Federal Register** as an interim final rule September 25, 1992 (57 FR 44312). That interim final rule added § 959.233, authorizing expenses for the Committee, and provided that interested persons could file comments through October 26, 1992. No comments were filed.

The Committee subsequently met on October 20, 1992, and unanimously recommended slight changes in some of the administrative expense categories and recommended funding for numerous research and promotion projects for a total 1992–93 budget of $339,188. The new budget is $2,417.67 less than the budget for the previous year. Increases include: $13,919 in market development, $2,000 in the fumigation trials research, $2,000 for a new computer and computer program, and $2,400 for monitoring of thrips research. These budget increases will be offset by decreases of $1,000 for furniture and fixtures, $3,600 in the leaf wetness research program, and the elimination of the Texas 1015 DNA research for which $12,000 was budgeted last season.

The Committee also unanimously recommended an assessment rate of $0.07 per 50-pound container or equivalent of onions, the same as last season. This rate, when applied to anticipated shipments of approximately 5 million 50-pound containers or equivalents, will yield $350,000 in assessment income, which will be adequate to cover budgeted expenses. Funds in the reserve as of September 30, 1992, $302,998, were within the maximum permitted by the order of two fiscal periods' expenses.

While this action will impose some additional costs on handlers, the costs are in the form of uniform assessments on handlers. Some of the additional costs may be passed on to producers. However, these costs will be offset by the benefits derived from the operation of the marketing order. Therefore, the Administrator of the AMS has determined that this action will not have a significant economic impact on a substantial number of small entities.

After consideration of all relevant matter presented, including the information and recommendations submitted by the Committee and other available information, it is hereby found that this rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it is also found and determined upon good cause that it is impracticable, unnecessary, and contrary to the public interest to give preliminary notice prior to putting this rule into effect and that good cause exists for not postponing the effective date of this action until 30 days after publication in the **Federal Register** because: (1) The Committee needs to have sufficient funds to pay its expenses which are incurred on a continuous basis; (2) the fiscal period began on August 1, 1992, and the marketing order requires that the rate of assessment for the fiscal period apply to all assessable onions handled during the fiscal period; (3) handlers are aware of this action which was unanimously recommended by the Committee at a public meeting and is similar to that taken for the 1991–92 fiscal period; and (4) this interim final rule provides a 30-day comment period, and all comments timely received will be considered prior to finalization of this action.

List of Subjects in 7 CFR Part 959

Marketing agreements, Onions, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 959 is amended as follows:

PART 959—ONIONS GROWN IN SOUTH TEXAS

1. The authority citation for 7 CFR part 959 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

2. Section 959.233 is revised to read as follows:

Note: This section will not appear in the Code of Federal Regulations.

§ 959.233 Expenses and assessment rate.

Expenses of $339,188 by the South Texas Onion Committee are authorized and an assessment rate of $0.07 per 50-pound container or equivalent of onions is established for the fiscal period ending July 31, 1993. Unexpended funds may be carried over as a reserve.

Dated: December 21, 1992.

Robert C. Keeney,

Deputy Director, Fruit and Vegetable Division.

7 CFR Part 967

[FV–92–082FR]

Handling Regulation for Celery Grown in Florida

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule with request for comments.

SUMMARY: The U.S. Department of Agriculture is adopting without modification, as a final rule, the provisions of an interim final rule which established the quantity of Florida celery which handlers may ship to fresh markets during the 1992–93 marketing season at 6,612,910 crates or 100 percent of producers' base quantities. The 1992–93 marketing season covers the period August 1, 1992, through July 31, 1993. This final rule is intended to lend stability to the industry, and, thus, help provide consumers with an adequate supply of the product. As in past marketing seasons, the limitation on the quantity of Florida celery handled for fresh shipment is not expected to restrict the quantity of Florida celery actually produced or shipped to fresh markets, because production and shipments are anticipated to be less than the marketable quantity. This action was unanimously recommended by the Florida Celery Committee (Committee), the agency responsible for local administration of the order.

EFFECTIVE DATE: January 28, 1993.

FOR FURTHER INFORMATION CONTACT: Richard Lower, Marketing Specialist, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, room 2523–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2020.

SUPPLEMENTARY INFORMATION: This final rule is issued under Marketing Agreement and Order No. 967 (7 CFR part 967), both as amended, regulating the handling of celery grown in Florida. The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the Act.

This final rule has been reviewed by the Department of Agriculture (Department) in accordance with Departmental Regulation 1512–1 and the criteria contained in Executive Order 12291, and has been determined to be a "non-major" rule.

This final rule has been reviewed under Executive Order 12778, Civil Justice Reform. This action establishes the quantity of Florida celery (at 6,612,910 crates or 100 percent of producers' base quantities) which handlers may ship to fresh markets during the 1992–93 marketing season which covers the period August 1, 1992 through July 31, 1993. This final rule will not preempt any state or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any

handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and requesting a modification of the order or to be exempted therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing, the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his principal place of business, has jurisdiction in equity to review the Secretary's ruling on the petition, provided a bill in equity is filed not later than 20 days after the date of the entry of the ruling.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities. The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are an estimated seven handlers of celery grown in Florida subject to regulation under the celery marketing order, and approximately seven producers of celery in the production area. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.601) as those having annual receipts of less than $500,000, and small agricultural service firms are defined as those whose annual receipts are less than $3,500,000. The majority of celery handlers and producers may be classified as small entities.

This action is based upon a recommendation and information submitted by the Committee and upon other available information. The Committee met on June 10, 1992, and unanimously recommended a marketable quantity of 6,612,910 crates of fresh celery for the 1992–93 marketing season beginning August 1, 1992. Additionally, a uniform percentage of 100 percent was recommended which will allow each producer, registered pursuant to § 967.37(f) of the order, to market 100 percent of such producer's base quantity. These recommendations were based on an appraisal of expected 1992–93 supply and demand.

As required by § 967.37(d)(1) of the order, a reserve of 6 percent (396,775 crates) of the 1991–92 total base quantities was made available to new producers and for increases for existing producers. As of May 1, 1992, the deadline for requesting changes in base quantities, no applications for new base quantities or adjustments in base quantities from current producers were received by the Florida Celery Committee.

This final rule will continue to limit the quantity of Florida celery which handlers may purchase from producers and ship to fresh markets during the 1992–93 marketing season to 6,612,910 crates. This marketable quantity is slightly reduced from the 1991–92 marketable quantity, but is more than the average number of crates marketed fresh during the 1987–88 through 1991–92 seasons. It is expected that such quantity will be more than actual shipments for the 1992–93 season. Thus, the 6,612,910 crate marketable quantity is not expected to restrict the amount of Florida celery which growers produce or the amount of celery which handlers ship. For these reasons, the final rule should lend stability to the industry, and, thus, help provide consumers with an adequate supply of the product.

The interim final rule was published in the **Federal Register** with an effective date of September 16, 1992 (57 FR 42689, September 16, 1992). That rule provided a 30-day comment period which ended October 16, 1992. No comments were received.

On the basis of the foregoing, the Administrator of the AMS has determined that issuance of this final rule will not have a significant economic impact on a substantial number of small entities.

After consideration of the information and recommendations submitted by the Committee and other available information, it is found that this final rule will tend to effectuate the declared policy of the Act.

List of Subjects in 7 CFR Part 967

Celery, Marketing agreements, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 967 is revised as follows:

PART 967—CELERY GROWN IN FLORIDA

1. The authority citation for 7 CFR part 967 continues to read as follows:

Authority: Sections. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

Subpart—Administrative Rules and Regulations

2. Accordingly, the interim final rule adding § 967.327, published in the **Federal Register** (57 FR 42689, September 16, 1992), is adopted as a final rule without change.

Note: This section will not be published in the annual Code of Federal Regulations.

Dated: December 21, 1992.

7 CFR Part 987

[Docket No. FV92–987–1IFR]

Temporary Relaxation of Size Requirements for California Deglet Noor Dates

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Interim final rule with request for comments.

SUMMARY: This interim final rule temporarily relaxes the size requirements prescribed for Deglet Noor dates for use domestically and in Canada as whole and pitted dates. This action increases the current tolerance, from 10 percent to 15 percent, through October 31, 1993, for individual Deglet Noor dates weighing less than 6.5 grams (the prescribed minimum). The relaxation is necessary because Deglet Noor dates from the 1992–93 crop are significantly smaller in size and weight than normal. The decrease in size and weight is due to extremely high temperatures experienced in the production area during late August and early September. The relaxation was unanimously recommended by the California Date Administrative Committee (committee) to make a larger quantity of the 1992–93 crop available for use as whole or pitted dates domestically and in Canada.

DATES: This interim final rule is effective December 29, 1992 and continues until October 31, 1993. Comments received by January 28, 1993, will be considered prior to issuance of a final rule.

ADDRESSES: Written comments concerning this rule should be submitted in triplicate to the Docket Clerk, Fruit and Vegetable Division, AMS, USDA, P.O. Box 96456, room 2525–S, Washington, DC 20090–6456. Comments should reference the docket

number and date and page number of this issue of the **Federal Register** and will be made available for public inspection in the Office of the Docket Clerk during regular business hours.

FOR FURTHER INFORMATION CONTACT: Kellee Hopper, Marketing Specialist, California Marketing Field Office, Fruit and Vegetable Division, Agricultural Marketing Service, USDA, 2202 Monterey Street, suite 102 B, Fresno, CA 93721; telephone (209) 487–5901 or Richard Lower, Marketing Specialist, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, room 2523–S, P.O. Box 96456, Washington, DC 20090–6456; telephone (202) 720–2020.

SUPPLEMENTARY INFORMATION: This interim final rule is issued under Marketing Agreement and Order No. 987 (7 CFR part 987), both as amended, regulating the handling of domestic dates produced or packed in Riverside County, California, hereinafter referred to as the "order." The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended [7 U.S.C. 601–674], hereinafter referred to as the "Act."

The Department of Agriculture is committed to carrying out its statutory and regulatory mandates in a manner that best serves the public interest. Therefore, where legal discretion permits, the Department actively seeks to promulgate regulations that promote economic growth, create jobs, are minimally burdensome, and are easy for the public to understand, use or comply with. In short, the Department is committed to issuing regulations that maximize net benefits to society and minimize costs imposed by those regulations. This principle is articulated in President Bush's January 28, 1992, memorandum to agency heads, and in Executive Orders 12291 and 12498. The Department applies this principle to the fullest extent possible, consistent with law.

The Department has developed and reviewed this regulatory action in accordance with these principles. Nonetheless, the Department believes that public input from all interested persons can be invaluable in ensuring that the final regulatory product is minimally burdensome and maximally efficient. Therefore, the Department specifically seeks comments and suggestions from the public regarding any less burdensome or more efficient alternative that would accomplish the purposes described in the action. Comments suggesting less burdensome or more efficient alternatives should be addressed to the agency as provided in this action.

This interim final rule has been reviewed by the Department of Agriculture (Department) in accordance with Departmental Regulation 1512–1 and the criteria contained in Executive Order 12291 and has been determined to be a "non-major" rule.

This interim final rule has been reviewed under Executive Order 12778, Civil Justice Reform. This action is not intended to have retroactive effect. This interim final rule will not preempt any state or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and requesting a modification of the order or to be exempt therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing, the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his principal place of business, has jurisdiction in equity to review the Secretary's ruling on the petition, provided a bill in equity is filed not later than 20 days after the date of the entry of the ruling.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are 25 handlers of California dates subject to regulation under the order each season and approximately 135 date producers in the regulated area. The majority of the date handlers and producers may be classified as small entities.

This interim final rule modifies paragraphs (b)(2) and (c)(2) of § 987.112a to relax the current size requirements for Deglet Noor dates to be used as whole or pitted dates domestically or in Canada. The modification is issued pursuant to § 987.39 of the order.

Section 987.112a prescribes grade, size, and container requirements for each outlet category of dates. Paragraph (b)(2) of that section prescribes such requirements for "DAC" dates, including an individual size requirement for Deglet Noor dates of 6.5 grams with a tolerance of 10 percent per lot for dates weighing less than 6.5 grams. DAC dates are marketable whole or pitted dates that are inspected and certified as meeting the grade, size, container, and applicable identification requirements for handling in the United States and Canada. Paragraph (c)(2) of § 987.112a provides the same requirements for "dates for further processing" (FP dates). FP dates are marketable whole dates acquired by one handler from another handler that are certified as meeting the same grade and size requirements for DAC dates, with the exception of moisture requirements and applicable identification requirements.

Due to exceedingly high temperatures during late August and early September which stressed the date palms, individual fruit of the current crop is significantly smaller in size and weight than normal. Early deliveries of Deglet Noor dates are failing to meet the marketing order requirements of 10 percent tolerance for individual dates in a lot weighing less than 6.5 grams. The size and weight of the dates are not expected to improve as the harvest progresses.

Therefore, at its October 22, 1992, meeting, the committee unanimously recommended that the size requirements for DAC and FP dates be relaxed through October 31, 1993, by increasing the tolerance from 10 to 15 percent for dates weighing less than 6.5 grams. This action is intended to permit a greater quantity of Deglet Noor dates which are of good quality but weigh less than 6.5 grams to meet the requirements for DAC and FP dates. The additional five percent tolerance for undersize dates will allow handlers to use approximately three smaller dates per pound. Thus, more of the crop can be utilized as whole or pitted dates domestically and in Canada. The committee estimates marketable 1992–93 Deglet Noor production at approximately 35.3 million pounds. Making more Deglet Noor dates of satisfactory quality available for use as whole and pitted dates domestically and in Canada will provide for maximum utilization of the 1992–93 crop, thereby

benefiting producers, handlers and consumers.

Based on the available information, the Administrator of the AMS has determined that this action will not have a significant economic impact on a substantial number of small entities.

After consideration of all relevant matter presented, the information and unanimous recommendation submitted by the committee, and other available information, it is found that this action will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it found and determined that upon good cause it is impracticable, unnecessary, and contrary to the public interest to give preliminary notice prior to putting this rule into effect, and that good cause exists for not postponing the effective date of this action until 30 days after publication in the **Federal Register** because: (1) Compliance with this action will require no special preparation by handlers; (2) it is important that the relaxed size requirements apply to as much of the 1992–93 crop as possible; (3) this action relieves restrictions on handlers and; (4) the rule provides a 30-day comment period, and any comments received will be considered prior to finalization of this interim final rule.

List of Subjects in 7 CFR Part 987

Dates, Marketing agreements, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 987 is amended as follows:

PART 987—DOMESTIC DATES PRODUCED OR PACKED IN RIVERSIDE COUNTY, CALIFORNIA

7 CFR Parts 1006, 1012, and 1013

[DA–92–38]

Milk in the Upper Florida, Tampa Bay, and Southeastern Florida Marketing Areas; Order Suspending Certain Provisions

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Suspension of rule.

SUMMARY: This action suspends a portion of the producer milk definition of the Upper Florida, Tampa Bay, and Southeastern Florida, milk orders. The action suspends the requirement that 10 days' production of a producer be received each month at a pool plant in order to qualify milk produced on other days for diversion to nonpool plants. The suspension was requested by the Florida Dairy Farmers' Association, Tampa Independent Dairy Farmers' Association, Dairymen, Inc., and Southern Milk Sales that want to reduce some inefficient milk movements in order to pool milk normally associated with these markets.

EFFECTIVE DATE: December 1, 1992.

FOR FURTHER INFORMATION CONTACT: Clayton H. Plumb, Chief, Order Formulation Branch, Dairy Division, USDA/AMS/Dairy Division, Order Formulation Branch, room 2968, South Building, P.O. Box 96456, Washington, DC 20090–6456, (202) 720–6274.

SUPPLEMENTARY INFORMATION: Prior Document in this proceeding:

Notice of Proposed Suspension: Issued November 16, 1992; published November 23, 1992 (57 FR 54947).

The Regulatory Flexibility Act (5 U.S.C. 601–612) requires the Agency to examine the impact of a proposed rule on small entities. Pursuant to 5 U.S.C. 605(b), the Administrator of the Agricultural Marketing Service has certified that this action will not have a significant economic impact on a substantial number of small entities. This action would lessen the regulatory impact of the order on certain milk handlers and would tend to ensure that dairy farmers would continue to have their milk priced under the order and thereby receive the benefits that accrue from such pricing.

This suspension has been reviewed under Executive Order 12778, Civil Justice Reform. This action is not intended to have a retroactive effect. This action will not preempt any state or local laws, regulations, or policies, unless they present an irreconcilable conflict with the rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provisions of the order, or any obligation imposed in connection with the order is not in accordance with law and requesting a modification of an order or to be exempted from the order. A handler is afforded the opportunity for a hearing on the petition. After a hearing the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has its principal place of business, has jurisdiction in equity to review the Secretary's ruling on the petition, provided a bill in equity is filed not later than 20 days after the date of the entry of the ruling.

This final rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512–1 and has been determined to be a "non-major" rule under the criteria contained therein.

This order of suspension is issued pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), and of the order regulating the handling of milk in the Upper Florida, Tampa Bay and Southeastern Florida marketing areas.

Notice of proposed rulemaking was published in the **Federal Register** on November 23, 1992, (57 FR 54947) concerning a proposed suspension of certain provisions of the orders. Interested persons were afforded opportunity to file written data, views, and arguments thereon. No comments were received.

After consideration of all relevant material, including the proposal in the notice, and other available information,

it is hereby found and determined that beginning December 1, 1992, for an indefinite period, the following provisions of the orders do not tend to effectuate the declared policy of the Act:

In § 1006.13, paragraph (b)(2).
In § 1012.13, paragraph (b)(2).
In § 1013.13, paragraph (b)(2).

Statement of Consideration

This action suspends portions of the producer milk definition of the Upper Florida, Tampa Bay, and Southeastern Florida milk orders. This action suspends the requirement that 10 days' production of a producer be received each month at a pool plan in order to qualify milk produced on other days for diversion to nonpool plants.

The suspension was requested by Florida Dairy Farmers' Association, Tampa Independent Dairy Farmers' Association, Dairymen Inc., and Southern Milk Sales. The proponents have formed and work through a common marketing agency in order to achieve maximum efficiencies in balancing the needs of the fluid milk plants and in disposing of reserve or excess milk supplies. When milk of producers located in other states who supply the Florida market is not needed, it is often diverted to plants located in other states that are regulated by other Federal milk orders.

Milk that is diverted to other order manufacturing plants, but fails to qualify for diversion under the 10-day requirement, becomes producer milk under the other order and lowers blend prices to producers under the other order. The suspension will enable cooperatives to realize efficiencies in diverting the most distant milk from fluid milk plants. The suspension will not threaten the integrity of marketwide pooling because all three orders limit the overall percentage of a handler's milk supply that can be diverted each month. The suspension is needed to be effective for the holiday season because of the need to move excess milk supplies off these markets.

No comments were received in response to the proposed suspension. Accordingly, it is appropriate to suspend the aforesaid provisions.

It is hereby found and determined that thirty days' notice of the effective date hereof is impractical, unnecessary and contrary to the public interest in that:

(a) The suspension is necessary to reflect current marketing conditions and to assure orderly marketing conditions in the marketing areas in that this action should enable cooperatives to realize efficiencies in diverting the most distant milk from fluid milk plants;

(b) This suspension does not require of persons affected substantial or extensive preparation prior to the effective date; and

(c) Notice of proposed rulemaking was given interested parties and they were afforded opportunity to file written data, views or arguments concerning this suspension. No comments were received.

Therefore, good cause exists for making this order effective December 1, 1992.

List of Subjects in 7 CFR Parts 1006, 1012, and 1013

Milk marketing orders.

The authority citation for 7 CFR parts 1006, 1012, and 1013 continue to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

It is therefore ordered, That the following provisions of the orders (7 CFR parts 1006, 1012, and 1013) are hereby suspended for an indefinite period.

PART 1006—MILK IN THE UPPER FLORIDA MARKETING AREA

§ 1006.13 [Suspended in Part]

1. In § 1006.13, paragraph (b)(2) is suspended.

PART 1012—MILK IN THE TAMPA BAY MARKETING AREA

§ 1012.13 [Suspended in Part]

1. In § 1012.13, paragraph (b)(2) is suspended.

PART 1013—MILK IN THE SOUTHEASTERN FLORIDA MARKETING AREA

§ 1013.13 [Suspended in Part]

1. In § 1013.13, paragraph (b)(2) is suspended.

Dated: December 21, 1992.

NUCLEAR REGULATORY COMMISSION

10 CFR Part 19

RIN 3150–AE11

Exclusion of Attorneys From Interviews Under Subpoena

AGENCY: Nuclear Regulatory Commission.

ACTION: Final rule.

SUMMARY: The Nuclear Regulatory Commission (NRC) is amending its regulations to provide for the exclusion of counsel from a subpoenaed interview when that counsel represents multiple interests in the investigation and there is concrete evidence that the counsel's presence at the interview would obstruct and impede the investigation. These amendments are designed to ensure the integrity and efficacy of the investigative and inspection process. These amendments provide a standard and procedures for making and effectuating the decision to exclude counsel.

EFFECTIVE DATE: March 1, 1993.

FOR FURTHER INFORMATION CONTACT: Roger K. Davis, Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, telephone: (301) 492–1606.

Contents

I. Background
II. Response to Public Comments on the Proposed Rule

I. Background

On December 19, 1991 (56 FR 65949), the Nuclear Regulatory Commission (NRC) published proposed amendments to its regulations found at 10 CFR part 19. The proposed amendments provided for the exclusion of counsel from subpoenaed interviews in connection with an NRC investigation when that counsel represents multiple interests in the investigation and there is concrete evidence that such representation would obstruct and impede the investigation. The proposed amendments also provided procedures to be followed by the NRC and individual witnesses in connection with the NRC's exercise of its authority to exclude counsel.

The Commission had published a final rule on the same subject on January 4, 1990 (55 FR 243). That rule provided, *inter alia*, for the exclusion of counsel for a subpoenaed witness when that counsel represented multiple interests and there existed a reasonable basis to believe that such representation would prejudice, impede, or impair the integrity of the inquiry. Upon legal challenge, the United States Court of Appeals for the District of Columbia Circuit struck down the portion of the final rule on attorney exclusion. *Professional Reactor Operator Society* v. *Nuclear Regulatory Commission*, 939 F.2d 1047, 1052 (D.C. Cir. 1991) (hereafter "*PROS*").

Specifically, the Court of Appeals ruled that the NRC must apply the same standard for attorney exclusion that the Court had previously required of the

Securities & Exchange Commission by virtue of the Court's interpretation of the right-to-counsel guarantee of the Administrative Procedure Act (APA), 5 U.S.C. 555(b). The Court stated that to exclude counsel "the agency must come forward with 'concrete evidence' that the counsel's presence would impede its investigation." *PROS*, 939 F.2d at 1049 (*citing SEC* v. *Csapo*, 533 F.2d 7, 11 (D.C. Cir. 1976)). Thus, the Court vacated the attorney exclusion portion of the rule, since its "rational basis" standard was less rigorous than the "concrete evidence" requirement. On December 19, 1991 (56 FR 65948), the Commission responded to the appeals court decision by publishing notice in the **Federal Register** of the Commission's revocation of its rule on attorney exclusion, *i.e.*, the definition of "exclusion" appearing in 10 CFR 19.3 and the standard and procedures for attorney exclusion appearing in 10 CFR 19.18(b)–(e). On December 19, 1991 (56 FR 65949), the Commission also published the proposed amendments in the **Federal Register** that would conform the NRC's attorney exclusion requirements to the Court's ruling.

II. Responses to Public Comments on the Proposed Rule

The Commission received nine comments on the proposed December 19, 1991 rule. The commenters included one individual, the Nuclear Utility Management and Resources Council (NUMARC), three utilities endorsing NUMARC's comments, the Professional Reactor Operators Society (PROS), a law firm commenting on behalf of PROS as well as seven utilities and a major engineering firm, a law firm commenting on behalf of six utilities, and a law firm that represents utilities and individuals holding NRC licenses. All commenters opposed adoption of the proposed rule. The comments are available for inspection and copying in the agency's Public Document Room, 2120 L Street NW. (Lower Level), Washington, DC.

The Commission has considered the comments received, but is not persuaded that the proposed amendments should be withdrawn or modified in substantial ways as some commenters requested. However, the Commission has clarified its description of the standard for exclusion by stating the threshold requirement as "concrete evidence that the presence of an attorney representing multiple interests would obstruct and impede the investigation or inspection * * *" A similar change was made in the definition of "[e]xclusion." The Commission has deleted the phrase "directly or indirectly" from the standard for exclusion of counsel. The Commission has also revised the rule to provide that the interview shall not be rescheduled to a date that precedes the expiration of the time provided under 10 CFR 19.18(d) for appeal of exclusion of counsel, unless the witness consents to an earlier date. In addition, the final rule requires that the written notice of the grounds for counsel's exclusion also describe the right to appeal the exclusion to the Commission and thereby obtain an automatic stay of the effectiveness of the subpoena pending the Commission's decision.

Because these changes are logical outgrowths of the proposed amendments and no other modifications are made, the Commission concludes that the final rule should become effective without further notice and comment. The Commission's responses to the concerns of the commenters are set forth below.

A. Need for the Rule

One commenter argued that the expected rarity of application of the rule demonstrated the absence of a need for the rule. The Commission does expect that the rule will be invoked only in rare and compelling cases. However, the Commission continues to believe that the rule should further expeditious and satisfactory resolution of some investigations and that this is important to the Commission's fulfillment of its statutory mission. By providing to witnesses, counsel, and agency staff both a general standard for determining whether disqualification is appropriate and procedures for implementing and challenging these determinations, the final rule should reduce delay, uncertainty and confusion associated with consideration of the exclusion of counsel.

Although several commenters emphasized the circumstances in which courts have found insufficient grounds for exclusion of counsel by the Securities and Exchange Commission (SEC), the same courts have explicitly recognized the propriety and utility of this type of rule. In *Csapo*, the United States Court of Appeals for the District of Columbia Circuit stated (533 F.2d at 11) with regard to the SEC's sequestration rule that—

> We do not question its utility in preserving the integrity of an investigation and recognize its practical necessity in certain circumstances.

533 F.2d at 11. In *SEC* v. *Higashi*, the Ninth Circuit said that "[t]he reason for and purpose of the [SEC's] sequestration rule are clear and there can be no question as to its necessity and general propriety" (359 F.2d 550, 552 (9th Cir. 1966)). For reasons akin to those motivating the SEC rule, the NRC proposed and now finalizes its attorney exclusion rule.

The NRC's investigation of unsafe practices and potential violations of the Atomic Energy Act and NRC regulations is an important means of ensuring public health and safety in operation of nuclear power plants and other uses of nuclear material (*see* 10 CFR part 19; 10 CFR 1.36). NRC investigators often interview licensees, their officials and employees, and other individuals having possible knowledge of matters under investigation. In many cases, investigating officials conduct extensive and difficult inquiries to determine whether violations were willful and/or whether licensee's management engaged in wrongdoing. Yet, effective identification and correction of unsafe practices or regulatory violations through an investigative or inspection process can depend upon the willingness of individuals having knowledge of the practices or violations to disclose that information to interviewing officials.

Therefore, as specified in 10 CFR 19.2, the rule would apply to all interviews under subpoena within the jurisdiction of the Nuclear Regulatory Commission other than those which focus on NRC employees or its contractors. While the purposes of the rule relate primarily to interviews conducted under subpoena by the NRC's Office of Investigations, the NRC's predominant user of investigative subpoenas, the final rule would also apply to NRC inspections and investigations conducted under subpoena by other NRC officials. The rule does not apply, however, to subpoenas issued pursuant to 10 CFR 2.720, which applies to subpoenas requested in hearings.

Several commenters argued that there is no need for the rule because of the availability of other means for ensuring proper conduct by counsel (*e.g.*, investigation and prosecution under Federal criminal statutes or investigation and disciplinary action or disqualification under standards of professional conduct for lawyers). In some cases, the causes of impairment of the investigation may justify consideration of criminal or other proceedings. However, the Commission's objectives, standard for action, burden of proof, and remedy, *i.e.*, exclusion of counsel from particular interviews, may differ widely from those associated with criminal statutes or rules of conduct. Therefore, the

possibility of collateral or future actions addressing misconduct in some cases pursuant to other authority is an insufficient basis to ignore the potential need for a direct determination of whether the counsel representing multiple interests should be excluded from an interview.

As noted in the supplementary information included in the notice of the proposed rule (56 FR 65949, 65950; December 19, 1991), questions regarding impairment of investigation as a result of multiple representation have arisen in some cases in the past. Several of the commenters argued that the cited cases did not involve any grounds for disqualification of counsel and that any concern about multiple representation in those cases was improper. The Commission believes that the final rule will facilitate resolution of this type of question when it arises in the future. As the Commission has stated (56 FR 65949, 65950; December 19, 1991), the justification for this rule is not premised on whether any *prior* case actually involved "concrete evidence" that the investigation would be impeded.

NUMARC and another commenter indicated that adoption of the proposed rule would be inconsistent with the Commission's efforts to eliminate unnecessary regulatory burdens (*see, e.g.*, 57 FR 4166; February 4, 1992 and 57 FR 39353; August 31, 1992). The Commission disagrees with the suggestion that the rule fails to strike a fair and reasonable balance between the right to counsel and the need for information in investigations. In this case, the Commission is expressly adopting the judicial resolution of that issue. That resolution does not involve a highly prescriptive standard. Rather, it involves a demanding general standard that is expected to have very limited application in a fraction of NRC interviews under subpoena.

NUMARC stated that the rule was unnecessary because NRC rules currently in effect (10 CFR part 2) provide a mechanism for imposing sanctions for attorney misconduct in various contexts. The existing provisions directly relating to standards of practice (10 CFR 2.713) concern appearance and practice in adjudicatory proceedings. By this final rule, however, the Commission intends to provide specific direction for expeditious resolution of decisions to exclude counsel because of obstruction or impediment of investigative interviews resulting from multiple representation. Therefore, the final rule serves purposes that are not met by the general 10 CFR part 2—Rules of practice for domestic licensing proceedings and issuance of orders.

B. Attorney Misconduct

Most commenters indicated that the proposed standard for exclusion of counsel was deficient because it did not require a showing of misconduct or wrongdoing by the attorney representing multiple parties. These commenters generally concede that unethical or illegal conduct by counsel, such as encouraging or condoning perjury or engaging in a pattern of overt disruption of the interview, would supply grounds for exclusion. Concrete evidence that such conduct is obstructing and impeding an investigation could lead to exclusion under the rule. However, the Commission does not find as a matter of logic or law that there is no possibility of a finding of concrete evidence of impairment on grounds other than misconduct or wrongdoing by counsel.

For instance, the Commission does not find it necessary to rule out application of the rule to a case presenting concrete evidence of nondisclosure of information by a witness as a result of the presence of counsel representing multiple interests even though the counsel has not engaged in misconduct. Moreover, whether or not an investigation will be impeded could be irrelevant in a pure misconduct case.

The Commission also does not interpret the legal precedent as permitting disqualification only for misconduct, wrongdoing, or active obstruction by counsel. Indeed, in stating the standard to which the Commission must adhere, the court in *Pros* did not mandate "concrete evidence" of wrongdoing but rather "'concrete evidence' that counsel's presence would impede [the agency's] investigation." *Pros*, 939 F.2d 1049 (*citing SEC* v. *Csapo*, 533 F.2d at 11).

The commenters insisting on the necessity of misconduct or wrongdoing as the essential substantive element for disqualification point to *Csapo*, in which the Court of Appeals agreed with the lower court's finding that the SEC had failed to produce any "concrete evidence" of misconduct (533 F.2d at 8). While that opinion clearly affirmed an evidentiary threshold of "concrete evidence" in relation to the alleged misconduct, the Court of Appeals also found that the record failed to disclose "*any reason* for barring counsel selected" by the witness (*id.*) (emphasis added). And, the Court's specific direction was that "before the SEC may exclude an attorney from its proceedings, it must come forth * * * with 'concrete evidence' that [counsel's] presence would obstruct and impede its investigation." *Id.* at 11. Therefore, the Commission does not interpret *Csapo* as limiting the grounds for exclusion of counsel to "misconduct."

c. Application of the Rule

Most commenters expressed or endorsed the view that the supplementary information in the notice of the proposed rule (56 FR 65949–65950; December 19, 1991) shows that the intended application of the rule is inconsistent with judicial direction. They suggest that the Commission's identification of concerns motivating the rule and of some of the potentially relevant evidence displaces the "concrete evidence" standard.

While "concrete evidence" was not defined expressly in the cases referenced above, the discussion and application of that standard indicates the courts require more than speculation or even reasonable concern about potential impairment. Rather, exclusion of counsel requires real or tangible evidence demonstrating that the investigation would be impeded as a result of the multiple representation. Thus, the Commission recognizes that neither multiple representation nor speculation about a potential for obstruction of an investigation by, for example, the mere sharing of information provided by an interviewee to a subsequent interviewee, is a sufficient basis to exclude counsel.

The Commission cannot predict in any significant detail what set of circumstances will arise in particular investigations that will lead to application of the exclusion rule. In the proposed rule, however, the Commission did endeavor to identify some of the factual circumstances which would tend to support invocation of the rule. For instance, it seems clear that the Commission's interests in the integrity and effectiveness of its investigation may outweigh a witnesses' choice of counsel for multiple interests where there is reliable, factual evidence that a witness is withholding, or will withhold, information critical to the investigation because the information will be shared with the witnesses' employer or supervisor by virtue of multiple representation.

Thus, the Commission continues to believe that evidence that the employee had a concern that his employment would be jeopardized by transmittal of information from the interview to the licensee would be relevant. The Commission believes that evidence that the multiple representation would lead to disclosure of the substance of an interview to a future interviewee or

subject in the investigation would also be relevant although not sufficient unless there was also concrete evidence that the disclosure would obstruct and impede the investigation. However, the Commission expects that it will be a rare case in which there is actual proof that the multiple representation will seriously obstruct and impede the investigation, *e.g.*, critical information is being or will be withheld.

Some commenters misunderstood the Commission's statement that concerns arise about inhibition of the candor of witnesses where the interviewee is represented by counsel who is paid by the licensee and also represents the licensee or licensee's officials under investigation, particularly where the matter at issue is whether the licensee's employees have been, or are being, harassed or intimidated for raising safety issues (56 FR 65949; December 19, 1991). These commenters viewed these statements as examples of cases in which the Commission would deem exclusion to be appropriate. The Commission recognizes that these circumstances do not necessarily lead to non-disclosure of critical information or other serious impairment of the investigation. Exclusion of counsel under the rule is warranted only when there is also concrete evidence, not just mere concern or speculation, that the investigation will be obstructed and impeded as a result of the presence of the counsel representing multiple interests.

Several commenters expressed concern that the Commission would find obstruction and impediment to the investigation where minor inconvenience results from such traditional activities of counsel as endeavoring to learn more about the investigation or to advise clients to testify truthfully but cautiously. The Commission recognizes that these types of activities do not establish real obstruction and impediment to the investigation. Indeed, these traditional activities of counsel are common to legal representation of any witness.

Some commenters fault the proposed rule's statement that disqualification may be based on concrete evidence that multiple representation will "directly or indirectly" impede the investigation. Several commenters state that the Commission's use of these modifiers unjustifiably lessens and obscures the "concrete evidence" standard.

The Commission recognizes that the Court in *Pros* and *Csapo* did not use the modifiers "directly or indirectly" in referring to the requirement of concrete evidence of impediment to the investigation. However, the Commission notes that the same modifiers were present in the final rule published on January 4, 1990 (55 FR 243), and that the court of appeals did not comment on their presence in that rule.

The key requirement is "concrete evidence" of obstruction and impediment. Whether the causation is described as direct or indirect, the question in a particular case will be whether there is concrete evidence that the presence of counsel representing multiple interests would obstruct and impede the investigation. It is the effects of multiple representation, not multiple representation standing alone, that may in some cases impede the investigation. For instance, if there were concrete evidence that a present or future witness will not answer questions or provide evidence because his attorney's representation of multiple interests will necessarily result in the sharing of the witness' testimony or evidence with a represented target, invocation of the rule could be warranted whether the cause of the impairment is described as direct or indirect. Clearly, a mere chain of inferences and speculation would not constitute "concrete evidence." Nonetheless, the "concrete evidence" requirement does not preclude a showing of obstruction and impediment through indirect effects, but rather implicitly embraces the possibility of such a showing. Therefore, the Commission has decided to delete the phrase "directly or indirectly" from the rule as unnecessary.

For increased clarity, the Commission has also revised the standard for exclusion by stating the threshold requirement in § 19.18(b) as "concrete evidence that the presence of an attorney representing multiple interests would obstruct and impede the investigation or inspection. * * *" In the proposed § 19.18(b), the requirement was described as "concrete evidence that the investigation or inspection will be obstructed and impeded, directly or indirectly, by an attorney's representation of multiple interests." A similar change was made in the definition of "[e]xclusion" in § 19.3. The revised language tracks more precisely the judicial articulation of the threshold requirement. Thus the revisions further affirm and clarify the Commission's intent to follow the judicial guidance.

D. Adequacy of the Procedures

NUMARC and another commenter stated that "consultation" by the investigating official with the Office of the General Counsel before a decision to exclude counsel is ineffectual without the requirement of consent by the Office of General Counsel. Another commenter recommended that the investigator be required to obtain a written opinion from the Office of the General Counsel that the standard of "concrete evidence" has been met. The Commission disagrees because it has already added numerous safeguards which it considers to be sufficient, including the "consultation" requirement, to guide agency officials and prevent arbitrary action in the exclusion process. The rule requires that the interviewing official provide a written statement of reasons for the exclusion to the witness whose attorney has been excluded and to the excluded attorney. The interviewing official must consult with the Office of the General Counsel prior to invoking the exclusion rule. The witness whose counsel has been excluded may appeal the decision to the Commission and automatically obtain a stay of the effectiveness of that decision pending decision by the Commission.

Of course, the Commission may also quash or modify the subpoena if it finds that the exclusion of counsel decision is not based upon concrete evidence or if the subpoena is otherwise unreasonable, or requires evidence not relevant to any matter in issue. Moreover, the Commission (like the SEC) must still prevail in court in a subpoena enforcement proceeding if the person under subpoena declines to comply. A court in which the basis for the exclusion is litigated may also conduct an evidentiary hearing if the factual issues require it. *SEC* v. *Csapo*, 533 F.2d at 12.

NUMARC recommended that § 19.18(d) be revised to provide the witness and the witness' counsel an opportunity to appear before the Commission in the course of the Commission's evaluation of the appeal of an interviewing official's decision. The purpose would be to ensure that the adversely affected parties had a right to be heard. The Commission believes that the procedure in the final rule, providing a statement of reasons for exclusion and permitting the filing of a motion to quash, provides a reasonable mechanism for presentation of the views of affected parties. However, nothing in the rule prevents the witness moving to quash the subpoena from requesting an opportunity for an oral presentation in connection with the motion and stating the reasons supporting the need for oral presentation.

The comments of PROS included the suggestion that the rule, if issued, be amended to require that the witness be advised of the right to counsel at the time of an exclusion of counsel and prior to any subsequent interview.

NUMARC recommended that internal procedures to implement the rule should be amended to direct NRC investigators to advise witnesses of the right to counsel, including a right to consent to multiple representation, and of the provisions of § 19.18, including the right to appeal any exclusion of counsel.

As a practical matter, a witness who is already represented by counsel can be expected to consult with counsel about such issues as the right to counsel, consent to multiple representation and witnesses' rights under this final rule. Thus, while an investigator may reasonably inquire about issues of consent to multiple representation in connection with an investigative interview, it does not seem necessary to require that an investigator provide general direction or advice on rights and limitations regarding an attorney's representation of multiple interests to a witness already represented by counsel. Moreover, the Commission was asked to require that investigators advise witnesses of the right to consent to multiple representation, although even under standards of professional conduct for lawyers such consent is subject to various conditions and exceptions. *See, e.g., Wheat* v. *United States*, 486 U.S. 153 (1988) (district court may refuse waiver of conflicts of interest in cases where a potential for conflict exists); *FTC* v. *Exxon*, 636 F.2d 1336, 1342 (D.C. Cir. 1980) (district court's order to retain separate counsel because of potential conflict violated neither due process nor the APA). However, in order to ensure that the witness is aware of the Commission's procedures for appeal of the exclusion decision, the Commission has revised the text of the proposed § 19.18(c) to require that the written notice of the reasons for exclusion include a description of the rights provided in § 19.18(d), regarding the right to appeal the exclusion decision.

NUMARC recommended that proposed 10 CFR 19.18(e) be clarified to assure that a witness' interview is delayed automatically to at least the date of the receipt of the written statement of basis for exclusion. An automatic delay is clearly unnecessary, however, if the witness chooses to proceed without counsel or with new counsel at an earlier time. Moreover, the proposed provision already permits the witness to request a reasonable period of time to obtain new counsel, and the witness may even obtain an automatic stay of the subpoena during an appeal of the exclusion decision to the Commission.

Nonetheless, the Commission would not expect that an interviewing official would proceed with the interview of the witness until more than five days after the receipt by the witness and the counsel of the written statement of reasons for exclusion, unless the witness requests that the interview proceed without counsel or with new counsel at an earlier date. Therefore, the Commission has revised the text of the proposed 10 CFR 19.18(e) to provide that the interview shall not be rescheduled to a date that precedes the expiration of the time provided under 10 CFR 19.18(d) for appeal of the exclusion of counsel, unless the witness consents to an earlier date.

Aside from this minimum delay, however, what constitutes a reasonable period of time for the continuation of an interview after exclusion of counsel must be determined on a case-by-case basis, with the interviewing official taking into account the relevant circumstances, including the availability of substitute counsel, the complexity of the case and the grounds for exclusion, the date of actual notice to the witness and excluded counsel of the grounds for exclusion, and the Commission's need to complete the investigation promptly in order to protect public health and safety.

PROS recommended that the witness whose counsel has been excluded be presented "concrete evidence" that the new counsel has a previous record of accomplishment in, and knowledge of, the nuclear industry that is on the same level as the excluded counsel. The Commission disagrees that it should have the burden of initiating an investigation and making a finding on this question. The witness, not the Commission, would choose new counsel. Many counsel and law firms appear in connection with Commission proceedings and investigations. Moreover, the Commission has already provided that a witness may either proceed without counsel or request a delay for a reasonable period of time to permit retention of new counsel.

Environmental Impact: Categorical Exclusion

The NRC has determined that this final rule is the type of action described in categorical exclusion 10 CFR 51.22(c)(1). Therefore, neither an environmental impact statement nor an environmental assessment has been prepared for this final rule.

Paperwork Reduction Act Statement

This final rule does not contain a new or amended information collection requirement subject to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 et seq.). Existing requirements were approved by the Office of Management and Budget approval number 3150–0044.

Regulatory Analysis

The APA affords individuals compelled to submit to agency inquiry under subpoena the right to be accompanied by counsel or other representative of choice (5 U.S.C. 555(b)). This right to counsel guarantee is not absolute and may be circumscribed within permissible limits when justice requires. An exception has been recognized for cases in which there is concrete evidence that the presence of counsel representing multiple interests during an investigative interview would impede and obstruct the agency's investigation.

Questions concerning the scope of the right to counsel have arisen in the context of NRC investigative interviews of licensee employees when the employee is represented by counsel who also represents the licensee or other witnesses or parties in the investigation. This arrangement is not improper as a general matter. This final rule provides, however, that counsel representing multiple interests may be excluded from a subpoenaed interview if there is concrete evidence that counsel's presence would obstruct and impede the investigation. This final rule also delineates responsibilities of NRC officials and rights of interviewees in connection with the exercise of the authority to exclude counsel. Thus, the rule is intended to further expeditious and satisfactory resolution of NRC's inquiry into matters concerning public health and safety. Guidance in this area should reduce delay and uncertainty in the completion of an investigation when questions of multiple representation arise. The foregoing discussion constitutes the regulatory analysis for this final rule.

Regulatory Flexibility Certification

In accordance with the Regulatory Flexibility Act of 1980, 5 U.S.C. 605(b), the Commission hereby certifies that this final rule would not have a significant impact on a substantial number of small entities. The final rule concerns an attorney's appearance at a subpoenaed interview of a licensee's employee or other individual during an NRC investigation or inspection in circumstances where there is concrete evidence that the attorney's representation of multiple interests would obstruct and impede the investigation or inspection. It provides procedures for exercise of the authority to exclude that attorney from the interview in these limited

circumstances and for challenge of a decision to exclude the attorney.

Backfit Analysis

The NRC has determined that a backfit analysis is not required because these amendments do not involve any provisions which would impose backfits as defined in 10 CFR 50.109(a)(1).

List of Subjects in 10 CFR Part 19

Criminal penalties, Environmental protection, Nuclear materials, Nuclear power plants and reactors, Occupational safety and health, Radiation protection, Reporting and recordkeeping requirements, Sex discrimination.

For the reasons set out in the preamble and under the authority of the Atomic Energy Act of 1954, as amended, the Energy Reorganization Act of 1974, as amended, and 5 U.S.C. 552 and 553, the NRC is adopting the following amendments to 10 CFR part 19.

PART 19—NOTICES, INSTRUCTIONS AND REPORTS TO WORKERS: INSPECTION AND INVESTIGATIONS

1. The authority citation for part 19 continues to read as follows:

Authority: Secs. 53, 63, 81, 103, 104, 161, 186, 68 Stat. 930, 933, 935, 936, 937, 948, 955, as amended, sec. 234, 83 Stat. 444, as amended (42 U.S.C. 2073, 2093, 2111, 2133, 2134, 2201, 2236, 2282); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841). Pub. L. 95–601, sec. 10. 92 Stat. 2951 (42 U.S.C. 5851).

2. In § 19.3, the definition of "Exclusion" is added in alphabetical order to read as follows:

§ 19.3 Definitions.

* * * * *

Exclusion means the removal of counsel representing multiple interests from an interview whenever the NRC official conducting the interview has concrete evidence that the presence of the counsel would obstruct and impede the particular investigation or inspection.

* * * * *

3. In § 19.18, paragraphs (b)–(e) are added to read as follows:

§ 19.18 Sequestration of witnesses and exclusion of counsel in interviews conducted under subpoena.

* * * * *

(b) Any witness compelled by subpoena to appear at an interview during an agency inquiry may be accompanied, represented, and advised by counsel of his or her choice. However, when the agency official conducting the inquiry determines, after consultation with the Office of the General Counsel, that the agency has concrete evidence that the presence of an attorney representing multiple interests would obstruct and impede the investigation or inspection, the agency official may prohibit that counsel from being present during the interview.

(c) The interviewing official is to provide a witness whose counsel has been excluded under paragraph (b) of this section and the witness's counsel a written statement of the reasons supporting the decision to exclude. This statement, which must be provided no later than five working days after exclusion, must explain the basis for the counsel's exclusion. This statement must also advise the witness of the witness' right to appeal the exclusion decision and obtain an automatic stay of the effectiveness of the subpoena by filing a motion to quash the subpoena with the Commission within five days of receipt of this written statement.

(d) Within five days after receipt of the written notification required in paragraph (c) of this section, a witness whose counsel has been excluded may appeal the exclusion decision by filing a motion to quash the subpoena with the Commission. The filing of the motion to quash will stay the effectiveness of the subpoena pending the Commission's decision on the motion.

(e) If a witness' counsel is excluded under paragraph (b) of this section, the interview may, at the witness' request, either proceed without counsel or be delayed for a reasonable period of time to permit the retention of new counsel. The interview may also be rescheduled to a subsequent date established by the NRC, although the interview shall not be rescheduled by the NRC to a date that precedes the expiration of the time provided under § 19.18(d) for appeal of the exclusion of counsel, unless the witness consents to an earlier date.

Dated at Rockville, Maryland, this 18th day of December, 1992.

For the Nuclear Regulatory Commission

Samuel J. Chilk,

Secretary of the Commission.

Material Approved for Incorporation by Reference; Maintenance and Availability

AGENCY: Nuclear Regulatory Commission.

ACTION: Final rule.

SUMMARY: The Nuclear Regulatory Commission is amending its regulations to make a needed clarification to previously published requirements governing the availability of material approved for incorporation by reference The amendment clarifies that copies of material which have been incorporated by reference are maintained and available for review at the NRC Library

EFFECTIVE DATE: December 29, 1992

FOR FURTHER INFORMATION CONTACT: Michael T. Lesar, Chief, Rules Review Section, Rules Review and Directives Branch, Division of Freedom of Information and Publications Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Telephone (301) 492–7758

SUPPLEMENTARY INFORMATION.

Background

The Nuclear Regulatory Commission is revising those portions of 10 CFR chapter I that reference the availability of materials that have been approved by the Director of the Office of Federal Register for incorporation by reference Current references within 10 CFR chapter I indicate that copies of material which have been incorporated by reference are available for inspection at the Commission's Public Document Room. This amendment revises the text of 10 CFR chapter I to indicate the current location where this material is available for inspection. The material which has been approved for incorporation by reference is maintained and available for inspection in the NRC Library, which is located at 7920 Norfolk Avenue, Bethesda, Maryland 20814.

Because this is an amendment dealing with agency practice and procedures the notice and comment provisions of the Administrative Procedure Act do not apply pursuant to 5 U.S.C. 553(b)(A). The amendment is effective upon publication in the **Federal Register**. Good cause exists to dispense with the usual 30-day delay in the effective date because the amendment is of a minor and administrative nature dealing with the location where referenced documents are available for inspection.

Environmental Impact: Categorical Exclusion

The NRC has determined that this final rule is the type of action described in categorical exclusion 10 CFR 51.22(c)(2). Therefore neither an environmental impact statement nor an environmental assessment has been prepared for this final rule

Paperwork Reduction Act Statement

This final rule does not contain a new or amended information collection requirement subject to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*). Existing requirements were approved by the Office of Management and Budget, approval numbers 3150–0007, –0010, –0002, and –0036.

List of Subjects

10 CFR Part 34

Criminal penalty, Packaging and containers, Radiation protection, Radiography, Reporting and recordkeeping requirements, Scientific equipment, Security measures.

10 CFR Part 35

Byproduct material, Criminal penalty, Drugs, Health facilities, Health professions, Incorporation by reference, Medical devices, Nuclear materials, Occupational safety and health, Radiation protection, Reporting and recordkeeping requirements.

10 CFR Part 50

Antitrust, Classified information, Criminal penalty, Fire protection, Incorporation by reference, Intergovernmental relations, Nuclear power plants and reactors, Radiation protection, Reactor siting criteria, Reporting and recordkeeping requirements.

10 CFR Part 73

Criminal penalty, Hazardous materials—transportation, Incorporation by reference, Nuclear materials, Nuclear power plants and reactors, Reporting and recordkeeping requirements, Security measures.

10 CFR Part 110

Administrative practice and procedure, Classified information, Criminal penalty, Export, Import, Incorporation by reference, Intergovernmental relations, Nuclear materials, Nuclear power plants and reactors, Reporting and recordkeeping requirements, Scientific equipment.

For the reasons set out in the preamble and under the authority of the Atomic Energy Act of 1954, as amended, the Energy Reorganization Act of 1974, as amended and 5 U.S.C. 552 and 553, the NRC is adopting the following amendments to 10 CFR parts 34, 35, 50, 73, and 110

PART 34—LICENSES FOR RADIOGRAPHY AND RADIATION SAFETY REQUIREMENTS FOR RADIOGRAPHIC OPERATIONS

1. The authority citation for part 34 continues to read in part as follows:

Authority: Sec. 161, 68 Stat. 948, as amended (42 U.S.C. 2201); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841) * * *.

§ 34.20 [Amended]

2. In § 34.20, paragraph (a), remove the words "Nuclear Regulatory Commission Public Document Room, 2120 L Street NW., Lower Level, Washington, DC 20555", and add in their place the words "NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814".

PART 35—MEDICAL USE OF BYPRODUCT MATERIAL

3. The authority citation for part 35 continues to read in part as follows:

Authority: Sec. 161, 68 Stat. 948, as amended (42 U.S.C. 2201); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841) * * *.

§ 35.632 [Amended]

4. In § 35.632, paragraph (d), remove the words "or may be obtained from the U.S. Nuclear Regulatory Commission, Public Document Room, 2120 L Street, NW., Washington, DC 20555", and add in their place the words "at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814".

PART 50—DOMESTIC LICENSING OF PRODUCTION AND UTILIZATION FACILITIES

5. The authority citation for part 50 continues to read in part as follows:

Authority: Sec. 161, 68 Stat. 948, as amended (42 U.S.C. 2201); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841) * * *.

§ 50.34 [Amended]

6. In § 50.34, paragraph (f)(3)(v)(A)(*2*), remove the words "Nuclear Regulatory Commission's Public Document Room, 2120 L Street, NW., Washington, DC", and add in their place the words "NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814".

7. In § 50.55a, paragraph (b) introductory text is revised to read as follows:

§ 50.55a Codes and standards.

* * * * *

(b) The ASME Boiler and Pressure Vessel Code, which is referenced in the following paragraphs, was approved for incorporation by reference by the Director of the Federal Register. A notice of any changes made to the material incorporated by reference will be published in the **Federal Register**. Copies of the ASME Boiler and Pressure Vessel Code may be purchased from the American Society of Mechanical Engineers, United Engineering Center, 345 East 47th St., New York, NY 10017. It is also available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814.

* * * * *

Appendix H to Part 50 [Amended]

8. In the second paragraph of the introduction to appendix H to part 50, remove the words "at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC", and add in their place the words "at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814".

9. In appendix J to part 50, section III, remove footnote number one, redesignate footnote number two as number one, and revise paragraph A 3 (a) to read as follows:

Appendix J to Part 50—Primary Reactor Containment Leakage Testing for Water-Cooled Power Reactors

* * * * *

III. * * *

A. * * *

3. *Test Methods.* (a) All Type A tests shall be conducted in accordance with the provisions of the American National Standards N45.4–1972, "Leakage Rate Testing of Containment Structures for Nuclear Reactors," March 16, 1972. In addition to the Total time and Point-to-Point methods described in that standard, the Mass Point Method, when used with a test duration of at least 24 hours, is an acceptable method to use to calculate leakage rates. A typical description of the Mass Point method can be found in the American National Standard ANSI/ANS 56.8–1987, "Containment System Leakage Testing Requirements," January 20, 1987. Incorporation of ANSI N45.4–1972 by reference was approved by the Director of the Federal Register. Copies of this standard, as well as ANSI/ANS–56.8–1987, "Containment System Leakage Testing Requirements" (dated January 20, 1987) may be obtained from the American Nuclear Society, 555 North Kensington Avenue, La Grange Park, IL 60525. A copy of each of these standards is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814.

* * * * *

10. In appendix K to part 50, section I is amended by revising paragraphs A4, A5, C1b, D5, and D7c to read as follows:

Appendix K to Part 50—ECCS Evaluation Models

I. * * *

A. * * *

4. *Fission Product Decay.* The heat generation rates from radioactive decay of fission products shall be assumed to be equal

to 1.2 times the values for infinite operating time in the ANS Standard (Proposed American Nuclear Society Standards—"Decay Energy Release Rates Following Shutdown of Uranium-Fueled Thermal Reactors." Approved by Subcommittee ANS–5, ANS Standards Committee, October 1971). This standard has been approved for incorporation by reference by the Director of the Federal Register. A copy of the standard is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814. The fraction of the locally generated gamma energy that is deposited in the fuel (including the cladding) may be different from 1.0; the value used shall be justified by a suitable calculation.

5. *Metal—Water Reaction Rate.* The rate of energy release, hydrogen generation, and cladding oxidation from the metal/water reaction shall be calculated using the Baker-Just equation (Baker, L., Just, L.C., "Studies of Metal Water Reactions at High Temperatures, III. Experimental and Theoretical Studies of the Zirconium-Water Reaction," ANL–6548, page 7, May 1962). This publication has been approved for incorporation by reference by the Director of the Federal Register. A copy of the publication is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814. The reaction shall be assumed not to be steam limited. For rods whose cladding is calculated to rupture during the LOCA, the inside of the cladding shall be assumed to react after the rupture. The calculation of the reaction rate on the inside of the cladding shall also follow the Baker-Just equation, starting at the time when the cladding is calculated to rupture, and extending around the cladding inner circumference and axially no less that 1.5 inches each way from the location of the rupture, with the reaction assumed not to be steam limited.

* * * * *

C. * * *

1. * * *

b. *Discharge Model.* For all times after the discharging fluid has been calculated to be two-phase in composition, the discharge rate shall be calculated by use of the Moody model (F.J. Moody, "Maximum Flow Rate of a Single Component, Two-Phase Mixture," Journal of Heat Transfer, Trans American Society of Mechanical Engineers, 87, No. 1, February, 1965). This publication has been approved for incorporation by reference by the Director of the Federal Register. A copy of this publication is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814. The calculation shall be conducted with at least three values of a discharge coefficient applied to the postulated break area, these values spanning the range from 0.6 to 1.0. If the results indicate that the maximum clad temperature for the hypothetical accident is to be found at an even lower value of the discharge coefficient, the range of discharge coefficients shall be extended until the maximum clad temperatures calculated by this variation has been achieved.

* * * * *

D. * * *

5. *Refill and Reflood Heat Transfer for Pressurized Water Reactors.* a. For reflood rates of one inch per second or higher, reflood heat transfer coefficients shall be based on applicable experimental data for unblocked cores including FLECHT results ("PWR FLECHT (Full Length Emergency Cooling Heat Transfer) Final Report," Westinghouse Report WCAP–7665, April 1971). The use of a correlation derived from FLECHT data shall be demonstrated to be conservative for the transient to which it is applied; presently available FLECHT heat transfer correlations ("PWR Full Length Emergency Cooling Heat Transfer (FLECHT) Group I Test Report," Westinghouse Report WCAP–7544, September 1970; "PWR FLECHT Final Report Supplement," Westinghouse Report WCAP–7931, October 1972) are not acceptable. Westinghouse Report WCAP–7665 has been approved for incorporation by reference by the Director of the Federal Register. A copy of this report is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814. New correlations or modifications to the FLECHT heat transfer correlations are acceptable only after they are demonstrated to be conservative, by comparison with FLECHT data, for a range of parameters consistent with the transient to which they are applied.

b. During refill and during reflood when reflood rates are less than one inch per second, heat transfer calculations shall be based on the assumption that cooling is only by steam, and shall take into account any flow blockage calculated to occur as a result of cladding swelling or rupture as such blockage might affect both local steam flow and heat transfer.

* * * * *

7. * * *

c. Wetting of the channel box shall be assumed to occur 60 seconds after the time determined using the correlation based on the Yamanouchi analysis ("Loss-of-Coolant Accident and Emergency Core Cooling Models for General Electric Boiling Water Reactors," General Electric Company Report NEDO–10329, April 1971). This report was approved for incorporation by reference by the Director of the Federal Register. A copy of the report is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814.

PART 73—PHYSICAL PROTECTION OF PLANTS AND MATERIALS

11. The authority citation for part 73 continues to read in part as follows:

Authority: Sec. 161, 58 Stat. 948, as amended (42 U.S.C. 2201; sec 201, 88 Stat. 1242, as amended (42 U.S.C. 5841) * * *.

12. In § 73.26, paragraph (l)(1) is revised to read as follows:

§ 73.26 Transportation physical protection systems, subsystems, components and procedures.

* * * * *

(l) *Shipment by sea.* (1) Shipments shall be made only on container-ships. The strategic special nuclear material container(s) shall be loaded into exclusive use cargo containers conforming to American National Standards Institute (ANSI) Standard MH5.1—"Basic Requirements for Cargo Containers" (1971) or International Standards Organization (ISO) 1496, "General Cargo Containers" (1978). Locks and seals shall be inspected by the escorts whenever access is possible. The ANSI Standard MH5.1 (1971) and the (ISO) 1496 (1978), have been approved for incorporation by reference by the Director of the Federal Register. A copy of each of these standards is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814.

* * * * *

13. In § 73.50, paragraph (d)(1) is revised to read as follows:

§ 73.50 Requirements for physical protection of licensed activities.

* * * * *

(d) Detection aids. (1) All alarms required pursuant to this part shall annunciate in a continuously manned central alarm station located within the protected area and in at least one other continuously manned station, not necessarily within the protected area, such that a single act cannot remove the capability of calling for assistance or otherwise responding to an alarm. All alarms shall be self-checking and tamper indicating. The annunciation of an alarm at the onsite central alarm station shall indicate the type of alarm (e.g., intrusion alarm, emergency exit alarm, etc.) and location. All intrusion alarms, emergency exit alarms, alarm systems, and line supervisory systems shall at minimum meet the performance and reliability levels indicated by GSA Interim Federal Specification W-A–00450 B (GSA-FSS). The GSA Interim Federal Specification has been approved for incorporation by reference by the Director of the Federal Register. A copy of the material is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethedsa, Maryland 20814.

* * * * *

14. In Appendix B to part 73, section I is amended by revising paragraph B.1.b.(2)(a) and section IV is amended by revising Footnote 2 to the table in paragraph C to read as follows:

Appendix B to Part 73—General Criteria for Security Personnel

* * * * *

I. * * *

B. * * *

1. * * *

b. * * *

(2) Hearing: (a) Individuals shall have no hearing loss in the better ear greater than 30 decibels average at 500 Hz, 1,000 Hz, and 2,000 Hz with no level greater that 40 decibels at any one frequency (by ISO 389 "Standard Reference Zero for the Calibration of Puritone Audiometer" (1975) or ANSI S3.6–1969 (R. 1973) "Specifications for Audiometers"). ISO 389 and ANSI S3.6–1969 have been approved for incorporation by reference by the Director of the Federal Register. A copy of each standard is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814.

* * * * *

IV. * * *

C. * * *

2. As set forth by the National Rifle Association (NRA) in its official rules and regulations, "NRA Target Manufacturers Index," December 1976. The Index has been approved for incorporation by reference by the Director of the Federal Register. A copy of the index is available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814.

* * * * *

PART 110—EXPORT AND IMPORT OF NUCLEAR EQUIPMENT AND MATERIAL

15. The authority citation for part 110 continues to read in part as follows:

Authority: Sec. 161, 68 Stat. 948, as amended (42 U.S.C. 2201); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841) * * *.

16. In § 110.43, paragraph (a)(1) is revised to read as follows:

§ 110.43 Physical security standards.

(a) * * *

(1) Review of the physical security program established by the recipient country and of the implementation of the national requirements, as considered through country visits and other information exchanges, to ensure that the physical security measures provide, as a minimum protection comparable to that set forth in the International Atomic Energy publication INFCIRC/225 Rev. 1, entitled "The Physical Protection of Nuclear Material" (INFCIRC/225), which is incorporated by reference in this part.

This publication has been approved for incorporation by reference by the Director of the Federal Register. Notice of any changes to the publication will be published in the **Federal Register**. Copies of INFCIRC/225 may be obtained from the Assistant Director for International Security, Office of International Programs, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and are available for inspection at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland 20814. A copy is on file in the library of the Office of the Federal Register.

* * * * *

Dated at Rockville, Maryland, this 14th day of December 1992.

For the Nuclear Regulatory Commission.

James M. Taylor,

Executive Director for Operations.

[FR Doc. 92–31249 Filed 12–28–92; 8:45 am]

BILLING CODE 7590–01–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 92–NM–229–AD; Amendment 39–8451; AD 92–27–16]

Airworthiness Directives; Sabreliner Model NA265 Series Airplanes Equipped With or Converted to Electrical Driven Hydraulic Pump (Single or Double)

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule; request for comments.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that is applicable to certain Sabreliner Model NA265 series airplanes. This action requires installation of redundant hydraulic pump/motor ground circuitry. This amendment is prompted by an in-flight fire that occurred inside the aft section of the fuselage shortly after takeoff. The actions specified in this AD are intended to prevent electrical arcing, which could lead to a fire inside the aft section of the fuselage.

DATES: Effective January 13, 1993.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of January 13, 1993.

Comments for inclusion in the Rules Docket must be received on or before March 1, 1993.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–103, Attention: Rules Docket No. 92–NM–229–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

The service information referenced in this AD may be obtained from Sabreliner Corporation, 18118 Chesterfield Airport Road, Chesterfield, Missouri 63005–1121. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Small Airplane Directorate, Wichita Aircraft Certification Office, 1801 Airport Road, Room 100, Mid-Continent Airport, Wichita Kansas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. C. Dale Bleakney, Aerospace Engineer, Systems and Equipment Branch, ACE–130W, Wichita Aircraft Certification Office, 1801 Airport Road, Room 100, Mid-Continent Airport, Wichita Kansas 67209; telephone (316) 946–4135; fax (316) 946–4407.

SUPPLEMENTARY INFORMATION: Recently, a Sabreliner Model NA265–70 series airplane experienced an in-flight fire in the aft section of the fuselage shortly after takeoff. The airplane landed safely at the airport, the flight crew evacuated uninjured, and the fire was extinguished. Subsequent investigation revealed that the fire was caused by inadequate grounding of the hydraulic pump/motors. Such inadequate grounding caused high current flow through the metal braid covering the hydraulic pump pressure and return lines and into the airplane structure, which resulted in softening and rupturing of the high pressure lines and subsequent electrical arcing. Inadequate grounding of the hydraulic pump/motors could result in electrical arcing, which could lead to a fire inside the aft section of the fuselage.

The FAA has reviewed and approved Sabreliner Service Bulletin 92–5, dated December 11, 1992, that describes procedures for installation of redundant hydraulic pump/motor ground circuitry which would preclude the possibility for a fire in the aft section of the fuselage due to loss of ground in the hydraulic pump/motor. This service bulletin also describes procedures for repetitive inspections of the hydraulic pump/motors.

Since an unsafe condition has been identified that is likely to exist or develop on other Sabreliner Model NA265 series airplanes of the same type design, this AD is being issued to prevent electrical arcing caused by inadequate grounding of the hydraulic pump/motors, which could lead to fire inside the aft section of the fuselage. This AD requires installation of redundant hydraulic pump/motor ground circuitry. The actions are required to be accomplished in accordance with the service bulletin described previously.

Since a situation exists that requires the immediate adoption of this regulation, it is found that notice and opportunity for prior public comment hereon are impracticable, and that good cause exists for making this amendment effective in less than 30 days.

Comments Invited

Although this action is in the form of a final rule that involves requirements affecting flight safety and, thus, was not preceded by notice and an opportunity for public comment, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified under the caption "ADDRESSES." All communications received on or before the closing date for comments will be considered, and this rule may be amended in light of the comments received. Factual information that supports the commenter's ideas and suggestions is extremely helpful in evaluating the effectiveness of the AD action and determining whether additional rulemaking action would be needed.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this AD will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 92–NM–229–AD." The postcard will be date stamped and returned to the commenter.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Fedefalism Assessment.

The FAA has determined that this regulation is an emergency regulation and that it is not considered to be major under Executive Order 12291. It is impracticable for the agency to follow the procedures of Order 12291 with respect to this rule since the rule must be issued immediately to correct an unsafe condition in aircraft. It has been determined further that this action involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the Rules Docket. A copy of it, if filed, may be obtained from the Rules Docket at the location provided under the caption "ADDRESSES."

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. App. 1354(a), 1421 and 1423; 49 U.S.C. 106(g); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

92–27–16. Sabreliner: Amendment 39–8451. Docket 92–NM–229–AD.

Applicability: Model NA265, NA265–20, –30, –40, –50, –60, –65, –70, and –80 series airplanes equipped with or converted to electrical driven hydraulic pump (single or double); as listed in Sabreliner Service Bulletin 92–5, dated December 11, 1992; certificated in any category.

Compliance: Required as indicated, unless accomplished previously.

To prevent electrical arcing, which could lead to fire inside the aft section of the fuselage, accomplish the following:

(a) Within 30 days or 10 flight hours after the effective date of this AD, whichever occurs first, install redundant hydraulic pump/motor ground circuitry in accordance with Sabreliner Service Bulletin 92–5, dated December 11, 1992.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Wichita Aircraft Certification Office (ACO), FAA, Small Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Wichita ACO.

NOTE: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Wichita ACO.

(c) Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The installation shall be done in accordance with Sabreliner Service Bulletin 92–5, dated December 11, 1992. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Sabreliner Corporation, 18118 Chesterfield Airport Road, Chesterfield, Missouri 63005–1121. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Small Airplane Directorate, Wichita Aircraft Certification Office, 1801 Airport Road, Room 100, Mid Continent Airport, Wichita Kansas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(e) This amendment becomes effective on January 13, 1993.

Issued in Renton, Washington, on December 18, 1992.

Bill R. Boxwell,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 92–31532 Filed 12–28–92; 8:45 am]

BILLING CODE 4910–13–M

---

14 CFR Part 39

[Docket No. 92–CE–56–AD; Amendment 39–8455; AD 93–01–02]

Airworthiness Directives; British Aerospace, Regional Aircraft Limited, HP 137 Mk1, Jetstream Models 200, 3101, and 3201 Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule; request for comments.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that applies to British Aerospace (BAe), Regional Aircraft Limited, HP 137 Mk1, Jetstream Models 200, 3101, and 3201 airplanes. This action requires inspecting the tailplane de-icing system for water contamination, draining any water that has accumulated in the system, modifying the tailplane de-icing system, and replacing and relocating the tail unit pressure switch. The Federal Aviation Administration (FAA) has evaluated reports of accidents and incidents where it is believed that ice-induced tailplane stall is a causal factor.

The actions specified by this AD are intended to prevent tailplane de-icing system failure, including false indication of system operation, and subsequent loss of pitch control, which could result in loss of control of the airplane.

DATES: Effective January 22, 1993.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of January 22, 1993.

Comments for inclusion in the Rules Docket must be received on or before March 5, 1993.

ADDRESSES: Submit comments in triplicate to the FAA, Central Region, Office of the Assistant Chief Counsel, Attention: Rules Docket 92–CE–56–AD, room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

Service information that is applicable to this AD may be obtained from British Aerospace, Regional Aircraft Limited, Manager Product Support, Prestwick Airport, Ayrshire, KA9 2RW Scotland; Telephone (44–292) 79888; Facsimile (44–292) 79703; or British Aerospace, Inc., Librarian, Box 17414, Dulles International Airport, Washington, DC, 20041; Telephone (703) 435–9100; Facsimile (703) 435–2628. This information may also be examined at the FAA, Central Region, Office of the Assistant Chief Counsel, room 1558, 601 E. 12th Street, Kansas City, Missouri 64106; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Raymond A. Stoer, Program Officer, Brussels Aircraft Certification Office, FAA, Europe, Africa, and Middle East Office, c/o American Embassy, B–1000 Brussels, Belgium; Telephone (322) 513.38.30 ext. 2710; Facsimile (322) 230.68.99; or Mr. John P. Dow, Sr., Project Officer, Small Airplane Directorate, Aircraft Certification Service, FAA, 601 E. 12th Street, Kansas City, Missouri 64106; Telephone (816) 426–6932; Facsimile (816) 426–2169.

SUPPLEMENTARY INFORMATION: Accidents and incidents involving certain BAe, Regional Aircraft Limited, HP 137 Mk1, Jetstream Models 200, 3101, and 3201 airplanes where a probable causal factor is believed to be ice-induced tailplane stall has prompted the FAA and the National Transportation Safety Board (NTSB) to investigate the tailplane de-icing system of these airplanes. Results of this investigation showed that (1) water can enter the tailplane de-icing system through small leaks in the tailplane de-icing boots, in particular when the system is selected "Off" and is thus operating in the suction mode; (2) this water collects in a flexible pipe that supplies air to inflate the tailplane de-icing boots on the leading edge of the tailplane; and (3) if sufficient water has collected, ice can form in cold conditions which in turn could restrict or prevent air flow to the tailplane de-icing boots, causing the boots to fail. If failure of the tailplane de-icing boots is not detected and corrected, then flap extension to the landing setting could result in loss of pitch control at an altitude from which recovery is not possible.

BAe, Regional Aircraft Limited, has issued Jetstream Alert Service Bulletin (ASB) 30–A–JA 920444, dated October 30, 1992, which specifies procedures for (1) inspecting the tailplane de-icing system for water contamination; (2) draining any water that has accumulated in the system; (3) modifying the tailplane de-icing system; and (4) replacing and relocating the tail unit pressure switch.

The affected airplane models are manufactured in the United Kingdom and are type certificated for operation in the United States under the provisions of Section 21.29 of the Federal Aviation Regulations and the applicable bilateral airworthiness agreement. The Civil Airworthiness Authority (CAA), which is the airworthiness authority for the United Kingdom, recently issued CAA AD 009–10–92 in order to assure the continued airworthiness of these airplanes in the United Kingdom.

After examining the circumstances and reviewing all available information related to the accidents and incidents described above, the FAA has determined that AD action should be proposed for products of this type design that are operated in the United States.

Since an unsafe condition has been identified that is likely to exist or develop in other BAe, Regional Aircraft Limited, HP 137 Mk1, Jetstream Models 200, 3101, and 3201 airplanes of the same type design, this AD is being issued to provide actions that are intended to prevent tailplane de-icing system failure, including false indication of system operation, and subsequent loss of pitch control. The AD requires inspecting the tailplane de-icing system for water contamination, draining any water that has accumulated in the system, modifying the tailplane de-icing system, and replacing and relocating the tail unit pressure switch. The actions are accomplished in accordance with BAe, Regional Aircraft Limited, Jetstream ASB 30–A–JA 920444, dated October 30, 1992.

Since a situation exists that requires the immediate adoption of this regulation, it is found that notice and opportunity for public prior comment hereon are impracticable, and that good cause exists for making this amendment effective in less than 30 days.

Comments Invited

Although this action is in the form of a final rule that involves requirements affecting immediate flight safety and, thus, was not preceded by notice and opportunity to comment, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments will be considered, and this rule may be amended in light of the comments received. Factual information that supports the commenter's ideas and suggestions is extremely helpful in evaluating the effectiveness of the AD action and determining whether additional rulemaking action would be needed.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this AD will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. 92–CE–56–AD." The postcard will be date stamped and returned to the commenter.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

The FAA has determined that this regulation is an emergency regulation and that it is not considered to be major under Executive Order 12291. It is

impracticable for the agency to follow the procedures of Executive Order 12291 with respect to this rule since the rule must be issued immediately to correct an unsafe condition in aircraft. It has been determined further that this action involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the Rules Docket (otherwise, an evaluation is not required). A copy of it, if filed, may be obtained from the Rules Docket.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR Part 39 of the Federal Aviation Regulations as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. App. 1354(a), 1421 and 1423; 49 U.S.C. 106(g); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

93–01–02 British Aerospace, Regional Aircraft Limited: Amendment 39–8455; Docket No. 92–CE–56–AD.

Applicability: HP 137 Mk1, Jetstream Models 200, 3101, and 3201 Airplanes (serial numbers 1 through 969 and 971), certificated in any category.

Compliance: Required as indicated, unless already accomplished.

To prevent tailplane de-icing system failure, including false indication of system operation, and subsequent loss of pitch control, which could result in loss of control of the airplane, accomplish the following:

(a) Within the next 25 hours time-in-service (TIS) after the effective date of this AD, and thereafter at intervals not to exceed 150 hours TIS until the modification required by paragraph (b) of this AD is accomplished, inspect the tailplane de-icing system for contamination in accordance with part 1 of the Accomplishment Instructions section of British Aerospace (BAe), Regional Aircraft Limited, Jetstream Alert Service Bulletin (ASB) 30–A–JA 920444, dated October 30, 1992. Prior to further flight, drain any accumulated water.

(b) Within the next 400 hours TIS after the effective date of this AD, modify the tailplane de-icing system and replace and relocate the tail unit pressure switch in accordance with part 2 or part 3, as applicable, of the Accomplishment Instructions section of BAe, Regional Aircraft Limited, Jetstream ASB 30–A–JA 920444, dated October 30, 1992.

(c) Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) An alternative method of compliance or adjustment of the initial or repetitive compliance times that provides an equivalent level of safety may be approved by the Manager, Brussels Aircraft Certification Office, FAA, Europe, Africa, and Middle East Office, c/o American Embassy, B–1000 Brussels, Belgium. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Brussels Aircraft Certification Office.

Note: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Brussels Aircraft Certification Office.

(e) The inspections, modification, replacement, and relocation required by this AD shall be done in accordance with British Aerospace, Regional Aircraft Limited, Jetstream Alert Service Bulletin 30–A–JA 920444, dated October 30, 1992. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from British Aerospace, Regional Aircraft Limited, Manager Product Support, Commercial Aircraft Airlines Division, Prestwick Airport, Ayrshire, KA9 2RW Scotland; or British Aerospace, Inc., Librarian, Box 17414, Dulles International Airport, Washington, DC, 20041. Copies may be inspected at the FAA, Central Region, Office of the Assistant Chief Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street, NW., Suite 700, Washington, DC.

(f) This amendment (39–8455) becomes effective on January 22, 1993.

Issued in Kansas City, Missouri, on December 21, 1992.

Barry D. Clements,

Manager, Small Airplane Directorate, Aircraft Certification Service.

[FR Doc. 92–31533 Filed 12–28–92; 8:45 am]

BILLING CODE 4910–13–M

---

14 CFR Part 39

[Docket No. 92–NM–233–AD; Amendment 39–8446; AD 92–27–11]

Airworthiness Directives; McDonnell Douglas Model MD–11 and MD–11F Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule; request for comments.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that is applicable to certain McDonnell Douglas Model MD–11 and MD–11F series airplanes. This action requires a functional inspection for proper actuation of the fire bottle switch; a visual inspection of the fire shutoff handle cover assembly to verify whether proper clearance exists between the fire shutoff handles, cover assembly, and rub strips in the flight compartment; and modification of discrepant parts. This amendment is prompted by a report that the engine fire extinguisher switches would not actuate, due to interference between fire shutoff handles and the cover assembly in the flight compartment. The actions specified in this AD are intended to prevent inhibited operation of the engine emergency fire extinguisher system.

DATES: Effective January 13, 1993.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of January 13, 1993.

Comments for inclusion in the Rules Docket must be received on or before March 1, 1993.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–103, Attention: Rules Docket No. 92–NM–233–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

The service information referenced in this AD may be obtained from McDonnell Douglas Corporation, P.O. Box 1771, Long Beach, California 90846–1771, Attention: Business Unit Manager, Technical Publications-Technical Administrative Support, C1–L5B. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Transport Airplane Directorate, Los Angeles Aircraft Certification Office, 3229 East Spring Street, Long Beach, California; or at the Office of the Federal Register, 800 North Capitol Street, NW., Suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Raymond Vakili, Aerospace Engineer, Propulsion Branch, ANM–140L, FAA, Transport Airplane Directorate, Los Angeles Aircraft Certification Office, 3229 East Spring Street, Long Beach, California 90806–2425; telephone (310) 988–5262; fax (310) 988–5210.

SUPPLEMENTARY INFORMATION: Recently, during a routine maintenance check of the engine emergency fire extinguisher system on a Model MD–11 series airplane, the numbers one and three fire shutoff handles did not rotate far enough to actuate the fire extinguisher switches. This condition has been attributed to either incorrect trimming of the cutouts in the fire shutoff handle cover assembly or incorrect installation of the rub strips between the cover assembly and lightplate assembly, hindering rotation of the fire shutoff handles. This condition, if not corrected, could result in inhibited operation of the engine emergency fire extinguisher system.

The engine emergency fire extinguisher system of Model MD–11F series airplanes is similar to that of Model MD–11 series airplanes. Therefore, the Model MD–11F may be subject to the same potential unsafe condition.

The FAA has reviewed and approved McDonnell Douglas MD–11 Alert Service Bulletin A76–3, dated November 17, 1992, that describes procedures for a functional inspection for proper actuation of the fire bottle switch; a visual inspection of the fire shutoff handle cover assembly to verify whether proper clearance exists between the fire shutoff handles, cover assembly, and rub strips in the flight compartment; and if any fire bottle switch does not actuate and/or any handle clearance is not within the specified limits, trim of the cover assembly handle cutout and rub strips, and a functional reinspection for proper switch actuation. This modification will ensure sufficient rotation of the fire shutoff handles.

Since an unsafe condition has been identified that is likely to exist or develop on other McDonnell Douglas Model MD–11 and MD–11F series airplanes of the same type design, this AD is being issued to prevent inhibited operation of the engine emergency fire extinguisher system. This AD requires a functional inspection for proper actuation of the fire bottle switch; a visual inspection of the fire shutoff handle cover assembly to verify whether proper clearance exists between the fire shutoff handles, cover assembly, and rub strips in the flight compartment; and if any fire bottle switch does not actuate and/or any handle clearance is not within the specified limits, trim of the cover assembly handle cutout and rub strips, and a functional reinspection for proper switch actuation. The actions are required to be accomplished in accordance with the service bulletin described previously.

Since a situation exists that requires the immediate adoption of this regulation, it is found that notice and opportunity for prior public comment hereon are impracticable, and that good cause exists for making this amendment effective in less than 30 days.

Comments Invited

Although this action is in the form of a final rule that involves requirements affecting flight safety and, thus, was not preceded by notice and an opportunity for public comment, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified under the caption "**ADDRESSES**." All communications received on or before the closing date for comments will be considered, and this rule may be amended in light of the comments received. Factual information that supports the commenter's ideas and suggestions is extremely helpful in evaluating the effectiveness of the AD action and determining whether additional rulemaking action would be needed.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this AD will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 92–NM–233–AD." The postcard will be date stamped and returned to the commenter.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

The FAA has determined that this regulation is an emergency regulation and that it is not considered to be major under Executive Order 12291. It is impracticable for the agency to follow the procedures of Order 12291 with respect to this rule since the rule must be issued immediately to correct an unsafe condition in aircraft. It has been determined further that this action involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the Rules Docket. A copy of it, if filed, may be obtained from the Rules Docket at the location provided under the caption "**ADDRESSES**."

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. App. 1354(a), 1421 and 1423; 49 U.S.C. 106(g); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

92–27–11. McDonnell Douglas: Amendment 39–8446. Docket 92–NM–223–D.

Applicability: McDonnell Douglas Model MD–11 and MD–11F series airplanes; as listed in McDonnell Douglas MD–11 Alert Service Bulletin A76–3, dated November 17, 1992; certificated in any category.

Compliance: Required as indicated, unless accomplished previously.

To prevent inhibited operation of the engine emergency fire extinguisher system, accomplish the following:

(a) Within 30 days after the effective date of this AD, perform a functional inspection for proper actuation of the fire bottle switch, and a visual inspection of the fire shutoff handle cover assembly to verify whether a minimum clearance of 0.30 inch (0.76 mm) exists between the fire shutoff handles, cover assembly, and rub strips in the flight compartment, in accordance with the Accomplishment Instructions of McDonnell Douglas MD–11 Alert Service Bulletin A76–3, dated November 17, 1992.

(1) If any fire bottle switch actuates (audible click), and if any handle clearance

is found to be 0.30 inch (0.76 mm) or greater, no further action is necessary; or,

(2) If any fire bottle switch does not actuate (click is not audible), and/or any handle clearance is not found to be 0.30 inch (0.76 mm) or greater, prior to further flight, trim the cover assembly handle cutout and rub strips to achieve a clearance of 0.30 inch (0.76 mm) or greater, and repeat the functional inspection requirements for proper switch actuation in accordance with paragraph (a) of this AD.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Los Angeles Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Los Angeles ACO.

Note: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Manager, Los Angeles ACO.

(c) Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The functional inspection and trim shall be done in accordance with McDonnell Douglas MD-11 Alert Service Bulletin A76-3, dated November 17, 1992. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from McDonnell Douglas Corporation, P.O. Box 1771, Long Beach, California 90846-1771, Attention: Business Unit Manager, Technical Publications—Technical Administrative Support, C1-L5B. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at FAA, Transport Airplane Directorate, Los Angeles Aircraft Certification Office, 3229 East Spring Street, Long Beach, California; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(e) This amendment becomes effective on January 13, 1993.

Issued in Renton, Washington, on December 17, 1992.

Bill R. Boxwell,

Acting Manager, Transport Airplane Directorate Aircraft Certification Service.

[FR Doc. 92-31534 Filed 12-28-92; 8:45 am]

BILLING CODE 4910-13-M

14 CFR Part 39

[Docket No. 92-CE-44-AD; Amendment 39-8456; AD 93-01-03]

Airworthiness Directives; Ayres Corporation S2D and S2R Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that applies to certain Ayres Corporation (Ayres) S2D and S2R series airplanes. This action requires repetitively inspecting the wing front spar for corrosion, and repairing any corroded areas. Investigation of an accident involving one of the affected airplanes revealed extensive corrosion on the upper and lower portions of the front spar. The actions specified by this AD are intended to prevent wing structural damage that, if not detected, could progress to the point of failure.

DATES: Effective February 5, 1993.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of February 5, 1993.

ADDRESSES: Service information that is applicable to this AD may be obtained from the Ayres Corporation, P.O. Box 3090, Albany, Georgia 31708; Telephone (912) 883-1440. This information may also be examined at the Federal Aviation Administration (FAA), Central Region, Office of the Assistant Chief Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106; or at the Office of the Federal Register, 800 North Capitol Street, NW., Suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Ms. Cindy Lorenzen, Aerospace Engineer, Atlanta Aircraft Certification Office, 1669 Phoenix Parkway, Suite 210C, Atlanta, Georgia 30349; Telephone (404) 991-2910; Facsimile (316) 991-3606.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations to include an AD that would apply to certain Ayres S2D and S2R series airplanes was published in the Federal Register on September 9, 1992 (57 FR 41115). The action proposed repetitive inspections of the wing front spar for corrosion, and repair of any corroded areas. The proposed actions would be accomplished in accordance with the ACCOMPLISHMENT INSTRUCTIONS section of Ayres Service Bulletin No. SB-AG-29, dated June 15, 1992.

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposed rule or the FAA's determination of the cost to the public.

After careful review, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed except for minor editorial corrections. The FAA has determined that these minor corrections will not change the meaning of the AD nor add any additional burden upon the public than was already proposed.

The compliance time for this AD is presented in calendar time instead of hours time-in-service (TIS). The FAA has determined that a calendar time for compliance is the most desirable method because the unsafe condition described by the required AD is caused by corrosion. Corrosion can occur on airplanes regardless of whether the airplane is in service. In addition, the utilization rate of the affected airplanes varies throughout the fleet. For example, one operator may utilize the airplane 50 hours TIS in one week, while another operator may not operate the airplane 50 hours TIS in one month. Therefore, to ensure that corrosion is detected and corrected on all airplanes within a reasonable period of time without inadvertently grounding any airplanes, a compliance schedule based upon calendar time instead of hours TIS is utilized.

The FAA estimates that 1,700 airplanes in the U.S. registry will be affected by this AD, that it will take approximately 8 workhours per airplane to accomplish the required action, and that the average labor rate is approximately $55 an hour. Parts cost approximately $180 per airplane. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $1,054,000.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the final evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption ADDRESSES.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety .

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR Part 39 of the Federal Aviation Regulations as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for Part 39 continues to read as follows:

Authority: 49 U.S.C. App. 1354(a), 1421 and 1423; 49 U.S.C. 106(g); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new AD:

93–01–03 Ayres Corporation: Amendment 39–8456; Docket No. 92–CE–44–AD.

Applicability: The following model and serial number airplanes, certificated in any category:

Models	Serial numbers
S2D	all serial numbers.
S2R	5000 through 5099, 1380R, and 1416R through 2583R.
S2R–R1340	R1340–001 through R1340–030 (with or without DC suffix).
S2R–R3S	R3S–001 through R3S–011 (with or without DC suffix).
S2R–R1820	R1820–001 through R1820–035 (with or without DC suffix).
S2R–T11	T11–001 through T11–005 (with or without DC suffix).
S2R–T15	T15–001 through T15–029 (with or without DC suffix) and T15–031 (with or without DC suffix); and T27–001 through T27–029 (with or without DC suffix) and T27–031 (with or without DC suffix).
S2R–T34	6000 through 6049, T34–001 through T34–178 (with or without DC suffix) and T34–180 (with or without DC suffix); and T41–001 through T41–178 (with or without DC suffix) and T41–180 (with or without DC suffix).
S2R–T45	T45–001 through T45–003 (with or without DC suffix).
S2R–T65 and S2RHG–T65.	T65–001 through T65–010 (with or without DC suffix).
S2R–G6	G6–101 through G6–107 (with or without DC suffix).

Compliance: Required within the next 3 calendar months after the effective date of this AD, unless already accomplished, and thereafter at intervals not to exceed 12 calendar months.

To prevent wing structural damage that, if not detected, could progress to the point of failure, accomplish the following:

(a) Inspect the wing front spar for corrosion in accordance with the "ACCOMPLISHMENT INSTRUCTIONS: I. Inspection of Front Spar" section of Ayres Service Bulletin (SB) No. SB–AG–29, dated June 15, 1992.

(b) If corrosion is found, prior to further flight, treat and repair the corrosion damage in accordance with the "ACCOMPLISHMENT INSTRUCTIONS: II. Repairs" section of Ayres SB No. SB–AG–29, dated June 15, 1992.

(c) Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) An alternative method of compliance or adjustment of the initial or repetitive compliance times that provides an equivalent level of safety may be approved by the Manager, Atlanta Aircraft Certification Office, 1669 Phoenix Parkway, suite 210C, Atlanta, Georgia 30349. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Atlanta Aircraft Certification Office.

Note: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Atlanta Aircraft Certification Office.

(e) The inspections required by this AD shall be done in accordance with Ayres Service Bulletin No. SB–AG–29, dated June 15, 1992. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from the Ayres Corporation, P.O. Box 3090, Albany, Georgia 31708. Copies may be inspected at the FAA, Central Region, Office of the Assistant Chief Counsel, room 1558, 601 E. 12th Street, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(f) This amendment (39–8456) becomes effective on February 5, 1993.

Issued in Kansas City, Missouri, on December 21, 1992.

Barry D. Clements,

Manager, Small Airplane Directorate, Aircraft Certification Service.

[FR Doc. 92–31411 Filed 12–28–92; 8:45 am]

BILLING CODE 4910–13–M

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

14 CFR Part 1214

Space Shuttle

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Interim final rule.

SUMMARY: NASA is amending its regulations by adding new provisions on "Special Policy on Use of Small, Self-Contained Payloads (SSCP's) by Domestic Educational Institutions." In conjunction with NASA regulations on, "Use of Small, Self-Contained Payloads," the goal is to stimulate and encourage the use of space by a wide range of users, particularly those associated with education.

DATES: This rule is effective December 29, 1992. Any comments must be received on or before January 28, 1993.

ADDRESSES: Comments may be mailed to the Education Division, Code FET, NASA Headquarters, Washington, DC 20546, or delivered to room 2K31, 300 E Street, SW., Washington, DC 20546.

FOR FURTHER INFORMATION CONTACT: Dr. Malcom V. Phelps, (202) 358–1540.

SUPPLEMENTARY INFORMATION: The National Aeronautics and Space Administration has determined that:

1. This rule is not subject to the requirements of the Regulatory Flexibility Act, 51 U.S.C. 601–612, since it will not exert a significant economic impact on a substantial number of small business entities.

2. This rule is not a major rule as defined in Executive Order 12291.

List of Subjects in 14 CFR Part 1214

Government employees, Security measures, Space Shuttle.

PART 1214—SPACE SHUTTLE

For reasons set out in the Preamble, 14 CFR part 1214 is amended as follows:

1. The authority citation for 14 CFR part 1214 is revised to read as follows:

Authority: Sec. 203, Public Law 85–568, 72 Stat. 429, as amended (42 U.S.C. 2473).

2. Subpart 1214.10 is revised to read as follows:

Subpart 1214.10—Special Policy on Small, Self-Contained Payloads (SSCP's) by Domestic Educational Institutions

Sec.

1214.1000 Scope.
1214.1001 Goal.
1214.1002 Pricing.
1214.1003 Qualifications.
1214.1004 Results and data dissemination.

Subpart 1214.10—Special Policy on Small, Self-Contained Payloads (SSCP's) by Domestic Educational Institutions

§ 1214.1000 Scope.

This subpart defines NASA's special policy for the use of Small, Self-Contained Payloads (SSCP's) by domestic educational institutions.

§ 1214.1001 Goal.

The goal of NASA's policy on "Use of Small, Self-Contained Payloads," as stated in subpart 1214.9, is to stimulate

and encourage the use of space by a wide range of users, particularly those associated with education.

§ 1214.1002 Pricing.

As an adjunct to that policy, and in furtherance of NASA's commitment to education, NASA is offering lower prices for standard launch services for SSCP's sponsored by domestic educational institutions that agree to certain provisions and can meet certain criteria. The prices for standard launch services for such payloads will be:

Payload weight/volume	Price
200 lbs/5.0 cf	$10,000
100 lbs/2.5 cf	5,000
60 lbs/2.5 cf	3,000

§ 1214.1003 Qualifications.

For a payload to qualify for flight as a domestic educational institution payload":

(a) The applying institution must be a U.S. public or nonprofit (section 501(c)(3) of the Internal Revenue Code) educational institution, which may include universities, colleges, community colleges, elementary or secondary schools, or university-affiliated education research foundations.

(b) The payload must be certified by an authorized official of the institution to be part of an educational or research project that is principally for the benefit of students, rather than nonstudents, such as faculty or research staff. The certification shall include a brief explanation of the educational aspects of the payload project and how it principally benefits students.

(c) Payload experiments should involve students in all phases of the project, including concept development, initial planning, design, conduct, and analysis of the results of the experiments. Involvement of faculty or other professionals in a supervisory, advisory, or consultative relationship with the students is necessary.

(d) Projects may include; (1) Applied research;

(2) Basic research; and/or

(3) Other activities which have further educational uses beyond the immediate research effort.

§ 1214.1004 Results and data dissemination.

(a) A goal of this special category of payloads is to encourage student participation in various space science and technology experiments. Accordingly, subject to the exceptions listed below, NASA, unless otherwise agreed, will require all scientific or research results or data that are produced or obtained during the flight of a payload of this category to be made publicly available without restriction of disclosure and use no later than 2 years after the Shuttle mission on which the payload is flown. The exceptions are:

(1) Those results comprising an invention for which patent protection has been or will in a reasonable time be applied for.

(2) Data disclosing an invention prior to applying for patent protection thereon.

(b) Payloads of domestic educational institutions will be subject to all other provisions of subpart 1214.9, and each such institution will be required to sign a Launch Services Agreement with NASA.

(c) Domestic educational institutions proposing to fly SSCP experiments under this special policy should contact NASA Headquarters, Office of Space Flight, Code MB, Washington, DC 20546. Such applications must receive the approval of the NASA Education Division, Office of Human Resources and Education.

Dated: November 30, 1992.

Daniel S. Goldin,

Administrator.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Social Security Administration

20 CFR Part 404

[Regulations No. 4]

RIN 0960—None Assigned

Federal Old-Age, Survivors and Disability Insurance Determining Disability and Blindness; Extension of Expiration Date for Cardiovascular System Listing

AGENCY: Social Security Administration, HHS.

ACTION: Final rule.

SUMMARY: We are extending the date on which part A of the cardiovascular system listings found in appendix 1 of part 404, subpart P, will no longer be effective from January 5, 1993, to July 6, 1993. We have made no revisions in the medical criteria in the cardiovascular system listings; they remain the same as they now appear in the Code of Federal Regulations. We are presently considering comments we received on a Notice of Proposed Rulemaking (NPRM) to update the medical criteria contained in part A and part B of the cardiovascular system listings. When we have completed our review, any revised criteria will be published as final regulations.

EFFECTIVE DATE: This final rule will be effective December 29, 1992.

FOR FURTHER INFORMATION CONTACT: Irving Darrow, Legal Assistant, Office of Regulations, Social Security Administration, 6401 Security Boulevard, Baltimore, MD 21235, (410) 966–0512.

SUPPLEMENTARY INFORMATION: On December 6, 1985, a revised Listing of Impairments in appendix 1 to subpart P of part 404 was published in the **Federal Register** (50 FR 50068). The Listing of Impairments describes, for each of 13 major body systems, impairments that are considered severe enough to preclude a person from engaging in any gainful activity (part A), or in the case of a child under the age of 18, impairments that are considered severe enough to prevent the child from functioning independently, appropriately, and effectively in an age-appropriate manner (part B). The Listing of Impairments is used for evaluating disability and blindness at the third step of the sequential evaluation process for adults and children under the Social Security disability program and the supplemental security income program.

When the revised Listing of Impairments was published in 1985, we indicated that medical advances in disability evaluation and treatment and program experience would require that the listings be periodically reviewed and updated.

Accordingly, we established termination dates ranging from 4 to 8 years for each of the listings for specific body systems. A date of December 6, 1989, was established for the cardiovascular system listings in part A to no longer be effective. A date of December 6, 1993, was established for part B of the cardiovascular system listings to no longer be effective.

The potential program impact of the changes to update the cardiovascular system listings required careful analysis and consideration within the Agency. As our study and analysis continued, it became evident that we would be unable to publish a proposed and then a final regulation containing revised criteria for part A of the cardiovascular system listings by December 6, 1989. We published in the **Federal Register** of December 5, 1989 (54 FR 50233), a final regulation extending the current cardiovascular system listings for a period of 18 months through June 5, 1991. The cardiovascular system listings were again extended an additional 12

months through June 5, 1992, by final regulation published in the **Federal Register** on June 6, 1991 (56 FR 26030), and were extended to January 5, 1993, by final regulation published in the **Federal Register** on June 5, 1992 (57 FR 23945).

On July 9, 1991 we published an NPRM proposing revisions to the medical criteria contained in parts A and B of the cardiovascular system listings (56 FR 31266), with provisions for a 60-day comment period. The complex issues raised by the numerous comments we received have required extensive analysis and careful consideration. Because of the need to consider these complex issues thoroughly so that any revised criteria reflect medical advances in disability evaluation and treatment of cardiovascular impairments, we find that we will not have sufficient time to publish a final regulation in the **Federal Register** by January 5, 1993. We have, therefore, decided to extend the date on which the current cardiovascular system listings in part A will no longer be effective for an additional 6 months and 1 day—from January 5, 1993, to July 6, 1993.

Regulatory Procedures

The Department, even when not required by statute, as a matter of policy, generally follows the Administrative Procedure Act notice of proposed rulemaking and public comment procedures specified in 5 U.S.C. 553 in the development of its regulations. The Administrative Procedure Act provides exceptions to its notice and public comment procedures when an agency finds there is good cause for dispensing with such procedures on the basis that they are impracticable, unnecessary, or contrary to the public interest. We have determined that, under 5 U.S.C. 553(b)(B), good cause exists for waiver of notice of proposed rulemaking and public comment procedures on this rule because it only extends the date on which part A of the cardiovascular system listings will no longer be effective and makes no substantive changes to these listings. The current regulations expressly provide that the listings may be extended by the Secretary, as well as revised and promulgated again. Because we are not making any revisions to the current listings, we have determined that use of public comment procedures is unnecessary under the Administrative Procedure Act.

Executive Order 12291

The Secretary has determined that this is not a major rule under Executive Order 12291 because this regulation does not meet any of the threshold criteria for a major rule. Therefore, a regulatory impact analysis is not required.

Regulatory Flexibility Act

We certify that this regulation will not have a significant economic impact on a substantial number of small entities because it only affects disability claimants under titles II and XVI of the Social Security Act.

Paperwork Reduction Act

This regulation imposes no reporting or recordkeeping requirements necessitating clearance by the Office of Management and Budget.

BILLING CODE 4190–29–M

Food and Drug Administration

21 CFR Part 510

Animal Drugs, Feeds, and Related Products; Change of Sponsor Name

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect a change of sponsor name for a new animal drug application (NADA) from Norwich Eaton Pharmaceuticals, Inc., to Procter & Gamble Pharmaceuticals, Inc.

EFFECTIVE DATE: December 29, 1992.

FOR FUTHER INFORMATION CONTACT: Benjamin A. Puyot, Center for Veterinary Medicine (HFV–130), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 301–295–8646.

SUPPLEMENTARY INFORMATION: Norwich Eaton Pharmaceuticals, Inc., P.O. Box 191, Norwich, NY 13815, has informed FDA of a change of sponsor name from Norwich Eaton Pharmaceuticals, Inc., to Procter & Gamble Pharmaceuticals, Inc. Accordingly, FDA is amending the regulations in 21 CFR 510.600(c)(1) and (c)(2) to reflect the change of sponsor name.

List of Subjects in 21 CFR Part 510

Administrative practice and procedure, Animal drugs, Labeling, Reporting and recordkeeping requirements.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, 21 CFR part 510 is amended as follows:

PART 510—NEW ANIMAL DRUGS

1. The authority citation for 21 CFR part 510 continues to read as follows:

Authority: Secs. 201, 301, 501, 502, 503, 512, 701, 706 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321, 331, 351, 352, 353, 360b, 371, 376).

§ 510.600 [Amended]

2. Section 510.600 *Names, addresses, and drug labeler codes of sponsors of approved applications* is amended in the table in paragraph (c)(1) in the entry for "Norwich Eaton Pharmaceuticals, Inc." and in the table in paragraph (c)(2) in the entry for "000149" by revising the

sponsor name to read "Procter & Gamble Pharmaceuticals, Inc."

Dated: December 18, 1992.

Robert C. Livingston,

Director, Office of New Animal Drug Evaluation, Center for Veterinary Medicine.

BILLING CODE 4160-01-F

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[T.D. 8462]

RIN 1545-AH09

Definition of Affiliated Group

AGENCY: Internal Revenue Service, Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations under section 1504(a) setting forth circumstances under which warrants, options, obligations convertible into stock, and other similar interests are treated as exercised for purposes of determining whether a corporation is a member of an affiliated group. For purposes of these regulations, unless the context otherwise provides, warrants, options, convertible obligations, and similar interests are all referred to as options. This section generally applies to all provisions under the Internal Revenue Code and Income Tax Regulations to which affiliation within the meaning of section 1504 (with or without the exceptions in section 1504(b)) is relevant, and to all provisions that refer to section 1504(a)(2). These regulations ensure that the affiliation rules under section 1504(a) are not circumvented through the use of options.

DATES: These regulations are effective December 28, 1992 and apply to options with a measurement date on or after February 28, 1992. These regulations do not apply to options issued prior to February 28, 1992, which have a measurement date on or after February 28, 1992, if the measurement date for the option occurs solely because of an adjustment in the terms of the option pursuant to the terms of the option as it existed on February 28, 1992. Section 1.1504-4(b)(2)(iv) applies to stock outstanding on or after February 28, 1992.

FOR FURTHER INFORMATION CONTACT: Ken Cohen, (202) 622-7790 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Introduction

On March 2, 1992, the Internal Revenue Service published in the **Federal Register** a Notice of proposed rulemaking (57 FR 7340 [CO-152-84, 1992-12 I.R.B. 37]) proposing to add new regulations §§ 1.1504-0 and 1.1504-4 to 26 CFR part 1. The Notice of proposed rulemaking provided rules regarding circumstances under which options are treated as exercised for purposes of determining whether the 80 percent voting power and value tests for affiliation under section 1504(a) are satisfied. A public hearing was scheduled for April 14, 1992. Comments responding to the Notice of proposed rulemaking were received, but no one requested to present comments at the scheduled public hearing. Accordingly, the hearing was cancelled. After considering the written comments received, the Service adopts the proposed regulations as revised by this Treasury decision.

Overview

The final regulations provide guidance regarding circumstances under which options are treated as exercised for purposes of determining whether the 80 percent voting power and value tests for affiliation under section 1504(a) are satisfied. In general, options are disregarded in determining whether a corporation is a member of an affiliated group. An option, however, is treated as exercised for purposes of determining affiliation when (1) a reasonable certainty exists, on a specified measurement date (generally the issuance, adjustment, or transfer date), that the option will be exercised and (2) the issuance or transfer of the option in lieu of the issuance, redemption, or transfer of the underlying stock would result (but for these regulations) in the elimination of a substantial amount of federal income tax liability. In each case, the determination of whether an option is reasonably certain to be exercised or whether a substantial amount of federal income tax liability would be eliminated is based on all the facts and circumstances. Options that do not have an abuse potential, such as publicly traded options, employee stock options, and options granted in connection with a bona fide loan agreement are generally excepted from these regulations. Safe harbors are provided for other options, which based on their terms, do not evidence an abuse potential.

Amendment and Adoption of §§ 1.1504-0 and 1.1504-4

After full consideration of the comments concerning the proposed regulations, §§ 1.1504-0 and 1.1504-4 are amended and adopted as final regulations. Generally, the final regulations maintain the same approach as the proposed regulations. However, in response to comments, the following modifications have been made.

Scope of Regulations

Comments asked whether the proposed regulations were intended to apply to provisions of the Code and regulations that refer to section 1504(a)(2) or just to provisions that use the term "affiliation." The final regulations clarify that they apply to all provisions which refer to affiliation and to those provisions to which affiliation within the meaning of section 1504(a) is relevant, including those provisions which refer to section 1504(a)(2) without referring to affiliation. For this purpose, a provision is considered to refer to affiliation or section 1504(a)(2) regardless of whether the exceptions provided in section 1504(b) apply. However, a provision is not considered to refer to affiliation or section 1504(a)(2) if the 80 percent voting power and 80 percent value requirements of section 1504(a)(2) are modified. In addition, the regulations do not apply to those provisions specified by the Internal Revenue Service in regulations, a revenue ruling, or revenue procedure.

Several of the exceptions to the scope of the proposed regulations have been modified in the final regulations. Sections 163(j) and 904(i) have been added to the excepted sections and the exception relating to section 864 has been limited to subsection (e) of section 864. The proposed regulations provided that the regulations do not apply to section 382(l)(5). Because section 382(l)(5) modifies the 80 percent voting power and value requirement of section 1504(a)(2), no exception is needed to prevent the regulations from applying to section 382(l)(5). Accordingly, the exception for section 382(l)(5) is unnecessary and has been removed from the final regulations.

Option Not Treated as Exercised for Voting Power Purposes

Under the proposed regulations, an option that was treated as exercised was always treated as exercised for purposes of determining the value of the stock of the issuing corporation owned, but was treated as exercised for voting power purposes only in limited circumstances.

Comments requested that the regulations be clarified as to those circumstances. The regulations have been revised to provide that, for purposes of these regulations, an option is never treated as exercised for voting power purposes. Instead, the determination of the voting power owned is made under other applicable principles of law.

Cash Settlement Options, Phantom Stock, Stock Appreciation Rights, or Similar Interests

Comments requested that the regulations clarify the treatment of cash settlement options, phantom stock, stock appreciation rights, or similar interests. The final regulations provide that such options are treated as reasonably certain to be exercised if it is reasonably certain that the option will have value at some time during the period in which the option may be exercised. If such an option is treated as exercised, the option is treated as having been converted into stock of the issuing corporation. If the amount to be received upon the exercise of such an option is determined by reference to a multiple of the increase in the value of a share of the issuing corporation's stock on the exercise date over the value of a share of the stock on the date the option is issued, the option is treated as converted into a corresponding number of shares of such stock. For example, assume P owns all 100 shares of the stock of S. S issues to X, an unrelated corporation, a stock appreciation right that allows X to receive 40 times the increase in the value of a share of S stock at the time the stock appreciation right is exercised over the current value of a share of S stock. If the stock appreciation right is treated as exercised under these regulations, X is treated, for value purposes only, as the owner of 40 shares of S stock. Appropriate adjustments must be made in any situation in which the amount to be received upon exercise of the option is determined in another manner.

Measurement Dates

Comments requested that the number of measurement dates be limited. After consideration of the comments, several changes have been made.

Under the proposed regulations, a measurement date included the date on which an option was issued, transferred, or on which the terms of an existing option or the underlying stock were modified. The proposed regulations provided an exception for certain issuances, transfers, and modifications "unless used as a device to avoid the application of section 1504 and these regulations." Comments suggested that this exception was too vague. After consideration of these comments, the device test has been deleted.

Comments asserted that the exception from a measurement date for sales between parties none of which are related to a member of the issuing corporation's group was too narrow. The Service and Treasury have determined that the purposes of this provision can be satisfied by broadening the exception to cover sales between parties none of which is a member of the issuing corporation's affiliated group. However, the exception does not apply if the person is related to, or acting in concert with, the issuing corporation or a member of its affiliated group, and the issuance or transfer of the option is pursuant to a plan a principal purpose of which is to avoid the application of section 1504 and these regulations.

Comments also asserted that the definition of related persons in the proposed regulations was too broad. The proposed regulations defined related persons by reference to section 267(b), which incorporates sections 267(c) and 1563(e)(1). The incorporation of section 1563(e)(1) had the unintended result of treating a corporation having an option to acquire over 10 percent of the stock of an issuing corporation as related to the issuing corporation, regardless of whether it actually owned stock of the issuing corporation. Under the proposed regulations, the transfer of such an option by a corporation would have caused a measurement date. Accordingly, the regulations have been amended to provide that section 1563(e)(1) does not apply in determining whether persons are related. Furthermore, the Service and Treasury have determined that the incorporation of the constructive ownership rules under section 267(c) is also unnecessary to carry out the purposes of the regulations. Accordingly, the regulations have been amended to provide that section 267(c) does not apply in determining whether persons are related.

Instruments Treated as Options

Several comments concerned instruments treated as options under the proposed regulations. Comments asked whether an agreement under which one shareholder could require the issuing corporation to redeem the stock of another shareholder constituted an option under the proposed regulations. The regulations have been modified to clarify that redemption agreements constitute options because they provide for the ability to transfer or require the transfer of stock.

In addition, comments suggested that the provision in the proposed regulations treating any instrument or right (except for stock itself) pursuant to which the holder may share in corporate growth as an option was too broad. For example, comments suggested that this rule treated instruments such as royalty interests and purchase price "earn-outs" as options. Because these instruments generally are associated with non-abusive transactions, the proposed regulations were not intended to cover these types of instruments. Accordingly, the regulations have been modified to limit the application of the regulations to instruments with greater abuse potential and thus the language defining an option as any "instrument or right (except for stock itself) pursuant to which the holder may share in the growth of the issuing corporation" has been eliminated.

Comments requested that the treatment of tracking stock be clarified in the regulations. However, the final regulations do not address the treatment of tracking stock. The Service and Treasury continue to study the questions raised by tracking stock and may issue guidance in the future.

Instruments Not Treated as Options

The proposed regulations stated that, "provided they are not used as a device to avoid the application of section 1504 or these regulations," specified instruments are not treated as options. Several comments asserted that the device test causes uncertainty. Comments recommended eliminating the general device test and addressing concerns about abuse by narrowing the enumerated exceptions. After consideration of these comments, the general device test has been eliminated. Concerns about abuse are addressed by more specific requirements for instruments not treated as options. For example, under the final regulations, the exception for publicly traded options applies unless an option is issued, transferred, or listed with a principal purpose of avoiding the application of section 1504 and these regulations. The final regulations include examples of when a publicly traded option may have such a principal purpose.

In addition, the final regulations provide that options created pursuant to a title 11 or similar case and certain convertible preferred stock are not treated as options. Most convertible preferred stock should satisfy this exception and should not be treated as an option. If, however, the convertible preferred stock does not satisfy this exception, it may be treated as stock

and/or an option, depending on the circumstances.

Comments asked whether an option that is publicly traded on one measurement date but not on a subsequent measurement date is treated as an option on the subsequent measurement date. The regulations have been clarified to provide that the publicly traded exception no longer applies if the option is no longer publicly traded.

Reasonable Anticipation of Elimination of Tax Liability

Comments asked whether the requirement that there be a reasonable anticipation that the issuance or transfer of an option, in lieu of the underlying stock, result in the elimination of tax liability requires only some possibility of elimination, or similar to the reasonable certainty of exercise test, a strong probability. The intention of the regulations is that the sale of an option is treated as if it would result in the elimination of tax liability only if the parties expect, or should reasonably have expected, that there would be an elimination of tax liability. The mere possibility of such savings is not sufficient to satisfy this requirement.

Comments also suggested that an aggregation rule should be provided when testing whether the issuance or transfer of an option in lieu of the underlying stock would, if not for the regulations, result in the elimination of federal income tax liability. In response to these comments, the regulations have been changed to provide that in the case of options issued pursuant to a plan, a measurement date for any of the options constitutes a measurement date for all options issued pursuant to the plan that are outstanding on the measurement date. In addition, the regulations have been modified to provide that all options with the same measurement date are aggregated in determining whether the sale of the option, in lieu of the underlying stock, would result in the elimination of a substantial amount of federal income tax liability.

Other comments asked whether the triggering of an excess loss account or the restoration of deferred intercompany accounts because of the disaffiliation of the issuing corporation from its affiliated group are taken into account in determining whether there would be an elimination of tax liability under the regulations. The regulations intend that any benefit related to the affiliation of the issuing corporation and its affiliated group constitutes an elimination of federal income tax liability within the meaning of the regulations. When a corporation is disaffiliated from its group, the entire excess loss account or deferred intercompany account, and not just the amount associated with any stock that is sold, is restored to income. Therefore, these amounts must be taken into consideration in determining whether there would be an elimination of federal income tax liability. This should be contrasted with the deferral of gain with respect to stock subject to the option that would be recognized if such stock, rather than the option, were sold on a measurement date. This latter deferral of gain is not related to the affiliation of the issuing corporation and its affiliated group but only to the stock that would otherwise have been sold. Therefore, the regulations provide that such deferral does not constitute an elimination of federal income tax liability.

Another comment asked whether the description of items that constitute an elimination of tax liability under the proposed regulations was all inclusive, or whether other items could also satisfy this provision. The list was not intended to address all items that could constitute the elimination of tax liability. For example, a deferral of a loss under § 1.1502–13 from the current year to a later year to allow an otherwise expiring net operating loss to be used in the current year constitutes an elimination of tax liability for purposes of this provision.

Elimination of a Substantial Amount of Federal Income Tax Liability

Comments requested that the regulations add a safe harbor for the determination of a substantial amount of federal income tax liability. Careful consideration was given to this issue. Based on all of the different factors involved, however, including size of groups, gross income of groups, net income of groups, amount of savings, and timing of savings, the Service and Treasury determined that the final regulations would not provide a safe harbor. Accordingly, the determination of whether an elimination of tax liability is substantial is made on a facts and circumstances basis.

Reasonable Certainty of Exercise

Other comments asked about the treatment of an option whose exercise price varies over time. Generally, all the facts and circumstances are considered in determining whether an option is reasonably certain to be exercised. The fact that an option cannot, or may not, be exercised for a period of time after its issuance is not determinative as to whether the option is treated as exercised as of a measurement date. Therefore, if the possible exercise prices of an option are set forth in the option agreement, the lowest exercise price (or in the case of an option to sell stock, the highest exercise price) is used in determining whether an option is reasonably certain to be exercised. If the exercise price varies according to an index or some other standard outside the option agreement, all the facts and circumstances must be taken into consideration. In addition, the regulations have been amended to clarify that the date on which the exercise price of the option changes constitutes a measurement date, because the change is an adjustment pursuant to the terms of the option.

One of the factors considered in determining whether an option is reasonably certain to be exercised is the existence of stockholder rights (i.e., managerial or economic rights in the issuing corporation that ordinarily are possessed by owners of stock). Several comments asked whether an option holder (or a person whose stock ownership would increase on the exercise of an option) who is also a stockholder is considered to possess such stockholder rights if these rights are possessed solely because of actual stock ownership. In response to these comments, the regulations have been modified to provide that managerial or economic rights possessed because of actual stock ownership in the issuing corporation are not taken into account.

In addition, another comment noted that the proposed regulations treat the existence of stockholder rights as a factor to be taken into account in determining whether an option is reasonably certain to be exercised, even though the existence of such rights actually may reduce the likelihood of exercise. For example, if an option holder already possesses dividend and/or voting rights pursuant to an option agreement, the exercise of the option may be less likely than if the option did not provide such rights, because the option holder benefits less from the exercise of the option. However, because an option that provides stockholder rights tends to appear more similar to actual stock of the issuing corporation, the existence of such rights is considered a factor making an option more likely to be exercised, rather than less likely.

Treatment of Options Previously Treated as Exercised

Several comments concerned the treatment of options that were treated as exercised on one measurement date and that subsequently either lapsed or were forfeited. The lapse or forfeiture of an option does not constitute a

measurement date. However, because the option is no longer in existence as of the date of lapse or forfeiture, the option is not taken into account in determining affiliation on or after such date. Accordingly, if the option had the effect of breaking affiliation as of a prior measurement date, the lapse or forfeiture of the option may reaffiliate the issuing corporation with its affiliated group as of the date of lapse or forfeiture.

Several comments requested that an option that lapses or is forfeited be treated as if it never existed, so that the issuing corporation would be treated as not having disaffiliated. The final regulations do not adopt such a rule. These regulations only apply to options that are reasonably certain to be exercised and the sale, issuance, or transfer of which, if not for these regulations, would provide a substantial elimination of tax liability, i.e., abusive situations. In effect, the regulations treat the sale, issuance, or transfer of such an option as if the underlying stock were sold. Accordingly, the issuing corporation should properly be disaffiliated as of the date of the sale, issuance, or transfer of the option. Further, all of the consequences of the disaffiliation and reaffiliation, including section 1504(a)(3), apply.

Comments also asked whether options that were previously treated as exercised are to be retested on subsequent measurement dates or are permanently treated as exercised. Under the regulations, an option, whether previously treated as exercised or as not exercised, is retested on a subsequent measurement date for the option. Thus, an option that was previously treated as exercised will no longer be treated as exercised on a subsequent measurement date if the option no longer satisfies both the reasonable certainty of exercise test and the substantial elimination of tax liability test. If the retesting of the option causes the reaffiliation of the issuing corporation to its affiliated group, all of the consequences of disaffiliation and reaffiliation apply.

Substance Over Form

The preamble to the proposed regulations stated that no inference was intended that options with no measurement date on or after February 28, 1992, are to be disregarded for purposes of determining affiliation and that the Service may apply substance over form principles in determining whether options are treated as stock or as exercised in appropriate circumstances. Comments asked whether the same substance over form principles would be applied for options with measurement dates on or after February 28, 1992. It is intended that substance over form principles apply to options with measurement dates on or after February 28, 1992. Accordingly, the fact that an instrument is treated as an option under these regulations does not prevent the instrument from being treated as stock under general principles of law.

Effective Date

Several comments asked for clarification of the effective date of the provision concerning valuation of stock. This provision does not require the existence of an option and thus, the effective date of this provision is unclear. Accordingly, the regulations have been modified to provide that the valuation provision applies to stock outstanding on or after February 28, 1992, the date the proposed regulations were filed with the Federal Register.

Special Analyses

It has been determined that these rules are not major rules as defined in Executive Order 12291. Therefore, a Regulatory Impact Analysis and a final Regulatory Flexibility Analysis (under the Regulatory Flexibility Act (5 U.S.C. chapter 6)) are not required. Pursuant to section 7805(f) of the Internal Revenue Code, the Notice of Proposed Rulemaking for the regulations was submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on their impact on small business.

Drafting Information

The principal author of these regulations is Ken Cohen of the Office of Assistant Chief Counsel (Corporate), Internal Revenue Service. However, other personnel from the Service and the Treasury Department participated in their development.

List of Subjects in 26 CFR 1.1501–1 Through 1.1504–5

Consolidated returns, Income taxes, Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

Paragraph 1. The authority citation for part 1 is amended by adding the following citation:

Authority: 26 U.S.C. 7805 * * * Section 1.1504–4 also issued under 26 U.S.C. 1504(a)(5). * * *

Par. 2. Section 1.1504–0 is added to read as follows:

§ 1.1504–0 Outline of provisions.

In order to facilitate the use of §§ 1.1504–1 through 1.1504–4, this section lists the captions contained in §§ 1.1504–1 through 1.1504–4.

§ 1.1504–1 Definitions.

§ 1.1504–2 [Reserved].

§ 1.1504–3 [Reserved].

§ 1.1504–4 Treatment of warrants, options, convertible obligations, and other similar interests.

(a) Introduction.
(1) General rule.
(2) Exceptions.
(b) Options not treated as stock or as exercised.
(1) General rule.
(2) Options treated as exercised.
(i) In general.
(ii) Aggregation of options.

(2) Cash settlement options, phantom stock, stock appreciation rights, or similar interests.
(3) Safe harbors.
(i) Options to acquire stock.
(ii) Options to sell stock.
(iii) Options exercisable at fair market value.
(iv) Exceptions.
(v) Failure to satisfy safe harbor.
(h) Examples.
(i) Effective date.

Par. 3. Sections 1.1504–2 and 1.1504–3 are added and reserved and § 1.1504–4 is added to read as follows.

§ 1.1504–2 [Reserved]

§ 1.1504–3 [Reserved]

§ 1.1504–4 Treatment of warrants, options, convertible obligations, and other similar interests.

(a) *Introduction*—(1) *General rule.* This section provides regulations under section 1504(a)(5) (A) and (B) regarding the circumstances in which warrants, options, obligations convertible into stock, and other similar interests are treated as exercised for purposes of determining whether a corporation is a member of an affiliated group. The fact that an instrument may be treated as an option under these regulations does not prevent such instrument from being treated as stock under general principles of law. Except as provided in paragraph (a)(2) of this section, this section applies to all provisions under the Internal Revenue Code and the regulations to which affiliation within the meaning of section 1504(a) (with or without the exceptions in section 1504(b)) is relevant, including those provisions that refer to section 1504(a)(2) (with or without the exceptions in section 1504(b)) without referring to affiliation, provided that the 80 percent voting power and 80 percent value requirements of section 1504(a)(2) are not modified therein.

(2) *Exceptions.* This section does not apply to sections 163(j), 864(e), or 904(i) or to the regulations thereunder. This section also does not apply to any other provision specified by the Internal Revenue Service in regulations, a revenue ruling, or revenue procedure. See § 601.601(d)(2)(ii)(*b*) of this chapter.

(b) *Options not treated as stock or as exercised*—(1) *General rule.* Except as provided in paragraph (b)(2) of this section, an option is not considered either as stock or as exercised. Thus, options are disregarded in determining whether a corporation is a member of an affiliated group unless they are described in paragraph (b)(2) of this section.

(2) *Options treated as exercised*—(i) *In general.* Solely for purposes of determining whether a corporation is a member of an affiliated group, an option is treated as exercised if, on a measurement date with respect to such option—

(A) It could reasonably be anticipated that, if not for this section, the issuance or transfer of the option in lieu of the issuance, redemption, or transfer of the underlying stock would result in the elimination of a substantial amount of federal income tax liability (as described in paragraphs (e) and (f) of this section); and

(B) It is reasonably certain that the option will be exercised (as described in paragraph (g) of this section).

(ii) *Aggregation of options.* All options with the same measurement date are aggregated in determining whether the issuance or transfer of an option in lieu of the issuance, redemption, or transfer of the underlying stock would result in the elimination of a substantial amount of federal income tax liability.

(iii) *Effect of treating option as exercised*—(A) *In general.* An option that is treated as exercised is treated as exercised for purposes of determining the percentage of the value of stock owned by the holder and other parties, but is not treated as exercised for purposes of determining the percentage of the voting power of stock owned by the holder and other parties.

(B) *Cash settlement options, phantom stock, stock appreciation rights, or similar interests.* If a cash settlement option, phantom stock, stock appreciation right, or similar interest is treated as exercised, the option is treated as having been converted into stock of the issuing corporation. If the amount to be received upon the exercise of such an option is determined by reference to a multiple of the increase in the value of a share of the issuing corporation's stock on the exercise date over the value of a share of the stock on the date the option is issued, the option is treated as converted into a corresponding number of shares of such stock. Appropriate adjustments must be made in any situation in which the amount to be received upon exercise of the option is determined in another manner.

(iv) *Valuation.* For purposes of section 1504(a)(2)(B) and this section, all shares of stock within a single class are considered to have the same value. Thus, control premiums and minority and blockage discounts within a single class are not taken into account.

(3) *Example.* The provisions of paragraph (b)(2) of this section may be illustrated by the following example:

Example. (i) Corporation P owns all 100 shares of the common stock of Corporation S, the only class of S stock outstanding. Each share of S stock has a fair market value of $10 and has one vote. On June 30, 1992, P issues to Corporation X and option to acquire 80 shares of the S stock from P.

(ii) If, under the provisions of this section, the option is treated as exercised, then, solely for purposes of determining affiliation, P is treated as owning only 20 percent of the value of the outstanding S stock and X is treated as owing the remaining 80 percent of the value of the S stock. P is still treated as owning all of the voting power of S. Accordingly, because P is treated as owning less than 80 percent of the value of the outstanding S stock, P and S are no longer affiliated. However, because X is not treated as owning any of the voting power of S, X and S are also not affiliated.

(c) *Definitions.* For purposes of this section—

(1) *Issuing corporation.* "Issuing corporation" means the corporation whose stock is subject to an option.

(2) *Related or sequential option.* "Related or sequential option" means an option that is one of a series of options issued to the same or related persons. For purposes of this section, any options issued to the same person or related persons within a two-year period are presumed to be part of a series of options. This presumption may be rebutted if the facts and circumstances clearly establish that the options are not part of a series of options. Any options issued to the same person or related persons more than two years apart are presumed not to be part of a series of options. This presumption may be rebutted if the facts and circumstances clearly establish that the options are part of a series of options.

(3) *Related persons.* Persons are related if they are related within the meaning of section 267(b) (without the application of sections 267(c) and 1563(e)(1)) or 707(b)(1), substituting "10 percent" for "50 percent" wherever it appears.

(4) *Measurement date*—(i) *General rule.* "Measurement date" means a date on which an option is issued or transferred or on which the terms of an existing option or the underlying stock are adjusted (including an adjustment

pursuant to the terms of the option or the underlying stock).

(ii) *Issuances, transfers, or adjustments not treated as measurement dates.* A measurement date does not include a date on which—

(A) An option is issued or transferred by gift, at death, or between spouses or former spouses under section 1041;

(B) An option is issued or transferred—

(*1*) Between members of an affiliated group (determined with the exceptions in section 1504(b) and without the application of this section); or

(*2*) Between persons none of which is a member of the affiliated group (determined without the exceptions in section 1504(b) and without the application of this section), if any, of which the issuing corporation is a member, unless—

(*i*) Any such person is related to (or acting in concert with) the issuing corporation or any member of its affiliated group; and

(*ii*) The issuance or transfer is pursuant to a plan a principal purpose of which is to avoid the application of section 1504 and this section;

(C) An adjustment occurs in the terms or pursuant to the terms of an option or the underlying stock that does not materially increase the likelihood that the option will be exercised; or

(D) A change occurs in the exercise price of an option or in the number of shares that may be issued or transferred pursuant to the option as determined by a bona fide, reasonable, adjustment formula that has the effect of preventing dilution of the interests of the holders of the options.

(iii) *Transactions increasing likelihood of exercise.* If a change or alteration referred to in this paragraph (c)(4)(iii) is made for a principal purpose of increasing the likelihood that an option will be exercised, a measurement date also includes any date on which—

(A) The capital structure of the issuing corporation is changed; or

(B) The fair market value of the stock of the issuing corporation is altered through a transfer of assets to or from the issuing corporation (other than regular, ordinary dividends) or by any other means.

(iv) *Measurement date for options issued pursuant to a plan.* In the case of options issued pursuant to a plan, a measurement date for any of the options constitutes a measurement date for all options issued pursuant to the plan that are outstanding on the measurement date.

(v) *Measurement date for related or sequential options.* In the case of related or sequential options, a measurement date for any of the options constitutes a measurement date for all related or sequential options that are outstanding on the measurement date.

(vi) *Example.* The provisions of paragraph (c)(4)(v) of this section may be illustrated by the following example.

Example. (i) Corporation P owns all 80 shares of the common stock of Corporation S, the only class of S stock outstanding. On January 1, 1992, S issues a warrant, exercisable within 3 years, to U, an unrelated corporation, to acquire 10 newly issued shares of S common stock. On July 1, 1992, S issues a second warrant to U to acquire 10 additional newly issued shares of S common stock. On January 1, 1993, S issues a third warrant to T, a wholly owned subsidiary of U, to acquire 10 newly issued shares of S common stock. Assume that the facts and circumstances do not clearly establish that the options are not part of a series of options.

(ii) January 1, 1992, July 1, 1992, and January 1, 1993, constitute measurement dates for the first warrant, the second warrant, and the third warrant, respectively, because the warrants were issued on those dates.

(iii) Because the first and second warrants were issued within two years of each other, and both warrants were issued to U, the warrants constitute related or sequential options. Accordingly, July 1, 1992, constitutes a measurement date for the first warrant as well as for the second warrant.

(iv) Because the first, second, and third warrants were all issued within two years of each other, and were all issued to the same or related persons, the warrants constitute related or sequential options. Accordingly, January 1, 1993, constitutes a measurement date for the first and second warrants, as well as for the third warrant.

(5) *In-the-money.* "In-the-money" means the exercise price of the option is less than (or in the case of an option to sell stock, greater than) the fair market value of the underlying stock.

(d) *Options*—(1) *Instruments treated as options.* For purposes of this section, except to the extent otherwise provided in this paragraph (d), the following are treated as options:

(i) A call option, warrant, convertible obligation, put option, redemption agreement (including a right to cause the redemption of stock), or any other instrument that provides for the right to issue, redeem, or transfer stock (including an option on an option); and

(ii) A cash settlement option, phantom stock, stock appreciation right, or any other similar interest (except for stock).

(2) *Instruments generally not treated as options.* For purposes of this section, the following will not be treated as options:

(i) *Options on section 1504(a)(4) stock.* Options on stock described in section 1504(a)(4);

(ii) *Certain publicly traded options*—(A) *General rule.* Options which on the measurement date are traded on (or subject to the rules of) a qualified board or exchange as defined in section 1256(g)(7), or on any other exchange, board of trade, or market specified by the Internal Revenue Service in regulations, a revenue ruling, or revenue procedure. See § 601.601(d)(2)(ii)(*b*) of this chapter;

(B) *Exception.* Paragraph (d)(2)(ii)(A) of this section does not apply to options issued, transferred, or listed with a principal purpose of avoiding the application of section 1504 and this section. For example, a principal purpose of avoiding the application of section 1504 and this section may exist if warrants, convertible or exchangeable debt instruments, or other similar instruments have an exercise price (or, in the case of convertible or exchangeable instruments, a conversion or exchange premium) that is materially less than, or a term that is materially longer than, those that are customary for publicly traded instruments of their type. A principal purpose may also exist if a large percentage of an issuance of an instrument is placed with one investor (or group of investors) and a very small percentage of the issuance is traded on a qualified board or exchange;

(iii) *Stock purchase agreements.* Stock purchase agreements or similar arrangements whose terms are commercially reasonable and in which the parties' obligations to complete the transaction are subject only to reasonable closing conditions;

(iv) *Escrow, pledge, or other security agreements.* Agreements for holding stock in escrow or under a pledge or other security agreement that are part of a typical commercial transaction and that are subject to customary commercial conditions;

(v) *Compensatory options*—(A) *General rule.* Stock appreciation rights, warrants, stock options, phantom stock, or other similar instruments provided to employees, directors, or independent contractors in connection with the performance of services for the corporation or a related corporation (and that is not excessive by reference to the services performed) and which—

(*1*) Are nontransferable within the meaning of § 1.83–3(d); and

(*2*) Do not have a readily ascertainable fair market value as defined in § 1.83–7(b) on the measurement date;

(B) *Exceptions.* (*1*) Paragraph (d)(2)(v)(A) of this section does not apply to options issued or transferred with a principal purpose of avoiding the application of section 1504 and this section; and

(2) Paragraph (d)(2)(v)(A) of this section ceases to apply to options that become transferable;

(vi) *Options granted in connection with a loan.* Options granted in connection with a loan if the lender is actively and regularly engaged in the business of lending and the options are issued in connection with a loan to the issuing corporation that is commercially reasonable. This paragraph (d)(2)(vi) continues to apply if the option is transferred with the loan (or if a portion of the option is transferred with a corresponding portion of the loan). However, if the option is transferred without a corresponding portion of the loan, this paragraph (d)(2)(vi) ceases to apply;

(vii) *Options created pursuant to a title 11 or similar case.* Options created by the solicitation or receipt of acceptances to a plan of reorganization in a title 11 or similar case (within the meaning of section 368(a)(3)(A)), the option created by the confirmation of the plan, and any option created under the plan prior to the time the plan becomes effective;

(viii) *Convertible preferred stock.* Convertible preferred stock, provided the terms of the conversion feature do not permit or require the tender of any consideration other than the stock being converted; and

(ix) *Other enumerated instruments.* Any other instruments specified by the Internal Revenue Service in regulations, a revenue ruling, or revenue procedure. See § 601.601(d)(2)(ii)(*b*) of this chapter.

(e) *Elimination of federal income tax liability.* For purposes of this section, the elimination of federal income tax liability includes the elimination or deferral of federal income tax liability. In determining whether there is an elimination of federal income tax liability, the tax consequences to all involved parties are considered. Examples of elimination of federal income tax liability include the use of a loss or deduction that would not otherwise be utilized, the acceleration of a loss or deduction to a year earlier than the year in which the loss or deduction would otherwise be utilized, the deferral of gain or income to a year later than the year in which the gain or income would otherwise be reported, and the acceleration of gain or income to a year earlier than the year in which the gain or income would otherwise be reported, if such gain or income is offset by a net operating loss or net capital loss that would otherwise expire unused. The elimination of federal income tax liability does not include the deferral of gain with respect to the stock subject to the option that would be recognized if such stock were sold on a measurement date.

(f) *Substantial amount of federal income tax liability.* The determination of what constitutes a substantial amount of federal income tax liability is based on all the facts and circumstances, including the absolute amount of the elimination, the amount of the elimination relative to overall tax liability, and the timing of items of income and deductions, taking into account present value concepts.

(g) *Reasonable certainty of exercise*—(1) *Generally.* The determination of whether, as of a measurement date, an option is reasonably certain to be exercised is based on all the facts and circumstances, including:

(i) *Purchase price.* The purchase price of the option in absolute terms and in relation to the fair market value of the stock or the exercise price of the option;

(ii) *In-the-money option.* Whether and to what extent the option is in-the-money on the measurement date;

(iii) *Not in-the-money option.* If the option is not in-the-money on the measurement date, the amount or percentage by which the exercise price of the option is greater than (or in the case of an option to sell stock, is less than) the fair market value of the underlying stock;

(iv) *Exercise price.* Whether the exercise price of the option is fixed or fluctuates depending on the earnings, value, or other indication of economic performance of the issuing corporation;

(v) *Time of exercise.* The time at which, or the period of time during which, the option can be exercised;

(vi) *Related or sequential options.* Whether the option is one in a series of related or sequential options;

(vii) *Stockholder rights.* The existence of an arrangement (either within the option agreement or in a related agreement) that, directly or indirectly, affords managerial or economic rights in the issuing corporation that ordinarily would be afforded to owners of the issuing corporation's stock (e.g., voting rights, dividend rights, or rights to proceeds on liquidation) to the person who would acquire the stock upon exercise of the option or a person related to such person. For this purpose, managerial or economic rights in the issuing corporation possessed because of actual stock ownership in the issuing corporation are not taken into account;

(viii) *Restrictive covenants.* The existence of restrictive covenants or similar arrangements (either within the option agreement or in a related agreement) that, directly or indirectly, prevent or limit the ability of the issuing corporation to undertake certain activities while the option is outstanding (e.g., covenants limiting the payment of dividends or borrowing of funds);

(ix) *Intention to alter value.* Whether it was intended that through a change in the capital structure of the issuing corporation or a transfer of assets to or from the issuing corporation (other than regular, ordinary dividends) or by any other means, the fair market value of the stock of the issuing corporation would be altered for a principal purpose of increasing the likelihood that the option would be exercised; and

(x) *Contingencies.* Any contingency (other than the mere passage of time) to which the exercise of the option is subject (e.g., a public offering of the issuing corporation's stock or reaching a certain level of earnings).

(2) *Cash settlement options, phantom stock, stock appreciation rights, or similar interests.* A cash settlement option, phantom stock, stock appreciation right, or similar interest is treated as reasonably certain to be exercised if it is reasonably certain that the option will have value at some time during the period in which the option may be exercised.

(3) *Safe harbors*—(i) *Options to acquire stock.* Except as provided in paragraph (g)(3)(iv) of this section, an option to acquire stock is not considered reasonably certain, as of a measurement date, to be exercised if—

(A) The option may be exercised no more than 24 months after the measurement date and the exercise price is equal to or greater than 90 percent of the fair market value of the underlying stock on the measurement date; or

(B) The terms of the option provide that the exercise price of the option is equal to or greater than the fair market value of the underlying stock on the exercise date.

(ii) *Options to sell stock.* Except as provided in paragraph (g)(3)(iv) of this section, an option to sell stock is not considered reasonably certain, as of a measurement date, to be exercised if—

(A) The option may be exercised no more than 24 months after the measurement date and the exercise price is equal to or less than 110 percent of the fair market value of the underlying stock on the measurement date; or

(B) The terms of the option provide that the exercise price of the option is equal to or less than the fair market value of the underlying stock on the exercise date.

(iii) *Options exercisable at fair market value.* For purposes of paragraphs (g)(3)(i)(B) and (g)(3)(ii)(B) of this

section, an option whose exercise price is determined by a formula is considered to have an exercise price equal to the fair market value of the underlying stock on the exercise date if the formula is agreed upon by the parties when the option is issued in a bona fide attempt to arrive at fair market value on the exercise date and is to be applied based upon the facts in existence on the exercise date.

(iv) *Exceptions.* The safe harbors of this paragraph (g)(3) do not apply if—

(A) An arrangement exists that provides the holder or a related party with stockholder rights described in paragraph (g)(1)(vii) of this section (except for rights arising upon a default under the option or a related agreement);

(B) It is intended that through a change in the capital structure of the issuing corporation or a transfer of assets to or from the issuing corporation (other than regular, ordinary dividends) or by any other means, the fair market value of the stock of the issuing corporation will be altered for a principal purpose of increasing the likelihood that the option will be exercised; or

(C) The option is one in a series of related or sequential options, unless all such options satisfy paragraph (g)(3) (i) or (ii) of this section.

(v) *Failure to satisfy safe harbor.* Failure of an option to satisfy one of the safe harbors of this paragraph (g)(3) does not affect the determination of whether an option is treated as reasonably certain to be exercised.

(h) *Examples.* The provisions of this section may be illustrated by the following examples. These examples assume that the measurement dates set forth in the examples are the only measurement dates that have taken place or will take place.

Example 1. (i) P is the common parent of a consolidated group, consisting of P, S, and T. P owns all 100 shares of S's only class of stock, which is voting common stock. P also owns all the stock of T. On June 30, 1992, when the fair market value of the S stock is $40 per share, P sells to U, an unrelated corporation, an option to acquire 40 shares of the S stock that P owns at an exercise price of $30 per share, exercisable at any time within 3 years after the granting of the option. P and T have had substantial losses for 5 consecutive years while S has had substantial income during the same period. Because P, S, and T have been filing consolidated returns, P and T have been able to use all of their losses to offset S's income. It is anticipated that P, S, and T will continue their earnings histories for several more years. On July 31, 1992, S declares and pays a dividend of $1 per share to P.

(ii) If P, S, and T continue to file consolidated returns after June 30, 1992, it could reasonably be anticipated that P, S, and T would eliminate a substantial amount of federal income tax liability by using P's and T's future losses to offset S's income in consolidated returns. Furthermore, based on the difference between the exercise price of the option and the fair market value of the S stock, it is reasonably certain, on June 30, 1992, a measurement date, that the option will be exercised. Therefore, the option held by U is treated as exercised. As a result, for purposes of determining whether P and S are affiliated, P is treated as owning only 60 percent of the value of outstanding shares of S stock and U is treated as owning the remaining 40 percent. P is still treated as owning 100 percent of the voting power. Because members of the P group are no longer treated as owning stock possessing 80 percent of the total value of the S stock as of June 30, 1992, S is no longer a member of the P group. Additionally, P is not entitled to a 100 percent dividends received deduction under section 243(a)(3) because P and S are also treated as not affiliated for purposes of section 243. P is only entitled to an 80 percent dividends received deduction under section 243(c).

Example 2. (i) The facts are the same as in *Example 1* except that rather than P issuing an option to acquire 40 shares of S stock to U on June 30, 1992, P, pursuant to a plan, issues an option to U1 on July 1, 1992, to acquire 20 shares of S stock, and issues an option to U2 on July 2, 1992, to acquire 20 shares of S stock.

(ii) Because the options issued to U1 and U2 were issued pursuant to a plan, July 2, 1992, constitutes a measurement data for both options. Therefore, both options are aggregated in determining whether the issuance of the options, rather than the sale of the S stock, would result in the elimination of a substantial amount of federal income tax liability. Accordingly, as in *Example 1*, because the continued affiliation of P, S, and T could reasonably be anticipated to result in the elimination of a substantial amount of federal income tax liability and the options are reasonably certain to be exercised, the options are treated as exercised for purposes of determining whether P and S are affiliated, and P and S are no longer affiliated as of July 2, 1992.

Example 3. (i) The facts are the same as in *Example 1* except that the option gives U the right to acquire all 100 shares of the S stock, and U is the common parent of a consolidated group. The U group has had substantial losses for 5 consecutive years and it is anticipated that the U group will continue its earnings history for several more years.

(ii) If P sold the S stock, in lieu of the option, to U, S would become a member of the U group. Because the U group files consolidated returns, if P sold the S stock to U, U would be able to use its future losses to offset future income of S. When viewing the transaction from the effect on all parties, the sale of the option, in lieu of the underlying S stock, does not result in the elimination of federal income tax liability because S's income would be offset by the losses of members of either the P or U group. Accordingly, the option is disregarded and S remains a member of the P group.

Example 4. (i) P is the common parent of a consolidated group, consisting of P and S. P owns 90 of the 100 outstanding shares of S's only class of stock, which is voting common stock, and U, an unrelated corporation, owns the remaining 10 shares. On August 31, 1992, when the fair market value of the S stock is $100 per share, P sells a call option to U that entitles U to purchase 20 shares of S stock from P, at any time before August 31, 1993, at an exercise price of $115 per share. The call option does not provide U with any voting rights, dividend rights, or any other managerial or economic rights ordinarily afforded to owners of the S stock. There is no intention on August 31, 1992, to alter the value of S to increase the likelihood of the exercise of the call option.

(ii) Because the exercise price of the call option is equal to or greater than 90 percent of the fair market value of the S stock on August 31, 1992, a measurement date, the option may be exercised no more than 24 months after the measurement date, and none of the items described in paragraph (g)(3)(iv) of this section that preclude application of the safe harbor are present, the safe harbor of paragraph (g)(3)(i) of this section applies and the call option is treated as if it is not reasonably certain to be exercised. Therefore, regardless of whether the continued affiliation of P and S would result in the elimination of a substantial amount of federal income tax liability, the call option is disregarded in determining whether S remains a member of the P group.

Example 5. (i) The facts are the same as in *Example 4* except that the call option gives U the right to vote similar to that of a shareholder.

(ii) Under paragraph (g)(3)(iv) of this section, the safe harbor of paragraph (g)(3)(i) of this section does not apply because the call option entitles U to voting rights equivalent to that of a shareholder. Accordingly, all of the facts and circumstances surrounding the sale of the call option must be taken into consideration in determining whether it is reasonably certain that the call option will be exercised.

Example 6. (i) In 1992, two unrelated corporations, X and Y, decide to engage jointly in a new business venture. To accomplish this purpose, X organizes a new corporation, S, on September 30, 1992. X acquires 100 shares of the voting common stock of S, which are the only shares of S stock outstanding. Y acquires a debenture of S which is convertible, on September 30, 1995, into 100 shares of S common stock. If the conversion right is not exercised, X will have the right, on September 30, 1995, to put 50 shares of its S stock to Y in exchange for 50 percent of the debenture held by Y. The likelihood of the success of the venture is uncertain. It is anticipated that S will generate substantial losses in its early years of operation. X expects to have substantial taxable income during the three years following the organization of S.

(ii) Under the terms of this arrangement, it is reasonably certain on September 30, 1992, a measurement date, that on September 30, 1995, either through Y's exercise of its

conversion right or X's right to put S stock to Y, that Y will own 50 percent of the S stock. Additionally, it could reasonably be anticipated, on September 30, 1992, a measurement date, that the affiliation of X and S would result in the elimination of a substantial amount of federal income tax liability. Accordingly, for purposes of determining whether X and S are affiliated, X is treated as owning only 50 percent of the value of the S stock as of September 30, 1992, a measurement date, and S is not a member of the X affiliated group.

Example 7. (i) The facts are the same as in *Example 6* except that rather than acquiring 100 percent of the S stock and the right to put S stock to Y, X acquires only 80 percent of the S stock, while S, rather than acquiring a convertible debenture, acquires 20 percent of the S stock, and an option to acquire an additional 30 percent of the S stock. The terms of the option are such that the option will only be exercised if the new business venture succeeds.

(ii) In contrast to *Example 6*, because of the true business risks involved in the start-up of S and whether the business venture will ultimately succeed, along with the fact that X does not have an option to put S stock to Y, it is not reasonably certain on September 30, 1992, a measurement date, that the option will be exercised and that X will only own 50 percent of the S stock on September 30, 1995. Accordingly, the option is disregarded in determining whether S is a member of the X group.

(i) *Effective date.* This section applies, generally, to options with a measurement date on or after February 28, 1992. This section does not apply to options issued prior to February 28, 1992, which have a measurement date on or after February 28, 1992, if the measurement date for the option occurs solely because of an adjustment in the terms of the option pursuant to the terms of the option as it existed on February 28, 1992. Paragraph (b)(2)(iv) of this section applies to stock outstanding on or after February 28, 1992.

Shirley D. Peterson,

Commissioner of Internal Revenue,

Approved: November 13, 1992.

Fred T. Goldberg, Jr.,

Assistant Secretary of the Treasury.

RIN 1545-AP28

Income From Discharge of Indebtedness—Acquisition of Indebtedness by Person Related to the Debtor

AGENCY: Internal Revenue Service, Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final income tax regulations under section 108(e)(4) of the Internal Revenue Code of 1986. These regulations provide rules concerning the acquisition of outstanding indebtedness by a person related to the debtor from a person who is not related to the debtor. These regulations provide that the acquisition of outstanding indebtedness by a person related to the debtor from a person who is not related to the debtor results in the realization by the debtor of income from discharge of indebtedness (to the extent required by section 61(a)(12) and section 108). This rule also applies to transactions in which a holder of outstanding indebtedness becomes related to the debtor, if the holder acquired the indebtedness in anticipation of becoming related to the debtor.

DATES: The regulations are effective on December 28, 1992 and apply to direct or indirect acquisitions of indebtedness occurring on or after March 21, 1991.

FOR FURTHER INFORMATION CONTACT: Victor L. Penico at (202) 622-7750 or Sharon L. Hall at (202) 622-4930 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

On March 22, 1991, the Internal Revenue Service published a notice of proposed rulemaking in the **Federal Register** (56 FR 12135) regarding the tax treatment of the acquisition of indebtedness by a person related to the debtor under section 108(e)(4). The preamble to that notice contains an explanation of the proposed rules. A public hearing was held on June 3, 1991. After consideration of the public comments regarding the proposed regulations, the regulations are adopted as revised by this Treasury decision.

Explanation of Statutory Provisions

Under section 61(a)(12) of the Internal Revenue Code (Code), gross income includes income from discharge of indebtedness. Section 108(e)(4)(A) provides that for purposes of determining income from discharge of indebtedness, to the extent provided in regulations prescribed by the Secretary, the acquisition of outstanding indebtedness by a person bearing a relationship to the debtor specified in section 267(b) or 707(b)(1) from a person who does not bear such a relationship to the debtor is treated as the acquisition of such indebtedness by the debtor. Thus, to the extent required by section 61(a)(12) and section 108, the debtor realizes discharge of indebtedness income upon the acquisition of its debt at a discount by a related party from an unrelated party.

Section 108(e)(4) was enacted by section 2(a) of the Bankruptcy Tax Act of 1980 (Pub. L. No. 96-589, 94 Stat. 3389, 3392) to prevent taxpayers from avoiding discharge of indebtedness through acquisitions of outstanding indebtedness by related parties. The legislative history notes that, under prior law, "a related party (such as the parent corporation of a debtor) can acquire the taxpayer's debt at a discount and effectively eliminate it as a real liability to outside interests, but the debtor thereby avoids the tax treatment which would apply if the debtor had directly retired the debt by repurchasing it." H. Rep. No. 96-833, 96th Cong., 2d Sess. 9 (1980); S. Rep. No. 96-1035, 96th Cong., 2d Sess. 10 (1980) (the Senate Report).

Public Comments

A significant number of comments were received from the public on the scope and content of the proposed regulations. The following discussion summarizes the principal comments made, as well as the changes made in the final regulations in response to those comments.

Direct and Indirect Acquisitions

Under the proposed regulations, section 108(e)(4) applies if indebtedness is acquired in a direct acquisition or an indirect acquisition. A direct acquisition occurs where a person related to the debtor acquires the indebtedness from a person unrelated to the debtor. An indirect acquisition is a transaction in which a holder of outstanding indebtedness becomes related to the debtor, if the holder acquired the indebtedness in anticipation of becoming related to the debtor.

The final regulations provide that the Service may exclude certain transactions from the definition of a direct acquisition through the issuance of subsequent published guidance. In response to comments received, the Service intends to study the extent, if any, to which a direct acquisition should not occur if the indebtedness and an ownership interest in the debtor are acquired together from the same person, and that person was related to the debtor immediately prior to the transaction.

Some commentators argued that the Secretary does not have the regulatory authority to apply section 108(e)(4) to indirect acquisitions, particularly where the holder acquires the debtor (because the holder then retains the power to

require payment of the debt). However, the Service and Treasury continue to believe that section 108(e)(4) applies to indirect acquisitions of the type covered by these regulations.

Under the proposed regulations, a holder is treated as having acquired indebtedness in anticipation of becoming related to the debtor, (1) if the holder acquired the indebtedness less than 6 months before the date the holder becomes related to the debtor or, (2), if, on the date the holder becomes related to the debtor, indebtedness of the debtor represents more than 25 percent of the fair market value of the total gross assets of the holder or of the holder group (the 25 percent test). Under the proposed regulations, a holder is presumed to have acquired indebtedness in anticipation of becoming related to the debtor if the holder acquired the indebtedness 6 months or more before the date the holder becomes related to the debtor but less than 24 months before that date (the 6 to 24 month test). This presumption is rebutted if the holder establishes that the acquisition was not made in anticipation of becoming related to the debtor.

A number of comments were received with respect to these rules. Several commentators criticized the proposed regulations for not permitting the debtor to establish that the acquisition was not made in anticipation of becoming related to the debtor under the 25 percent test. Others suggested that certain transactions should be excepted from the test. In response to these comments, the final regulations eliminate the presumptions relating to the 25 percent test and 6 to 24 month test. In those cases, the determination as to whether the acquisition was in anticipation of becoming related to the debtor will be based on the facts and circumstances of the particular case. However, if either the 25 percent test or the 6 to 24 month test is met and the debtor does not treat the transaction as an indirect acquisition, the final regulations require the debtor to disclose the circumstances of the acquisition on its income tax return (or on a qualified amended return within the meaning of § 1.6664–2(c)(3)) for the taxable year in which the debtor becomes related to the holder. This disclosure is in addition to any applicable disclosure required under section 6662, 6664 or 6694. If the debtor fails to make this disclosure in a timely manner, the holder will be presumed to have acquired the indebtedness in anticipation of becoming related to the debtor.

The final regulations also make technical changes in the mechanics of the 25 percent test and with respect to the tacking of holding periods for measuring the time elapsed from the date of the acquisition of the indebtedness until the date the holder becomes related to the debtor.

Measure of Discharge of Indebtedness Income

The proposed regulations provide that in a direct or indirect acquisition, discharge of indebtedness income is measured by reference to the fair market value of the indebtedness. Several commentators urged that the amount of discharge of indebtedness should be measured by reference to the related holder's cost of acquiring the indebtedness.

In most cases (for example, where an affiliate of the debtor buys the indebtedness for cash), the holder's cost should equal, or at least approximate, the fair market value of the indebtedness. However, disparities could potentially arise in three significant cases. One is where the related party acquires the indebtedness in exchange for its own indebtedness (a debt swap) and the issue price of the related party's indebtedness is not determined by reference to the fair market value of either instrument. Another is in an indirect acquisition, where the value of the indebtedness can change between the time the holder acquires the indebtedness and the time the holder becomes related to the debtor. The third is where the indebtedness is acquired in a nonrecognition transaction, in which case the holder's basis generally reflects the transferor's earlier cost rather than the current economic cost to the debtor group of acquiring the indebtedness.

The proponents of a cost standard argued that the treatment of an indebtedness acquired by a related person under section 108(e)(4) should mirror the treatment of an acquisition of indebtedness by the debtor itself. In the latter case, under § 1.61–12 and section 108(e)(11), the amount of income from discharge of indebtedness is generally determined by reference to the debtor's cost of acquiring the indebtedness.

As noted above, in most cases subject to section 108(e)(4), the cost and fair market value standards should produce similar results. The Service and Treasury believe that, where the two standards would differ, the correct economic measure of the cost of acquiring the debt (and, thus, of discharge of indebtedness income) is by reference to fair market value. However, the Service and Treasury have concluded that, in most circumstances, the related holder's cost of acquiring the indebtedness is a reasonable measure for determining the amount of discharge of indebtedness income. For example because discharge of indebtedness income in debt swaps by the debtor is measured by reference to the debtor's cost rather than always measured by reference to fair market value, the Service and Treasury are persuaded that the cost standard should generally apply in debt swaps by debtor affiliates. Moreover, the use of cost is significantly less burdensome because it eliminates the need to value the indebtedness

Consequently, the final regulations adopt a cost standard in computing discharge of indebtedness income for most transactions subject to section 108(e)(4). Except in certain special cases, this rule applies as long as the related holder (or a holder that becomes related to the debtor) acquires the debt "by purchase" on or less than six months before the acquisition date. For this purpose, a purchase occurs if the indebtedness in the hands of the holder is not substituted basis property within the meaning of section 7701(a)(42) (*e.g.* if the holder has a cost basis under section 1012 or a fair market value basis under section 301(d)).

Where the holder's basis is not established by purchase within the six month period, the final regulations retain the fair market value measuring standard. In that case, the holder's cost of acquiring the indebtedness provides a less reliable measure of the debtor's discharge of indebtedness, *i.e.*, that cost would be less likely to bear a reasonable relationship to the fair market value of the debt and, thus, to the economic cost to the debtor group of reacquiring its debt. It is expected that this rule will apply infrequently because of the limited scope of the indirect acquisition rules.

The final regulations reserve on the treatment of an acquisition of indebtedness in a nonrecognition transaction, such as a merger of the creditor into a subsidiary of the debtor in a reorganization under section 368(a)(1)(A). As stated in the preamble to the proposed regulations, the Treasury Department intends to issue regulations clarifying the measurement and treatment of income from discharge of indebtedness in certain nonrecognition transactions in which the debtor acquires its own indebtedness, or the creditor assumes a debtor's obligation to the creditor. It is anticipated that those regulations will also provide guidance on the amount of discharge of indebtedness income in a nonrecognition transition that constitutes a direct or indirect

acquisition of debt under section 108(e)(4).

The final regulations also provide that discharge of indebtedness income is measured by the fair market value of the indebtedness if a principal purpose of the acquisition is the avoidance of federal income tax. Such an avoidance purpose may be inferred, for example, in a transaction that shifts the discharge of indebtedness income of a domestic corporation to a foreign affiliate.

Deemed Issuance

In general, the proposed regulations treat indebtedness acquired in a direct or indirect acquisition as new indebtedness of the debtor for all purposes of the Code with an issue price equal to its fair market value. This deemed issuance creates original issue discount (OID) that is generally deductible by the debtor and includible in income by the related holder. To correlate with the revised measure of discharge of indebtedness income in a section 108(e)(4) transaction, the final regulations provide that the issue price of the new indebtedness is equal to the amount used to compute the debtor's discharge of indebtedness. As discussed above, this amount is generally the related holder's cost of acquiring the indebtedness but, in certain cases, may be the fair market value of the indebtedness.

As noted above, under the proposed regulations, the deemed issuance applies for all purposes of the Code. In the preamble to the proposed regulations, the Service invited comments on whether the deemed issuance should not apply for purposes of specific provisions of the Code. Several commentators argued that the deemed issuance should not apply for purposes of the applicable high yield discount obligation (AHYDO) rules of section 163(e)(5) and the earnings stripping rules of section 163(j).

The final regulations provide that the Commissioner may provide by Revenue Procedure or other published guidance that the indebtedness is not treated as newly issued indebtedness for purposes of designated provisions of the income tax laws. The Service and Treasury are currently of the view that providing an exception from section 163(j) (or its effective date provisions) would permit taxpayers to convert non-earnings stripping debt into earnings stripping debt, and do not contemplate providing relief for that case. The Service is studying the possibility of publishing guidance with respect to other contexts (including AHYDO) and invites comments as to where the deemed issuance results in inappropriate consequences.

Treatment of the Holder in an Indirect Acquisition

The proposed regulations treat the holder of indebtedness in an indirect acquisition as if it sold the indebtedness to an unrelated party on the day before the acquisition date for an amount of money equal to the fair market value of the indebtedness on the acquisition date (deemed sale rule).

Comments were received to the effect that the holder should not be treated as selling the indebtedness, and that the holder's basis in the indebtedness should be treated as acquisition premium that offsets the OID to be earned by the holder as a result of the deemed issuance.

By adopting cost as the measuring standard for discharge of indebtedness income for most transactions under section 108(e)(4), the final regulations have substantially diminished the underlying basis for the deemed sale rule. Even where the final regulations measure discharge of indebtedness income by reference to the fair market value of the indebtedness, the Service and Treasury have concluded, in response to the comments received, that it is appropriate not to cause the holder to recognize gain or loss, and instead to treat the holder's basis as acquisition premium that offsets the OID otherwise includible as a result of the deemed issuance.

Accordingly, the final regulations have eliminated the deemed sale rule. In addition, the final regulations provide that the related holder does not recognize any gain or loss on the deemed issuance and its adjusted basis in the indebtedness is equal to its adjusted basis immediately before the deemed issuance. The deemed issuance is treated as a purchase of the indebtedness by the related holder for purposes of sections 1272(a)(7) and 1276, enabling the holder to use any basis in excess of the new issue price as an offset against the OID of the reissued indebtedness.

Subsequent Dispositions

Under the proposed regulations, the deemed issuance rule continues to apply after the related holder disposes of the indebtedness to an unrelated holder or ceases to be related to the debtor. Under this rule, the debtor continues to deduct and the unrelated holder must include in income the OID attributable to the deemed issuance. The preamble to the proposed regulations requested comments whether a different rule should apply, *e.g.*, a rule that suspends the debtor's deduction of OID (and does not require holder inclusion) attributable to the deemed issuance until maturity.

Although one commentator partially endorsed the alternative proposal, the final regulations retain the rule of the proposed regulations. The Service and Treasury believe that a subsequent disposition of the indebtedness by a related party would not be a common business transaction. Thus, the complexity involved in the alternative proposal was not considered justified.

Under the final regulations, a special anti-abuse rule applies to certain subsequent dispositions of indebtedness by the related holder if the related holder acquired the indebtedness in exchange for its own indebtedness and the issue price of the related holder's indebtedness is not determined by reference to fair market value.

As noted above, the final regulations generally measure discharge of indebtedness income under section 108(e)(4) by reference to the holder's cost. This rule was adopted, in part, to provide parity with the treatment that would apply if the debtor acquired its own indebtedness in exchange for new indebtedness. However, in the situation outlined above, absent this special rule, the debtor group might be able to obtain better treatment than would be available if the debtor acquired its own debt in exchange for its indebtedness and then resold its acquired obligation (which, for income tax purposes, would be treated as the issuance of a new obligation). In that case, the timing of the debtor's deductions with respect to the newly issued indebtedness (stated interest or OID) would match that of the holders' income inclusion. By contrast, in the transaction outlined above, the debtor group would have the benefit of a current deduction (the related holder's loss on the disposition of the indebtedness) while the unrelated holder would generally defer its corresponding market discount income until the debt is satisfied.

Accordingly, under the anti-abuse rule, the related holder's loss is deferred until the date the debtor retires the indebtedness. Comparable treatment is also provided for less direct forms of disposition (*e.g.*, where the holder contributes the indebtedness to a subsidiary and either the subsidiary sells the debt or the former holder sells the subsidiary) that would otherwise result in a tax benefit similar to the loss.

Miscellaneous Comments

Additional comments were received from the public. The Service and Treasury were requested, among other

things, to provide a *de minimis* dollar exception to the application of section 108(e)(4), to clarify the applicability of the stock-for-debt exception to cancellation of indebtedness income, and to clarify the treatment of the acquisition by an affiliate of portions of stripped bonds. The Service and Treasury concluded that a *de minimis* exception would not be appropriate and would add undue complexity (including aggregation rules and similar provisions).

The regulations (both proposed and final) require the realization of income "to the extent required by section 61(a)(12) and section 108." They do not address the extent to which the stock-for-debt exception might apply when a person related to the debtor issues its stock in exchange for the indebtedness. The Service is currently working on guidance regarding triangular stock-for-debt exchanges within a consolidated return context.

The question regarding coupon stripping transactions should be addressed with respect to acquisitions by the debtor as well as by its affiliates. Accordingly, it is believed that such guidance should await future guidance under section 1286 generally.

Additional comments were received prior to the publication of the proposed regulations as to the scope of the relationship rules. However, the Service and Treasury believe it would be inappropriate to address the scope of section 267(b) or 707(b) solely in the context of section 108(e)(4) and, thus, those issues are not addressed in the final regulations.

Effective Dates

The proposed regulations state that the regulations are proposed to apply to direct or indirect acquisitions on or after March 21, 1991. In addition, the proposed regulations state that section 108(e)(4) is effective for any transaction after December 31, 1980, subject to the rules of section 7 of the Bankruptcy Tax Act of 1980 (Pub. L. No. 96–589, 94 Stat. 3389, 3411). Several commentators argued that the statute should not be considered effective before the effective date of regulations because the statutory language of section 108(e)(4) states that the section applies to the extent provided in regulations.

It remains the position of the Service and Treasury that section 108(e)(4) is effective from the date of its enactment. The statutory language of section 108(e)(4) is reasonably clear in its primary application. However, the final regulations clarify that taxpayers may use any reasonable method of determining the amount of discharge of indebtedness income and the treatment of correlative adjustments for acquisitions of indebtedness before March 21, 1991, if such method is applied consistently by both the debtor and related holder. In addition, pursuant to a notice being published separately in the Internal Revenue Bulletin, the Service will permit taxpayers to apply the proposed regulations to acquisitions occurring on or after March 21, 1991 and before December 28, 1992.

Special Analyses

These rules are not major rules as defined in Executive Order 12291. Therefore, a Regulatory Impact Analysis is not required. It has also been determined that section 553(b) of the Administrative Procedures Act (5 U.S.C. chapter 5) and the Regulatory Flexibility Act (5 U.S.C. chapter 6) do not apply to any part of these regulations other than § 1.108–2(g). Furthermore, the rules of § 1.108–2(g) generally apply only to extraordinary transactions, primarily by larger issuers of indebtedness and their affiliates. Thus, they will generally not have a significant impact on a substantial number of small entities, nor will they significantly alter the reporting or recordkeeping duties of small entities. Therefore, although this Treasury decision was preceded by a notice of proposed rulemaking that solicited public comments, a final Regulatory Flexibility Analysis is not required. Pursuant to section 7805(f)(1) of the Internal Revenue Code, the notice of proposed rulemaking for the regulations was submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on their impact on small businesses.

Drafting Information

The principal authors of these regulations are Victor L. Penico of the Office of Assistant Chief Counsel (Corporate), Internal Revenue Service, and Sharon L. Hall of the Office of Assistant Chief Counsel (Income Tax and Accounting), Internal Revenue Service. Other personnel from the Internal Revenue Service and the Treasury Department participated in their development.

Income taxes, Reporting and recordkeeping requirements.

Adoption of Final Regulations

Accordingly 26 CFR part 1 is amended as follows:

PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

Paragraph 1. The authority citation for part 1 is amended by adding the following citation:

Authority: 26 U.S.C. 7805 * * * Section 1.108–2 also issued under 26 U.S.C. 108. * * *

Par. 2. Section 1.108–2 is added to read as follows:

§ 1.108–2 Acquisition of indebtedness by a person related to the debtor.

(a) *General rules.* The acquisition of outstanding indebtedness by a person related to the debtor from a person who is not related to the debtor results in the realization by the debtor of income from discharge of indebtedness (to the extent required by section 61(a)(12) and section 108) in an amount determined under paragraph (f) of this section. Income realized pursuant to the preceding sentence is excludible from gross income to the extent provided in section 108(a). The rules of this paragraph apply if indebtedness is acquired directly by a person related to the debtor in a direct acquisition (as defined in paragraph (b) of this section) or if a holder of indebtedness becomes related to the debtor in an indirect acquisition (as defined in paragraph (c) of this section).

(b) *Direct acquisition.* An acquisition of outstanding indebtedness is a direct acquisition under this section if a person related to the debtor (or a person who becomes related to the debtor on the date the indebtedness is acquired) acquires the indebtedness from a person who is not related to the debtor. Notwithstanding the foregoing, the Commissioner may provide by Revenue Procedure or other published guidance that certain acquisitions of indebtedness described in the preceding sentence are not direct acquisitions for purposes of this section.

(c) *Indirect acquisition*—(1) *In general.* An indirect acquisition is a transaction in which a holder of outstanding indebtedness becomes related to the debtor, if the holder acquired the indebtedness in anticipation of becoming related to the debtor.

(2) *Proof of anticipation of relationship.* In determining whether indebtedness was acquired by a holder in anticipation of becoming related to the debtor, all relevant facts and circumstances will be considered. Such facts and circumstances include, but are not limited to, the intent of the parties at the time of the acquisition, the nature of any contacts between the parties (or

their respective affiliates) before the acquisition, the period of time for which the holder held the indebtedness, and the significance of the indebtedness in proportion to the total assets of the holder group (as defined in paragraph (c)(5) of this section). For example, if a holder acquired the indebtedness in the ordinary course of its portfolio investment activities and the holder's acquisition of the indebtedness preceded any discussions concerning the acquisition of the holder by the debtor (or by a person related to the debtor) or the acquisition of the debtor by the holder (or by a person related to the holder), as the case may be, these facts, taken together, would ordinarily establish that the holder did not acquire the indebtedness in anticipation of becoming related to the debtor. The absence of discussions between the debtor and the holder (or their respective affiliates), however, does not by itself establish that the holder did not acquire the indebtedness in anticipation of becoming related to the debtor (if, for example, the facts and circumstances show that the holder was considering a potential acquisition of or by the debtor, or the relationship is created within a relatively short period of time of the acquisition, or the indebtedness constitutes a disproportionate portion of the holder group's assets).

(3) *Indebtedness acquired within 6 months of becoming related.* Notwithstanding any other provision of this paragraph (c), a holder of indebtedness is treated as having acquired the indebtedness in anticipation of becoming related to the debtor if the holder acquired the indebtedness less than 6 months before the date the holder becomes related to the debtor.

(4) *Disclosure of potential indirect acquisition*—(i) *In general.* If a holder of outstanding indebtedness becomes related to the debtor under the circumstances described in paragraph (c)(4)(ii) or (iii) of this section, the debtor is required to attach the statement described in paragraph (c)(4)(iv) of this section to its tax return (or to a qualified amended return within the meaning of § 1.6664–2(c)(3)) for the taxable year in which the debtor becomes related to the holder, unless the debtor reports its income on the basis that the holder acquired the indebtedness in anticipation of becoming related to the debtor. Disclosure under this paragraph (c)(4) is in addition to, and is not in substitution for, any disclosure required to be made under section 6662, 6664 or 6694.

(ii) *Indebtedness represents more than 25 percent of holder group's assets*—(A) *In general.* Disclosure under this paragraph (c)(4) is required if, on the date the holder becomes related to the debtor, indebtedness of the debtor represents more than 25 percent of the fair market value of the total gross assets of the holder group (as defined in paragraph (c)(5) of this section).

(B) *Determination of total gross assets.* In determining the total gross assets of the holder group, total gross assets do not include any cash, cash item, marketable stock or security, short-term indebtedness, option, futures contract, notional principal contract, or similar item (other than indebtedness of the debtor), nor do total gross assets include any asset in which the holder has substantially reduced its risk of loss. In addition, total gross assets do not include any ownership interest in or indebtedness of a member of the holder group.

(iii) *Indebtedness acquired within 6 to 24 months of becoming related.* Disclosure under this paragraph (c)(4) is required if the holder acquired the indebtedness 6 months or more before the date the holder becomes related to the debtor, but less than 24 months before that date.

(iv) *Contents of statement.* A statement under this paragraph (c)(4) must include the following—

(A) A caption identifying the statement as disclosure under § 1.108–2(c);

(B) An identification of the indebtedness with respect to which disclosure is made;

(C) The amount of such indebtedness and the amount of income from discharge of indebtedness is section 108(e)(4) were to apply;

(D) Whether paragraph (c)(4)(ii) or (iii) of this section applies to the transaction; and

(E) A statement describing the facts and circumstances supporting the debtor's position that the holder did not acquire the indebtedness in anticipation of becoming related to the debtor.

(v) *Failure to disclose.* In addition to any other penalties that may apply, if a debtor fails to provide a statement required by this paragraph (c)(4), the holder is presumed to have acquired the indebtedness in anticipation of becoming related to the debtor unless the facts and circumstances clearly established that the holder did not acquire the indebtedness in anticipation of becoming related to the debtor.

(5) *Holder group.* For purposes of this paragraph (c), the holder group consists of the holder of the indebtedness and all persons who are both—

(i) Related to the holder before the holder becomes related to the debtor; and

(ii) Related to the debtor after the holder becomes related to the debtor.

(6) *Holding period*—(i) *Suspensions.* The running of the holding periods set forth in paragraphs (c)(3) and (c)(4)(iii) of this section is suspended during any period in which the holder or any person related to the holder is protected (directly or indirectly) against risk of loss by an option, a short sale, or any other device or transaction.

(ii) *Tacking.* For purposes of paragraphs (c)(3) and (c)(4)(iii) of this section, the period for which a holder held the debtor's indebtedness includes—

(A) The period for which the indebtedness was held by a corporation to whose attributes the holder succeeded pursuant to section 381; and

(B) The period (ending on the date on which the holder becomes related to the debtor) for which the indebtedness was held continuously by members of the holder group (as defined in paragraph (c)(5) of this section).

(d) *Definitions*—(1) *Acquisition date.* For purposes of this section, the acquisition date is the date on which a direct acquisition of indebtedness or an indirect acquisition of indebtedness occurs.

(2) *Relationship.* For purposes of this section, persons are considered related if they are related within the meaning of sections 267(b) or 707(b)(1). However—

(i) Sections 267(b) and 707(b)(1) are applied as if section 267(c)(4) provided that the family of an individual consists of the individual's spouse, the individual's children, grandchildren, and parents, and any spouse of the individual's children or grandchildren; and

(ii) Two entities that are treated as a single employer under subsection (b) or (c) of section 414 are treated as having a relationship to each other that is described in section 267(b).

(e) *Exceptions*—(1) *Indebtedness retired within one year.* This section does not apply to a direct or indirect acquisition of indebtedness with a stated maturity date on or before the date that is one year after the acquisition date, if the indebtedness is, in fact, retired on or before its stated maturity date.

(2) *Acquisitions by securities dealers.* (i) This section does not apply to a direct acquisition or an indirect acquisition of indebtedness by a dealer that acquires and disposes of such indebtedness in the ordinary course of its business of dealing in securities if—

(A) The dealer accounts for the indebtedness as a security held primarily for sale to customers in the ordinary course of business;

(B) The dealer disposes of the indebtedness (or it matures while held by the dealer) within a period consistent with the holding of the indebtedness for sale to customers in the ordinary course of business, taking into account the terms of the indebtedness and the conditions and practices prevailing in the markets for similar indebtedness during the period in which it is held; and

(C) The dealer does not sell or otherwise transfer the indebtedness to a person related to the debtor (other than in a sale to a dealer that in turn meets the requirements of this paragraph (e)(2)).

(ii) A dealer will continue to satisfy the conditions of this paragraph (e)(2) with respect to indebtedness that is exchanged for successor indebtedness in a transaction in which unrelated holders also exchange indebtedness of the same issue, provided that the conditions of this paragraph (e)(2) are met with respect to the successor indebtedness.

(iii) For purposes of this paragraph (e)(2), if the period consistent with the holding of indebtedness for sale to customers in the ordinary course of business is 30 days or less, the dealer is considered to dispose of indebtedness within that period if the aggregate principal amount of indebtedness of that issue sold by the dealer to customers in the ordinary course of business (or that mature and are paid while held by the dealer) in the calendar month following the month in which the indebtedness is acquired equals or exceeds the aggregate principal amount of indebtedness of that issue held in the dealer's inventory at the close of the month in which the indebtedness is acquired. If the period consistent with the holding of indebtedness for sale to customers in the ordinary course of business is greater than 30 days, the dealer is considered to dispose of the indebtedness within that period if the aggregate principal amount of indebtedness of that issue sold by the dealer to customers in the ordinary course of business (or that mature and are paid while held by the dealer) within that period equals or exceeds the aggregate principal amount of indebtedness of that issue held in inventory at the close of the day on which the indebtedness was acquired.

(f) *Amount of discharge of indebtedness income realized*—(1) *Holder acquired the indebtedness by purchase on or less than six months before the acquisition date.* Except as otherwise provided in this paragraph (f), the amount of discharge of indebtedness income realized under paragraph (a) of this section is measured by reference to the adjusted basis of the related holder (or of the holder that becomes related to the debtor) in the indebtedness on the acquisition date if the holder acquired the indebtedness by purchase on or less than six months before the acquisition date. For purposes of this paragraph (f), indebtedness is acquired "by purchase" if the indebtedness in the hands of the holder is not substituted basis property within the meaning of section 7701(a)(42). However, indebtedness is also considered acquired by purchase within six months before the acquisition date if the holder acquired the indebtedness as transferred basis property (within the meaning of section 7701(a)(43)) from a person who acquired the indebtedness by purchase on or less than six months before the acquisition date.

(2) *Holder did not acquire the indebtedness by purchase on or less than six months before the acquisition date.* Except as otherwise provided in this paragraph (f), the amount of discharge of indebtedness income realized under paragraph (a) of this section is measured by reference to the fair market value of the indebtedness on the acquisition date if the holder (or the transferor to the holder in a transferred basis transaction) did not acquire the indebtedness by purchase on or less than six months before the acquisition date.

(3) *Acquisitions of indebtedness in nonrecognition transactions.* [Reserved]

(4) *Avoidance transactions.* The amount of discharge of indebtedness income realized by the debtor under paragraph (a) of this section is measured by reference to the fair market value of the indebtedness on the acquisition date if the indebtedness is acquired in a direct or an indirect acquisition in which a principal purpose for the acquisition is the avoidance of federal income tax.

(g) *Correlative adjustments*—(1) *Deemed issuance.* For income tax purposes, if a debtor realizes income from discharge of its indebtedness in a direct or an indirect acquisition under this section (whether or not the income is excludible under section 108(a)), the debtor's indebtedness is treated as new indebtedness issued by the debtor to the related holder on the acquisition date (the deemed issuance). The new indebtedness is deemed issued with an issue price equal to the amount used under paragraph (f) of this section to compute the amount realized by the debtor under paragraph (a) of this section (*i.e.*, either the holder's adjusted basis or the fair market value of the indebtedness, as the case may be). Under section 1273(a)(1), the excess of the stated redemption price at maturity (as defined in section 1273(a)(2)) of the indebtedness over its issue price is original issue discount (OID) which, to the extent provided in sections 163 and 1272, is deductible by the debtor and includible in the gross income of the related holder. Notwithstanding the foregoing, the Commissioner may provide by Revenue Procedure or other published guidance that the indebtedness is not treated as newly issued indebtedness for purposes of designated provisions of the income tax laws.

(2) *Treatment of related holder.* The related holder does not recognize any gain or loss on the deemed issuance described in paragraph (g)(1) of this section. The related holder's adjusted basis in the indebtedness remains the same as it was immediately before the deemed issuance. The deemed issuance is treated as a purchase of the indebtedness by the related holder for purposes of section 1272(a)(7) (pertaining to reduction of original issue discount where a subsequent holder pays acquisition premium) and section 1276 (pertaining to acquisitions of debt at a market discount).

(3) *Loss deferral on disposition of indebtedness acquired in certain exchanges.* (i) Any loss otherwise allowable to a related holder on the disposition at any time of indebtedness acquired in a direct or indirect acquisition (whether or not any discharge of indebtedness income was realized under paragraph (a) of this section) is deferred until the date the debtor retires the indebtedness if—

(A) The related holder acquired the debtor's indebtedness in exchange for its own indebtedness; and

(B) The issue price of the related holder's indebtedness was not determined by reference to its fair market value (*e.g.*, the issue price was determined under section 1273(b)(4) or 1274(a) or any other provision of applicable law).

(ii) Any comparable tax benefit that would otherwise be available to the holder, debtor, or any person related to either, in any other transaction that directly or indirectly results in the disposition of the indebtedness is also deferred until the date the debtor retires the indebtedness.

(4) *Examples.* The following examples illustrate the application of this paragraph (g). In each example, all taxpayers are calendar-year taxpayers, no taxpayer is insolvent or under the

jurisdiction of a court in a title 11 case and no indebtedness is qualified farm indebtedness described in section 108(g).

Example 1. (i) P, a domestic corporation, owns 70 percent of the single class of stock of S, a domestic corporation. S has outstanding indebtedness that has an issue price of $10,000,000 and provides for monthly interest payments of $80,000 payable at the end of each month and a payment at maturity of $10,000,000. The indebtedness has a stated maturity date of December 31, 1994. On January 1, 1992, P purchases S's indebtedness from I, an individual not related to S within the meaning of paragraph (d)(2) of this section, for cash in the amount of $9,000,000. S repays the indebtedness in full at maturity.

(ii) Under section 61(a)(12), section 108(e)(4), and paragraphs (a) and (f) of this section, S realizes $1,000,000 of income from discharge of indebtedness on January 1, 1992.

(iii) Under paragraph (g)(1) of this section, the indebtedness is treated as issued to P on January 1, 1992, with an issue price of $9,000,000. Under section 1273(a), the $1,000,000 excess of the stated redemption price at maturity of the indebtedness ($10,000,000) over its issue price ($9,000,000) is original issue discount, which is includible in gross income by P and deductible by S over the remaining term of the indebtedness under sections 163(e) and 1272(a).

(iv) Accordingly, S deducts and P includes in income original issue discount, in addition to stated interest, as follows: in 1992, $289,144.88; in 1993, $331,286.06; and in 1994, $379,569.06.

Example 2. The facts are the same as in *Example 1*, except that on January 1, 1992, P sells S's indebtedness to J, who is not related to S within the meaning of paragraph (d)(2) of this section, for $9,400,000 in cash. J holds S's indebtedness to maturity. On January 1, 1993, P's adjusted basis in S's indebtedness is $9,289,144.88. Accordingly, P realizes gain in the amount of $110,855.12 upon the disposition. S and J continue to deduct and include the original issue discount on the indebtedness in accordance with *Example 1*. The amount of original issue discount includible by J is reduced by the $110,855.12 acquisition premium as provided in section 1272(a)(7).

Example 3. The facts are the same as in *Example 1*, except that on February 1, 1992 (one month after P purchased S's indebtedness), S retires the indebtedness for an amount of cash equal to the fair market value of the indebtedness. Assume that the fair market value of the indebtedness is $9,022,621.41, which in this case equals the issue price of indebtedness determined under paragraph (g)(1) of this section ($9,000,000) plus the accrued original issue discount through February 1 ($22,621.41). Section 1.61–12(c)(3) provides that if indebtedness is repurchased for a price that is exceeded by the issue price of the indebtedness plus the amount of discount already deducted, the excess is income from discharge of indebtedness. Therefore, S does not realize income from discharge of indebtedness. The result would be the same if P had contributed the indebtedness to the capital of S. Under section 108(e)(6), S would be treated as having satisfied the indebtedness with an amount of money equal to P's adjusted basis and, under section 1272(d)(2), P's adjusted basis is equal to $9,022,621.41.

Example 4. (i) P, a domestic corporation, owns 70 percent of the single class of stock of S, a domestic corporation. On January 1, 1986, P issued indebtedness that has an issue price of $5,000,000 and provides for no stated interest payments and a payment at maturity of $10,000,000. The indebtedness has a stated maturity date of December 31, 1995. On January 1, 1992, S purchases P's indebtedness from K, a partnership not related to P within the meaning of paragraph (d)(2) of this section, for cash in the amount of $6,000,000. The sum of the debt's issue price and previously deducted original issue discount is $7,578,582.83. P repays the indebtedness in full at maturity.

(ii) Under section 61(a)(12), section 108(e)(4), and paragraphs (a) and (f) of this section, P realizes $1,578,582.83 in income from discharge of indebtedness ($7,578,582.83 minus $6,000,000) on January 1, 1992.

(iii) Under paragraph (g)(1) of this section, the indebtedness is treated as issued to S on January 1, 1992, with an issue price of $6,000,000. Under section 1273(a), the $4,000,000 excess of the stated redemption price at maturity of the indebtedness ($10,000,000) over its issue price ($6,000,000) is orignial issue discount, which is includible in gross income by S and deductible by P over the remaining term of the indebtedness under sections 163(e) and 1272(a).

(iv) Accordingly, P deducts and S includes in income original issue discount as follows: in 1992, $817,316.20; in 1993, $928,650.49; in 1994, $1,055,150.67; and in 1995, $1,198,882.64.

(h) *Effective date.* This section applies to any transaction described in paragraph (a) and in either paragraph (b) or (c) of this section with an acquisition date on or after March 21, 1991. Although this section does not apply to direct or indirect acquisitions occurring before March 21, 1991, section 108(e)(4) is effective for any transaction after December 31, 1980, subject to the rules of section 7 of the Bankruptcy Tax Act of 1980 (Pub. L. 96–589, 94 Stat. 3389, 3411). Taxpayers may use any reasonable method of determining the amount of discharge of indebtedness income realized and the treatment of correlative adjustments under section 108(e)(4) for acquisitions of indebtedness before March 21, 1991, if such method is applied consistently by both the debtor and related holder.

Michael P. Dolan,

Acting Commissioner of Internal Revenue

Approved: November 16, 1992.

Treatment of Certain Stripped Bonds and Stripped Coupons

AGENCY: Internal Revenue Service, Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final income tax regulations that apply to taxpayers holding stripped bonds and stripped coupons under section 1286 of the Internal Revenue Code. The regulations are needed to provide guidance on the treatment of original issue discount (OID) that arises under section 1286(a) of the Internal Revenue Code. This guidance is intended to simplify and clarify the tax treatment of certain stripped bonds and stripped coupons.

EFFECTIVE DATE: These regulations are effective August 8, 1991.

FOR FURTHER INFORMATION CONTACT: Mark S. Smith, telephone (202) 622–3920 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

Temporary regulations (T.D. 8358) on the tax treatment of certain stripped bonds and stripped coupons were published in the **Federal Register** on August 13, 1991 (56 FR 38339). The text of these temporary regulations also served as the comment document for a notice of proposed rulemaking (the proposed regulations) (56 FR 38398). No public hearing on these regulations was requested or held, and no written comments were received. Accordingly, the temporary regulations are adopted as revised by this Treasury decision.

Explanation of Provisions

Section 1286(a) of the Internal Revenue Code (Code) provides that a stripped bond or stripped coupon is treated by the purchaser as a bond originally issued on the purchase date and having OID equal to the excess of (1) the stated redemption price at

maturity (or, in the case of a coupon, the amount payable on the due date of the coupon), over (2) the bond's or coupon's ratable share of the purchase price. Section 1273(a)(3) of the Code provides that if a debt instrument has only a *de minimis* amount of OID, then the OID shall be treated as zero. Section 1.1286–1(a) of the final regulations provides that the *de minimis* rule applies to stripped bonds and stripped coupons.

Section 1.1286–1(b) of the final regulations, which adopts the provisions of § 1.1286–1T(b) without change, authorizes the Internal Revenue Service to publish guidance in the Internal Revenue Bulletin (see § 601.601(d)(2)(ii)(*b*) of the Statement of Procedural Rules) treating certain stripped bonds as market discount bonds under section 1278, provided that certain criteria are met. This authority was exercised in Rev. Proc. 91–49, 1991–2 C.B. 777, which provides simplified tax treatment for certain mortgages that are stripped bonds.

The extent to which this Treasury decision revises § 1.1286–1T(a) is discussed below.

Weighted Average Maturity Rule

Section 1.1286–1(a) of the final regulations treats as *de minimis* any OID determined under Code section 1286(a) with respect to the purchase of a stripped bond or stripped coupon, if the OID "is less than the amount computed under subparagraphs (A) and (B) of section 1273(a)(3) and the regulations thereunder." Code section 1273(a)(3) provides that this amount is ¼ of 1 percent of the stated redemption price at maturity, multiplied by the number of complete years to maturity. However, in the case of an installment obligation, the multiplier is the debt instrument's weighted average maturity. A special safe harbor rule also is available for certain installment obligations.

Section 1.1286–1T(a) provided that for purposes of the computation under section 1273(a)(3), the number of complete years to maturity is the number of full years from the date the stripped bond or stripped coupon is purchased to final maturity. This provision was intended not to override the reference in § 1.1286–1T(a) to "section 1273(a)(3) and the regulations thereunder," but, simply, to provide that the number of complete years to maturity is measured from the date the stripped bond or stripped coupon is purchased. This provision has been clarified to remove any arguable ambiguity as to the required use of a weighted average maturity in testing for *de minimis* OID.

Treatment of OID on Tax-Exempt Obligations

The final regulations also contain a provision that prevents the *de minimis* rule from causing any tax-exempt portion of OID to become taxable. Under section 1288, the holder of a tax-exempt obligation generally increases its basis in the obligation in a manner designed to prevent tax on accrued OID. Section 1.1286–1(a) of the final regulations prevents the *de minimis* rule from negating the section 1288 basis adjustment for any tax-exempt portion of OID on stripped bonds and stripped coupons. Without this provision, the tax-exempt portion of *de minimis* OID would become taxable. Since the provision applies only to any tax-exempt portion of OID, it does not prevent any taxable portion of OID from being treated as zero if the total OID (including any tax-exempt portion thereof) on a tax-exempt obligation is *de minimis*.

Aggregation of Stripped Bonds and Stripped Coupons

The final regulations are premised on the assumption that an aggregation approach such as that applicable under Code section 1275 is appropriate in determining whether OID on a stripped bond or stripped coupon is *de minimis*. The final regulations are premised also on the assumption that stripped coupons may be treated as stated interest with respect to the bonds from which they are stripped and, therefore, may be excluded from stated redemption price at maturity in appropriate circumstances. Without these assumptions, each stripped bond and stripped coupon would be treated as a separate (zero coupon) bond, and the OID with respect to each separate bond or coupon virtually never would be *de minimis*.

Section 1.1286–1T(a) contained a provision concerning the stated redemption price at maturity of a stripped bond or stripped coupon. That provision was omitted from the final regulations to avoid any arguable inconsistency with the assumptions described above. Future regulations under section 1286 will provide specific guidance relating to these assumptions. In anticipation of these regulations, comments are requested on the appropriate rules for aggregating stripped bonds and stripped coupons under section 1286.

Special Analyses

It has been determined that these final regulations are not major rules as defined in Executive Order 12291. Therefore, a Regulatory Impact Analysis is not required. It has also been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) and the Regulatory Flexibility Act (5 U.S.C. chapter 6) do not apply to these regulations and, therefore, a final Regulatory Flexibility Analysis is not required. Pursuant to section 7805(f) of the Internal Revenue Code, the notice of proposed rulemaking for these regulations was submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on their impact on small business.

Drafting Information

The principal author of these regulations is Mark S. Smith, Office of the Assistant Chief Counsel (Financial Institutions and Products), Internal Revenue Service. However, personnel from other offices of the Internal Revenue Service and Treasury Department participated in their development.

List of Subjects in 26 CFR 1.1231–1 through 1.1297–3T

Income taxes.

Amendment to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

Paragraph 1. The authority citation for part 1 is amended by removing the citation for "Section 1.1286–1T" and adding the following citation:

Authority: 26 U.S.C. 7805 * * * Section 1.1286–1 also issued under 26 U.S.C. 1275(D) and 1286(f).

Par. 2. Section 1.1286–1T is removed.

Par. 3. Section 1.1286–1 is added to read as follows:

§ 1.1286–1 Tax treatment of certain stripped bonds and stripped coupons.

(a) *De minimis OID.* If the original issue discount determined under section 1286(a) with respect to the purchase of a stripped bond or stripped coupon is less than the amount computed under subparagraphs (A) and (B) of section 1273(a)(3) and the regulations thereunder, then the amount of original issue discount with respect to that purchase (other than any tax-exempt portion thereof, determined under section 1286(d)(2)) shall be considered to be zero. For purposes of this computation, the number of complete years to maturity is measured from the date the stripped bond or stripped coupon is purchased.

(b) *Treatment of certain stripped bonds as market discount bonds*—(1) *In general.* By publication in the Internal Revenue Bulletin (see § 601.601(d)(2)(ii)(*b*) of the Statement of Procedural Rules), the Internal Revenue Service may (subject to the limitation of paragraph (b)(2) of this section) provide that certain mortgage loans that are stripped bonds are to be treated as market discount bonds under section 1278. Thus, any purchaser of such a bond is to account for any discount on the bond as market discount rather than original issue discount.

(2) *Limitation.* This treatment may be provided for a stripped bond only if, immediately after the most recent disposition referred to in section 1286(b)—

(i) The amount of original issue discount with respect to the stripped bond is determined under paragraph (a) of this section (concerning *de minimis* OID); or

(ii) The annual stated rate of interest payable on the stripped bond is no more than 100 basis points lower than the annual stated rate of interest payable on the original bond from which it and any other stripped bond or bonds and any stripped coupon or coupons were stripped.

(c) *Effective date.* This section is effective on and after August 8, 1991.

Shirley D. Peterson,

Commissioner of Internal Revenue.

Approved: December 9, 1992.

Alan J. Wilensky,

Deputy Assistant Secretary of the Treasury.

Capitalization of Certain Policy Acquisition Expenses

AGENCY: Internal Revenue Service, Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations relating to the requirement that insurance companies capitalize specified policy acquisition expenses for tax purposes. Changes to the applicable law were made by the Revenue Reconciliation Act of 1990. The regulations are necessary to provide guidance to insurance companies that must comply with the capitalization requirement.

EFFECTIVE DATE: September 30, 1990.

FOR FURTHER INFORMATION CONTACT: Gary Geisler, 202–622–3970 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Paperwork Reduction Act

The collections of information requirement contained in these final regulations have been reviewed and approved by the Office of Management and Budget in accordance with the Paperwork Reduction Act of 1980 (44 U.S.C. 3504(h)) under control number 1545–1287. The estimated annual burden per respondent varies from 15 minutes to 20 hours, depending on individual circumstances, with an estimated average of 1 hour.

These estimates are an approximation of the average time expected to be necessary to collect information. They are based on such information as is available to the Internal Revenue Service. Individual respondents may require greater or less time, depending on their particular circumstances.

Comments concerning the accuracy of these burdens estimates and suggestions for reducing this burden should be directed to the Internal Revenue Service, Attention: IRS Reports Clearance Officer, T:FP, Washington, DC 20224, and to the Office of Management and Budget, Attention: Desk Officer for the Department of the Treasury, Office of Information and Regulatory Affairs, Washington, DC 20503.

Background

This document contains final income tax regulations under section 848 of the Internal Revenue Code (Code), relating to the capitalization of certain policy acquisition expenses of insurance companies. Section 848 was added to the Code by section 11301(a) of the Revenue Reconciliation Act of 1990, Pub. L. No. 101–508. Proposed regulations under section 848 were published in the **Federal Register** on November 15, 1991 (56 FR 58003). Written comments were received from the public and a public hearing was held on January 31, 1992. After consideration of all written and oral comments regarding the proposed regulations, those regulations are adopted as revised by this Treasury decision.

Explanation of Provisions

Section 848 provides that insurance companies must capitalize "specified policy acquisition expenses," in lieu of identifying the categories of expenses that must be capitalized, section 848 requires that a company capitalize an amount of otherwise deductible expenses equal to specified percentages of net premiums with respect to certain types of insurance contracts. These capitalized amounts are called "specified policy acquisition expenses." The maximum amount of specified policy acquisition expenses required to be capitalized in any taxable year is generally limited to the insurance company's "general deductions" for that year.

Categories of Specified Insurance Contracts

Under sections 848 (c) and (e), the amounts treated as specified policy acquisition expenses depend on whether a particular contract is classified as an annuity contract, a group life insurance contract, or "other specified insurance contract."

The proposed regulations contain definitions of the types of contracts to which the provisions of section 848 apply. They also define a "combination contract" (that is, a contract providing more than one type of insurance or annuity coverage) and provide rules for applying the capitalization requirement to premiums under a combination contract.

Combination Contracts

In response to comments, the final regulations modify the treatment of premiums under a combination contract. The final regulations define a combination contract as a contract that provides two or more types of coverage, one of which if provided separately would be a life insurance contract, an annuity, or a noncancellable or guaranteed renewable accident and health insurance contract. The regulations generally provide that if the premiums relating to each type of insurance coverage provided by a combination contract are separately stated on the insurance company's annual statement, the separately stated premiums are treated in the same manner as premiums under separate contracts. If premiums allocable to any type of coverage provided under a combination contract are not separately stated, the premium for the entire contract is subject to the highest capitalization percentage applicable to any of the coverages provided by the contract.

Special rules apply in the case of de minimis premiums. De minimis premiums are not required to be separately stated. If the separate statement rule is otherwise satisfied but for de minimis premiums, the de minimis premiums are required to be treated consistently with the characterization of these premiums on the insurance company's annual

statement. Furthermore, in determining the highest capitalization percentage applicable to any of the coverages provided by the contract, the coverage to which a de minimis premium is allocable is disregarded. For purposes of these provisions, premiums allocable to a type of coverage considered de minimis if the premiums are 2 percent or less of the entire premium for the contract.

Definition of Group Life Insurance

Under section 848(c), a lower capitalization percentage is applied to premiums received on a group life insurance contract than to premiums received with respect to an individual life insurance contract. Section 848(e)(2) defines a group life insurance contract as one which satisfies three requirements. The first requirement is an affiliation requirement; that is, the contract must cover "a group of individuals defined by reference to employment relationship, membership in an organization, or similar factor."

The proposed regulations specify five categories of eligible groups as satisfying the affiliation requirement: an employee group, a debtor group, a labor union group, a credit union group, and an association group satisfying certain conditions. The proposed regulations also allow multiple groups consisting of combinations of groups from the same category.

The categories of eligible groups in the proposed regulations include the specific group categories referred to in the Group Life Insurance Definition and Group Life Insurance Standard Provisions Model Act approved by the National Association of Insurance Commissioners. Unlike the Model Act, the proposed regulations make no provision for a discretionary group that satisfies the requirements of the applicable state law to be treated as an eligible group. The preamble to the proposed regulations requested public comment concerning the desirability of expanding the group life insurance definition to include discretionary groups.

In response to comments, the final regulations list a number of discretionary groups that will also be treated as satisfying the affiliation requirement of section 848(e)(2)(A). The final regulations also authorize the Commissioner to specify other discretionary groups as satisfying the group affiliation requirement in subsequent guidance published in the Internal Revenue Bulletin.

Comments stated that a contract covering members from different categories of eligible groups should be treated as a group contract. In general, these comments were not adopted because the Model Act does not specifically authorize these contracts. The final regulations, however, allow employees to be included as members of a group sponsored by an association, a labor union, or a credit union. The regulations also allow members of a credit union to be covered under a single contract whether in their capacity as members or as borrowers of the credit union.

Comments were received asking that the prohibition of determining a group (or class within a group) on the basis of individual health characteristics be clarified such that a pre-retirement age requirement or active work requirement would be allowed. Comments also requested clarification of the application of the identical premium requirement in the context of the separate employer units covered by a single contract issued to a multi-employer trust. The final regulations adopt these comments.

The second requirement for qualification as a group life insurance contract is that the premiums for a group life insurance contract must be determined on a group basis. The proposed regulations set forth a two-part test to determine whether premiums for a contract are determined on a group basis: an identical premium requirement and an eligibility requirement.

Under the identical premium requirement, the only permissible differences in premiums charged with respect to any member of the group are those reflecting the member's actual age (in years), the member's gender, or the member's smoking habits. Under the eligibility requirement, all members of the group generally must be eligible for the coverage provided under the contract without regard to evidence of insurability.

The proposed regulations provide two exceptions with respect to the eligibility requirement. First, in the case of group term life insurance coverage, the proposed regulations allow the insurance company to deny or limit coverage based on a member's responses to a medical questionnaire (but not on any other basis, such as a medical examination). Secondly, a denial or limitation of coverage to any member is allowed on the basis of medical information obtained with respect to that member prior to January 1, 1993.

Public comments generally endorsed the use of an identical premium requirement as a means for determining whether premiums for the contract are determined on a group basis. The comments suggested a number of changes to the identical premium requirement to clarify the application of this test. The final regulations adopt most of these comments. For example, the regulations provide that the identical premium requirement is satisfied if the premium rates charged by the insurance company for the corresponding units of coverage (for example, per $1,000 of face amount of insurance) provided to each member of the group are the same, except for differences attributable to the age, gender, or smoking habits of the member.

A large number of comments objected to the proposed regulations' requirement that all members of the group generally must be eligible for coverage without regard to evidence of insurability. It was stressed that under state law, an insurance company may deny or limit coverage to any member of the group in the absence of satisfactory evidence of individual insurability, and that the accepted group underwriting practice is to require evidence of individual insurability beyond a medical questionnaire in cases when there is a high likelihood of anti-selection against the insurer. The comments stated that other rules in the proposed regulations, such as the group affiliation requirement and the identical premium requirement, clearly differentiate the coverage under a group life insurance contract from that of individual life insurance.

In response to these comments, the final regulations do not contain the eligibility requirement. Future regulations may address company underwriting practices for group life insurance contracts if, for example, changes in business practice or a shift in premiums from the individual to the group category indicate the need for further guidance. If additional guidance addressing the eligibility requirement is contemplated, the guidance would be first published in a notice of proposed rulemaking and, if adopted, would be applied prospectively.

A third requirement for qualification as a group life insurance contract is that the proceeds of the contract are payable to (or for the benefit of) persons other than the employer of the insured, an organization to which the insured belongs, or other similar person. In response to comments, the final regulations clarify the usage of the term "organization" in this context to include only the organization that is either the sponsor of the contract or the group policyholder. It is intended that other life insurance in which the proceeds are used similarly to credit life insurance (for example, pre-need burial insurance) will not be treated as violating the

restriction on the payment of proceeds to the sponsoring organization or group policyholder.

The final regulations also adopt new rules to address the situation in which the requirements of the regulations are not satisfied with respect to a small number of individuals covered by a group contract. Under the proposed regulations, if the group life insurance requirements are not met with respect to all members of the group, the premiums for the entire contract are treated as received under an individual life insurance contract. Comments indicated that an ineligible individual or individuals may temporarily obtain coverage under a group contract (through inadvertence of the group policyholder or otherwise), and that one individual or a small number of individuals should not disqualify the entire premium for the contract. In response to these comments, the final regulations provide that if the premiums allocable to an ineligible member (or members) are no more than 5 percent of the total premiums charged by the insurance company for the group as a whole, then only the premiums allocable to ineligible member (or members) will be treated as individual life insurance premiums.

General Deductions

The final regulations clarify that the determination of general deductions under section 848(c)(2) is made without regard to any amount capitalized under section 848(a) in any taxable year. This clarification eliminates any circularity with respect to the determination of general deductions under section 848(c)(2) and the capitalization of specified policy acquisition expenses for the taxable year.

Definition of Net Premiums

Section 848(d)(1) provides that, with respect to each category of specified insurance contracts, net premiums equal the excess, if any, of the gross amount of premiums and other consideration for the contracts, over the sum of return premiums and premiums incurred for the reinsurance of the contracts. Pursuant to section 848(d)(3), the gross amount of premiums and other consideration does not include certain policyholder dividends and similar amounts that, under section 808(e), are treated as paid to the policyholder and returned to the insurance company as a premium.

Policy Exchanges

The proposed regulations provide that if an insurance or annuity contract is exchanged (within the meaning of section 1001) for a specified insurance contract, the insurance company must include the fair market value of the contract issued in the exchange in its gross amount of premiums and other consideration for the issuance of a new specified insurance contract. The preamble to the proposed regulations requested comments whether this treatment of exchanges of insurance contracts (initiated by either a policyholder or the company) would require an insurance company to capitalize excessive amounts.

Many comments questioned whether under the proposed regulations many routine policy changes, such as the addition or deletion of a rider, might result in the capitalization of existing contract values. The comments generally urged that only external exchanges (that is, exchanges involving a different insurance company) should give rise to net premiums under section 848.

In response to comments, the treatment of exchanges of insurance or annuity contracts is modified in the final regulations. Except as otherwise provided by the regulations, an exchange (including a change in the terms of a specified insurance contract) will not give rise to net premiums under section 848. The regulations identify specific types of exchanges that will cause net premiums to be subject to section 848. These situations are (1) external exchanges (that is, exchanges involving a different insurance company), and (2) internal exchanges which result in the issuance of fundamentally different contracts.

Under the final regulations, an internal exchange is considered to result in the issuance of a fundamentally different contract if the contract issued in the exchange (1) belongs to a different category of specified insurance contract (or is issued in exchange for a nonspecified insurance contract), (2) changes the identity of the individual insured, or (3) changes the mortality, morbidity, interest, or expense guarantees with respect to nonforfeiture benefits provided in the exchanged contract.

The final regulations identify certain modifications that will not be treated as changing the mortality, morbidity, interest, or expense guarantees and authorize the Commissioner to identify other modifications in subsequent guidance published in the Internal Revenue Bulletin. The regulations also provide an exception for contracts that are restructured pursuant to a rehabilitation, conservatorship, insolvency, or similar state proceeding. A finding of insolvency is not necessary to qualify for this exception.

The final regulations also clarify the amount that is taken into account as the value of the new contract issued in an exchange that generates net premiums under section 848. The value of the new contract is generally determined by the most recent sale by the insurance company of a comparable contract, or if this value is not readily ascertainable, by reference to the interpolated terminal reserve of the original contract. The final regulations permit a lesser value to be used for an exchange of contracts made pursuant to a policy enhancement or update transaction. The regulations also provide that in the case of any exchange involving a group term life insurance contract without cash value, the value of the new contract is deemed to be zero.

Dividend Accumulations

The proposed regulations provide that an amount deposited with an insurance company is not treated as a premium until it is applied to, or irrevocably committed to, the payment of premiums on a specified insurance contract. Amounts left on deposit with an insurance company in a dividend accumulation account are not treated as irrevocably committed to the payment of premiums.

Numerous comments asked that dividend accumulations used to pay premiums on a specified insurance contract be treated like "other similar amounts" under section 848(d)(3). This comment was not adopted because amounts credited to a dividend accumulation account are treated as taxable deposits held on behalf of the policyholder and are not committed to the payment of premiums on a specified insurance contract.

Reinsurance

The capitalization requirements of section 848 apply to premiums and other consideration for reinsurance agreements. Under section 848(d)(1), the ceding company reduces its gross amount of premiums and other consideration by the amount that it incurs as premiums for reinsurance. Correspondingly, the reinsurer includes the reinsurance premiums in its gross amount of premiums and other consideration.

Section 848(d)(4)(B) authorizes the Treasury Department to prescribe regulations to ensure that "premiums and other consideration with respect to reinsurance" are treated consistently by the parties of a reinsurance agreement in applying the provisions of section 848.

Pursuant to this regulatory authority, the proposed regulations set forth rules identifying the amounts that are to be taken into account in determining the parties' premiums and other consideration for reinsurance under section 848(d)(1). Under the proposed regulations, all items of consideration transferred between a ceding company and a reinsurer pursuant to a reinsurance agreement are netted. The net negative consideration determined by one party to a reinsurance agreement reduces its net premiums under section 848(d)(1)(B). The net positive consideration determined by the other party increases its net premiums under section 848(d)(1)(A). The determination of net consideration for the reinsurance agreement ensures consistency between the parties. This consistency extends to the amount and timing, as well as the character, of items. The net consideration rules of the proposed regulations apply to all amounts incurred under a reinsurance agreement for taxable years beginning after December 31, 1991.

The proposed regulations also address a second problem that may arise in reinsurance transactions. The capitalization requirements of section 848 could be avoided if, for example, a primary insurer reinsures its business with a reinsurer whose general deductions are disproportionately small. To prevent this avoidance, the proposed regulations limit a party's use of the net negative consideration on a reinsurance agreement to reduce its net premiums if the other party did not capitalize the net positive consideration due to that party's general deductions limitation. Under the proposed regulations, this potential reduction applies to all amounts arising under any reinsurance agreement executed on or after November 15, 1991, and to all amounts arising under any reinsurance agreement for taxable years beginning after December 31, 1991, without regard to when the reinsurance agreement was entered into.

Net Consideration Rules

Several comments addressed the determination of net consideration for reinsurance agreements. One set of comments urged that claims and benefit reimbursements be excluded from the determination of net consideration for reinsurance. Other comments urged the retention of all items of consideration (including claims and benefit reimbursements) in determining net consideration for reinsurance. Finally, a third set of comments urged the adoption of separate rules for determining premiums and other consideration for reinsurance depending on the type of reinsurance agreement involved.

The final regulations generally retain the rules relating to the determination of net consideration for reinsurance agreements that were entered into after November 14, 1991, for taxable years beginning after December 31, 1991. In response to comments, the regulations postpone the effective date of the net consideration rules for other reinsurance agreements. The regulations provide that for reinsurance agreements entered into prior to November 15, 1991, the net consideration rules apply only to amounts arising for taxable years beginning after December 31, 1994. For taxable years beginning before January 1, 1995, the parties must account for premiums and other consideration for the agreement using the interim rules of the proposed regulations.

The final regulations also contain a special rule that applies to a funds-withheld reinsurance agreement that was entered into after November 14, 1991, but before the first day of the first taxable year beginning after December 31, 1991, and was terminated before January 1, 1995. Under this rule, the parties' net consideration for the year of termination must include the amount of the original reserve for any reinsured specified insurance contract that, in applying the provisions of subchapter L, is treated as premiums and other consideration for reinsurance in the taxable year for which the agreement becomes effective.

Reduction in the Amount of Net Negative Consideration To Ensure Consistency of Capitalization for Reinsurance Agreements

The comments generally supported the rule in the proposed regulations that provided for a reduction in the amount of net negative consideration that a party to reinsurance agreement could take into account to reduce its net premiums if the other party did not capitalize the net positive consideration because of the other party's general deductions limitation. Some comments requested that the regulations specify the manner of demonstrating consistency of capitalization between the parties of a reinsurance agreement (such as an affidavit from the party with net positive consideration). Although the regulations do not adopt this comment, the Internal Revenue Service is considering whether to provide an administrative means of demonstrating consistency of capitalization in subsequent guidance published in the Internal Revenue Bulletin.

Reinsurance Agreements With Parties Not Subject to United States Taxation

Section 848(d)(4)(A) provides that premiums and other consideration incurred for reinsurance may be taken into account as a reduction of net premiums only to the extent that the premiums are includible in the gross income of an insurance company which is taxable under subchapter L, or whose shareholders are subject to United States taxation on the reinsurance premiums by reason of subpart F of part III of subchapter N. The proposed regulations provide that a party to a reinsurance agreement may not reduce its net premiums by the net negative consideration on a reinsurance agreement if the other party is neither an insurance company subject to tax under subchapter L nor a controlled foreign corporation. The proposed regulations do not address the treatment of net positive consideration on reinsurance agreements with parties not subject to United States taxation.

Several comments urged that the regulations exclude from net premiums any net positive consideration from reinsurance agreements with parties that are not subject to United States taxation. The comments expressed concern that unless these net positive consideration amounts are eliminated, the rules in the proposed regulations could result in a double counting of a party's net premiums.

In response to the comments, the final regulations provide an election to separately determine the amounts required to be capitalized for reinsurance agreements with parties not subject to United States taxation with respect to the premiums and other consideration under the agreements. If the election is made, a capitalization amount (either positive or negative) is determined for each category of specified insurance contracts based on the net premiums for each category. The capitalization amounts for all the categories of contracts are then aggregated to arrive at a "net foreign reinsurance capitalization amount" (either positive or negative) for the taxable year on all reinsurance agreements with parties that are not subject to United States taxation.

If the net foreign capitalization amount for any taxable year is negative, the negative amount is applied to reduce (but not below zero) the unamortized balances of amounts previously capitalized (beginning with the most recent taxable year) to the extent attributable to prior years' net positive foreign capitalization amounts The reduction of the previously

capitalized amounts is allowed as a deduction for the taxable year. The net negative foreign capitalization amount. The remaining portion of a net negative foreign capitalization amount, if any, remaining after this reduction is carried over and used to offset a future year's net positive foreign capitalization amount. The remaining portion of a net negative foreign capitalization amount may not reduce the amounts otherwise required to be capitalized for the taxable year with respect to directly written business or reinsurance agreements with parties that are subject to United States taxation.

A net positive foreign capitalization amount (after reduction by any carryover amount from preceding years) is added to the specified policy acquisition expenses required to be capitalized for the taxable year (determined without regard to amounts taken into account under the election). Thus, a net positive foreign capitalization amount is capitalized independently of the general deductions limitation.

The rules in the final regulations with respect to the determination of net foreign capitalization amounts generally apply to taxable years beginning after November 14, 1991. Under the regulations, however, an insurance company may make an election to apply the rules with respect to the determination of net foreign capitalization amounts for earlier taxable years by filing an amended federal income tax return.

Carryover of Excess Negative Capitalization Amount

Section 848(f)(1) authorizes an insurance company to reduce the amount of the current year's capitalization of specified policy acquisition expenses and the unamortized balances of specified policy acquisition expenses from preceding years if there is a "negative capitalization amount" for a category of specified insurance contracts. The negative capitalization amount is determined by multiplying the negative net premiums for a category of specified insurance contracts by the applicable percentage set forth in section 848(c)(1) from that category of specified contracts. As a practical matter, a negative capitalization amount for a category of specified insurance contracts will generally only arise as a result of reinsurance agreements.

In response to comments, the final regulations add rules that permit an insurance company to carry over to future years the portion of any negative capitalization amount remaining after the reductions specified in section 848(f)(1). This provision of the regulations is effective for taxable years ending on or after September 30, 1990.

Reinsurance Agreements Involving Insolvent Insurance Companies

The proposed regulations authorize the Commissioner to grant a waiver excluding from the capitalization requirement any reinsurance consideration relating to agreements approved by a state court supervising the rehabilitation or liquidation of an insolvent company. The proposed regulations do not specify the conditions that would allow an insurance company undergoing a rehabilitation, conservatorship, liquidation, or similar state proceeding to be treated as "insolvent."

In response to comments, the final regulations adopt specific rules for the treatment of reinsurance agreements involving insolvent insurance companies. The rules operate in conjunction with the provisions allowing the carryover of an excess negative capitalization amount under section 848(f). Under the final regulations, an insolvent insurance company with an excess negative capitalization amount as a result of a reinsurance agreement and the party with net positive consideration under that agreement may make a joint election. The joint election requires the insolvent company to forego the carryover of the portion of the excess negative capitalization amount attributable to the agreement and allows the party with net positive consideration to reduce its specified policy acquisition expenses for the taxable year by an amount equal to the portion of the insolvent company's excess negative capitalization amount that is not carried over. The final regulations also specify certain conditions occurring as part of a state supervised proceeding that will cause the insurance company that is the subject of this proceeding to be presumed to be insolvent.

The provisions of the final regulations relating to reinsurance agreements involving insolvent companies are effective for taxable years ending on or after September 30, 1990. The joint election of an insolvent insurance company and a reinsurer may be made on an amended return.

Application of the Capitalization Requirements in the Context of Corporate Adjustment

The preamble to the proposed regulations requested comments concerning the applicability of section 848 to reinsurance agreements undertaken in the context of corporate adjustments, such as different non-recognition transactions under subchapter C. Several comments were received on this issue. The comments requested that the regulations also provide guidance regarding the application of section 848 to stock acquisitions that are treated as asset acquisitions under section 338.

Due to the complexity of this area of the tax law, these regulations do not adopt rules relating to the application of section 848 to reinsurance agreements affected as part of non-recognition transactions and other corporate adjustments. The application of section 848 in the context of different subchapter C transactions will be the subject of forthcoming proposed regulations. The Treasury Department and the Internal Revenue Service continue to invite comments on the application of section 848 to these transactions.

Coordination With Subchapter N

The final regulations do not address the treatment of amounts required to be capitalized under section 848 for purposes of subchapter N (including rules concerning source of income, allocation and apportionment of expenses, and computation of the foreign tax credit). The Treasury Department and the Internal Revenue Service request comments on any issues relating to the coordination of section 848 and subchapter N that should be addressed in these forthcoming proposed regulations.

Special Analyses

It has been determined that these regulations are not major rules as defined in Executive Order 12291. Therefore, a Regulatory Impact Analysis is not required. It has been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) and the Regulatory Flexibility Act (5 U.S.C. chapter 6) do not apply to these regulations, and, therefore, a final Regulatory Flexibility Analysis is not required. Pursuant to section 7805(f) of the Internal Revenue Code, the notice of proposed rulemaking for these regulations was submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Drafting Information

The principal author of these regulations is Gary Geisler of the Office of the Assistance Chief Counsel (Financial Institutions and Products), Internal Revenue Service. However,

personnel from other offices of the IRS and Treasury Department participated in their development.

List of Subjects

26 CFR 1.801–1 Through 1.860–5

Income taxes, Insurance companies, Reporting and recordkeeping requirements.

26 CFR Part 602

Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

For the reasons set forth in the preamble, 26 CFR parts 1 and 602 are amended as follows:

PART 1—[AMENDED]

Paragraph 1. The authority citation for part 1 is amended by adding the following citations:

Authority: 26 U.S.C. 7805 * * * Section 1.848–2 also issued under 26 U.S.C. 845(b) and 26 U.S.C. 848(d)(4)(B). Section 1.848–3 also issued under 26 U.S.C. 848(d)(4)(B).

Par. 2. Sections 1.848–0, 1.848–1, 1.848–2, and 1.848–3 are added to read as follows:

§ 1.848–0 Outline of regulations under section 848.

This section lists the paragraphs in §§ 1.848–1 through 1.848–3.

§ 1.848–1 Definitions and special provisions.

(a) Scope and effective date.
(b) Specified insurance contract.
(1) In general.
(2) Exceptions.
(i) In general.
(ii) Reinsurance of qualified foreign contracts.
(c) Life insurance contract.
(d) Annuity contract.
(e) Noncancellable accident and health insurance contract.
(f) Guaranteed renewable accident and health insurance contract.
(g) Combination contract.
(1) Definition.
(2) Treatment of premiums on a combination contract.
(i) In general.
(ii) De minimis premiums.
(3) Example.
(h) Group life insurance contract.
(1) In general.
(2) Group affiliation requirement.
(i) In general.
(ii) Employee group.
(iii) Debtor group.
(iv) Labor union group.
(v) Association group.
(vi) Credit union group.
(vii) Multiple group.
(viii) Certain discretionary groups.
(ix) Employees treated as members.
(x) Class or classes of a group determined without regard to individual health characteristics.
(A) In general.
(B) Limitation of coverage based on certain work and age requirements permissible.
(3) Premiums determined on a group basis.
(i) In general.
(ii) Exception for substandard premium rates for certain high risk insureds.
(iii) Flexible premium contracts.
(iv) Determination of actual age.
(4) Underwriting practices used by company. [Reserved]
(5) Disqualification of group.
(i) In general.
(ii) Exception for de minimis failures.
(6) Supplemental life insurance coverage.
(7) Special rules relating to the payment of proceeds.
(i) Contracts issued to a welfare benefit fund.
(ii) Credit life insurance contracts.
(iii) "Organization or association" limited to the sponsor of the contract or the group policyholder.
(i) General deductions.

§ 1.848–2 Determination of net premiums.

(a) Net premiums.
(1) In general.
(2) Separate determination of net premiums for certain reinsurance agreements.
(b) Gross amount of premiums and other consideration.
(1) General rule.
(2) Items included.
(3) Treatment of premium deposits.
(i) In general.
(ii) Amounts irrevocably committed to the payment of premiums.
(iii) Retired lives reserves.
(4) Deferred and uncollected premiums.
(c) Policy exchanges.
(1) General rule.
(2) External exchanges.
(3) Internal exchanges resulting in fundamentally different contracts.
(i) In general.
(ii) Certain modifications treated as not changing the mortality, morbidity, interest, or expense guarantees.
(iii) Exception for contracts restructured by a court supervised rehabilitation or similar proceeding.
(4) Value of the contract.
(i) In general.
(ii) Special rule for group term life insurance contracts.
(iii) Special rule for certain policy enhancement and update programs.
(A) In general.
(B) Policy enhancement or update program defined.
(5) Example.
(d) Amounts excluded from the gross amount of premiums and other consideration.
(1) In general.
(2) Amounts received or accrued from a guaranty association.
(3) Exclusion not to apply to dividend accumulations.
(e) Return premiums.
(f) Net consideration for a reinsurance agreement.
(1) In general.
(2) Net consideration determined by a ceding company.
(i) In general.
(ii) Net negative and net positive consideration.
(3) Net consideration determined by the reinsurer.
(i) In general.
(ii) Net negative and net positive consideration.
(4) Timing consistency required.
(5) Modified coinsurance and funds-withheld reinsurance agreements.
(i) In general.
(ii) Special rule for certain funds-withheld reinsurance agreements.
(6) Treatment of retrocessions.
(7) Mixed reinsurance agreements.
(8) Treatment of policyholder loans.
(9) Examples.
(g) Reduction in the amount of net negative consideration to ensure consistency of capitalization for reinsurance agreements.
(1) In general.
(2) Application to reinsurance agreements subject to the interim rules.
(3) Amount of reduction.
(4) Capitalization shortfall.
(5) Required capitalization amount.
(i) In general.
(ii) Special rule with respect to net negative consideration.
(6) General deductions allocable to reinsurance agreements.
(7) Allocation of capitalization shortfall among reinsurance agreements.
(8) Election to determine specified policy acquisition expenses for an agreement without regard to general deductions limitation.
(i) In general.
(ii) Manner of making election.
(iii) Election statement.
(iv) Effect of election.
(9) Examples.
(h) Treatment of reinsurance agreements with parties not subject to U.S. taxation.
(1) In general.
(2) Agreements to which this paragraph (h) applies.
(i) In general.
(ii) Parties subject to U.S. taxation.
(A) In general.
(B) Effect of a closing agreement.
(3) Election to separately determine the amounts required to be capitalized for reinsurance agreements with parties not subject to U.S. taxation.
(i) In general.
(ii) Manner of making the election.
(4) Amount taken into account for purposes of determining specified policy acquisition expenses.
(5) Net foreign capitalization amount.
(i) In general.
(ii) Foreign capitalization amounts by category.
(6) Treatment of net negative foreign capitalization amount.

(i) Applies as a reduction to previously capitalized amounts.
(ii) Carryover of remaining net negative foreign capitalization amount.
(7) Reduction of net positive foreign capitalization amount by carryover amounts allowed.
(8) Examples.
(i) Carryover of excess negative capitalization amount.
(1) In general.
(2) Excess negative capitalization amount.
(3) Treatment of excess negative capitalization amount.
(4) Special rule for the treatment of an excess negative capitalization amount of an insolvent company.
(i) When applicable.
(ii) Election to forego carryover of excess negative capitalization amount.
(iii) Amount of reduction to the excess negative capitalization amount and specified policy acquisition expenses.
(iv) Manner of making election.
(v) Presumptions relating to the insolvency of an insurance company undergoing a court supervised rehabilitation or similar state proceeding.
(vi) Example.
(j) Ceding commissions with respect to reinsurance of contracts other than specified insurance contracts.
(k) Effective dates.
(1) In general.
(2) Reduction in the amount of net negative consideration to ensure consistency of capitalization for reinsurance agreements.
(3) Net consideration rules.
(4) Determination of the date on which a reinsurance agreement is entered into.
(5) Special rule for certain reinsurance agreements with parties not subject to U.S. taxation.
(6) Carryover of excess negative capitalization amount.

§ 1.848–3 Interim rules for certain reinsurance agreements.

(a) Scope and effective dates.
(b) Interim rules.
(c) Adjustments and special rules.
(1) Assumption reinsurance.
(2) Reimbursable dividends.
(3) Ceding commissions.
(i) In general.
(ii) Amount of ceding commission.
(4) Termination payments.
(5) Modified coinsurance agreements.
(d) Examples.

§ 1.848–1 Definitions and special provisions.

(a) *Scope and effective date.* The definitions and special provisions in this section apply solely for purposes of determining specified policy acquisition expenses under section 848 of the Internal Revenue Code, this section, and §§ 1.848–2 and 1.848–3. Unless otherwise specified, the rules of this section are effective for the taxable years of an insurance company beginning after November 14, 1991.

(b) *Specified insurance contract*—(1) *In general.* A "specified insurance contract" is any life insurance contract, annuity contract, noncancellable or guaranteed renewable accident and health insurance contract, or combination contract. A reinsurance agreement that reinsures the risks under a specified insurance contract is treated in the same manner as the reinsured contract.

(2) *Exceptions*—(i) *In general.* A "specified insurance contract" does not include any pension plan contract (as defined in section 818(a)), flight insurance or similar contract, or qualified foreign contract (as defined in section 807(e)(4)).

(ii) *Reinsurance of qualified foreign contracts.* The exception for qualified foreign contracts does not apply to reinsurance agreements that reinsure qualified foreign contracts.

(c) *Life insurance contract.* A "life insurance contract" is any contract—

(1) Issued after December 31, 1984, that qualifies as a life insurance contract under section 7702(a) (including an endowment contract as defined in 7702(h)); or

(2) Issued prior to January 1, 1985, if the premiums on the contract are reported as life insurance premiums on the insurance company's annual statement (or could be reported as life insurance premiums if the company were required to file the annual statement for life and accident and health companies).

(d) *Annuity contract.* An "annuity contract" is any contract (other than a life insurance contract as defined in paragraph (c) of this section) if amounts received under the contract are subject to the rules in section 72(b) or section 72(e) (determined without regard to section 72(u)). The term "annuity contract" also includes a contract that is a qualified funding asset under section 130(d).

(e) *Noncancellable accident and health insurance contract.* The term "noncancellable accident and health insurance contract" has the same meaning for purposes of section 848 as the term has for purposes of section 816(b).

(f) *Guaranteed renewable accident and health insurance contract.* The term "guaranteed renewable accident and health insurance contract" has the same meaning for purposes of section 848 as the term has for purposes of section 816(e).

(g) *Combination contract*—(1) *Definition.* A "combination contract" is a contract (other than a contract described in section 848(e)(3)) that provides two or more types of insurance coverage, at least one of which if offered separately would be a life insurance contract, an annuity contract, or a noncancellable or guaranteed renewable accident and health insurance contract.

(2) *Treatment of premiums on a combination contract*—(i) *In general.* If the premium allocable to each type of insurance coverage is separately stated on the insurance company's annual statement (or could be separately stated if the insurance company were required to file the annual statement for life and accident and health companies), the premium allocable to each type of insurance coverage in a combination contract is subject to the capitalization rate, if any, that would apply if that coverage was provided in a separate contract. If the premium allocable to each type of insurance coverage in a combination contract is not separately stated, the entire premium is subject to the highest capitalization percentage applicable to any of the coverages provided.

(ii) *De minimis premiums.* For purposes of this paragraph (g)(2)—

(A) A de minimis premium is not required to be separately stated;

(B) In determining the highest capitalization percentage applicable to a combination contract, the coverage to which a de minimis premium is allocable is disregarded;

(C) If the separate statement requirement of this paragraph (g)(2) is satisfied, a de minimis premium is treated in accordance with its characterization on the insurance company's annual statement; and

(D) Whether a premium for an insurance coverage is de minimis is determined by comparing that premium with the aggregate of the premiums for the combination contract. A premium that is not more than 2 percent of the premium for the entire contract is considered de minimis. Whether a premium that is more than 2 percent is de minimis is determined based on all the facts and circumstances.

(3) *Example.* The principles of this paragraph (g) are illustrated by the following example.

Example. A life insurance company (L1) issues a contract to an employer (X) which provides cancellable accident and health insurance coverage and group term life insurance coverage to X's employees. L1 charges a premium of $1,000 for the contract. $950 of which is attributable to the cancellable accident and health insurance coverage and $50 of which is attributable to the group term life insurance coverage. On its annual statement, L1 reports the premiums attributable to the accident and health insurance coverage separately from the premiums attributable to the group term life insurance coverage. The contract issued by

L1 is a combination contract as defined in paragraph (g)(1) of this section. Pursuant to paragraph (g)(2)(i) of this section, only the premiums attributable to the group term life insurance coverage ($50) are subject to the provisions of section 848. The premiums attributable to the cancellable accident and health insurance coverage ($950) are not subject to the provisions of section 848.

(h) *Group life insurance contract*—(1) *In general.* A life insurance contract (as defined in paragraph (c) of this section) is group life insurance contract if—

(i) The contract is a group life insurance contract under the applicable law;

(ii) The coverage is provided under a master contract issued to the group policyholder, which may be a trust, trustee, or agent;

(iii) The premiums on the contract are reported either as group life insurance premiums or credit life insurance premiums on the insurance company's annual statement (or could be reported as group life insurance premiums or credit life insurance premiums if the company were required to file the annual statement for life and accident and health companies);

(iv) The group affiliation requirement of paragraph (h)(2) of this section is satisfied;

(v) The premiums on the contract are determined on a group basis within the meaning of paragraph (h)(3) of this section; and

(vi) The proceeds of the contract are not payable to or for the benefit of the insured's employer, an organization or association to which the insured belongs, or other similar person. (See paragraph (h)(7) of this section for special rules that apply in determining if this requirement is satisfied.)

(2) *Group affiliation requirement*—(i) *In general.* The group affiliation requirement of section 848(e)(2)(A) and this paragraph (h)(2) is satisfied only if all of the individuals eligible for coverage under the contract constitute a group described in paragraphs (h)(2) (ii) through (viii) of this section.

(ii) *Employee group.* An employee group consists of all of the employees (including statutory employees within the meaning of section 3121(d)(3) and individuals who are treated as employed by a single employer under section 414 (b), (c), or (m)), or any class or classes thereof within the meaning of paragraph (h)(2)(x) of this section, of an employer. For this purpose, the term "employee" includes—

(A) A retired or former employee;

(B) The sole proprietor, if the employer is a sole proprietorship;

(C) A partner of the partnership, if the employer is a partnership;

(D) A director of the corporation, if the employer is a corporation; and

(E) An elected or appointed official of the public body, if the employer is a public body.

(iii) *Debtor group.* A debtor group consists of all of the debtors, or any class or classes thereof within the meaning of paragraph (h)(2)(x) of this section, of a creditor. For this purpose, the term "debtor" includes a borrower of money or purchaser or lessee of goods, services, or property for which payment is arranged through a credit transaction.

(iv) *Labor union group.* A labor union group consists of all of the members, or any class or classes thereof within the meaning of paragraph (h)(2)(x) of this section, of a labor union or similar employee organization.

(v) *Association group.* An association group consists of all of the members, or any class or classes thereof within the meaning of paragraph (h)(2)(x) of this section, of an association that, at the time the master contract is issued—

(A) Is organized and maintained for purposes other than obtaining insurance;

(B) Has been in active existence for at least two years (including, in the case of a merged or successor association, the years of active existence of any predecessor association); and

(C) Has at least 100 members.

(vi) *Credit union group.* A credit union group consists of all of the members of borrowers, or any class or classes thereof within the meaning of paragraph (h)(2)(x) of this section, of a credit union.

(vii) *Multiple group.* A multiple group consists of two or more groups from any single category described in paragraphs (h)(2) (ii) through (vi) of this section. A multiple group may not include two or more groups from different categories described in paragraph (h)(2) (ii) through (vi) of this section.

(viii) *Certain discretionary groups.* Provided that the contract otherwise satisfies the requirements of paragraph (h)(1) of this section, a contract issued to one of the following discretionary groups is treated as satisfying the group affiliation requirement of this paragraph (h)(2)—

(A) A contract issued to a group consisting of students of one or more universities or other educational institutions;

(B) A contract issued to a group consisting of members or former members of the U.S. Armed Forces;

(C) A contract issued to a group of individuas for the payment of future funeral expenses; and

(D) A contract issued to any other discretionary group as specified by the Commissioner in subsequent guidance published in the Internal Revenue Bulletin. (See § 601.601(d)(2)(ii)(*b*) of this chapter.)

(ix) *Employees treated as members.* In determining whether the group affiliation requirement of paragraph (h)(2) of this section is satisfied, the employees of a labor union, credit union, or association may be treated as members of a labor union group, a credit union group, or an association group, respectively.

(x) *Class or classes of a group determined without regard to individual health characteristics*—(A) *In general.* A class or classes of a group described in paragraphs (h)(2) (ii) through (viii) of this section may be determined using any reasonable characteristics (for example, amount of insurance, location, or occupation) other than individual health characteristics. The employees of a single employer covered under a policy issued to a multi-employer trust are considered a class of a group described in paragraph (h)(2)(ii) of this section.

(B) *Limitation of coverage based on certain work and age requirements permissible.* A limitation of coverage under a group contract to persons who are actively at work or of a pre-retirement age (for example, age 65 or younger) is not treated as based on individual health characteristics.

(3) *Premiums determined on a group basis*—(1) *In general.* Premiums for a contract are determined on a group basis for purposes of section 848(e)(2)(B) and this paragraph (h) only if the premium charged by the insurance company for each member of the group (or any class thereof) is determined on the basis of the same rates for the corresponding amount of coverage (for example, per $1,000 of insurance) or on the basis of rates which differ only because of the gender, smoking habits, or age of the member.

(ii) *Exception for substandard premium rates for certain high risk insureds.* Any difference in premium rates is disregarded for purposes of this paragraph (h)(3) if the difference is charged for an individual who was accepted for coverage at a substandard rate prior to January 1, 1993.

(iii) *Flexible premium contracts.* In the case of a group universal life insurance contract, the identical premium requirement is satisfied if the premium rates used by the insurance company in determining the periodic mortality charges applied to the policy account value of any member insured by the contract differ from those of other

members (within the same class) only because of the gender, smoking habits, or age of the member.

(iv) *Determination of actual age.* For purposes of this paragraph (h)(3), determinations of actual age may be made using any reasonable method, provided that this method is applied consistently for all members of the group.

(4) *Underwriting practices used by company.* [Reserved]

(5) *Disqualification of group*—(i) *In general.* Except as otherwise provided in this paragraph (h)(5), if the requirements of paragraphs (h)(1), (2), and (3) of this section are not satisfied with respect to one or more members of the group, or of a class within a group (within the meaning of paragraph (h)(2)(x) of this section), the premiums for the entire group (or class) are treated as individual life insurance premiums.

(ii) *Exception for de minimis failures.* If the requirements of paragraphs (h) (1), (2), or (3) of this section are not satisfied with respect to one or more members of the group (or class), but the sum of the premiums charged by the insurance company for those individuals is no more than 5 percent of the aggregate premiums for the group (or class), only the premiums charged for those individuals are treated as premiums for an individual life insurance contract.

(6) *Supplemental life insurance coverage.* For purposes of determining whether the requirement in paragraph (h)(3)(i) of this section is satisfied, any supplemental life insurance coverage (including optional coverage for members of the group, their spouses, or their dependent children) is (or is treated as) a separate contract. In determining whether the group affiliation requirement of paragraph (h)(2) of this section is satisfied for the supplemental coverage, a member's spouse and dependent children are treated as members of the group if they are eligible for coverage.

(7) *Special rules relating to the payment of proceeds.* The following rules apply for purposes of section 848(e)(2) and paragraph (h)(1)(vi) of this section.

(i) *Contracts issued to a welfare benefit fund.* If a contract issued to a welfare benefit fund (as defined in section 419) provides for payment of proceeds to the welfare benefit fund, the proceeds of the contract are not considered payable to or for the benefit of the insured's employer, an organization or association to which the insured belongs, or other similar person, provided the proceeds are paid as benefits to the employee or the employee's beneficiary.

(ii) *Credit life insurance contracts.* If a credit life insurance contract provides for payment of proceeds to the insured's creditor, the proceeds of the contract are not treated as payable to or for the benefit of the insured's employer, an organization or association to which the insured belongs, or other similar person, provided the proceeds are applied against an outstanding indebtedness of the insured.

(iii) *"Organization or association" limited to the sponsor of the contract or the group policyholder.* The term "organization or association" means the organization or association that is either the sponsor of the contract or the group policyholder.

(i) *General deductions.* The term "general deductions" is defined in section 848(c)(2). An insurance company determines its general deductions for the taxable year without regard to amounts capitalized or amortized under section 848(a). The amount of a company's general deductions is also determined without regard to the rules of § 1.848–2(f), which apply only for purposes of determining net consideration for reinsurance agreements.

§ 1.848–2 Determination of net premiums.

(a) *Net premiums*—(1) *In general.* An insurance company must use the accrual method of accounting (as prescribed by section 811(a)(1)) to determine the net premiums with respect to each category of specified insurance contracts. With respect to any category of contracts, net premiums means—

(i) The gross amount of premiums and other consideration (see paragraph (b) of this section); reduced by

(ii) The sum of—

(A) The return premiums (see paragraph (e) of this section); and

(B) The net negative consideration for a reinsurance agreement (other than an agreement described in paragraph (h)(2) of this section). See paragraphs (f) and (g) of this section for rules relating to the determination of net negative consideration.

(2) *Separate determination of net premiums for certain reinsurance agreements.* Net premiums with respect to reinsurance agreements for which an election under paragraph (h)(3) of this section has been made (certain reinsurance agreements with parties not subject to United States taxation) are treated separately and are subject to the rules of paragraph (h) of this section.

(b) *Gross amount of premiums and other consideration*—(1) *General rule.* The term "gross amount of premiums and other consideration" means the sum of—

(i) All premiums and other consideration (other than amounts on reinsurance agreements); and

(ii) The net positive consideration for any reinsurance agreement (other than an agreement for which an election under paragraph (h)(3) of this section has been made).

(2) *Items included.* The gross amount of premiums and other consideration includes—

(i) Advance premiums;

(ii) Amounts in a premium deposit fund or similar account, to the extent provided in paragraph (b)(3) of this section;

(iii) Fees;

(iv) Assessments;

(v) Amounts that the insurance company charges itself representing premiums with respect to benefits for its employees (including full-time life insurance salesmen treated as employees under section 7701(a)(20)); and

(vi) The value of a new contract issued in an exchange described in paragraph (c)(2) or (c)(3) of this section.

(3) *Treatment of premium deposits*—(i) *In general.* An amount in a premium deposit fund or similar account is taken into account in determining the gross amount of premiums and other consideration at the earlier of the time that the amount is applied to, or irrevocably committed to, the payment of a premium on a specified insurance contract. If an amount is irrevocably committed to the payment of a premium on a specified insurance contract, then neither that amount nor any earnings allocable to that amount are included in the gross amount of premiums and other consideration when applied to the payment of a premium on the same contract.

(ii) *Amounts irrevocably committed to the payment of premiums.* Except as provided in paragraph (b)(3)(iii) of this section, an amount in a premium deposit fund or similar account is irrevocably committed to the payment of premiums on a contract only if neither the amount nor any earnings allocable to that amount may be—

(A) Returned to the policyholder or any other person (other than on surrender of the contract); or

(B) Used by the policyholder to fund another contract.

(iii) *Retired lives reserves.* Premiums received by an insurance company under a retired lives reserve arrangement are treated as irrevocably committed to the payment of premiums on a specified insurance contract.

(4) *Deferred and uncollected premiums.* The gross amount of premiums and other consideration does not include deferred and uncollected premiums.

(c) *Policy exchanges*—(1) *General rule.* Except as otherwise provided in this paragraph (c), an exchange of insurance contracts (including a change in the terms of a specified insurance contract) does not result in any amount being included in the gross amount of premiums and other consideration.

(2) *External exchanges.* If a contract is exchanged for a specified insurance contract issued by another insurance company, the company that issues the new contract must include the value of the new contract in the gross amount of premiums and other consideration.

(3) *Internal exchanges resulting in fundamentally different contracts*—(i) *In general.* If a contract is exchanged for a specified insurance contract issued by the same insurance company that issued the original contract, the company must include the value of the new contract in the gross amount of premiums and other consideration if the new contract—

(A) Relates to a different category of specified insurance contract than the original contract;

(B) Does not cover the same insured as the original contract; or

(C) Changes the interest, mortality, morbidity, or expense guarantees with respect to the nonforfeiture benefits provided in the original contract.

(ii) *Certain modifications treated as not changing the mortality, morbidity, interest, or expense guarantees.* For purposes of paragraph (c)(3)(i)(C) of this section, the following items are not treated as changing the interest, mortality, morbidity, or expense guarantees with respect to the nonforfeiture benefits provided in the contract—

(A) A change in a temporary guarantee with respect to the amounts to be credited as interest to the policyholder's account, or charged as mortality, morbidity, or expense charges, if the new guarantee applies for a period of ten years or less;

(B) The determination of benefits on annuitization using rates which are more favorable to the policyholder than the permanently guaranteed rates; and

(C) Other items as specified by the Commissioner in subsequent guidance published in the Internal Revenue Bulletin.

(iii) *Exception for contracts restructured by a court supervised rehabilitation or similar proceeding.* No amount is included in the gross amount of premiums and other consideration with respect to any change made to the interest, mortality, morbidity, or expense guarantees with respect to the nonforfeiture benefits of contracts of an insurance company that is the subject of a rehabilitation, conservatorship, insolvency, or similar state proceeding. This treatment applies only if the change—

(A) Occurs as part of the rehabilitation, conservatorship, insolvency, or similar state proceeding; and

(B) Is approved by the state court, the state insurance department, or other state official with authority to act in the rehabilitation, conservatorship, insolvency, or similar state proceeding.

(4) *Value of the contract*—(i) *In general.* For purposes of paragraph (c)(2) or (c)(3) of this section, the value of the new contract is established through the most recent sale by the company of a comparable contract. If the value of the new contract is not readily ascertainable, the value may be approximated by using the interpolated terminal reserve of the original contract as of the date of the exchange.

(ii) *Special rule for group term life insurance contracts.* In the case of any exchange involving a group term life insurance contract without cash value, the value of the new contract is deemed to be zero.

(iii) *Special rule for certain policy enhancement and update programs*—(A) *In general.* If the interest, mortality, morbidity, or expense guarantees with respect to the nonforfeiture benefits of a specified insurance contract are changed pursuant to a policy enhancement or update program, the value of the contract included in the gross amount of premiums and other consideration equals 30 percent of the value determined under paragraph (c)(4) of this section.

(B) *Policy enhancement or update program defined.* For purposes of paragraph (c)(4)(iii)(A) of this section, a policy enhancement or update program means any offer or commitment by the insurance company to all of the policyholders holding a particular policy form to change the interest, mortality, morbidity, or expense guarantees used to determine the contract's nonforfeiture benefits.

(5) *Example.* The principles of this paragraph (c) are illustrated by the following example.

Example. (i) An individual (A) owns a life insurance policy issued by a life insurance company (L1). On January 1, 1993, A purchases additional term insurance for $250, which is added as a rider to A's life insurance policy. The purchase of the additional term insurance does not change the interest mortality, morbidity, or expense guarantees with respect to the nonforfeiture benefits provided by A's life insurance policy.

(ii) A's purchase of the term insurance rider is not considered to result in a fundamentally different contract under paragraph (c)(3) of this section because the addition of the rider did not change the interest, mortality, morbidity, or expense guarantees with respect to the nonforfeiture values of A's original life insurance policy. Therefore, L1 includes only the $250 received from A in the gross amount of premiums and other consideration.

(d) *Amounts excluded from the gross amount of premiums and other consideration*—(1) *In general.* The following items are not included in the gross amount of premiums and other consideration—

(i) Items treated by section 808(e) as policyholder dividends that are paid to the policyholder and immediately returned to the insurance company as a premium on the same contract that generated the dividends, including—

(A) A policyholder dividend applied to pay a premium under the contract that generated the dividend;

(B) Excess interest accumulated within the contract;

(C) A policyholder dividend applied for additional coverage (for example, a paid-up addition, extension of the period for which insurance protection is provided, or reduction of the period for which premiums are paid) on the contract that generated the dividend;

(D) A policyholder dividend applied to reduce premiums otherwise payable on the contract that generated the dividend;

(E) An experience-rated refund applied to pay a premium on the group contract that generated the refund; and

(F) An experience-rated refund applied to a premium stabilization reserve held with respect to the group contract that generated the refund;

(ii) Premiums waived as a result of the disability of an insured or the disability or death of a premium payor;

(iii) Premiums considered to be paid on a contract as the result of a partial surrender or withdrawal from the contract, or as a result of the surrender or withdrawal of a paid-up addition previously issued with respect to the same contract; and

(iv) Amounts treated as premiums upon the selection by a policyholder or by a beneficiary of a settlement option provided in a life insurance contract.

(2) *Amounts received or accrued from a guaranty association.* Amounts received or accrued from a guaranty association relating to an insurance company that is subject to an insolvency, delinquency, conservatorship, rehabilitation, or

similar proceeding are not included in the gross amount of premiums and other consideration.

(3) *Exclusion not to apply to dividend accumulations.* For purposes of section 848(d)(3) and paragraph (d)(1) of this section, amounts applied from a dividend accumulation account to pay premiums on a specified insurance contract are not amounts treated as paid to, and immediately returned by, the policyholder.

(e) *Return premiums.* For purposes of section 848(d)(1)(B) and this section, return premiums do not include policyholder dividends (as defined in section 808), claims or benefits payments, or amounts returned to another insurance company under a reinsurance agreement. For the treatment of amounts returned to another insurance company under a reinsurance agreement, see paragraph (f) of this section.

(f) *Net consideration for a reinsurance agreement*—(1) *In general.* For purposes of section 848, the ceding company and the reinsurer must treat amounts arising from the reinsurance of a specified insurance contract consistently in determining their net premiums. See paragraph (g) of this section for restrictions on the amount of the net negative consideration for any reinsurance agreement that may be taken into account. See paragraph (h) of this section for special rules applicable to reinsurance agreements with parties not subject to United States taxation.

(2) *Net consideration determined by a ceding company*—(i) *In general.* The net consideration determined by a ceding company for a reinsurance agreement equals—

(A) The gross amount incurred by the reinsurer with respect to the reinsurance agreement, including any ceding commissions, annual allowances, reimbursements of claims and benefits, modified coinsurance reserve adjustments under paragraph (f)(5) of this section, experience-rated adjustments, and termination payments; less

(B) The gross amount of premiums and other consideration incurred by the ceding company with respect to the reinsurance agreement.

(ii) *Net negative and net positive consideration.* If the net consideration is less than zero, the ceding company has net negative consideration for the reinsurance agreement. If the net consideration is greater than zero, the ceding company has net positive consideration for the reinsurance agreement.

(3) *Net consideration determined by the reinsurer*—(i) *In general.* The net consideration determined by a reinsurer for a reinsurance agreement equals—

(A) The amount described in paragraph (f)(2)(i)(B) of this section; less

(B) The amount described in paragraph (f)(2)(i)(A) of this section.

(ii) *Net negative and net positive consideration.* If the net consideration is less than zero, the reinsurer has net negative consideration for the reinsurance agreement. If the net consideration is greater than zero, the reinsurer has net positive consideration for the reinsurance agreement.

(4) *Timing consistency required.* For purposes of determining the net consideration of a party for a reinsurance agreement, an income or expense item is taken into account for the first taxable year for which the item is required to be taken into account by either party. Thus, the ceding company and the reinsurer must take the item into account for the same taxable year (or for the same period if the parties have different taxable years).

(5) *Modified coinsurance and funds-withheld reinsurance agreements*—(i) *In general.* In the case of a modified coinsurance or funds-withheld reinsurance agreement, the net consideration for the agreement includes the amount of any payments or reserve adjustments, as well as any related loan transactions between the ceding company and the reinsurer. The amount of any investment income transferred between the parties as the result of a reserve adjustment or loan transaction is treated as an item of consideration under the reinsurance agreement.

(ii) *Special rule for certain funds-withheld reinsurance agreements.* In the case of a funds-withheld reinsurance agreement that is entered into after November 14, 1991, but before the first day of the first taxable year beginning after December 31, 1991, and is terminated before January 1, 1995, the parties' net consideration in the year of termination must include the amount of the original reserve for any reinsured specified insurance contract that, in applying the provisions of subchapter L, was treated as premiums and other consideration incurred for reinsurance for the taxable year in which the agreement became effective.

(6) *Treatment of retrocessions.* For purposes of this paragraph (f), a retrocession agreement is treated as a separate reinsurance agreement. The party that is relieved of liability under a retrocession agreement is treated as the ceding company.

(7) *Mixed reinsurance agreement.* If a reinsurance agreement includes more than one category of specified insurance contracts (or specified insurance contracts and contracts that are not specified insurance contracts), the portion of the agreement relating to each category of reinsured specified insurance contracts is treated as a separate agreement. The portion of the agreement relating to reinsured contracts that are not specified insurance contracts is similarly treated as a separate agreement.

(8) *Treatment of policyholder loans.* For purposes of determining the net consideration under a reinsurance agreement, the transfer of a policyholder loan receivable is treated as an item of consideration under the agreement. The interest credited with respect to a policyholder loan receivable is treated as investment income earned directly by the party holding the receivable. The amounts taken into account as claims and benefit reimbursements under the agreement must be determined without reduction for the policyholder loan.

(9) *Examples.* The principles of this paragraph (f) are illustrated by the following examples.

Example 1. On July 1, 1992, a life insurance company (L1) transfers a block of individual life insurance contracts to an unrelated life insurance company (L2) under an agreement whereby L2 becomes solely liable to the policyholders under the contracts reinsured. L1 and L2 are calendar year taxpayers. Under the assumption reinsurance agreement, L1 agrees to pay L2 $100,000 for assuming the life insurance contracts, and L2 agrees to pay L1 a $17,000 ceding commission. Under paragraph (f)(2) of this section, L1 has net negative consideration of ($83,000) ($17,000 ceding commission incurred by L2—$100,000 incurred by L1 for reinsurance). Under paragraph (f)(3) of this section, L2 has net positive consideration of $83,000. Under paragraph (b)(1)(ii) of this section, L2 includes the net positive consideration in its gross amount of premiums and other consideration.

Example 2. (i) On July 1, 1992, a life insurance company (L1) transfers a block of individual life insurance contracts to an unrelated life insurance company (L2) under an agreement whereby L1 remains liable to the policyholders under the reinsured contracts. L1 and L2 are calendar year taxpayers. Under the indemnity reinsurance agreement, L1 agrees to pay L2 $100,000 for reinsuring the life insurance contracts, and L2 agrees to pay L1 a $17,000 ceding commission. L1 agrees to pay L2 an amount equal to the future premiums on the reinsured contracts. L2 agrees to indemnify L1 for claims and benefits and administrative expenses incurred by L1 while the reinsurance agreement is in effect.

(ii) For the period beginning July 1, 1992, and ending December 31, 1992, the following income and expense items are determined with respect to the reinsured contracts:

Item	Income	Expense
Premiums	$25,000	
Death benefits		$10,000
Surrender benefits		8,000
Premium taxes and other expenses		2,000
Total		20,000

(iii) Under paragraph (f)(2) of this section, L1's net negative consideration equals ($88,000), which is determined by subtracting the $125,000 ($100,000 + $25,000) incurred by L1 from the $37,000 incurred by L2 under the reinsurance agreement ($17,000 + $10,000 + $8,000 + $2,000). L2's net positive consideration is $88,000. Under paragraph (b)(1)(ii) of this section, L2 includes the $88,000 net positive consideration in its gross amount of premiums and other consideration.

Example 3. (i) Assume that the reinsurance agreement referred to in *Example 2* is terminated on December 31, 1993. During the period from January 1, 1993 through December 31, 1993, the following income and expense items are determined with respect to the reinsured contracts:

Item	Income	Expense
Premiums	$45,000	
Death benefits		$18,000
Surrender benefits		6,000
Premium taxes and other expenses		8,000
Total		32,000

(ii) On the termination of the reinsurance agreement, L1 receives a payment of $70,000 from L2 as consideration for releasing L2 from liability with respect to the reinsured contracts.

(iii) L1's net positive consideration equals $57,000, which is the excess of the $102,000 incurred by L2 for the year ($18,000 + $6,000 + $8,000 + $70,000) over the $45,000 incurred by L1. L2's net negative consideration is ($57,000). L1 includes the net positive consideration in its gross amount of premiums and other consideration.

Example 4. (i) On January 1, 1993, an insurance company (L1) enters into a modified coinsurance agreement with another insurance company (L2), covering a block of individual life insurance contracts. Both L1 and L2 are calendar year taxpayers. Under the agreement, L2 is credited with an initial reinsurance premium equal to L1's reserves on the reinsured contracts at the inception of the agreement, any new premiums received with respect to the reinsured contracts, any decrease in L1's reserves on the reinsured contracts, and an amount of investment income determined by reference to L1's reserves on the reinsured contracts. L2 is charged for all claims and expenses incurred with respect to the reinsured contracts plus an amount reflecting any increase in L1's reserves. The agreement further provides that cash settlements between the parties are made at the inception and termination of the agreement, as well as at the end of each calendar year while the agreement is in effect. The cash settlement is determined by netting the sum of the amounts credited to L2 against the sum of the amounts charged to L2 with respect to the reinsured policies. L1's reserves on the reinsured policies at the inception of the reinsurance agreement are $375,000.

(ii) Under the cash settlement formula, L2 is credited with an initial reinsurance premium equal to L1's reserves on the reinsured policies ($375,000), but is charged an amount reflecting L1's policy reserve requirements ($375,000).

(iii) For the period ending December 31, 1993, L2 is also credited and charged the following amounts with respect to the reinsured contracts.

Item	Income	Expense
Premiums	$100,000	
Investment income	39,000	
Death benefits		$65,000
Increase in reserves		75,000

(iv) Under paragraph (f)(5) of this section, L2's net negative consideration for the 1993 taxable year equals ($1,000) which is determined by subtracting the sum of the amounts charged to L2 ($375,000 + $65,000 + $75,000 = $515,000) from the sum of the amounts credited to L2 ($375,000 + $100,000 + $39,000 = $514,000). L1's net positive consideration for calendar year 1993 equals $1,000. Under paragraph (b)(1)(ii) of this section, L1 includes the $1,000 net positive consideration in its gross amount of premiums and other consideration.

Example 5. (i) On January 1, 1993, an insurance company (L1) enters into a coinsurance agreement with another insurance company (L2) covering a block of individual life insurance contracts. Both L1 and L2 are calendar year taxpayers. Under the agreement, L2 is credited with an initial reinsurance premium equal to L1's reserves on the effective date of the agreement, any new premiums received on the reinsured contracts, but must indemnify L1 of all claims and expenses incurred with respect to the contracts. As part of the agreement, L2 makes a loan to L1 equal to the amount of the reserves on the reinsured contracts. L1's reserves on the reinsured contracts on the effective date of the agreement are $375,000. Thus, on the inception date of the reinsurance agreement, L1 transfers to L2 its note for $375,000 as consideration for reinsurance.

(ii) The reinsurance agreement between L1 and L2 is a funds-withheld reinsurance agreement. Under paragraph (f)(5) of this section, the amount of any loan transaction is taken into account in determining the parties' net consideration. At the inception of the reinsurance agreement, L2 is credited with a reinsurance premium equal to L1's reserves on the reinsured contracts ($375,000). L2's $375,000 loan to L1 is treated as an amount returned to L1 under the agreement.

(iii) For the period ending December 31, 1993, L2 is credited and charged the following amounts with respect to the reinsured contracts and the loan transaction with L1.

Item	Income	Expense
Premiums	$100,000	
Accrued interest	39,000	
Death benefits		$65,000
Increase in loan to L1		75,000

(iv) Under paragraph (f)(5) of this section, L2's net negative consideration for the 1993 taxable year equals ($1,000), which is determined by subtracting the sum of amounts incurred by L2 with respect to death benefits and the loan transaction ($375,000 + $65,000 + $75,000 = $515,000) from the sum of the amounts credited to L2 as reinsurance premiums and interest on the loan transaction ($375,000 + $100,000 + 39,000 = $514,000). L1's net positive consideration for calendar year 1993 equals $1,000. Under paragraph (b)(1)(ii) of this section, L1 includes the $1,000 net positive consideration in its gross amount of premiums and other consideration.

Example 6. (i) On December 31, 1993, an insurance company (L1) enters into a reinsurance agreement with another insurance company (L2) covering a block of individual life insurance contracts. Both L1 and L2 are calendar year taxpayers. Under the agreement, L2 is credited with L1's reserves on the reinsured contracts on the effective date of the agreement, plus any new premiums received on the reinsured contracts, but must indemnify L1 for all claims and expenses incurred with respect to the contracts. Under the agreement, L1 transfers cash of $325,000 to L2 plus rights to its policyholder loan receivables on the reinsured contracts ($50,000). L2 reports the reinsurance agreement by including the transferred policyholder loan receivables as an asset on its books.

(ii) For the period beginning January 1, 1994 and ending December 31, 1994, the following income and expense items are incurred with respect to the reinsured contracts.

Item	Income	Expense
Premiums	$100,000	
Death benefits		$25,000
Surrender benefits		5,000
Premium taxes and other expenses		8,000
Total		38,000

(iii) These amounts are net of the outstanding policyholder loans held by L2 of $20,000 with respect to death benefits and $15,000 with respect to surrender benefits.

(iv) Under paragraph (f)(8) of this section, the transferred policyholder loan receivables are treated as an item of consideration under the reinsurance agreement. In determining the parties' net consideration for the agreement, the transferred policyholder loan receivables ($50,000) are treated as an item of consideration incurred by L1 under paragraph (f)(2)(i)(B) of this section. Therefore, for the 1993 taxable year, L1 has net negative consideration of ($375,000). L2 has net positive consideration of $375,000. Under paragraph (b)(1)(ii) of this section, L2 includes the $375,000 net positive consideration in its gross amount of premiums and other consideration.

(v) For the 1994 taxable year, L2 has net positive consideration for the reinsurance

agreement of $62,000 before adjustment for the transferred policyholder loans. Under paragraph (f)(8) of this section, the amounts taken into account as claim and benefit payments must be adjusted by the amount of any transferred policyholder loan receivables which are netted against the reinsurer's claim and benefit reimbursements. Therefore, L2 takes into account $45,000 ($25,000+$20,000=$45,000) as reimbursements for death benefits, and $20,000 ($5,000+$15,000=$20,000) as reimbursements for surrender benefits. After adjustment for these items, L2 has net positive consideration of $27,000, which is determined by subtracting the sum of the amounts charged to L2 ($45,000+$20,000+$8,000=$73,000) from the sum of the amounts credited to L2 ($100,000). L1 has net negative consideration of ($27,000) under the agreement. Under paragraph (b)(1)(ii) of this section, L2 includes the $27,000 net positive consideration in its gross amount of premiums and other consideration. The amount of any interest earned on the policyholder loan receivables after their transfer to L2 is treated as investment income earned directly by L2, and is not taken into account as an item of consideration under the agreement.

(g) *Reduction in the amount of net negative consideration to ensure consistency of capitalization for reinsurance agreements*—(1) *In general.* Paragraph (g)(3) of this section provides for a reduction in the amount of net negative consideration that a party to a reinsurance agreement (other than a reinsurance agreement described in paragraph (h)(2) of this section) may take into account in determining net premiums under paragraph (a)(2)(ii) of this section if the party with net positive consideration has a capitalization shortfall (as defined in paragraph (g)(4) of this section). Unless the party with net negative consideration demonstrates that the party with net positive consideration does not have a capitalization shortfall or demonstrates the amount of the other party's capitalization shortfall which is allocable to the reinsurance agreement, the net negative consideration that may be taken into account under paragraph (a)(2)(ii) of this section is zero. However, the reduction of paragraph (g)(3) of this section does not apply to a reinsurance agreement if the parties make a joint election under paragraph (g)(8) of this section. Under the election, the party with net positive consideration capitalizes specified policy acquisition expenses with respect to the agreement without regard to the general deductions limitation of section 848(c)(1).

(2) *Application to reinsurance agreements subject to the interim rules.* In applying this paragraph (g) to a reinsurance agreement that is subject to the interim rules of § 1.848–3, the term "premiums and other consideration incurred for reinsurance under section 848(d)(1)(B)" is substituted for "net negative consideration," and the term "gross amount of premiums and other consideration under section 848(d)(1)(A)" is substituted for "net positive consideration." If an insurance company has "premiums and other consideration incurred for reinsurance under section 848(d)(1)(B)" and a "gross amount of premiums and other consideration under section 848(d)(1)(A)" for the same agreement, the net of these amounts is taken into account for purposes of this paragraph (g).

(3) *Amount of reduction.* The reduction required by this paragraph (g)(3) equals the amount obtained by dividing—

(i) The portion of the capitalization shortfall (as defined in paragraph (g)(4) of this section) allocated to the reinsurance agreement under paragraph (g)(7) of this section; by

(ii) The applicable percentage set forth in section 848(c)(1) for the category of specified insurance contracts reinsured by the agreement.

(4) *Capitalization shortfall.* A "capitalization shortfall" equals the excess of—

(i) The sum of the required capitalization amounts (as defined in paragraph (g)(5) of this section) for all reinsurance agreements (other than reinsurance agreements for which an election has been made under paragraph (h)(3) of this section); over

(ii) The general deductions allocated to those reinsurance agreements, as determined under paragraph (g)(6) of this section.

(5) *Required capitalization amount*—(i) *In general.* The "required capitalization amount" for a reinsurance agreement (other than a reinsurance agreement for which an election has been made under paragraph (h)(3) of this section) equals the amount (either positive or negative) obtained by multiplying—

(A) The net positive or negative consideration for an agreement not described in paragraph (h)(2) of this section, and the net positive consideration for an agreement described in paragraph (h)(2) of this section, but for which an election under paragraph (h)(3) of this section has not been made; by

(B) The applicable percentage set forth in section 848(c)(1) for that category of specified insurance contracts.

(ii) *Special rule with respect to net negative consideration.* Solely for purposes of computing a party's required capitalization amount under this paragraph (g)(5)—

(A) If either party to the reinsurance agreement is the direct issuer of the reinsured contracts, the party computing its required capitalization amount takes into account the full amount of any net negative consideration without regard to any potential reduction under paragraph (g)(3) of this section; and

(B) If neither party to the reinsurance agreement is the direct issuer of the reinsured contracts, any net negative consideration is deemed to equal zero in computing a party's required capitalization amount except to the extent that the party with the net negative consideration establishes that the other party to that reinsurance agreement capitalizes the appropriate amount.

(6) *General deductions allocable to reinsurance agreements.* An insurance company's general deductions allocable to its reinsurance agreements equals the excess, if any, of—

(i) The company's general deductions (excluding additional amounts treated as general deductions under paragraph (g)(8) of this section); over

(ii) The amount determined under section 848(c)(1) on specified insurance contracts that the insurance company has issued directly (determined without regard to any reinsurance agreements).

(7) *Allocation of capitalization shortfall among reinsurance agreements.* The capitalization shortfall is allocated to each reinsurance agreement for which the required capitalization amount (as determined in paragraph (g)(5) of this section) is a positive amount. The portion of the capitalization shortfall allocable to each agreement equals the amount which bears the same ratio to the capitalization shortfall as the required capitalization amount for the reinsurance agreement bears to the sum of the positive required capitalization amounts.

(8) *Election to determine specified policy acquisition expenses for an agreement without regard to general deductions limitation*—(i) *In general.* The reduction specified by paragraph (g)(3) of this section does not apply if the parties to a reinsurance agreement make an election under this paragraph (g)(8). The election requires the party with net positive consideration to capitalize specified policy acquisition expenses with respect to the reinsurance agreement without regard to the general deductions limitation of section 848(c)(1). That party must reduce its deductions under section 805 or section 832(c) by the amount, if any, of the

party's capitalization shortfall allocable to the reinsurance agreement. The additional capitalized amounts are treated as specified policy acquisition expenses attributable to premiums and other consideration on the reinsurance agreement, and are deductible in accordance with section 848(a)(2).

(ii) *Manner of making election.* To make an election under paragraph (g)(8) of this section, the ceding company and the reinsurer must include an election statement in the reinsurance agreement, either as part of the original terms of the agreement or by an addendum to the agreement. The parties must each attach a schedule to their federal income tax returns which identifies the reinsurance agreement for which the joint election under this paragraph (g)(8) has been made. The schedule must be attached to each of the parties' federal income tax returns filed for the later of—

(A) The first taxable year ending after the election becomes effective; or

(B) The first taxable year ending on or after December 29, 1992.

(iii) *Election statement.* The election statement in the reinsurance agreement must—

(A) Provide that the party with net positive consideration for the reinsurance agreement for each taxable year will capitalize specified policy acquisition expenses with respect to the reinsurance agreement without regard to the general deductions limitation of section 848(a)(1);

(B) Set forth the agreement of the parties to exchange information pertaining to the amount of net consideration under the reinsurance agreement each year to ensure consistency;

(C) Specify the first taxable year for which the election is effective; and

(D) Be signed by both parties.

(iv) *Effect of election.* An election under this paragraph (g)(8) is effective for the first taxable year specified in the election statement and for all subsequent taxable years for which the reinsurance agreement remains in effect. The election may not be revoked without the consent of the Commissioner.

(9) *Example.* The principles of this paragraph (g) are illustrated by the following examples.

Example 1. (i) On December 31, 1992, a life insurance company (L1) transfers a block of individual life insurance contracts to an unrelated life insurance company (L2) under an agreement in which L2 becomes solely liable to the policyholders on the reinsured contracts. L1 transfers $105,000 to L2 as consideration for the reinsurance of the contracts.

(ii) L1 and L2 do not make an election under paragraph (g)(8) of this section to capitalize specified policy acquisition expenses with respect to the reinsurance agreement without regard to the general deductions limitation. L2 has no other insurance business, and its general deductions for the taxable year are $3,500.

(iii) Under paragraph (f)(2) of this section, L1's net negative consideration is ($105,000). Under paragraph (f)(3) of this section, L2's net positive consideration is $105,000. Pursuant to paragraph (b)(1)(ii) of this section, L2 includes the net positive consideration in its gross amount of premiums and other consideration.

(iv) The required capitalization amount under paragraph (g)(5) of this section for the reinsurance agreement is $8,085 ($105,000 × .077). L2's general deductions, all of which are allocable to the reinsurance agreement with L1, are $3,500. The $4,585 difference between the required capitalization amount ($8,085) and the general deductions allocable to the reinsurance agreement ($3,500) represents L2's capitalization shortfall under paragraph (g)(4) of this section.

(v) Since L2 has a capitalization shortfall allocable to the agreement, the rules of paragraph (g)(1) of this section apply for purposes of determining the amount by which L1 may reduce its net premiums. Under paragraph (g)(3) of this section, L1 must reduce the amount of net negative consideration that it takes into account under paragraph (a)(2)(ii) of this section by $59,545 ($4,585/.077). Thus, of the $105,000 net negative consideration under the reinsurance agreement, L1 may take into account only $45,455 as a reduction of its net premiums.

Example 2. The facts are the same as *Example 1*, except that L1 and L2 make the election under paragraph (g)(8) of this section to capitalize specified policy acquisition expenses with respect to the reinsurance agreement without regard to the general deductions limitation. Pursuant to this election, L2 must capitalize as specified policy acquisition expenses an amount equal to $8,085 ($105,000 × .077). L1 may reduce its net premiums by the $105,000 of net negative consideration.

Example 3. (i) A life insurance company (L1) is both a direct issuer and a reinsurer of life insurance and annuity contracts. For 1993, L1's net premiums under section 848 (d)(1) for directly issued individual life insurance and annuity contracts are as follows:

Category	Net premiums
Life insurance contracts	$17,000,000
Annuity contracts	8,000,000

(ii) L1's general deductions for 1993 are $1,500,000.

(iii) For 1993, L1 is a reinsurer under four separate indemnity reinsurance agreements with unrelated insurance companies (L2, L3, L4, and L5). The agreements with L2, L3, and L4 cover life insurance contracts issued by those companies. The agreement with L5 covers annuity contracts issued by L5. The parties to the reinsurance agreements have not made the election under paragraph (g)(8) of this section to capitalize specified policy acquisition expenses with respect to these agreements without regard to the general deductions limitation.

(iv) L1's net consideration for 1993 with respect to its reinsurance agreements is as follows:

Agreement	Net consideration
L2	$1,200,000
L3	(350,000)
L4	300,000
L5	600,000

(v) To determine whether a reduction under paragraph (g)(3) of this section applies with respect to these reinsurance agreements, L1 must determine the required capitalization amounts for its reinsurance agreements and the amount of its general deductions allocable to these agreements.

(vi) Pursuant to paragraph (g)(5) of this section, the required capitalization amount for each reinsurance agreement is determined as follows:

L2.....$1,200,000×.077=$92,400
L3.....($350,000)×.077=($26,950)
L4.....$300,000×.077=$23,100
L5.....$600,000×.0175=$10,500

(vii) Thus, the sum of L1's required capitalization amounts on its reinsurance agreements equals $99,050.

(viii) Pursuant to paragraph (g)(6) of this section, L1 determines its general deductions allocable to its reinsurance agreements. The amount determined under section 848(c)(1) on its directly issued contracts is:

Category:		
Annuity contracts	$8,000,000×.0175 =	$140,000
Life insurance contracts	$17,000,000×.077 =	1,309,000
		$1,449,000

(ix) L1's general deductions allocable to its reinsurance agreements are $51,000 ($1,500,000–$1,449,000).

(x) Pursuant to paragraph (g)(4) of this section, L1's capitalization shortfall equals $48,050, reflecting the excess of L1's required capitalization amounts for its reinsurance agreements ($99,050) over the general deductions allocable to its reinsurance agreements ($51,000).

(xi) Pursuant to paragraph (g)(7) of this section, the capitalization shortfall of $48,050 must be allocated between each of L1's reinsurance agreements with net positive consideration in proportion to their respective required capitalization amounts. The allocation of the shortfall between L1's reinsurance agreements is determined as follows:

L2=$35,237 ($48,050×92,400/126,000)
L4=$8,809 ($48,050×23,100/126,000)
L5=$4,004 ($48,050×10,500/126,000)

(xii) Accordingly, the reduction under paragraph (g)(3) of this section that applies to the amount of net negative consideration that may be taken into account by L2, L4, and L5

under paragraph (a)(1)(ii)(B) of this section is determined as follows:

L2=$457,623 ($35,237/.077)
L4=$114,403 ($8,809/.077)
L5=$228,800 ($4,004/.0175)

Example 4. The facts are the same as *Example 3*, except that L1 and L4 make a joint election under paragraph (g)(8) of this section to capitalize specified policy acquisition expenses with respect to the reinsurance agreement without regard to the general deductions limitation. Pursuant to this election, L1 must reduce its deductions under section 805 by an amount equal to the capitalization shortfall allocable to the reinsurance agreement with L4 ($8,809). L1 treats the additional capitalized amounts as specified policy acquisition expenses allocable to premiums and other consideration under the agreement. L4 may reduce its net premiums by the $300,000 net negative consideration. The election by L1 and L4 does not change the amount of the capitalization shortfall allocable under paragraph (g)(7) of this section to the reinsurance agreements with L2 and L5. Thus, the reduction required by paragraph (g)(3) of this section with respect to the amount of the net negative consideration that L2 and L5 may recognize under paragraph (a)(2)(ii) of this section is $457,623 and $228,800, respectively.

(h) *Treatment of reinsurance agreements with parties not subject to U.S. taxation*—(1) *In general.* Unless an election under paragraph (h)(3) of this section is made, an insurance company may not reduce its net premiums by the net negative consideration for the taxable year (or, with respect to a reinsurance agreement that is subject to the interim rules of § 1.848–3, by the premiums and other consideration incurred for reinsurance) under a reinsurance agreement to which this paragraph (h) applies.

(2) *Agreements to which this paragraph (h) applies*—(i) *In general.* This paragraph (h) applies to a reinsurance agreement if, with respect to the premiums and other consideration under the agreement, one party to that agreement is subject to United States taxation and the other party is not.

(ii) *Parties subject to U.S. taxation*—(A) *In general.* A party is subject to United States taxation for this purpose if the party is subject to United States taxation either directly under the provisions of subchapter L of chapter 1 of the Internal Revenue Code (subchapter L), or indirectly under the provisions of subpart F of part III of subchapter N of chapter 1 of the Internal Revenue Code (subpart F).

(B) *Effect of a closing agreement.* If a reinsurer agrees in a closing agreement with the Internal Revenue Service to be subject to tax under rules equivalent to the provisions of subchapter L on its premiums and other consideration from reinsurance agreements with parties subject to United States taxation, the reinsurer is treated as an insurance company subject to tax under subchapter L.

(3) *Election to separately determine the amounts required to be capitalized for reinsurance agreements with parties not subject to U.S. taxation*—(i) *In general.* This paragraph (h)(3) authorizes an insurance company to make an election to separately determine the amounts required to be capitalized for the taxable year with respect to reinsurance agreements with parties that are not subject to United States taxation. If this election is made, an insurance company separately determines a net foreign capitalization amount for the taxable year for all reinsurance agreements to which this paragraph (h) applies.

(ii) *Manner of making the election.* An insurance company makes the election authorized by this paragraph (h)(3) by attaching an election statement to the federal income tax return (including an amended return) for the taxable year for which the election becomes effective. The election applies to that taxable year and all subsequent taxable years unless permission to revoke the election is obtained from the Commissioner.

(4) *Amount taken into account for purposes of determining specified policy acquisition expenses.* If for a taxable year an insurance company has a net positive foreign capitalization amount (as defined in paragraph (h)(5)(i) of this section), any portion of that amount remaining after the reduction described in paragraph (h)(7) of this section is treated as additional specified policy acquisition expenses for the taxable year (determined without regard to amounts taken into account under this paragraph (h)). A net positive capitalization amount is treated as an amount otherwise required to be capitalized for the taxable year for purposes of the reduction under section 848(f)(1)(A).

(5) *Net foreign capitalization amount*—(i) *In general.* An insurance company's net foreign capitalization amount equals the sum of the foreign capitalization amounts (netting positive and negative amounts) determined under paragraph (h)(5)(ii) of this section for each category of specified insurance contracts reinsured by agreements described in paragraph (h)(2) of this section. If the amount is less than zero, the company has a net negative foreign capitalization amount. If the amount is greater than zero, the company has a net positive foreign capitalization amount.

(ii) *Foreign capitalization amounts by category.* The foreign capitalization amount for a category of specified insurance contracts is determined by—

(A) Combining the net positive consideration and the net negative consideration for the taxable year (or, with respect to a reinsurance agreement that is subject to the interim rules of § 1.848–3, by combining the gross amount of premiums and other consideration and the premiums and other consideration incurred for reinsurance) for all agreements described in paragraph (h)(2) of this section which reinsure specified insurance contracts in that category; and

(B) Multiplying the result (either positive or negative) by the percentage for that category specified in section 848(c)(1).

(6) *Treatment of net negative foreign capitalization amount*—(i) *Applied as a reduction to previously capitalized amounts.* If for a taxable year an insurance company has a net negative foreign capitalization amount, the negative amount reduces (but not below zero) the unamortized balances of the amounts previously capitalized (beginning with the amount capitalized for the most recent taxable year) to the extent attributable to prior years' net positive foreign capitalization amounts. The amount by which previously capitalized amounts is reduced is allowed as a deduction for the taxable year.

(ii) *Carryover of remaining net negative foreign capitalization amount.* The net negative foreign capitalization amount, if any, remaining after the reduction described in paragraph (h)(6)(i) of this section is carried over to reduce a future net positive capitalization amount. The remaining net negative foreign capitalization amount may only offset a net positive foreign capitalization amount in a future year, and may not be used to reduce the amounts otherwise required to be capitalized under section 848(a) for the taxable year, or to reduce the unamortized balances of specified policy acquisition expenses from preceding taxable years, with respect to directly written business or reinsurance agreements other than agreements for which the election under paragraph (h)(3) of this section has been made.

(7) *Reduction of net positive foreign capitalization amount by carryover amounts allowed.* If for a taxable year an insurance company has a net positive foreign capitalization amount, that amount is reduced (but not below zero) by any carryover of net negative foreign capitalization amounts from preceding taxable years. Any remaining net positive foreign capitalization amount is

taken into account as provided in paragraph (h)(4) of this section.

(8) *Examples.* The principles of this paragraph (h) are illustrated by the following examples.

Example 1. (i) On January 1, 1993, a life insurance company (L1) enters into a reinsurance agreement with a foreign corporation (X) covering a block of annuity contracts issued to residents of the United States. X is not subject to taxation either directly under subchapter L or indirectly under subpart F on the premiums for the reinsurance agreement with L1. L1 makes the election under paragraph (h)(3) of this section to separately determine the amounts required to be capitalized for the taxable year with respect to parties not subject to United States taxation.

(ii) For the taxable year ended December 31, 1993, L1 has net negative consideration of ($25,000) under its reinsurance agreement with X. L1 has no other reinsurance agreements with parties not subject to United States taxation.

(iii) Under paragraph (h)(5) of this section, L1's net negative foreign capitalization amount for the 1993 taxable year equals ($437.50), which is determined by multiplying L1's net negative consideration on the agreement with X ($25,000) by the percentage in section 848(c)(1) for the reinsured specified insurance contracts (1.75%). Under paragraph (h)(6)(ii) of this section, L1 carries over the net negative foreign capitalization amount of $437.50) to future taxable years. The net negative foreign capitalization amount may not be used to reduce the amounts which L1 is required to capitalize on directly written business or reinsurance agreements other than those agreements described in paragraph (h)(2) of this section.

Example 2. (i) The facts are the same as *Example 1* except that L1 terminates its reinsurance agreement with X and receives $35,000 on December 31, 1994. For the 1994 taxable year, L1 has net positive consideration of $35,000 under its agreement with X. L1 has no other reinsurance agreements with parties not subject to United States taxation.

(ii) Under paragraph (h)(5) of this section, L1's net positive net foreign capitalization amount for the 1984 taxable year equals $612.50, which is determined by multiplying the net positive consideration on the agreement with X ($35,000) by the percentage in section 848(c)(1) for the reinsured specified insurance contracts (1.75%). Under paragraph (h)(4) of this section, L1 reduces the net positive foreign capitalization amount for the taxable year by the net negative foreign capitalization amount carried over from preceding taxable years ($437.50). After this reduction, L1 includes $175 ($612.50–$437.50) as specified policy acquisition expenses for the 1994 taxable year.

(i) *Carryover of excess negative capitalization amount*—(1) *In general.* This paragraph (i) authorizes a carryover of an excess negative capitalization amount (as defined in paragraph (i)(2) of this section) to reduce amounts otherwise required to be capitalized under section 848. Paragraph (i)(4) provides special rules for the treatment of excess negative capitalization amounts of insolvent insurance companies.

(2) *Excess negative capitalization amount.* The excess negative capitalization amount with respect to a category of specified insurance contracts for a taxable year is equal to the excess of—

(A) The negative capitalization amount with respect to that category; over

(B) The amount that can be utilized under section 848(f)(1).

(3) *Treatment of excess negative capitalization amount.* The excess negative capitalization amount for a taxable year reduces the amounts that are otherwise required to be capitalized by an insurance company under section 848(c)(1) for future years.

(4) *Special rule for the treatment of an excess negative capitalization amount of an insolvent company*—(i) *When applicable.* This paragraph (i)(4) applies only for the taxable year in which an insolvent insurance company has an excess negative capitalization amount and has net negative consideration under a reinsurance agreement. See paragraph (i)(4)(v) of this section for the definition of "insolvent."

(ii) *Election to forego carryover of excess negative capitalization amount.* At the joint election of the insolvent insurance company and the other party to the reinsurance agreement—

(A) The insolvent insurance company reduces the excess negative capitalization amount which would otherwise be carried over under paragraph (i)(1) of this section by the amount determined under paragraph (i)(4)(iii) of this section; and

(B) The other party reduces the amount of its specified policy acquisition expenses for the taxable year by the amount determined under paragraph (i)(4)(iii) of this section.

(iii) *Amount of reduction to the excess negative capitalization amount and specified policy acquisition expenses.* To determine the reduction to the carryover of an insolvent insurance company's excess negative capitalization amount and the specified policy acquisition expenses of the other party with respect to a reinsurance agreement—

(A) Multiply the net negative consideration for each reinsurance agreement of the insolvent insurer for which there is net negative consideration for the taxable year by the appropriate percentage specified in section 848(c)(1) for the category of specified insurance contracts reinsured by the agreement;

(B) Sum the results for each agreement;

(C) Calculate the ratio between the results in paragraphs (i)(4)(ii) (A) and (B) of this section for each agreement; and

(D) Multiply that result by the increase in the excess negative capitalization amount of the insolvent insurer for the taxable year.

(iv) *Manner of making election.* To make an election under paragraph (i)(4) of this section, each party to the reinsurance agreement must attach an election statement to its federal income tax return (including an amended return) for the taxable year for which the election is effective. The election statement must identify the reinsurance agreement for which the joint election under this paragraph (i)(4) has been made, state the amount of the reduction to the insolvent insurance company's excess negative capitalization amount that is attributable to the agreement, and be signed by both parties. An election under this paragraph (i)(4) is effective for the taxable year specified in the election statement, and may not be revoked without the consent of the Commissioner.

(v) *Presumptions relating to the insolvency of an insurance company undergoing a court supervised rehabilitation or similar state proceeding.* For purposes of this paragraph (i)(4), an insurance company which is undergoing a rehabilitation, conservatorship, or similar state proceeding shall be presumed to be insolvent if the state proceeding results in—

(A) An order of the state court finding that the fair market value of the insurance company's assets is less than its liabilities;

(B) The use of funds, guarantees, or reinsurance from a guaranty association;

(C) A reduction of the policyholders' available account balances; or

(D) A substantial limitation on access to funds (for example, a partial or total moratorium on policyholder withdrawals or surrenders that applies for a period of 5 years).

(vi) *Example.* The principles of this paragraph (i)(4) are illustrated by the following example.

Example. (i) An insurance company (L1) is the subject of a rehabilitation proceeding under the supervision of a state court. The state court has made a finding that the fair market value of L1's assets is less than its liabilities. On December 31, 1993, L1 transfers a block of individual life insurance contracts to an unrelated insurance company (L2) under an assumption reinsurance

agreement whereby L2 becomes solely liable to the policyholders under the contracts reinsured. Under the agreement, L1 agrees to pay L2 $2,000,000 for assuming the life insurance contracts. This negative net consideration causes L1 to incur an excess negative capitalization amount of $138,600 for the 1993 taxable year. L1 has no other reinsurance agreements for the taxable year.

(ii) As part of the reinsurance agreement, L1 and L2 agree to make an election under paragraph (i)(4) of this section. Under the election, L1 agrees to forgo the carryover of the $138,600 excess negative capitalization amount for future taxable years. L2 must include the $2,000,000 net positive consideration for the reinsurance agreement in its gross amount of premiums and other consideration. L2 reduces its specified policy acquisition expenses for the 1993 taxable year by $138,600.

(j) *Ceding commissions with respect to reinsurance of contracts other than specified insurance contracts.* A ceding commission incurred with respect to the reinsurance of an insurance contract that is not a specified insurance contract is not subject to the provisions of section 848(g).

(k) *Effective dates*—(1) *In general.* Unless otherwise specified in this paragraph, the rules of this section are effective for the taxable years of an insurance company beginning after November 14, 1991.

(2) *Reduction in the amount of net negative consideration to ensure consistency of capitalization for reinsurance agreements.* Section 1.848–2(g) (which provides for an adjustment to ensure consistency) is effective for—

(i) All amounts arising under any reinsurance agreement entered into after November 14, 1991; and

(ii) All amounts arising under any reinsurance agreement for taxable years beginning after December 31, 1991, without regard to the date on the reinsurance agreement was entered into.

(3) *Net consideration rules.* Section 1.848–2(f) (which provides rules for determining the net consideration for a reinsurance agreement) applies to—

(i) Amounts arising in taxable years beginning after December 31, 1991, under a reinsurance agreement entered into after November 14, 1991; and

(ii) Amounts arising in taxable years beginning after December 31, 1994, under a reinsurance agreement entered into before November 15, 1991.

(4) *Determination of the date on which a reinsurance agreement is entered into.* A reinsurance agreement is considered entered into at the earlier of—

(i) The date of the reinsurance agreement; or

(ii) The date of a binding written agreement to enter into a reinsurance transaction if the written agreement evidences the parties' agreement on substantially all material items relating to the reinsurance transaction.

(5) *Special rule for certain reinsurance agreements with parties not subject to U.S. taxation.* The election and special rules in paragraph (h) of this section relating to the determination of amounts required to be capitalized on reinsurance agreements with parties not subject to United States taxation apply to taxable years ending on or after September 30, 1990.

(6) *Carryover of excess negative capitalization amount.* The provisions of paragraph (i) of this section, including the special rule for the treatment of excess negative capitalization amounts of insolvent insurance companies, are affected with respect to amounts arising in taxable years ending on or after September 30, 1990.

§ 1.848–3. Interim rules for certain reinsurance agreements.

(a) *Scope and effective dates.* The rules of this section apply in determining net premiums for a reinsurance agreement with respect to—

(1) Amounts arising in taxable years beginning before January 1, 1992, under a reinsurance agreement entered into after November 14, 1991; and

(2) Amounts arising in taxable years beginning before January 1, 1995, under a reinsurance agreement entered into before November 15, 1991.

(b) *Interim rules.* In determining a company's gross amount of premiums and other consideration under section 848(d)(1)(A) and premiums and other consideration incurred for reinsurance under section 848(d)(1)(B), the general rules of subchapter L of the Internal Revenue Code apply with the adjustments and special rules set forth in paragraph (c) of this section. Except as provided in paragraph (c)(5) of this section (which applies to modified coinsurance transactions), the gross amount of premiums and other consideration is determined without any reduction for ceding commissions, annual allowances, reimbursements of claims and benefits, or other amounts incurred by a reinsurer with respect to reinsured contracts.

(c) *Adjustment and special rules.* This paragraph sets forth certain adjustments and special rules that apply for reinsurance agreements in determining the gross amount of premiums and other consideration under section 848(d)(1)(A) and premiums and other considerations incurred for reinsurance under section 848(d)(1)(B).

(1) *Assumption reinsurance.* The ceding company must treat the gross amount of consideration incurred with respect to an assumption reinsurance agreement as premiums and other consideration incurred for reinsurance under section 848(d)(1)(B). The reinsurance must include the same amount in the gross amount of premiums and other consideration under section 848(d)(1)(A). For rules relating to the determination and treatment of ceding commissions, see paragraph (c)(3) of this section.

(2) *Reimbursable dividends.* The reinsurer must treat the amount of policyholder dividends reimbursable to the ceding company (other than under a modified coinsurance agreement covered by paragraph (c)(5) of this section) as a return premium under section 848(d)(1)(B). The ceding company must include the same amount in the gross amount of premiums and other consideration under section 848(d)(1)(A). The amount of any experience-related refund due the ceding company is treated as a policyholder dividend reimbursable to the ceding company.

(3) *Ceding commissions*—(i) *In general.* The reinsurer must treat ceding commissions as a general deduction. The ceding company must treat ceding commissions as non-premium related income under section 803(a)(3). The ceding company may not reduce its general deductions by the amount of the ceding commission.

(ii) *Amount of ceding commission.* For purposes of this section, the amount of a ceding commission equals the excess, if any, of—

(A) The increase in the reinsurer's tax reserves resulting from the reinsurance agreement (computed in accordance with section 807(d)); over

(B) The gross consideration incurred by the ceding company for the reinsurance agreement, less any amount incurred by the reinsurer as part of the reinsurance agreement.

(4) *Termination payments.* The reinsurer must treat the gross amount of premiums and other consideration payable as a termination payment to the ceding company (including the tax reserves on the reinsured contracts) as premiums and other consideration incurred for reinsurance under section 848(d)(1)(B). The ceding company must include the same amount in the gross amount of premiums and other consideration under section 848(d)(1)(A). This paragraph does not apply to modified coinsurance agreements.

(5) *Modified coinsurance agreements.* In the case of a modified coinsurance

agreement, the parties must determine their net premiums on a net consideration basis as described in § 1.848–2(f)(5).

(D) *Examples.* The principles of this section are illustrated by the following examples.

Example 1. On July 1, 1991, an insurance company (L1) transfers a block of individual life insurance contracts to an unrelated insurance company (L2) under an arrangement whereby L2 becomes solely liable to the policy holder under the contracts reinsured. The tax reserves on the reinsured contracts are $100,000. Under the assumption reinsurance agreement, L1 pays L2 $83,000 for assuming the life insurance contracts. Under paragraph (c)(3) of this section, since the increase in L2's tax reserves ($100,000) exceeds the net consideration transferred by L1 ($83,000), the reinsurance agreement provides for a ceding commission. The ceding commission equals $17,000 ($100,000-$83,000). Under paragraph (c)(3) of this section, L1 reduces its gross amount of premiums and other consideration for the 1991 taxable year under section 848(d)(1)(B) by the $100,000 premium incurred for reinsurance, and L2 includes the $100,000 premium for reinsurance in its gross amount of premiums and other consideration under section 848(d)(1)(A). L1 treats the $17,000 ceding commission as non-premium related income and section 803(a)(3).

Example 2. On July 1, 1991, a life insurance company (L1) transfers a block of individual life insurance contracts to an unrelated insurance company (L2) under an arrangement whereby L2 becomes solely liable to the policyholder under the contracts reinsured. The tax reserves on the reinsured contracts are $100,000. Under the assumption reinsurance agreement, L1 pays L2 $100,000 for assuming the contracts, and L2 pays L1 a $17,000 ceding commission. Under paragraph (c)(1) of this section, L1 reduces its gross amount of premiums and other consideration under section 848(d)(1)(B) by $100,000. L2 includes $100,000 in its gross amount of premiums and other consideration under section 848(d)(1)(A). Under paragraph (c)(3) of this section, since the increase in L2's tax reserves ($100,000) exceeds the net consideration transferred by L1, the reinsurance agreement provides for a ceding commission. The ceding commission equals $17,000 ($100,000 increase in L2's tax reserves less $83,000 net consideration transferred by L1). L1 treats the $17,000 ceding commission as non-premium related income under section 803(a)(3).

Example 3. On July 1, 1991, a life insurance company (L1) transfers a block of individual life insurance contracts to an unrelated insurance company (L2) under an arrangement whereby L2 becomes solely liable to the policyholder under the contracts reinsured. Under the assumption reinsurance agreement, L1 transfers assets of $105,000 to L2. The tax reserves on the reinsured contracts are $100,000. Under paragraph (c)(1) of this section, L1 reduces its gross amount of premiums and other consideration under section 848(d)(1)(B) by $105,000, and L2 increases its gross amount of premiums and other consideration under section 848(d)(1)(A) by $105,000. Since the net consideration transferred by L1 exceeds the increase in L2's tax reserves, there is no ceding commission under paragraph (c)(3) of this section.

Example 4. (i) On June 30, 1991, a life insurance company (L1) reinsures 40% of certain individual life insurance contracts to be issued after that date with an unrelated insurance company (L2) under an agreement whereby L1 remains directly liable to the policyholders with respect to the contracts reinsured. The agreement provides that L2 is credited with 40% of any premiums received with respect to the reinsured contracts, but must indemnify L1 for 40% of any claims, expenses, and policyholder dividends. During the period from July 1 through December 31, 1991, L1 has the following income and expense items with respect to the reinsured policies:

Item	Income	Expense
Premiums	$8,000	
Benefits paid		$1,000
Commissions		6,000
Policyholder dividends		500
Total		7,500

(ii) Under paragraphs (b) and (c)(2) of this section, L1 includes $8,200 in its gross amount of premiums and other consideration under section 848(d)(1)(A) ($8,000 gross premiums on the reinsured contracts plus $200 of policyholder dividends reimbursed by L2 ($500 × 40%). L1 reduces its gross amount of premiums and other consideration by $3,200 (40% × $8,000) as premiums and other consideration incurred for reinsurance under section 848(d)(1)(B). The benefits and commissions incurred by L1 with respect to the reinsured contracts do not reduce L1's gross amount of premiums and other consideration under section 848(d)(1)(B). L2 includes $3,200 in its gross amount of premiums and other consideration (40% × $8,000) and is treated as having paid return premiums of $200 (the amount of reimbursable dividends paid to L1). L2 is also treated as having incurred the following expenses with respect to the reinsured contracts: $400 as benefits paid (40% × $1,000) and $2,400 as commissions expense (40% × $6,000). Under paragraph (b) of this section, these expenses do not reduce L2's gross amount of premiums and other consideration under section 848(d)(1)(A).

Example 5. On December 31, 1991, an insurance company (L1) terminates a reinsurance agreement with an unrelated insurance company (L2). The termination applies to a reinsurance agreement under which L1 had ceded 40% of its liability on a block of individual life insurance contracts to L2. Upon termination of the reinsurance agreement, L2 makes a final payment of $116,000 to L1 for assuming full liability under the contracts. The tax reserves attributable to L2's portion of the reinsured contracts are $120,000. Under paragraph (c)(4) of this section, L2 reduces its gross amount of premiums and other consideration under section 848(d)(1)(B) by $120,000. L1 includes $120,000 in its gross amount of premiums and other consideration under section 848(d)(1)(A).

Example 6. (i) On June 30, 1991, an insurance company (L1) reinsures 40% of its existing life insurance contracts with an unrelated life insurance company (L2) under a modified coinsurance agreement. For the period July 1, 1991 through December 31, 1991, L1 reports the following income and expense items with respect to L2's 40% share of the reinsured contracts:

Item	Income	Expense
Premiums	$10,000	
Benefits paid		$4,000
Policyholder dividends		500
Reserve adjustment		1,500
Total		6,000

(ii) Pursuant to paragraph (c)(5) of this section, L1 reduces its gross amount of premiums and other consideration under section 848(d)(1)(B) by the $4,000 net consideration for the modified coinsurance agreement ($10,000–$6,000). L2 includes the $4,000 net consideration in its gross amount of premiums and other consideration under section 848(d)(1)(A).

PART 602—OMB CONTROL NUMBERS UNDER THE PAPERWORK REDUCTION ACT

Par. 38. The authority citation for part 602 continues to read as follows:

Authority: 26 U.S.C. 7805.

Par. 39. Section 602.101 (c) is amended by adding the following entries in the table to read as follows:

§ 602.101 OMB Control Numbers.

* * * * *

(c) * * *

CFR part or section where identified and described	Current OMB control number
1.848–2(g)(8)	1545–1287
1.848–2(h)(3)	1545–1287
1.848–2(i)(4)	1545–1287

* * * * *

Michael P. Dolan,

Acting Commissioner of Internal Revenue.

Approved: November 16, 1992.

Fred T. Goldberg, Jr.,

Assistant Secretary of the Treasury.

DEPARTMENT OF THE INTERIOR

Bureau of Mines

30 CFR Part 609

RIN 1032-AA02

Payments Required for Owners of Private Lands Upon Which the Bureau of Mines Performs Exploration or Development Work To Investigate Known Coal Deposits

AGENCY: Bureau of Mines, Interior.

ACTION: Final rule; rescission.

SUMMARY: This document rescinds the Federal Government's regulations that stipulate that a "reasonable percentage" of the value of coals produced by a private owner be paid to the Federal Government as compensation for the exploration and development efforts of the Bureau of Mines. This regulation is no longer applicable to Bureau programs.

EFFECTIVE DATE: December 29, 1992.

FOR FURTHER INFORMATION CONTACT: John D. Ford, U.S. Department of the Interior, U.S. Bureau of Mines, Branch of Management Analysis, 810 7th Street NW., Washington, DC 20241, Tel: 202–501–9253.

SUPPLEMENTARY INFORMATION: The current 30 CFR part 609, Payments Required from Owners of Private Lands Upon Which the Bureau of Mines Performs Exploration or Development Work to Investigate Known Coal Deposits is a result of a directive established in fiscal year 1947 by the Interior Department Appropriation Act. At that time, the Bureau investigated known coal deposits on Federal, State; and private lands. When on private lands, the Federal Government required a "reasonable percentage" of the value of coals produced by the private owner as compensation for the exploration and development efforts. This regulation, as described above, no longer has application to Bureau programs. Under the authority of the President's memorandum of January 28, 1992, regarding reducing the burden of Government regulations, this regulation is rescinded.

The Department of the Interior has determined this document is not a major rule under Executive Order 12291 and certifies this document does not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*).

In accordance with the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*), the Bureau of Mines certifies that this final rule does not have a significant economic effect on a substantial number of small entities.

This final rule to rescind 30 CFR part 609 is determined not to have federalism effects under Executive Order 12612 as it has no direct causal effect on the relative roles of Federal and State Governments.

This final rule does not contain collections of information that require approval by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.*

The Department of the Interior has determined that this final rule does not constitute a major Federal action significantly affecting the quality of the human environment under The National Environmental Policy Act of 1969.

Author: Michael L. Kaas, Chief, Division of Resource Evaluation, U.S. Bureau of Mines.

The policy of the Department of the Interior is, whenever practicable, to afford the public an opportunity to participate in the rulemaking process. A proposed rule was published in the **Federal Register**, Vol. 57, No. 183, Monday, September 21, 1992, on pages 43411–43412. Accordingly, interested persons were asked to submit written comments, suggestions, or objections regarding its content. No comments were received during the 30-day comment period.

The Department has certified to the Office of Management and Budget that this final rule meets the applicable standards provided in sections 2(a) and 2(b) of Executive Order 12778.

List of Subjects in 30 CFR Part 609

Coal, Mines.

Accordingly, in exercise of authority delegated (5 U.S.C. 302) by the Secretary of the Interior to the Assistant Secretary, 30 CFR chapter VI is amended by removing part 609.

Dated: November 5, 1992.

John M. Sayre,

Assistant Secretary—Water and Science.

30 CFR Part 651

RIN 1032–AA03

Administration of Grants

AGENCY: Bureau of Mines, Interior.

ACTION: Final rule, rescission.

SUMMARY: 30 CFR part 651 requires innovation in the submission of research and development proposals to further Bureau programs as authorized by statute. These requirements are also contained in 48 CFR chapter 15, part 1515, subpart 1515.5. Since there is no need these requirements be contained in both locations, this part is rescinded.

EFFECTIVE DATE: December 29, 1992.

FOR FURTHER INFORMATION CONTACT: John D. Ford, U.S. Department of the Interior, U.S. Bureau of Mines, Branch of Management Analysis, 810 7th Street NW., Washington, DC 20241, Tel: 202–501–9253.

SUPPLEMENTARY INFORMATION: Under the authority of the President's memorandum of January 28, 1992, regarding reducing the burden of Government regulation, this regulation is rescinded.

The Department of the Interior has determined that this document is not a major rule under Executive Order 12291 and certifies this document does not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq* .).

In accordance with the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*), the Bureau of Mines certifies that this final rule does not have a significant economic effect on a substantial number of small entities.

This final rule to rescind 30 CFR part 651 is determined not to have federalism effects under Executive Order 12612 as it has no direct causal effect on the relative roles of Federal and State Governments.

This final rule does not contain collections of information that require approval by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.*

The Department of the Interior has determined that this final rule does not constitute a major Federal action significantly affecting the quality of the human environment under The National Environmental Policy Act of 1969.

Author: Doyne W. Teets, Chief, Division of Procurement, U.S. Bureau of Mines.

The policy of the Department of the Interior is, whenever practicable, to afford the public an opportunity to participate in the rulemaking process. LIBRARY OF CONGRESS

37 CFR Part 201

[Docket No. RM 92-7]

Cable and Satellite Carrier Royalty Interest Regulations (Amendments)

AGENCY: Copyright Office; Library of Congress.

ACTION: Final rule.

SUMMARY: The Copyright Office amends §§ 201.11(h)(2) and 201.17(i)(2)(i) of its regulations to adopt the Department of the Treasury's published interest rates for late and underpaid royalties made pursuant to section 111 and section 119 of the Copyright Act. The Office also makes technical amendments to §§ 201.11(h)(3) and 201.17(i)(2)(ii).

EFFECTIVE DATE: December 29, 1992.

FOR FURTHER INFORMATION CONTACT: Dorothy Schrader, General Counsel, Copyright Office, Library of Congress, Washington, DC 20540. Telephone: (202) 707-8380.

SUPPLEMENTARY INFORMATION:

1. Background

On April 10, 1989, the Copyright Office announced that it would be assessing interest against late and underpaid royalties made pursuant to the cable compulsory license. See 54 FR 14217 (1989). The Office made a similar announcement on July 3, 1989 for late payments and underpayments made pursuant to the satellite carrier compulsory license. See 54 FR 27873 (1989). The regulations provide, *inter alia*, the means for determining the beginning and end of the accrual period, the minimum charge assessable, and the method for determining the applicable interest rate.

With regards to determination of an interest rate, the Office provided:

> The Copyright Office does not wish to penalize cable systems for late and amended filings, but rather wishes to compensate copyright owners for the present value loss of royalties which should have been deposited on a timely basis. Therefore, to achieve this equitable result, the Office chose a rate which would most closely approximate the interest earned on royalty payments made within the accounting period filing dates.
>
> As part of its standard practice, the Copyright Office makes a deposit of royalty funds recently received with the U.S. Treasury on the first business day after the close of an accounting filing period. The interest rate paid on that deposit is readily obtainable from the U.S. Treasury within a day or so of the deposit. The Office feels that making the Treasury rate applicable to all underpayments which resulted from cable carriage during that accounting period, most closely equals the amount of interest the underpaid royalties would have earned had they been paid in accordance with the accounting period filing deadlines. The one drawback of adopting such an interest rate is that it is not a fixed predetermined rate.

54 FR at 14220. See also 54 FR at 27874-75. The Office subsequently adopted a regulation which set the interest rate for an accounting period as the rate paid by the Treasury on the first investment of royalties made after the close of the filing period for that accounting period. See § 201.17(i)(2)(i). See also, § 201.11(h)(2).

The Copyright Office also adopted a regulation for the cable and satellite carrier license setting the minimum amount of interest that would be assessed. The regulation provides:

> Interest is not required to be paid on any royalty underpayment from a particular accounting period if the sum of that underpayment is less than or equal to five dollars ($5.00).

§ 201.17(i)(2)(ii). See also § 201.11(h)(3).

2. Policy Decision of the Copyright Office

The Copyright Office has found the procedure for setting the interest rate for late payments and underpayments from particular accounting periods to present several problems. First, the Office has noticed a significant disparity between the interest rate appearing on Treasury securities purchased after the close of an accounting filing period and the actual yield those securities produce. This has resulted in the setting of an interest rate pursuant to §§ 201.11(h)(2) and 201.17(i)(2)(i) which is often higher than the interest yield the royalties would have produced had they been deposited with the Office on time. Second, the Office has faced the administrative problem, particularly with section 119 royalties, of not having sufficient funds to make an investment immediately following the close of the accounting filing period. This has caused problems with the setting of the interest rate. Furthermore, the Copyright Office is often forced to purchase short-term Treasury bills, as opposed to Treasury notes, which contain a discount rate rather than an interest rate, further complicating the setting of an appropriate interest rate.

As the Copyright Office noted in the preamble to the interest regulation for the cable compulsory license, the Office "does not wish to penalize cable systems for late and amended filings, but rather wishes to compensate copyright owners for the present value loss of royalties which should have been deposited on a timely basis." 54 FR at 14220. In order to further this goal, the Office chose a system for establishing a rate of interest to be assessed against late payments and underpayments that it felt would most closely match the amount of interest copyright owners would have earned had all royalties been submitted on time for each individual accounting period. The Office therefore concluded that the "interest rate applicable under the interest regulation adopted herein shall be the interest rate paid by the Treasury on the cable royalty funds deposited by the Copyright Office on the first business day after the close of the filing deadline for the accounting period with respect to which the underpayment occurs." *Id.* at 14220. See also 54 FR at 27875.

The current system for establishing the applicable interest rate has proved administratively difficult for several reasons. First, as noted above, the interest rate obtained from the Treasury on securities purchased the first business day after the close of the filing period has often differed greatly from the effective yield of those securities. For example, when the Office purchases a Treasury note on the day following the close of the filing period, the note may state on its face that it will pay a 9.125% interest rate over the two year term of the note. However, as is often the case, the Copyright Office is forced to purchase notes which have been issued well prior to the purchase date by the Office, and have actually been held by others. The notes are typically held for up to six months or less, at which time the funds are available to the Copyright Royalty Tribunal for distribution. The notes are therefore held for a far shorter period of time than the term of the note. In the above example, a two year note paying 9.125% over that period which is only held for a six month period will yield an amount that is far less than 9.125%. A cable system which makes a late payment therefore must, under the

current regulations, pay a 9.125% interest assessment when, if it had submitted its royalties on time, copyright owners would have received a lesser yield. This result frustrates the Office's stated goal of not penalizing cable systems and satellite carriers for late payments, but rather providing copyright owners the funds they would have received had the royalties been paid on time.

Second, the Copyright Office has encountered the administrative difficulty, particular with satellite carrier royalties, in making deposits of royalties with the Treasury the day after the close of the filing period. It is often the case that the majority of royalties arrive well in advance of the final day of the filing period, necessitating earlier deposits. The Copyright Office does not wish to hold funds from deposit for any period of time, since copyright owners will lose the interest on those funds, nor will it deposit relatively insignificant amounts on a daily basis. The problem therefore arises of having a sufficiently large, recently received royalty pool to be deposited on the day after the close of the filing period so that the appropriate interest rate may be established.

Third, the Copyright Office is faced with the problem of not always being able to purchase Treasury securities which carry an interest rate. It is often the case that the Office is forced to purchase Treasury bills, rather than notes, which are sold at a discount rate, rather than an interest rate. This situation arises when the royalty funds are to be turned over to the Copyright Royalty Tribunal at a time period of less than six months from the date of investment. Since the bills do not carry an interest rate, the question becomes how to calculate the appropriate interest rate for regulation purposes.

Finally, due to such circumstances as the necessity of purchasing Treasury bills as opposed to notes, it is often difficult for the Copyright Office to quickly provide cable and satellite operators with the applicable interest rate for the most recent accounting period. This delay, while perhaps only for a period of several days, has serious implications for Form 3 systems submitting large royalty payments a day or two late.

To correct the above-stated problems, the Copyright Office has decided to amend its regulations to adopt the Department of the Treasury's method for determining the percentage rate charge for late payments. Section 8025.40 of the Treasury Financial Manual states:

> The minimum annual rate of interest to be charged will be calculated by Treasury as an average of current value of funds to Treasury and will be published in the **Federal Register** each year by October 31, to become effective January 1.
>
> Described as the Current Value of Funds Rate, this Treasury Department rate is subject to quarterly revisions if the annual average changes by 2 percent, and such revisions are published in the **Federal Register**. The applicable interest rate for an accounting period shall be the Current Value of Funds Rate in effect on the first business day after the close of an accounting filing period.

The Copyright Office finds the Current Value of Funds Rate to be the superior means of calculating the appropriate cable and satellite interest rate for several reasons. First, the rate more accurately reflects what the market is currently paying on investment funds than the current system, thereby producing a rate which approximates yield on investment. This eliminates disparities currently experienced between interest rate assessed and yield on funds received by copyright owners. Second, the Current Value of Funds Rate solves the problem of lack of deposits on the day after the close of a filing period, and the problem faced by the purchase of Treasury bills carrying only a discount rate. Finally, the rate is easily determinable well in advance of the close of an accounting filing period and is available to all through the **Federal Register**. The Office therefore amends its regulations to adopt the Treasury's method of calculating interest to be effective beginning with the current 1992/2 accounting period and for all accounting periods thereafter.

The Copyright Office also amends §§ 201.11(h)(3) and 201.17(10)(2)(ii) by adding "or late payment" after the word "underpayment" and by removing the second "underpayment" and replacing it with the words "interest charge." Both sections should read:

> Interest is not required to be paid on any royalty underpayment or late payment from a particular accounting period if the interest charge is less than or equal to five dollars ($5.00).

Since this regulation makes technical adjustments to the method used in calculating interest on late and underpaid royalties and since the amendments make it easier to establish the applicable interest rate, the regulation is issued in final form and takes effect for late payments and underpayments related to royalties due for the 1992/2 accounting period and for all accounting periods thereafter. The Copyright Office has already set the interest rates for accounting periods earlier than 1992/2 under the superseded regulation, and those established rates are unaffected by this amendment of the regulation. That is, the interest rates already set under the superseded regulation will apply to any late payments or underpayments related to royalties due for any accounting period before 1992/2.

With respect to the Regulatory Flexibility Act, the Copyright Office takes the position that this Act does not apply to Copyright Office rulemaking. The Copyright Office is a department of the Library of Congress, which is part of the legislative branch. Neither the Library of Congress nor the Copyright Office is an "agency" within the meaning of the Administrative Procedure Act of June 11, 1946, as amended (title 5, of U.S. Code, subchapter II and chapter 7). The Regulatory Flexibility Act consequently does not apply to the Copyright Office since that Act affects only those entities of the Federal Government that are agencies as defined in the Administrative Procedure Act.[1]

Alternatively, if it is later determined by a court of competent jurisdiction that the Copyright Office is an "agency" subject to the Regulatory Flexibility Act, the Register of Copyrights has determined and hereby certifies that this regulation will have no significant impact on small businesses.

List of Subjects in 37 CFR Part 201

Cable television; Cable compulsory license.

Final Regulation

In consideration of the foregoing, the Copyright Office is amending part 201 of 37 CFR, chapter II, as set forth below.

PART 201—[AMENDED]

1. The authority section for part 201 continues to read as follows:

> **Authority:** Sec. 702, 90 Stat. 2541, 17 U.S.C. 702; § 201.7 is also issued under 17 U.S.C. 408, 409, and 410; § 201.16 is also issued under 17 U.S.C. 116; § 201.24 is also issued under Public Law 101–650, 104 Stat. 5089, 5134; § 201.6 is also issued under 17 U.S.C. 708; § 201.17 is also issued under 17

[1] The Copyright Office was not subject to the Administrative Procedure Act before 1978, and it is now subject to it only in areas specified by section 701(d) of the Copyright Act (i.e., "all actions taken by the Register of Copyrights under this title (17)," except with respect to the making of copies of copyright deposits (17 U.S.C. 706(b)). The Copyright Act does not make the Office an "agency" as defined in the Administrative Procedure Act. For example, personnel actions taken by the Office are not subject to APA–FOIA requirements.

U.S.C. 111; § 201.19 is also issued under 17 U.S.C. 115.

PART 201.11—[AMENDED]

2. Sections 201.11(h) (2) and (3) are revised to read as follows:

§ 201.11 Satellite carrier statements of account covering statutory licensee for secondary transmissions for private home viewing.

* * * * *

(h)(1) * * *

(2)(i) The interest rate applicable to a specific accounting period beginning with the 1992/2 period shall be the Current Value of Funds Rate, as established by section 8025.40 of the Treasury Financial Manual and published in the **Federal Register**, in effect on the first business day after the close of the filing deadline for that accounting period. Cable operators wishing to obtain the interest rate for a specific accounting period may do so by consulting the **Federal Register** for the applicable Current Value of Funds Rate, or by contacting the Licensing Division of the Copyright Office.

(ii) The interest rate applicable to a specific accounting period earlier than the 1992/2 period shall be the rate fixed by the Licensing Division of the Copyright Office pursuant to 37 CFR 201.11(h) in effect on June 30, 1992.

* * * * *

(3) Interest is not required to be paid on any royalty underpayment or late payment from a particular accounting period if the interest charge is less than or equal to five dollars ($5.00).

§ 201.17 [Amended]

3. Sections 201.17(i)(2) (i) and (ii) are revised and (i)(2)(iii) is added to read as follows:

§ 201.17 Statements of account covering compulsory licenses for secondary transmissions by cable systems.

* * * * *

(i)(1) * * *

(2) * * *

(i) The interest rate applicable to a specific accounting period beginning with the 1992/2 period shall be the Current Value of Funds Rate, as established by section 8025.40 of the Treasury Financial Manual and published in the **Federal Register**, in effect on the first business day after the close of the filing deadline for that accounting period. Cable operators wishing to obtain the interest rate for a specific accounting period may do so by consulting the **Federal Register** for the applicable Current Value of Funds Rate, or by contacting the Licensing Division of the Copyright Office.

(ii) The interest rate applicable to a specific accounting period earlier than the 1992/2 period shall be the rate fixed by the Licensing Division of the Copyright Office pursuant to 37 CFR 201.17(i) in effect on June 30, 1992.

(iii) Interest is not required to be paid on any royalty underpayment or late payment from a particular accounting period if the interest charge is less than or equal to five dollars ($5.00).

* * * * *

Dated: December 3, 1992.

BILLING CODE 1410-08-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[IL 16-1-5140; FRL 4545-5]

Approval and Promulgation of Implementation Plans; Illinois

AGENCY: U.S. Environmental Protection Agency (USEPA).

ACTION: Final rule.

SUMMARY: USEPA is approving three revisions to the Illinois State Implementation Plan (SIP) addressing the control of emissions of total suspended particulates (TSP) from fuel combustion sources. These revisions pertain to the incorporation of new TSP rules to replace those remanded by the courts, as well as procedures for granting adjusted opacity standards. USEPA's action is based upon a request incorporating all three revisions, which was submitted by the State to satisfy the requirements of Part D of the Clean Air Act (Act).

DATES: This action will be effective March 1, 1993 unless notice is received within 30 days that someone wishes to submit adverse or critical comments. If the effective date is delayed, timely notice will be published in the **Federal Register**.

ADDRESSES: Copies of the SIP revision request and USEPA's analysis are available for inspection at the following address: (It is recommended that you telephone Randolph O. Cano at (312) 886-6036, before visiting the Region 5 office.) U.S. Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604.

Written comments should be sent to: J. Elmer Bortzer, Chief, Regulation Development Section, Regulation Development Branch (AR-18J) U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.

A copy of today's revision to the Illinois SIP is available for inspection at: U.S. Environmental Protection Agency, Public Information Reference Unit, 401 M Street, SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Randolph O. Cano, Regulation Development Branch, Regulation Development Section (AR-18J), U.S. Environmental Protection Agency, Region 5, Chicago, Illinois 60604 (312) 886-6036.

SUPPLEMENTARY INFORMATION: USEPA revised the National Ambient Air Quality Standard (NAAQS) for particulate matter on July 1, 1987, (52 FR 24634), and replaced the TSP ambient air quality standard. The revised standard is expressed in terms of particulate matter with a nominal diameter of 10 micrometers or less (PM_{10}). However, at the State's option, USEPA continues to process TSP SIP revisions which were in process at the time the new (PM_{10}) standard was promulgated. In a policy document published on July 1, 1987, (52 FR at 24679, column 2), USEPA stated that it would regard its approval of existing TSP rules as necessary interim particulate matter plans during the period preceding the approval of State plans specifically aimed at PM_{10}. Section 110(1) of the 1990 Clean Air Act Amendments (CAAA), 42 U.S.C. 7410, prohibits USEPA from approving SIP revisions that result in the relaxation of control requirements in effect in nonattainment areas before November 15, 1990, if such revisions "would interfere with any applicable requirement concerning attainment or reasonable further progress (as defined in section 171), or any other applicable requirement of this Act." If the SIP revision is judged to include more stringent provisions than are in the existing plan, USEPA's general policy is to approve it. Regulations in the TSP SIP cannot be relaxed, however, without a demonstration that the revision will not interfere with attainment and maintenance of the PM_{10} NAAQS. It is USEPA's judgement that the revisions in this action would increase the stringency of the plan and are, therefore, not likely to interfere with the attainment and maintenance of the PM_{10} standard as well. Thus, USEPA is approving this SIP revision.

On May 31, 1972 (37 FR 10862), USEPA approved the incorporation of Illinois Pollution Control Board (IPCB) rule 203(g)(1) and rule 202(b) into the Illinois SIP. These rules were vacated and remanded by the Illinois Appellate Court on September 22, 1978 and, therefore, are no longer federally enforceable as part of the Illinois SIP. Rule 203(g)(1) addressed particulate emission from fuel combustion emission sources. Rule 202(b) addresses visual emission standards for existing sources.

Because these regulations were vacated, USEPA issued a notice of deficiency regarding the Illinois SIP (on July 12, 1979, (44 FR 40723)). Today's rulemaking concerns regulations adopted to replace the TSP fuel combustion regulations remanded by the Court.

On March 13, 1986, the Illinois Environmental Protection Agency (IEPA) submitted certain proposed regulations to USEPA then being considered by the IPCB to replace the regulations vacated and remanded by the Illinois Appellate Court. In submitting these proposed regulations, the State requested USEPA to initiate proposed rulemaking on these regulations using parallel processing. USEPA did not take action on the March 13, 1986, submittals. On July 2, 1986, the IPCB adopted final regulations to replace rule 203(g)(1), those being rules 212.201 through 212.204, and 212.209. The final adopted regulations were submitted to USEPA on July 30, 1986, with a request to incorporate them into the SIP. On June 30, 1988, the IPCB finally adopted regulations to replace rule 202(b), those being rules 212.113, and 212.121 through 212.126. These regulations were submitted to USEPA on July 22, 1988, with a request to incorporate them into the SIP. Also submitted July 22, 1988, were procedural rules, those being rules 106.501 through 106.507, adopted by the IPCB, intended to establish procedures for considering source requests for an adjusted opacity standard pursuant to § 212.126.

It should be noted that subsequent to the invalidation of rule 203(g)(1) and 202(b) by the Illinois Appellate Court, the State of Illinois recodified all of its environmental regulations into title 35 of the Illinois Administrative Code (IAC). The regulations being considered to replace rule 203(g)(1) and rule 202(b) are, respectively, §§ 212.201 through 212.204 and 212.209 and 212.113, 212.121 through 212.126 of 35 IAC Subtitle B; Air Pollution, Chapter I: Pollution Control Board USEPA's description and evaluation of these regulations will utilize the revised numbering scheme.

Description and Evaluation of Rules

Boilers Rules

Section 212.201 Existing Sources Using Solid Fuel Exclusively Located in the Chicago Area

This section provides an emission limit of 0.10 lbs/million British Thermal Units (Btu). This is the same limit that was approved in 1972. USEPA considers this rule to represent Reasonably Available Control Technology (RACT) for TSP sources in Illinois.

Section 212.202 Existing Sources Using Solid Fuel Exclusively Located Outside the Chicago Area

This section provides the following emission limits:

Actual heat input of sources in million Btu/hr (H)	Emission limit in pounds per million Btu
Less than or equal to 10	1.0
Greater than 10 but less than 20	5.18H–0.175
Greater than or equal to 250	0.1

These are the same limits that were approved in 1972. USEPA believes that these rules represent RACT. They would apply both in attainment and nonattainment areas.

Section 212.203 Existing Controlled Sources Using Solid Fuel Exclusively

This section allows for degradation of control at sources subject to section 212.201 and 212.202. Emissions from these sources would in no case exceed 0.20 lbs per million Btu. The rule approved in 1972 would allow a source to degrade up to 0.05 lbs per million Btu from original design or acceptance performance test conditions. Section 212.203 would additionally allow a source to degrade up to 0.05 lbs per million Btu from the most recent stack test submitted prior to April 1, 1985. This rule would apply in attainment and nonattainment areas alike. USEPA considers these Illinois rules, even with this relaxation, to represent RACT. Granting a relaxed emission limit would redefine RACT for a particular facility.

This rule, in effect, sets up a generic procedure for the State agency to provide an alternate emission limit for sources subject to § 212.201 or 212.202. As a general practice USEPA is reluctant to approve SIP provisions which grant the state "director discretion" to allow sources to modify their emission limits without first obtaining Federal approval through the SIP rulemaking process. USEPA's concern is that if source emission limits can be relaxed without Federal SIP approval it is possible that the SIP could be modified so that the attainment and maintenance of the National Ambient Air Quality Standards the SIP was intended to protect is jeopardized. USEPA would not be given an opportunity to rulemake on all such modifications. Several factors lessen USEPA's concerns. First, in all instances the degregations cannot exceed .05 lbs/MMBtu. The relaxed emission limits cannot exceed .20/lbs per MMBtu. USEPA believes that even these relaxed emission limits are reflective of RACT for in the process of granting a relaxed emission limit the State redefines RACT as it pertains to the subject facility. Further, all such relaxations should be incorporated in an operating permit. On December 17, 1992, (57 FR 59928) USEPA approved the Illinois Operating Permit program for the purpose of issuing federally enforceable operating permits. Prior to issuing an operating permit, the State must give USEPA the opportunity to review the permit to ensure that the respective permit is federally enforceable. USEPA will therefore be able to use its review of State operating permits to further ensure that the NAAQS are protected.

Section 212.204 New Sources Using Solid Fuel Exclusively

This section would provide an emission limit of 0.10 lbs per million Btu in any one hour period for new solid fuel sources. This is the same limit that was approved as representing RACT in 1972 and is still approvable as RACT. Under the Clean Air Act's regulatory scheme new sources would also be subject to any applicable emission limits required by Part D, or section 112. These include lowest achievable emission rate (LAER), new source performance standards (NSPS) and, national emission standards for hazardous air pollutants (NESHAPS).

Section 212.209 Village of Winnetka Generating Station

This section would provide as a variance a temporary emission limit of 0.25 lbs per million Btu for the Village of Winnetka Generating Stations if the Village files a petition to establish site-specific particulate standards within 60 days of the effective date of this rule. This variance would be effective until January 1, 1988, or until a final determination is made by the Illinois Pollution Control Board on the site-specific rulemaking, whichever occurs sooner. (The provisions of § 212.209 are moot since the variance period ended on January 1, 1988.)

USEPA believes that §§ 212.201, 212.202, 212.203 and 212.204 are

approvable because they represent RACT. As § 212.209 is moot by its own terms, no determination is made as to its approvability.

Opacity Rules

Section 212.113 Incorporations by Reference

This section was revised to incorporate all of part 60 of title 40 of the Code of Federal Regulations (1987) (which was the most current version available at the time the State modified this Section). In addition, language was added to clarify that no future additions were being incorporated by reference at this time. This additional qualification is consistent with the legal requirements for incorporation by reference at both the State and Federal level. It is simply impossible to incorporate by reference something that is not yet in existence.

Section 212.121 Opacity Standards

This section provides that, for the purpose of subpart B: Visible Emissions of part 212: Visible and Particulate Matter Emissions, all visible emission opacity standards shall be considered equivalent to corresponding Ringleman Chart readings as described under the definition of opacity in § 211.122. An additional change to this Section is that the term "visible" replaces the term "visual". USEPA approves the incorporation of this section into the SIP because the change to the rule in non substantive.

Section 212.122 Limitation for Certain New Sources

This Section, which provides emission limits for new sources with actual heat input greater than 250 MMBtu/hr, was approved for incorporation into the Illinois SIP on May 31, 1972 (37 FR 10862) as PCB rule 202(a)(1). Today USEPA is incorporating the recordified rule number, 35 IAC 212.122 into the SIP.

Section 212.123 Limitation for All Other Sources

This Section has been revised to clarify that no person shall cause or allow emission of smoke, or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission source other than those sources subject to § 212.122. This Section also contains an exception for smoke or other particulate matter from any such emission source, which allows opacity greater than 30 percent but not greater than 60 percent for a period or periods aggregating 8 minutes in any 60 minute period. The more opaque emissions shall occur from only one such emission source, located within 305 meters or 1,000 feet radius from the center point from any other such emission source, owned or operated by the same person. It is further provided that the periods of more opaque emissions are limited to three times in a 24 hour period. USEPA is granting approval of the incorporation of this section into the SIP.

Section 212.124 Exceptions

This section provides for exceptions during startup, malfunction, and breakdown, as provided in an operating permit issued in accordance with 35 IAC 201. Part 201 contains the permit and general provisions. Section 212.124 also provides that sources which have obtained an adjusted opacity standard pursuant to § 212.126 are subject to that standard rather than the limitations of § 212.122 or 212.123. Finally § 212.124 clearly defines the criteria for a source's use of compliance with the particulate regulations as a defense to a violation of the applicable opacity standards. USEPA approves the incorporation of this section into the SIP.

Section 212.125 Determination of Violations

This Section provides three methods for determining violations: visual observation, use of an approved calibrated smoke evaluation device or, use of an approved smoke monitor, which were approved by IPCB for incorporation into the Illinois SIP on May 31, 1972 (37 FR 10862) as PCB rule 202(c). Today USEPA is incorporating the recodified rule number 35 IAC 212.125 into the SIP.

Section 212.126 Adjusted Opacity Standards Procedures

This Section provides detailed procedures a source can follow to obtain an adjusted opacity standard, including a detailed testing methodology. Four limits on alternate opacity limitations are also set forth; they must be contained in an operating permit; must substitute for the otherwise applicable limit; must not allow an opacity greater than 60 percent; and, must allow opacity for one, six minute averaging period in any sixty minute period, to exceed the adjusted opacity standard. USEPA approves the incorporation of this Section in the SIP.

The Illinois opacity rules as discussed above incorporate guidance provided by USEPA in its September 23, 1986, comments to IEPA. The regulations are clear and enforceable. The procedures in § 212.126 Adjusted Opacity Standards Procedures allows the IPCB to modify the pertinent SIP emission requirements without USEPA rulemaking. It should be noted here that opacity is used as an indirect measure of compliance with particulate emission limits by a point source. Even without an opacity limit, compliance with the particulate limit is required. Further, such compliance can be more accurately measured through the use of a stack test. USEPA normally objects to this practice because the State could modify the SIP in such a way as to interfere with attainment and maintenance of the NAAQS. However, because USEPA has approved the Illinois operating permit program for the purpose of issuing federally enforceable operating permits, and operating permits will be the vehicle for issuing Adjusted Opacity Standards, such concerns are minimized. USEPA intends to use its overview of the Illinois operating permit program to review operating permits prior to their issuance; and, through its authority under section 105 of the Act grant process, to ensure attainment and maintenance of the NAAQS. For the above cited reasons, USEPA approves the incorporation of these opacity rules into the SIP.

Air Adjusted Standards Procedures

As part of its June 30, 1988, submittal the State submitted Adjusted Standard Procedures which are part of IPCB's procedural results. These procedures are contained in 35 IAC Subtitle A: General Provisions; Chapter I: Pollution Control Board; part 106: Hearings Pursuant to Specific Rules; subpart E: Air Adjusted Standard Procedures; § 106.501 through 106.507.

Section 106.501 Scope and Applicability

This Section clarifies that subpart E only applies whenever an adjusted standard is requested pursuant to 35 IAC 212.126 Adjusted Opacity Standard Procedures.

Section 106.502 Joint Single Petitions

This Section provides that any person may initiate an adjusted standard proceeding by filing a petition jointly with the IEPA, or on its own.

Section 106.503 Request to Agency to Join as Co-Petitioner

This Section allows IEPA to act in any adjusted standard proceeding as a petitioner. Any person may request IEPA assistance in initiating a petition for an adjusted standard. IEPA may require the requestor to submit relevant information. IEPA must promptly notify the requestor of its decision whether or not to become a co-petitioner. The basis for not becoming a co-petitioner must be given to the requestor. IEPA's decision

is discretionary and not appealable to the IPCB.

Section 106.504 Contents of Petition

This Section specifies what information must be included in a petition.

Section 106.505 Response and Reply

This Section requires IEPA to file a response within 45 days of a petition being filed in which IEPA is not a co-petitioner. This response must include IEPA's recommendations concerning IPCB's proposed action on the petition. The petitioner is allowed 15 days to file a reply to the IEPA response.

Section 106.506 Notice and Conduct of Hearing

This Section requires the IPCB to hold at least one public hearing prior to granting an adjusted standard. The public notification process must conform to the pertinent Federal requirements.

Section 106.507 Opinions and Orders

This Section requires the IPCB to issue an Opinion and Order stating the relevant facts and rationale for the final IPCB determination. The IPCB may issue other orders as it deems appropriate. This Section also requires the Clerk of the IPCB to maintain a record of all Opinions and Orders for public inspection. This Section also provides that decisions of the IPCB are appealable pursuant to section 41 of the Illinois Environmental Protection Act, which provides for judicial review of IPCB decisions in the Appellate Court for the District in which the cause of action arose.

USEPA believes that these Air Adjusted Standards Procedures are well defined and provide for adequate review of petitions for an adjusted standard in that both the public and IEPA are afforded an opportunity to comment on all petitions. These comments must also be addressed in the IPCB Opinion and Order. For these reasons, USEPA approves the incorporation of these procedural rules into the SIP.

USEPA has reviewed IEPA's submittals of July 30, 1986, and July 22, 1988, for conformance with the provisions of the 1990 CAAA enacted on November 15, 1990. USEPA has determined that these actions conform with those requirements irrespective of the fact that the submittal preceded the date of enactment.

Because USEPA considers today's actions noncontroversial and routine, we are approving them today without prior proposal. The action will become effective on March 1, 1993. However, if we receive notice by January 28, 1993 that someone wishes to submit adverse comments, then USEPA will publish: (1) A notice that withdraws the action, and (2) a notice that begins a new rulemaking by proposing the action and establishing a comment period.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any SIP. Each request for revision to the SIP shall be considered separately in light of specific technical, economic, and environmental factors and in relation to relevant statutory and regulatory requirements.

This action has been classified as a Table 2 action by the Regional Administrator under the procedures published in the **Federal Register** on January 19, 1989, (54 FR 2214–2225). On January 6, 1989, the Office of Management and Budget (OMB) waived Table Two and Three SIP revisions (54 FR 2222) from the requirements of Section 3 of Executive Order 12291 for a period of 2 years. USEPA has submitted a request for a permanent waiver for Table 2 and Table 3 SIP revisions. The OMB has agreed to continue the temporary waiver until such time as it rules on USEPA's request.

Under the Regulatory Flexibility Act, 5 U.S.C. 600 et seq., USEPA must prepare a regulatory flexibility analysis assessing the impact of any proposed or final rule on small entities. 5 U.S.C. 603 and 604. Alternatively, USEPA may certify that the rule will not have a significant impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and government entities with jurisdiction over populations of less than 50,000.

SIP approvals under section 110 and subchapter I, part D of the CAA do not create any new requirements, but simply approve requirements that the State is already imposing. Therefore, because the Federal SIP-approval does not impose any new requirements, it does not have a significant impact on any small entities affected. Moreover, due to the nature of the Federal-State relationship under the CAA, preparation of a regulatory flexibility analysis would constitute Federal inquiry into the economic reasonableness of State actions. The CAA forbids USEPA to base it actions concerning SIPs on such grounds. *Union Electric Co. v. U.S., E.P.A.*, 427 U.S. 246, 256–66 (S.Ct. 1976); 42 U.S.C. 7410 (a)(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by March 1, 1993. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall be not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Air pollution control, Incorporation by reference, Intergovernmental relations, Particulate matter.

Dated: December 2, 1992.

David Kee,

Acting Regional Administrator.

For the reasons set out in the preamble title 40, Chapter I of the Code of Federal Regulations is amended as follows.

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

1. The authority citation for part 52 continues to read as follows:

Subpart O—Illinois

Authority: 42 U.S.C. 7401, 7671(q)

2. Section 52.720 is amended by adding paragraph (c)(94) to read as follows:

§ 52.720 Identification of plan.

* * * * *

(c) * * *

(94) On July 30, 1986, the State submitted particulate boiler rules intended to replace rule 203(g)(1) which was vacated by the Courts. No action is taken on § 212.209 because the variance which it authorized has expired. On July 22, 1988, the State submitted opacity rules intended to replace rule 202(b) which had been vacated by the Courts. Also on July 22, 1988, the State submitted Illinois Pollution Control Board procedural rules for considering Air Adjusted Standard Procedures.

(i) Incorporation by reference.

(A) Title 35: Environmental Protection, Illinois Administrative Code, Subtitle B: Air Pollution; Chapter 1: Pollution Control Board; part 212 Visible and Particulate Matter Emissions; subpart E: Particulate Matter Emission from Fuel Combustion Emission Sources; §§ 212.201, 212.202, 212.203 and 212.204. Amended or added at 10 Ill Reg. 12637, effective July 9, 1986.

(B) Title 35: Environmental Protection, Illinois Administrative Code,

Subtitle B: Air Pollution; Chapter 1: Pollution Control Board; part 212 Visible and Particulate Matter Emissions; subpart B: Visible Emissions. Amended or added at 12 Ill. Reg 12492, effective July 13, 1988.

(C) Title 35: Environmental Protection, Illinois Administrative Code; Subtitle A: General Provisions; Chapter 1: Pollution Control Board; part 106: Hearings Pursuant to Specific Rules; subpart E: Air Adjusted Standards Procedures. Added at 12 Ill. Reg 12484, effective July 13, 1988.

Proposed Rules

Federal Register
Vol. 57, No. 250
Tuesday, December 29, 1992

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 1106

[DA-92-39]

Milk in the Southwest Plains Marketing Area; Proposed Suspension of Certain Provisions of the Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed suspension of rule.

SUMMARY: The proposed action would suspend from the Southwest Plains order for the months of December 1992 through August 1993 the shipping standards for supply plants that were pooled during the preceding September, and for an indefinite period the limits on the percentage of a supply plant's shipping standard that may be met by considering milk to be qualifying shipments from the supply plant. The action is requested by Kraft General Foods, Inc. Kraft operates a supply plant at Bentonville, Arkansas.

DATES: Comments are due no later than January 4, 1993.

ADDRESSES: Comments (two copies) should be filed with the USDA/AMS/Dairy Division, Order Formulation Branch, room 2968, South Building, P.O. Box 96456, Washington, DC 20090–6456.

FOR FURTHER INFORMATION CONTACT: Richard A. Glandt, Marketing Specialist, USDA/AMS/Dairy Division, Order Formulation Branch, room 2968, South Building, P.O. Box 96456, Washington, DC 20090–6456, (202) 720–4829.

SUPPLEMENTARY INFORMATION: The Regulatory Flexibility Act (5 U.S.C. 601–612) requires the Agency to examine the impact of a proposed rule on small entities. Pursuant to 5 U.S.C. 605(b), the Administrator of the Agricultural Marketing Service has certified that this proposed action would not have a significant economic impact on a substantial number of small entities. Such action would lessen the regulatory impact of the order on certain milk handlers and would tend to ensure that dairy farmers would continue to have their milk priced under the order and thereby receive the benefits that accrue from such pricing.

This proposed rule has been reviewed by the Department in accordance with Departmental Regulation 1512–1 and the criteria contained in Executive Order 12291 and has been determined to be a "non-major" rule.

The proposed rule has been reviewed under Executive Order 12778, Civil Justice Reform. This action would not be intended to have retroactive effect. This action would not preempt any state or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with the law and requesting a modification of an order or to be exempted from the order. A handler is afforded the opportunity for a hearing on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has its principal place of business, has jurisdiction in equity to review the Secretary's ruling on the petition, provided a bill in equity is filed not later than 20 days after date of the entry of the ruling.

The Department of Agriculture is committed to carrying out its statutory and regulatory mandates in a manner that best serves the public interest. Therefore, where legal discretion permits, the Department actively seeks to promulgate regulations that promote economic growth, create jobs, are minimally burdensome and are easy for the public to understand, use or comply with. In short, the Department is committed to issuing regulations that maximize net benefits to society and minimize costs imposed by those regulations. This principle is articulated in President Bush's January 28, 1992, memorandum to agency heads, and in Executive Orders 12291 and 12498. The Department applies this principle to the full extent possible, consistent with law.

In this regard, the Department believes that public input from all interested persons can be invaluable to ensuring that the final regulatory product is minimally burdensome and maximally efficient. Therefore, the Department specifically seeks comments and suggestions from the public regarding any less burdensome or more efficient alternative that would accomplish the purposes described in this notice of proposed suspension.

Notice is hereby given that, pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), the suspension of the following provisions of the order regulating the handling of milk in the Southwest Plains marketing area is being considered: A. For an indefinite period: In § 1106.7(b)(2), the following sentence: "Diversions in excess of three-fifths of the shipping requirements shall not be included as qualifying shipments."; and B. For the period of December 1, 1992, through August 31, 1993, the following:

1. In § 1106.6, the words "during the month."

2. In § 1106.7(b)(1), the words "each of", the word "months", the words "through January", and the words "of February through August until any month of such period in which less than 20 percent of the milk received or diverted as previously specified, is shipped to plants described in paragraph (a) or (e) of this section. A plant not meeting such 20 percent requirement in any month of such February-August period shall be qualified in any remaining month of such period only if transfers and diversions pursuant to paragraph (b)(2) of this section to plants described in paragraph (a) or (e) of this section are not less than 50 percent of receipts or diversions as previously specified."

All persons who want to send written data, views or arguments about the proposed suspension should send two copies of them to the USDA/AMS/Dairy Division, Order Formulation Branch, room 2968, South Building, P.O. Box 96456, Washington, DC 20090–6456, by the 7th day after publication of this notice in the **Federal Register**. The period for filing comments is limited to 7 days because a longer period would not provide the time needed to complete the required procedures and include

December 1992 in the suspension period.

The comments that are sent will be made available for public inspection in the Dairy Division during normal business hours (7 CFR 1.27(b)).

Statement of Consideration

The proposed action for December 1992 through August 1993 would suspend the shipping standards for supply plants that were previously associated with the market. The order defines a supply plant as a plant from which fluid milk products are transferred or diverted to distributing plants during the month. It also provides that in order to be pooled under the order during the months of September through January, 50 percent of a supply plant's receipts must be shipped to distributing plants each month. A supply plant that was pooled during each month of the immediately preceding months of September through January shall continue to be pooled during the following months of February through August if 20 percent of its receipts are shipped to distributing plants. Part of the requested suspension action would remove during the months of December 1992 through August 1993 the shipping standard for supply plants that were pooled under the order during the immediately preceding month of September.

The order also provides that the operator of a supply plant may meet up to 60 percent of its shipping requirement with milk that was diverted from the supply plant. The second part of the proposed suspension would remove the requirement that some milk must actually move from the supply plant to a distributing plant each month. The proposed suspension also would allow a supply plant to meet its pooling standard with diverted milk; i.e., milk that moves directly from the procedures farm(s) to the plant after the suspension of shipping standards ends. This proposed action would be for an indefinite period.

Under the proposed suspension, a supply plant that had met the shipping requirement for September 1992 could be a pool plant during December 1992 through August 1993 without making any actual deliveries of milk to distributing plants. Moreover, the shipping requirements for supply plants could be met entirely with diverted milk as long as the indefinite suspension remained in effect.

These suspension actions were requested by Kraft, USA, which operates a supply plant at Bentonville, Arkansas. Kraft maintains that it is capable of meeting the supply plant shipping standards entirely with diverted milk. Since the order now allows only three-fifths of the shipments to be made by diversions, Kraft must receive, unload and reload two-fifths of the required shipments. Kraft maintains that this uneconomic unloading/reloading is done solely to meet the pooling requirements and serves no other function.

Kraft further maintains that other provisions of the order, such as the "touch-base" provision, will protect the integrity of the order. Meanwhile, the suspension action would allow supply plants to meet their performance standards with the most efficient method of shipping milk. Kraft indicates a belief that the rationale that the Department of Agriculture relied on in reducing cooperative performance standards for pooling balancing plants is appropriate to justify this proposed action.

Before deciding whether to grant the proposed suspension, the Department of Agriculture is inviting comments from other interested parties. Comments also are sought regarding whether the portion of the request that would be suspended indefinitely should instead be suspended for a limited period, such as two years.

List of Subjects in 7 CFR Part 1106

Milk marketing orders.

The authority citation for 7 CFR part 1106 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

Dated: December 21, 1992.

Daniel Haley,

Administrator.

BILLING CODE 3410–02–M

[4910–13]

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 91–CE–37–AD]

Airworthiness Directives; Fairchild Aircraft (Formerly Swearingen Aviation Corporation) SA226 and SA227 series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes to supersede Airworthiness Directive (AD) 81–22–04, which currently requires repetitively inspecting the elevator return spring on certain Fairchild Aircraft SA226 and SA227 series airplanes, and replacing any damaged part. The Federal Aviation Administration's policy on aging commuter-class aircraft is to eliminate or, in certain instances, reduce the number of certain repetitive short-interval inspections when improved parts or modifications are available. The proposed action would require relocating the elevator return spring as terminating action for the repetitive inspections that are currently required by AD 81–22–04. The actions specified in the proposed AD are intended to prevent a jammed elevator control caused by elevator return spring failure.

DATES: Comments must be received on or before March 5, 1993.

ADDRESSES: Submit comments on the proposal in triplicate to the Federal Aviation Administration (FAA), Central Region, Office of the Assistant Chief Counsel, Attention: Rules Docket No. 91–CE–37–AD, room 1558, 601 E. 12th Street, Kansas City, Missouri 64106. Comments may be inspected at this location between 8 a.m. and 4 p.m., Monday through Friday, holidays excepted.

Service information that is discussed in the proposed AD may be obtained from Fairchild Aircraft, P.O. Box 790490, San Antonio, Texas 78279–0490; Telephone (512) 824–9421. This information also may be examined at the Rules Docket at the address above.

FOR FURTHER INFORMATION CONTACT: Mr. Bob D. May, Aerospace Engineer, Airplane Certification Office, FAA, Southwest Region, 4400 Blue Mound Road, Fort Worth, Texas 76193–0150; Telephone (817) 624–5156.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments

submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No 91–CE–37–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Central Region, Office of the Assistant Chief Counsel, Attention: Rules Docket No. 91–CE–37–AD, room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

Discussion: The FAA has determined that reliance on critical repetitive inspections on aging commuter-class airplanes carries an unnecessary safety risk when a design change exists that could eliminate or, in certain instances, reduce the number of those critical inspections. In determining what inspections are critical, the FAA considers: (1) The safety consequences of the airplane if the known problem is not detected by the inspection; (2) the reliability of the inspection such as the probability of not detecting the known problem; (3) whether the inspection area is difficult to access; and (4) the possibility of an adjacent structure being damaged as a result of the problem.

These factors have led the FAA to establish an aging commuter-class aircraft policy that requires the incorporation of a known design change when it could replace a critical repetitive inspection. With this policy in mind, the FAA recently conducted a review of existing ADs that apply to Fairchild Aircraft SA226 and SA227 series airplanes. Assisting the FAA in this review were (1) Fairchild Aircraft; (2) the Regional Airlines Association (RAA); and (3) several operators of the affected airplanes.

From this review, the FAA has identified AD 81–22–04, Amendment 39–4238, as one that should be superseded with a new AD that would eliminate short-interval and critical repetitive inspections. AD 81–22–04 currently requires repetitively inspecting the elevator return spring on certain Fairchild Aircraft SA226 and SA227 series airplanes, and replacing any damaged part.

Fairchild Aircraft has issued Service Bulletin (SB) No. 226–27–032, Issued: September 14, 1981, revised: January 19, 1983; and SB No. 227–27–002, Issued: September 14, 1981, revised: October 25, 1985. These service bulletins specify procedures for relocating the elevator return spring on certain Fairchild Aircraft SA226 and SA227 series airplanes.

Based on its aging commuter-class aircraft policy and after reviewing all available information, the FAA has determined that (1) The procedures specified in the referenced service information incorporate an improved design change that could replace the repetitive inspections currently required by AD 81–22–04; and (2) AD action should be taken to eliminate these repetitive short-interval inspections and prevent failure of the elevator return spring.

Since the condition described is likely to exist or develop in other SA226 and SA227 series airplanes of the same type design, the proposed AD would supersede AD 81–22–04 with a new AD that would (1) initially retain the inspections of the elevator return spring with replacement and relocation of any damaged elevator return spring; and (2) eventually require the relocation of the elevator return spring as terminating action for the repetitive inspections required by AD 81–22–04. The proposed relocation would be accomplished in accordance with Fairchild SB No. 226–27–032, Issued: September 14, 1981, revised: January 19, 1983; or Fairchild SB No. 227–27–002, Issued: September 14, 1981, revised: October 25, 1985, as applicable.

The FAA estimates that 322 airplanes in the U.S. registry would be affected by the proposed AD, that it would take approximately 20 workhours per airplane to accomplish the proposed action, and that the average labor rate is approximately $55 an hour. Parts would be provided by the manufacturer at no cost to the operator. Based on these figures, the total cost impact of the proposed AD on U.S. operators is estimated to be $354,200.

The intent of the FAA's aging commuter airplane program is to ensure safe operation of commuter-class airplanes that are in commercial service without adversely impacting private operators. Of the approximately 322 airplanes in the U.S. registry that would be affected by the proposed AD, the FAA has determined that approximately 30 percent are operated in scheduled passenger service by 19 different operators. A significant number of the remaining 70 percent are operated in other forms of air transportation such as air cargo and air taxi.

The proposed AD allows 2,200 hours time-in-service (TIS) before mandatory accomplishment of the design modification. The average utilization of the fleet for those airplanes in commercial commuter service is approximately 25 to 50 hours TIS per week. Based on these figures, operators of commuter-class airplanes involved in commercial operation would have to accomplish the proposed modification within 5 to 11 calendar months after the proposed AD would become effective. For private owners, who typically operate between 100 to 200 hours TIS per year, this would allow 11 to 22 calendar years before the proposed modification would be mandatory.
